In a separate development on Friday, the European Commission said it plans to tighten ship fuel sulphur regulations, which should lead to public health savings of billions of dollars, especially in countries like Britain and Holland that border busy sea lanes. The proposal would cut the maximum permissible sulphur content of fuels to 0.1% from 1.5% from 2015 in sensitive areas such as the Baltic Sea and the Channel, and to 0.5% from 4.5% in all other areas from 2020.

Shipping burns some of the most polluting fuels, and the proposal is expected to fine particle emissions from ships by up to 80 percent, the commission said.

The expected cost to the shipping industry of the new standards is between €2.6bn and €11bn ($3.7-$15.6bn), which the EU executive argues would be far outweighed by public health savings, of up to €34bn.

A 3.4-magnitude earthquake shook Alameda County this morning, according to the U.S. Geological Survey.

The tremor rattled an area two miles southeast of Berkeley and three miles northeast of Emeryville at 3:51 a.m.

The quake had a depth of 4 miles, according to the USGS.

Hail storm damages 40 planes, strands passengers

July 15, 2011
http://www.brisbanetimes.com.au/travel/tra...0715-1hh0t.html

More than 100 flights have been cancelled at Denver International Airport after hail damaged about 40 planes and stranded about 1000 passengers overnight.

Airport spokeswoman Laura Coale said on Thursday that all damaged planes had to be evaluated, slowing operations. She says an unknown number of planes have been taken out of service because of damage.

Frontier Airlines says it expects more cancellations on Friday.
Advertisement: Story continues below

The airport was pummelled by three-quarter-inch hail for about 15 minutes on Wednesday night.

Among those stranded at the airport was Wisconsin Governor Scott Walker. He tweeted that he slept on the floor of a conference room after airport staff got him a blanket and pillow.

The airport didn't distribute cots and blankets to all passengers because airlines didn't request help. About 200 people typically spend the night at the airport.

China Oil Spill Six Times Size of Singapore: Govt

by Frederic J. Brown
http://www.commondreams.org/headline/2011/07/15-3

A huge oil spill off the Chinese coast has now contaminated an area around six times the size of Singapore, state media reported Friday, as the government said it may seek compensation for the leak.

File photo shows a worker's feet stained with oil in the port city of Dalian in China's northeastern Liaoning province. Chinese oil producer CNOOC, in partnership with ConocoPhillips China, a subsidiary of the US oil giant, operates an oil field in Bohai Bay, off China's eastern coast, where a massive oil slick was detected on June 4 but only made public on Friday (AFP)
The spill from the oil field, which the United States' ConocoPhillips operates with China's state-run oil giant CNOOC, has polluted a total area of almost 4,250 square kilometres (1,650 square miles), government figures showed.

The figures, which were announced on the State Oceanic Administration website earlier this week but only reported on Friday, were almost five times the size of the 840-square-kilometre area previously reported.

The administration says that area remains worst affected by the spill, but that another 3,400 square kilometres have also been contaminated to a lesser degree by the oil.

The spill was kept secret by the authorities for several weeks before being made public this month, sparking suspicions of an official cover-up, and the disaster has triggered a furious public response in China.

State media said the government was considering seeking compensation from ConocoPhillips over the spill.

"We have made an initial plan to claim compensation from ConocoPhillips China," the business daily 21st Century Business Herald quoted an unnamed official from the State Oceanic Administration as saying.

"But whether and how it will be implemented still depends on the status of plugging the leak."

CNOOC said last week the spill was "basically under control" while ConocoPhillips told reporters the leaks had been plugged.

But on Wednesday the oceanic administration said oil was still leaking into the ocean and ordered ConocoPhillips to stop operations at several rigs in the polluted area until the source of the spill was fully plugged.

"There has been oil seeping continuously into the sea for days from platforms B and C in the Penglai 19-3 oilfield and there is still a slick in the surrounding marine areas," it said in a statement.

"Another spill could happen at any time, which has posed a huge threat to the oceanic ecological environment."

CNOOC has been slammed by state media and green groups over the spill, and it emerged on Tuesday that the firm was cleaning up another slick after a breakdown at a rig off the northeast coast.

ConocoPhillips said Thursday the spill was the equivalent of 1,500 barrels of oil.

View Full Version: Corporate Water World

Title: Corporate Water World

TheUnhivedMind - July 18, 2011 12:56 AM (GMT)

Corporate Water World

JO
http://www.realitysandwich.com/corporate_water_world

Pharmaceutical giant Merck has become the most recent multinational corporation to endorse the United Nations CEO Water Mandate, an initiative that was awarded the Public Eye Greenwash Award. Public Eye described the Mandate as a club of corporations that profit financially from water as a primary resource while exhibiting "irresponsible and damaging behavior." Merck is just the latest corporation to join the ranks of Nestlé, Coca-Cola, Dow Chemical, and a host of other environmental offenders.

According to the Polaris Institute the Mandate is nothing more than a greenwashing front. They explain, "companies can easily state that they are working with all of these actors in order to appear involved with solving problems of water scarcity, pollution and over-exploitation, while their damaging production processes can continue unchecked."

“Unfortunately, the United Nations appears to be embracing more and more partnerships with the corporate sector across the board,” said Corporate Accountability International campaign director Gigi Kellett. “There are strong voices within the United Nations, including some Member states, who are questioning the partnership paradigm adopted by the UN and calling for more transparency and accountability.”

Just how a policy of water privatization under the U.N. emblem became possible has some pointing at the International Monetary Fund and World Bank. Both the World Bank and IMF as well as regional development banks are now in control of the United Nations' biggest projects, including the United Nations new $100 billion Green Fund. Environmental activist Maude Barlow points out that “we’re also seeing the IMF forcing indebted nations to sell off public assets, including water systems, as a condition of receiving financial support. The whole system is rigged for these corporations."

With many doom and gloom reports of an impending global water crisis, the prospect of the world's drinking water being controlled by an elite group of corporations is not comforting. But there is opposition to the Mandate, such as the "Think Outside the Bottle Campaign," being run by Corporate Accountability International.

Queensland floods and Russian heatwave will be used to justify 'climate change' policies

Chris Huhne's 'carbon saving' measures could double energy bills within nine years - so

By Christopher Booker
7:51PM BST 16 Jul 2011
http://www.telegraph.co.uk/earth/environme...e-policies.html

Sir John Beddington may have thought he was earning his £165,000 a year as the Government's Chief Scientific Adviser when he was last week reported as proposing that it should "use climate-related disasters overseas to persuade British voters to accept unpopular policies for curbing carbon emissions".

The sort of disasters Sir John had in mind included last year's Russian heatwave, the floods in Pakistan and Queensland and the current drought in East Africa, all of which climate zealots have rushed to blame on global warming. But Sir John, who is a professor in "applied population biology", may not be aware that each of these examples has been shown by scientific studies not to be evidence of "climate change".

A new paper in Geophysical Research Letters confirms that the parts of Russia affected by last year's heatwave "show no significant warming trend" over the past 130 years. Similar studies have shown that the 2010 Paikstan floods were no worse than those in 1929.

The flooding in Queensland was lower than that in 1974. It was only turned into a disaster by the sudden release of water from a dam, which had been held back on the orders of state politicians who were obsessed with the need to store water because of their fear that global warming would cause droughts. Even the UN now says that the

Horn of Africa's worst drought for 60 years cannot be ascribed to climate change.

In a week when Chris Huhne, Energy and Climate Change Secretary, announced "carbon saving" measures which are predicted to double energy bills within nine years and drive more than half the population into fuel poverty, one can see that he might be desperate to "persuade British voters" that his absurdly costly gimmicks are justified.

But if he wants advice on climate change more plausible than just scare stories that echo his own prejudices, he could do with someone better qualified in that field than a specialist in applied population biology – whatever that may be.

MP votes both for and against giving away your £9 billion

Henry Smith, MP for Crawley, was proud to be among the 31 Tory backbenchers who last Monday rebelled against the Government by voting against its wish to provide the IMF with a further £9.8 billion to assist in bailing out various failing EU economies such as Greece.

This earned him brownie points with Euro-sceptics who cannot understand why UK taxpayers should be prepared to lend nearly £400 for every household in the land to countries which may never be able to pay it back.

It might seem particularly odd that we should want to do this when we ourselves are already having to borrow nearly £3 billion every week to pay for our own Government's reckless overspending,

But before the whips come down too hard on Mr Smith for voting against the Government, they should note that, as a loyal Tory with expectations of preferment, he also voted at the same time in support of the Government. As Hansard shows, Mr Smith went into the lobbies twice over, once against the motion and once in favour.

According to Erskine May, MPs may vote in opposite directions only when they have made a mistake. But they must then explain to the House which side they had intended to support. Otherwise, the gambit practised by the member for Crawley, Mr "Facing Both Ways" Smith, is officially "deprecated as unparliamentary". No doubt this man will go far.

View Full Version: Earthquake Causes River to Disappear in Costa Rica

Title: Earthquake Causes River to Disappear in Costa Rica

TheUnhivedMind - July 16, 2011 02:09 AM (GMT)

Earthquake Causes River to Disappear in Costa Rica

By Tammy Lee Morris | Yahoo! Contributor Network – Thu, Jul 14, 2011
http://news.yahoo.com/earthquake-causes-ri...-200100966.html

Following a series of moderate earthquakes that struck the country Tuesday, residents around the Guacalito River in Costa Rica discovered that the river had disappeared. Earthquake-report.com reported that sometime after the earthquakes, villagers living near the river, which is located near Armenia de Upala, discovered that the river was dry.

It was not immediately known if the waters of the river had disappeared due to sinkhole activity that can occur after earthquakes or if the earth shaking caused damming that dried up the river near the Miravalles volcano. The quakes were centered near the Nicaragua and Costa Rica border in the same vicinity as the Miravalles volcano.

An entire body of water disappears? Strange but true, and this isn't the first time this odd event has happened.

In 2010, the Iska River in Slovenia disappeared after local residents heard loud crashing and banging overnight. The next morning, the river was dry and the riverbed was full of fish and other creatures. It was believed that the waters of the river had drained through a large crack into an underground riverbed. This disappearance was not believed to have been related to an earthquake.

Most recently -- aside from the disappearing river in Costa Rica -- an entire reservoir in

Huntsbury, New Zealand, that was filled with 36 million liters of water disappeared following a 6.3 magnitude earthquake. The reservoir water disappeared after the earthquake struck Christchurch Feb. 22.

A body of water disappearing is not unusual, nor is it unheard of for an earthquake to change the shape and form of bodies of water. There have also been numerous examples of seismic activity creating new bodies of water.

In 1959, the largest earthquake to strike Montana -- a 7.3 magnitude temblor -- caused a landslide to dam the Madison River just below Hebgen Dam, thus creating a new body of water that became Hebgen Dam, or "Quake Lake."

The historic New Madrid earthquakes in the central United States created a lake in northwestern Tennessee in 1812. Reelfoot Lake was formed during the Feb. 7, 1812, earthquake that was one of several to strike the region during the winter of 1811 and 1812. That earthquake, which is estimated to have been at least 7.0 in magnitude or higher, caused subsidence along the Reelfoot River, dropping a 13,000 acre area of land between 4 and 19 feet. This area filled with water to become Reelfoot Lake.

Tammy Lee Morris is certified as a Community Emergency Response Team (CERT) member and is a trained Skywarn Stormspotter through the National Weather Service. She has received interpretive training regarding the New Madrid Seismic Zone through EarthScope--a program of the National Science Foundation. She researches and writes about earthquakes, volcanoes, tornadoes and other natural phenomena.

Description: *Since Then*

TheUnhivedMind - July 16, 2011 01:48 AM (GMT)

BP Spill Stopped One Year Ago Today - 5,000 Spills Since Then

Friday, July 15, 2011
http://blog.skytruth.org/2011/07/bp-spill-...-ago-today.html

July 15, 2010 was a day of relief for many - even for folks up here in West Virginia - after 2-1/2 months watching helplessly as oil and gas billowed relentlessly into the Gulf of Mexico from BP's runaway Macondo well. On that day one year ago, the final valve was carefully closed on an improvised "capping stack" that did the job after a string of heartbreaking failures. By that time an estimated 172 million gallons of oil had spewed directly into the Gulf, vastly exceeding the Exxon Valdez tanker spill of 1989 -- making it the nation's worst oil spill, and the world's worst accidental spill.
Photo from "spill cam" showing oil flow shut off at last on July 15, 2010

After cumulatively covering an area the size of Oklahoma, the massive oil slicks on the Gulf's surface began to dissipate almost immediately under the steady assault of evaporation, wind and wave action, biodegradation, photolysis, and cleanup efforts. We last observed significant oil slicks on satellite images taken July 28. But unknown amounts of oil and chemical dispersant lingered beneath the ocean's surface, out of sight, with an uncertain fate and as-yet untallied environmental consequences. What is clear is that this spill caused significant economic damage to the Gulf seafood and tourism industries, upsetting the lives and livelihoods of people as far away as Virginia. And oil from the spill continues to wash ashore along the Gulf coast.

Meanwhile, Congress has yet to pass any new laws governing offshore drilling safety. In fact, they are going backwards by reducing funding for government inspections and oversight -- despite the fact that the oil industry itself requested more funding for BOEMRE, the agency that manages offshore drilling.

Other frustrations? The lack of progress in creating a national oil spill cleanup capability that has a fighting chance against the next major spill; the continued reliance on chemical dispersants as an effective cleanup tool, despite evidence suggesting they may do more harm than good; our serendipitous discovery of a chronic, 7-years-and-counting leak that is continually polluting the Gulf; the regular occurrence of "mystery spills" that never get resolved; the laughable results of a system that naively hopes polluters will accurately report their spills; the lack of consistent fines for polluters, a moral hazard that encourages sloppy operations and risk taking, all but ensuring another major disaster.

Oh yeah, and the 5,100 new oil and other hazardous materials spills in the Gulf region reported to the National Response Center since July 15, 2010. Here are the 3,000 reports that have enough usable location information for us to pinpoint them on a map: NRC oil and hazardous materials spill reports, July 15, 2010 - July 15, 2011

The inevitable conclusion? Concerned individuals and citizen's groups, like our Gulf Monitoring Consortium, have to take it upon themselves to investigate, understand, and publicize what's really going on with pollution and offshore drilling. You can help us by submitting your observations and photos to our Gulf Oil Spill Tracker site. And next week we'll unveil the SkyTruth Alerts system, a continually updated interactive map of reported pollution incidents nationwide, onshore and off.

View Full Version: UN Climate Body Struggling to Pinpoint Rising Sea

Title: UN Climate Body Struggling to Pinpoint Rising Sea
Description: *Levels*

TheUnhivedMind - July 16, 2011 01:42 AM (GMT)

UN Climate Body Struggling to Pinpoint Rising Sea Levels

By Axel Bojanowski
http://12160.info/forum/topics/contradicto...shorten_twitter

The United Nations' forecast of how quickly global sea levels will rise this century is vital in determining how much money might be needed to combat the phenomenon. But predictions by researchers vary wildly, and the attempt to find consensus has become fractious.

It is a number which will ultimately establish how billions in taxpayer money will be spent -- and it is one which is the subject of heated debate, both among politicians and scientists.

When the next report from the United Nations Intergovernmental Panel on Climate Change (IPCC) is issued in two years, it will include a forecast for how high the world's oceans might rise by 2100. With 146 million people in the world currently living less than one meter above sea level, the forecast will be vital in determining how much money governments must spend on measures to protect people from the rising waters and to resettle those in the most acute danger.

Eighteen scientists from 10 countries are involved in the task, and their first step is to determine which of the myriad studies relating to climate change's effect on ocean levels to consider. In the end, they are to establish a possible range, with the maximum being the most decisive -- and most contested -- number. Even more challenging, the estimates currently differ by almost five meters (16.5 feet).

The last IPCC report, which was issued in 2007, forecast an ocean level rise of up to 59

centimeters by the end of the century. Now, the UN experts must once again sift through hundreds of reports, and the haggling over their findings is not unlike the bargaining for the best price at the bazaar. On the one hand, researchers have published forecasts that are far higher than the result reported in the last IPCC report. On the other, sea level measurements have yet to prove any meaningful rise though there is agreement that they are, on global average, rising.

Outdoing Each Other's Predictions

In recent days, the debate over the IPCC forecast has heated up. Some 4,000 experts gathered in Melbourne, Australia last week for a meeting of the International Union of Geodesy and Geophysics (IUGG). And it seems almost as though they are in competition to outdo one-another's predictions.

NASA climate researcher James Hansen, for example, warns in a paper published this month that sea levels could rise by five meters in the next 90 years -- nine times higher than the maximum cited in the last IPCC report. He insists that he has found indications that sea levels in the future could rise by as much as five centimeters per year.

Hansen, say some climatologists, is risking his reputation with such an extreme forecast. Three years ago, researchers found that a rise of over two meters per century is impossible because so much ice simply can't melt in such a short time. Furthermore, current measurements show a rise of just three millimeters per year.

An additional recent study, written by Jim Houston from the Engineer Research Center in Vicksburg, Mississippi and Bob Dean from the University of Florida in Gainsville for the Journal of Coastal Research, argues that sea levels have risen steadily for the last 100 years -- and that there has been no acceleration at all in recent years.

A reply was not long in coming. In the current issue of the Journal of Coastal Research, Stefan Rahmstorf, from the Potsdam Institute for Climate Impact Research argues that Houston and Dean only included sea level calculations beginning in the 1930s. He says that if one chooses a year from the previous century, an accelerated rise can be seen.

Fluctuation

Rahmstorf is not alone in his belief that the sea level rise has accelerated. Data up until 1993, based on coastal measurements, show an annual rise of 1.7 millimeters. Since then, however, satellite measurements have indicated a rise of three millimeters per year.

But does that mean that water levels are rising faster? Not necessarily. "I find it unlikely that sea level started to accelerate just at the time we started to measure it with satellites," says Simon Holgate, a sea level researcher with the National Oceanography Centre in Liverpool. He says that the simple change in measuring technique could

account for the change.

"Whether or not this is a further acceleration is not yet clear," agrees John Church of the Commonwealth Scientific and Industrial Research Organisation (CSIRO), in reference to the discrepancy between the two methods of measurement. Some studies see an acceleration, others do not. Church is also head of the sea level working group at the IPCC.

Furthermore, the more rapid rise since 1993, even if it existed, may not be out of the ordinary, says Guy Wöppelmann of the Université de La Rochelle in France. The sea level rise increased in rate at times during the 20th century, only to slow down again later.

The same thing can be observed now, says Eduardo Zorita, from the Helmholtz-Zentrum Geesthacht Centre for Meterials and Coastal Research. In the last eight years, he says, the rise of the oceans has slowed -- and what the future may hold is uncertain.

Avoiding Pessimism

Still, studies have shown that the thick layer of ice on Greenland has begun melting faster. And that massive amount of water has to go somewhere. The 2007 IPCC report avoided the most pessimistic scenarios for the melting ice on Greenland, primarily because so little is known about the ice sheet there.

"Without a better understanding of how the great ice sheets of Greenland and Antarctica will react to warming air and warming oceans, we simply cannot say" what the future might hold, says Josh Willis, an ocean researcher at NASA's Jet Propulsion Laboratory.

Nevertheless, the accelerated melting of the ice sheet would indicate that the IPCC report from 2007 may have underestimated its impact on sea levels. But to what degree?

Data from earlier warm periods do not provide cause for optimism. A study published by a team led by Anton Eisenhauer at the Leibniz Institute of Marine Sciences two years ago found that coral reefs that are six meters above sea level today were under water 125,000 years ago. Sea levels must have been much higher at the time. And the climate was much warmer than it is today. Eisenhauer believes that melting Greenland glaciers may have been to blame.

The scientists are in a dilemma: There are reasons to believe that the melting of the Greenland ice could speed up dramatically, but they won't have proof for decades to come. As such, researchers are attempting to use data from the past to make predictions as to what might happen in the future. So-called "semi-empirical studies" seek to find a connection between the air temperature and the ocean levels.

Open to Question

Using such global temperature data since 1880, Martin Vermeer from the Helsinki University of Technology, together with Rahmstorf, came to the conclusion that global sea levels could rise by 1.9 meters by the year 2100.

To what degree such studies might be accounted for in the new UN report is open to question. Their results could make for a much higher UN forecast when it comes to future ocean levels. And many researchers have their doubts. "The semi-empirical models have not been verified," says, for example, Neil White from CSIRO, adding it is unclear whether such comparisons reflect real occurences in nature. "In some circumstances," he adds, they "have been shown not to work."

Arriving at a forecast is made even more difficult by the fact that sea levels do not rise at the same rate across the globe. In some regions, it is rising at double the average," says Claus Böning from the Leibniz Institute. "Elsewhere, levels are even sinking, for example at some Pacific islands and in the Indian Ocean." Ocean currents are largely responsible for these differences, he and colleague Franziska Schwarzkopf recently reported in the journal Geophysical Research Letters.

Research until now has been based on the assumption that three factors affect the rise of ocean levels equally: the expansion of the warming water, the melting of mountain glaciers and the melting of the Greenland ice sheet and the polar ice caps. But now, says David Bahr from Regis University in Denver, it is vital to intensify research into those glaciers in Greenland which stick out into the ocean. They are threatening to collapse.

Disagreements Over What to Expect

In addition, the melting of ice in the western Antarctic needs to be better understood. During the last warm period 120,000 years ago, when it was roughly 2 degrees Celsius warmer than today, the Antarctic ice cap did not completely melt, according to a recent study in the journal Palaeogeography, Palaeoclimatology, Palaeoecology.

"Without a better understanding of how the great ice sheets of Greenland and Antarctica will react to warming air and warming oceans, we simply cannot say" what will happen in the future, said Josh Willis, an ocean researcher at NASA's Jet Propulsion Laboratory.

As a result, researchers don't agree on what to expect. Whereas James Hansen expects a five meter rise, his colleague Simon Holgate says that "I think that even in the

highest emission scenario we won't exceed a global average of one meter of sea level rise by 2100."

Given the large discrepancies in expert opinions it would appear that the 18 scientists currently working to arrive at a forecast have their work cut out for them. And unlike the glaciers on Greenland, they cannot work at a snail's pace. After all, one of the most important numbers in the next IPCC report is at stake

View Full Version: “Covert” Operations by East Anglia’s CRU

Title: “Covert” Operations by East Anglia’s CRU

TheUnhivedMind - July 16, 2011 01:33 AM (GMT)

“Covert” Operations by East Anglia’s CRU

14 Jul 2011
http://climateaudit.org/2011/07/14/covert-...st-anglias-cru/

Today brings news of the arrest of the managing director of a firm hired by the University of East Anglia’s CRU (Climatic Research Unit) to carry out “covert” operations – h/t reader Chu here). Neil Wallis of Outside Organisation was arrested today in connection with the spreading News of the World scandal.

Last year, Wallis’ partner at Outside Organisation , Alan Edwards, was profiled in Music Week in a story that led with:

Don’t tell the conspiracy theorists. But one PR company was at the centre of the Michael Jackson funeral, Climategate and Naomi Campbell’s appearance at Charles Taylor’s trial in The Hague.

Edwards is described as the “man who has also helped shape the careers of Amy Winehouse, Blondie, The Rolling Stones, Jimmy Cliff, David Bowie, Spice Girls, David Beckham, P Diddy, Kevin Pietersen and Shayne Ward” and the man who masterminded PR for Naomi Campbell’s trial. Outside Organisation’s handling of Climategate for CRU was described as “more covert”.

Less apparent is its work in the corporate field, where its activities tend to be rather more covert. [my bold]

“We don’t advertise a lot of the things we do,” says Edwards, who was called in by the University of East Anglia when Climategate blew up. “That was really interesting. It’s very high level, and you’re very much in the background on that sort of thing.”

The university’s Climatic Research Unit wanted Outside to fire back some shots on the scientists’ behalf after leaked emails from the unit gave climate change skeptics ammunition and led to an avalanche of negative press about whether global warming was a real possibility.

Fukushima cleanup recruits 'nuclear gypsies' from across Japan

Thousands of engineers and labourers have been lured by higher wages and a sense of duty

Justin McCurry in Iwaki-Yumoto
guardian.co.uk, Wednesday 13 July 2011 19.42 BST
http://www.guardian.co.uk/environment/2011...neers-labourers

The sun has only just risen in Iwaki-Yumoto when groups of men in white T-shirts and light blue cargo pants emerge blinking into the sunlight, swapping the comfort of their air-conditioned rooms for the fierce humidity of a Japanese summer.

Four months on from the start of the world's worst nuclear crisis since Chernobyl, this hot-spring resort in north-east Japan has been transformed into a dormitory for 2,000 men who have travelled from across the country to take part in the clean-up effort 30 miles away at the Fukushima Daiichi power plant.

Iwaki-Yumoto has come to resemble corporate Japan in microcosm. Among its newest residents are technicians and engineers with years of experience and, underpinning them all, hundreds of labourers lured from across Japan by the prospect of higher wages.

They include Ariyoshi Rune, a tall, wiry 47-year-old truck driver whose slicked-back hair and sideburns are inspired by his idol, Joe Strummer.

For five days a week, Rune is in thrall to the drudgery of life as a "nuclear gypsy", the name writer Kunio Horie gave to contract workers who have traditionally performed the

dirtiest, most dangerous jobs for Japan's power utilities.

The industry has relied on temporary workers for maintenance and repair work since the nuclear plant construction boom in the 1970s. Now, as then, those from the lowest rungs of Japanese society work for meagre wages, with little training or experience of hazardous environments.

"I've never thought working at the plant was dangerous," Rune tells the Guardian after a day's work, for which he receives 12,000 yen (£95). "And I think my wage is fair for the kind of work I do. It's more than I used to get driving a truck."

He arrived at Fukushima in early June after seeing an advertisement for labourers in a magazine. His 73-year-old mother knows her son is working in the area, but she has no idea he spends half of every day at the site of Japan's worst-ever nuclear accident.

Rune, who is divorced, generally gets two days off a week, when he travels to nearby Ibaraki prefecture to see his sons. "When I told them about my work the first thing they said was, 'Please don't get irradiated.' They worry, but they also think that what I'm doing is kind of cool."

He says he has been exposed to five millisieverts (mSv) in little over a month – more than double the worldwide average background dose of 2.4mSv a year. While Tokyo Electric Power (Tepco) engineers working inside reactor buildings are allowed an annual radiation dose of up to 250mSv, Rune's firm has imposed a cut-off point of 30mSv for staff and 15mSv for casual labourers.

"I have about two months left before I reach my limit, but I'm hoping they will make an exception and let me work for longer," he says.

The next morning, at 5.45am, the bus is already waiting when Rune emerges from his hotel, where he shares a room with five other workers.

Before them lies a 45-minute journey to J-Village, a football training complex, where they will be briefed on their duties for the day before changing into radiation suits, masks and goggles, protective gloves and glass-encased monitors which they must carry with them at all times on site.

At 8am they begin the first of two 90-minute shifts at Fukushima Daiichi, separated by a break of similar length. Radiation exposure and heat bring their working day to an end by early afternoon.

Rune gave the Guardian a rare insight into working conditions inside the plant.

As he leaves his place of work for his 90-minute break, he must remove his cotton gloves before opening a door into a second room, where he takes off two pairs of

rubber gloves and strips down to his underpants. In a third room, he is scanned for radiation. If he gets the all clear, he is given a new uniform and underwear. The process is repeated again after his second 90-minute shift of the day.

"It is so hot there at the moment, we have to take lots of breaks, so I don't think this will be done by January," he says, referring to Tepco's self-imposed deadline for stabilising the plant. "That said I have seen signs of progress, like the treatment of contaminated water."

He is part of the team of 25 men removing and packing 23,000 firefighters' uniforms dumped near reactors No 1, 2, 3 and 4 in the first chaotic days of the crisis, when three of the plant's six reactors suffered core meltdowns. One group retrieves the uniforms, which he collects by truck and drops off for another crew to sort and pack before they are taken away for disposal.

"We don't have any contact with the Tepco engineers or technicians," he says. "My company is about six places down the pecking order."

None of the men the Guardian spoke to was confident that Tepco would meet its deadline of January to bring the reactors to a safe state, known as cold shutdown.

In April, Tepco said it would reduce radiation leaks by this month and achieve cold shutdown by January. But that timetable is expected to be revised when the utility company releases its latest roadmap on Tuesday.

The prime minister, Naoto Kan, said this week that it may be a decade before work can even begin on decommissioning the reactors.

In the aftermath of the 11 March disaster, Tepco called on major construction and maintenance companies to help. Those firms in turn hired workers from a sprawling network of 600 contractors of varying expertise and reputation.

For the time being Iwaki-Yumoto will comprise three disparate communities – about 30,000 locals, 2,000 plant workers and 1,000 people evacuated from towns and villages near Fukushima Daiichi.

The presence of so many contractors, and the sheer number of men, has led to fears that not all are observing health and safety regulations.

One restaurateur complained of workers returning in the evenings still wearing their uniforms, even down to the boots they wear inside the plant's grounds.

Tourism to the town, with its hot springs and mountain views, has dried up since the nuclear accident.

"There's not much exchange between the workers and local people," says Katsue Takahashi, an Iwaki city official.

"The inn owners are pleased to be fully booked for months ahead, but they are beginning to worry about how long this will go on. With the evacuees here, too, no one wants to come here for a holiday."

Toshiyuki Sasaki, an employee at a construction firm in Hokkaido, is one of the better-paid contract workers who have made Iwaki-Yumoto their temporary home.

He is earning twice his monthly salary of 350,000 yen clearing debris from in front of the No 3 reactor, preparing it for the arrival of a 700-tonne crane that will erect a huge steel shroud over the unit to prevent further radiation leaks.

"I'm not allowed inside the reactor itself, and I work for just one or two hours a day," says Sasaki as he drinks a cold beer at a local restaurant. "If my reading reaches 40mSv for the a year, I have to leave for good."

Sasaki, like other machinery operators, spends his shift inside crane and digger cabins, the only way they can clear dangerously radioactive debris.

He has helped build nuclear power plants, but never helped rescued one from catastrophe. Yet he says he will work at Fukushima for as long as his radiation readings permit.

"We are very careful," he says. "If my dosimeter hits a certain level during a single shift, I have to get out. But that hasn't happened yet."

Not all of the firm's staff share his optimism. About half the company's employees have refused to work at the plant at the pleading of their families.

All of the men who spoke to the Guardian said they believed the most immediate threat to their health came not from radiation but from hours spent wrapped in masks, goggles and protective suits sealed tight with tape at the ankles, wrists and neck. "Radiation doesn't bother me, but I am worried about falling ill because of the heat," says a 34-year-old man from Osaka who declined to give his name. "It is unbelievably hot inside those suits. I know of several people who have been taken ill on the job."

The food, meanwhile, has improved since the early days of the crisis, when Tepco and the government were criticised for not providing workers with enough to eat and drink. Lunch is usually a boil-in-the-bag curry and rice, bottled water and tea, jelly-like vitamin supplements sucked from a tube and packets of sweets.

"But there is not enough room to get your head down for an hour during breaks," says Rune, who travelled to Fukushima from the south-western island of Kyushu, about 600

miles away. "That said, there are more toilets and drinks and more space for relaxing."

When the Fukushima crisis is finally over, accolades will deservedly go to the Tepco engineers, soldiers and emergency workers who battled serious radiation leaks and exploding reactor buildings in the days after the tsunami.

But Rune expects there will be little praise, at least in public, for the men who cleaned up the devastation the waves left in their wake.

"People like me came here partly out of a sense of duty, but mainly to make more money," he says. "Some came because they were unemployed. And others are here because they have never been able to hold down a regular job. Until now, no one has ever wanted to give them a chance."

Indonesian volcano erupts

Thousands of residents evacuated from slopes of Mount Lokon in Sulawesi province

guardian.co.uk, Friday 15 July 2011 07.37 BST
http://www.guardian.co.uk/world/2011/jul/1...-volcano-erupts

Mount Lokon in central Indonesia has erupted three times, starting forest fires and causing thousands of people to be evacuated Link to this video

A volcano in central Indonesia has sent thousands of residents fleeing from their homes as it spit lava and ash high into the air. One woman died of a heart attack, but no other casualties were reported.

Mount Lokon, located in northern Sulawesi province, unleashed its first powerful eruption at 10:46pm on Thursday, said Brian Rulrone, a disaster management agency official. That eruption was followed by a second just after midnight and a third at 1:10am on Friday.

Lava cascaded from the mouth of the crater, triggering forest fires along its western slope, according to Ferry Rusmawan, an official at the nearest monitoring post, who said activity remained high and another eruption appeared imminent.

The 1,750m (5,741ft) mountain continued to rumble late on Friday morning.

Soldiers and police helped rescuers evacuate residents living along the mountain's fertile slopes, said Jimmy Eman, the acting mayor in the nearby town of Tomohon. He said the only victim so far was the 56-year-old woman who died of a heart attack.

More than 6,000 people were crammed into schools, churches and other temporary

shelters. Authorities said 27,000 others living within two miles (3.5km) of the crater also would be moved.

"This is the largest eruption I've ever experienced," said Nelson Uada, who was among those evacuated overnight. "It was very scary. Glowing lava flowed like flames in the darkness and it sounded like we were in a war."

Flights to the nearest international airport in Manado, the provincial capital, were not disrupted, said Lucky Podaag, an airport spokesman.

Indonesia's vast archipelago of 240 million people is prone to earthquakes and volcanoes because it sits along the Pacific Ring of Fire, a horseshoe-shaped string of faults that lines the Pacific Ocean.

Mount Lokon, which has been on high alert for nearly a week, is one of the country's 129 active volcanos. Its last major eruption in 1991 killed a Swiss hiker and forced thousands of people to flee their homes.

TheUnhivedMind - July 15, 2011 10:34 PM (GMT)

"Gasland"

Will the boom in natural gas drilling contaminate America's water supply?

Week of 3.26.10
http://www.pbs.org/now/shows/613/index.html

In the debate over energy resources, natural gas is often considered a "lesser-of-evils". While it does release some greenhouse gases, natural gas burns cleaner than coal and oil, and is in plentiful supply—parts of the U.S. sit above some of the largest natural gas reserves on Earth. But a new boom in natural gas drilling, a process called "fracking", raises concerns about health and environmental risks.

This week, NOW talks with filmmaker Josh Fox about "Gasland", his Sundance award-winning documentary on the surprising consequences of natural gas drilling. Fox's film—inspired when the gas company came to his hometown—alleges chronic illness, animal-killing toxic waste, disastrous explosions, and regulatory missteps.

1,000-pound whale, second found this week in Indian River County, to be part of study

By James Kirley
http://www.tcpalm.com/news/2011/jul/09/100...n-river/?Posted July 9, 2011 at 6:10 p.m., updated July 9, 2011 at 6:48 p.m.

INDIAN RIVER COUNTY — A half-ton pygmy sperm whale found dead late Friday on the beach near Bermuda Bay on State Road A1A by a visiting Texas couple will be studied to determine why these deep ocean marine mammals are swimming to land and dying.

Scientists want to know whether a heart disease similar to one that affects humans is the cause, said Steve McCulloch, manager of the Marine Mammal Research and Conservation Program at Florida Atlantic University's Harbor Branch Oceanographic Institute in Fort Pierce.

The whale was the second in three days to be found stranded on Indian River County beaches and the eighth this week to be found beached between North Carolina and the Florida Keys, McCulloch said.

"The last time we had this number of strandings in this amount of time was in 1998," he added.

Then, as now, scientists are unsure why the animals left their native open ocean environment to strand themselves on beaches. McCulloch said DNA analysis will determine if the whales were related to one another, possibly members of the same pod.

Blubber from the animals also will be tested to determine the presence of any natural or

manmade toxins.

McCulloch said stranded whales often show signs of a heart muscle disease called cardiomyopathy, which also afflicts humans. It lessens the heart's ability to pump blood and is thought to be inherited.

McCulloch said Harbor Branch staff veterinarian Juli Goldstein and Greg Bossart, formerly of Harbor Branch and now chief veterinary officer at the Georgia Aquarium, are studying cardiomyopathy in whales under a grant by the National Marine Fisheries Service.

The work done by Harbor Branch's Marine Mammal Research and Conservation Program is largely funded through the "Save Florida's Whales" specialty motor vehicle license plate, McCulloch said.

He asked anyone finding whales, sea turtles, birds or other marine animals in distress to phone 1-888-404-FWCC.

View Full Version: Missouri River floodwaters taking more farmland

Title: Missouri River floodwaters taking more farmland

TheUnhivedMind - July 15, 2011 10:16 PM (GMT)

Missouri River floodwaters taking more farmland

KANSAS CITY, Mo | Wed Jul 13, 2011 5:48pm EDT
http://www.reuters.com/article/2011/07/13/...E76C70P20110713

(Reuters) - The swollen Missouri River was swamping more farmland in Missouri on Wednesday as federal officials began to prepare for a gradual reduction in water releases from a key dam starting later in July.

Residents from Montana through Missouri have built flood barriers and evacuated homes for more than a thousand miles over the last two months as melting snow and heavy rains overwhelmed six reservoirs on the Upper Missouri River.

Federal officials have released water from the dams at double previous record rates, straining levees through the North and South Dakota capitals down along the borders of Nebraska, Iowa and Kansas and across Missouri.

Some of the latest breaches were in Carroll County, Missouri, about 60 miles east of Kansas City where some barriers have been overtopped by floodwaters, threatening roads and smaller communities.

Earlier on Wednesday, more than 12 square miles of farmland remained under water in Carroll County, due to a primary levee breach along the Missouri River on Monday, said Tyler Beuchwakk, a firefighter in Carrollton, the county seat.

Officials were concerned flooding could widen considerably but it seemed to be under control Wednesday morning and only a handful of homes had been impacted by the flooding, he said.

"We have a handle on it, knock on wood," Beuchwakk said.

U.S. Highway 65 in the area was down to one lane due to high water. Federal officials and the Missouri transportation department had noted the road typically floods for broad stretches when one of the area levees is breached.

The U.S. Army Corps of Engineers has begun to reduce water releases gradually from five of its six dams in Montana through South Dakota. It plans to begin reducing water releases from the sixth dam at Gavins Point on July 30.

Gavins Point is a key dam to focus on for residents living downriver because the Missouri flows freely from there until it reaches the Mississippi River near St. Louis.

The water levels were raised slowly and must be drawn back slowly to allow levees to dry out gradually. The saturated levees could collapse if water levels drop too quickly.

The Corps plans to pull back Gavins Point releases to 155,000 cubic feet per second from the current 160,000 cubic feet per second on July 30 and July 31. It plans to release 150,000 cubic feet per second for the first five days of August.

Those figures are still more than double the previous record release rate from Gavins Point Dam of 70,000 cubic feet per second and the Corps expects releases to remain high for the rest of August.

The Missouri River has subsided enough to allow the Cooper Nuclear Power Station near Brownville, Nebraska, to take itself off the unusual event list.

Title: State Fracking Rules Could Allow Drilling Near New

TheUnhivedMind - July 15, 2011 10:15 PM (GMT)

State Fracking Rules Could Allow Drilling Near New York City Water Supply Tunnels

by Nicholas Kusnetz
ProPublica, July 14, 2011, 1:04 p.m.
http://www.propublica.org/article/state-fr...mpaign=fracking

The latest draft of guidelines for hydraulic fracturing in New York could open the door to drilling within 1,000 feet of aging underground tunnels that carry water to New York City —a far cry from the seven-mile buffer once sought by city officials.

The draft environmental impact statement, released last week by state officials, is a crucial step toward allowing high-volume hydraulic fracturing, or fracking, in New York. The gas drilling technique was put on hold three years ago so the state could assess any environmental effects of the practice.

If the proposal is adopted in coming months, the state would allow drilling near aqueducts but would require a site-specific environmental review for any application to drill within 1,000 feet of the water supply infrastructure.

That's not enough to protect New York City's water, said Kate Sinding, a senior attorney with the Natural Resources Defense Council, which is based in the city.

"There needs to be a buffer area in which there's no drilling whatsoever," Sinding said. "Just having elevated review doesn't cut it."

City spokesman Farrell Sklerov wouldn't say whether the city's position on the buffer zone had changed, only that officials are updating their recommendations. When the state advanced a similar proposal two years ago, city officials said it could expose tunnels to damage and allow explosive gases and pollutants to leak into the water.

State spokeswoman Emily DeSantis said a separate proposal to prohibit drilling in the New York City watershed was enough to address the city's concerns about threats to the water supply.

John Conrad, a spokesman for the Independent Oil and Gas Association of New York, an industry group, said the guidelines' provision for drilling near infrastructure was adequate to ensure safety. "It seems to be more than would be necessary to be protective," he said.

At the center of the debate is a system of tunnels constructed in the mid-20th century that carries 1.2 billion gallons of water a day from upstate reservoirs to New York City and nearby counties. The network is already fragile—tens of millions of gallons of water leak out each day. One repair project is expected to cost more than $1 billion.

In comments on a previous draft of the state fracking guidelines, the city said brittle rock surrounds many of the tunnels. Drilling nearby could shift the earth, exerting pressure on tunnel walls that they weren't designed to withstand. Natural fractures extend as far as seven miles out and 6,000 feet down through the earth; gases and fluids already have a tendency to migrate through those fractures and toward the aqueducts, according to the city.

These geologic features, together with drilling errors like the ones that have contaminated water wells in Pennsylvania, "could result in significant surface and subsurface contamination," the city wrote.

Though state environmental experts have concluded that gas, natural fluids and fracking fluids—a mixture of water, sand and chemicals used to crack open the earth—would not migrate beyond the targeted rock, city environmental officials have argued there isn't enough evidence to prove this couldn't happen. This debate is at the center of the disagreement.

The city and state use a similar 1,000-foot zone to govern the drilling of geothermal wells near the infrastructure. The state has said this policy should apply to gas wells, too, because fracking occurs thousands of feet below the tunnels, which would isolate any effects. The city, however, has expressed concern that the pressure exerted by fracking could alter pre-existing faults and damage the tunnels.

Moreover, city officials have said there are areas where the Marcellus Shale, the zone of rock the drillers are targeting, is in direct contact with the tunnels. The shale is deeper to the west and south but nears the surface in parts of New York.

In addition to banning drilling in the New York City and Syracuse watersheds—both of which provide high-quality, unfiltered water—the state has proposed setbacks of varying distances from these watersheds and other sensitive areas where drilling would

be prohibited.

Drillers who want to sink a well within 1,000 feet of the aqueducts would need to conduct a study to identify whether drilling poses significant adverse environmental effects. If any potential effects are identified, the driller would need to initiate a full environmental impact study before drilling could be approved. The state has said it would not approve drilling unless the city is satisfied, but the state would hold ultimate authority over whether drilling would proceed.

Sinding worries that the layers of protection guaranteed on paper won't get much use in practice. A similar process has existed for conventional drilling in sensitive areas for more than two decades, yet the state has never required the full review, she pointed out.

The 60-day public comment period on the state's proposals is scheduled to start in August, after which officials will issue final guidelines, a process unlikely to be completed this year. Drilling cannot begin until the process is complete.

EcoAlert: A dozen massive volcanoes reaching nearly 10,000 feet above the ocean floor found near Antarctica

July 13, 2011
http://www.dailygalaxy.com/my_weblog/2011/...ave-been-f.html

A chain of a dozen undersea volcanoes some reaching nearly 10,000 feet above the ocean floor , and several of them active, have been near Antarctica, south of the South Sandwich Islands — desolate, ice-covered volcanoes that rise above the southern Atlantic Ocean about halfway between South America and South Africa which erupted as recently as 2008. It was the first such discovery in that region.

"That's a big volcano. That's a very big volcano. If that was on land it would be quite remarkable," said Philip Leat, a volcanologist with the British Antarctic Survey who led a seafloor mapping expedition to the region in 2007 and 2010. "We knew there were other volcanoes in the area, but we didn't go trying to find volcanoes," Leat told OurAmazingPlanet. "We just went because there was a big blank area on the map and we had no idea what was there; we just wanted to fill in the seafloor."

"So it's very exciting," he said. "You go along and suddenly you see the bottom start to rise up underneath you, and you don't know how shallow it's going to get."

At one point, in the dead of night, the team encountered a volcano so large it looked as though the RRS James Clark Ross, the team's research vessel, might actually crash into the hidden summit. "It was quite frightening, actually," Leat said. The onboard instruments revealed that some of the peaks rise within 160 feet of the ocean's surface.

The team mapped an area about 100 miles wide and nearly the length of Britain. The missing parts of the image are where islands blocked the mapping sonar.

Though the peaks are largely invisible without the aid of 3-D mapping technology, Leat said their conelike silhouette is a dead giveaway. "There's no other way of getting that shape on the seafloor," he said. In addition, the researchers dredged up rocky material from several peaks and found it rife with volcanic ash, lumps of pumice and black lava.

The find backed up reports from a ship that visited the area in 1962, which indicated a hidden volcano had erupted in the region.

View Full Version: Dawn craft to circle giant asteroid in first of

Title: Dawn craft to circle giant asteroid in first of
Description: *double mission encounter*

TheUnhivedMind - July 15, 2011 03:19 PM (GMT)

Dawn craft to circle giant asteroid in first of double-mission encounter

After four years sailing through space, the Dawn spacecraft was expected to slip into orbit late Friday around a giant asteroid to begin a year-long investigation into the origins of the solar system.

2:16PM BST 15 Jul 2011
http://www.telegraph.co.uk/science/space/8...-encounter.html

It is the first of two scheduled tour stops for the NASA probe that almost never made it to the launch pad.

Dawn will spend the next several weeks spiralling ever closer to the surface of Vesta, a dry and rocky asteroid about the length of Arizona that's thought to be the source of numerous meteorites found on Earth.

Scientists are eagerly awaiting the first close-up shots of Vesta, expected next month. Until now, it has only been photographed from afar.

Residing in a vast field of rubble between Mars and Jupiter, asteroids are like the Peter Pans of the solar system that never quite grew into full-fledged planets. That they remain frozen in time is a boon for researchers attempting to reconstruct how Earth and the other planets formed.

Because of its stunted growth, Vesta holds "a record of the earliest history of the solar system," said the mission's lead scientist Christopher Russell of the University of California, Los Angeles.

After spending a year at Vesta, Dawn will cruise on to an even bigger asteroid, Ceres.

Vesta and Ceres are not your garden-variety asteroids; if the asteroid belt were a boxing ring, they would be the heavyweights in a sea of lightweights.

Past spacecraft have zipped by, circled around and even landed on much smaller asteroids. Dawn will be the first to orbit two asteroids on the same mission, a feat that is possible because of Dawn's futuristic ion propulsion engines, which allow for gentle yet constant acceleration. Once the stuff of science fiction, ion propulsion, which has been tested in space over the years, is far more efficient than conventional rocket fuel used by the majority of spacecraft.

Circling an extraterrestrial body is usually a risky, nail-biting business. A speeding spacecraft often has to fire its engines to slow down and be captured into orbit. One wrong move and it can overshoot its target.

In Dawn's case, it journeyed slowly on purpose so that it could line up with Vesta's path around the sun. Dawn was approaching the asteroid at 60mph, and engineers expected it to enter orbit late on Friday.

Because Dawn's antenna was pointed away from Earth, actual confirmation of the capture would not be possible until after the weekend when it's programmed to re-establish contact.

If a cosmic ray or other unforeseen occurrence interrupts Dawn's flight, engineers said they can still get it back on track.

The spacecraft will begin surveying Vesta next month from 1,700 miles high and will get as close as 110 miles above the surface. Besides a camera, it carries a spectrometer to map minerals, and a gamma ray and neutron detector to measure the chemical composition of the surface.

Of particular interest is a massive crater in the South Pole caused by an ancient collision that hurled chunks of debris into space. Some fragments fell to Earth as meteorites. It's estimated that 1 out of every 20 meteorites found on our planet came from Vesta.

Title: RAIN TODAY COULD LAST FOR 40 DAYS

TheUnhivedMind - July 15, 2011 01:49 AM (GMT)

RAIN TODAY COULD LAST FOR 40 DAYS

Legend says that showers today, St Swithin's Day, mean 40 days of rain to come

Friday July 15,2011
http://www.express.co.uk/posts/view/258914...ast-for-40-days

BRITAIN could be heading for a washout summer if ancient folklore is to be believed.

Legend says that showers today, St Swithin's Day, mean 40 days of rain to come.

And with downpours predicted for parts of the UK this afternoon, experts expect wet times ahead.

Forecaster Brian Gaze of The Weather Outlook said: "There will be showers or longer outbreaks of rain and there may well be some substance to the legend this year.

"Although I don't expect 40 days of non-stop rain, it's downhill from Friday onwards."

Low pressure will push wet and windy weather across Britain from the Atlantic, with temperatures well below the mid-July average, while cold air from the Arctic could bring a dusting of snow to the Scottish highlands.

The showery weather may continue into August, although summer will return, a welcome relief for central England which had its coldest June since 1991.

View Full Version: EARTHQUAKE HITS ENGLISH CHANNEL

Title: EARTHQUAKE HITS ENGLISH CHANNEL

TheUnhivedMind - July 14, 2011 11:56 AM (GMT)

Quake 'like big lorry' hits Channel

14 July 2011
http://uk.news.yahoo.com/3-9-earthquake-hi...-094815785.html

An earthquake with a magnitude of 3.9 has struck in the middle of the English Channel, the British Geological Survey (BGS) has said.

Residents in parts of West Sussex reported buildings shaking for a few seconds but no injuries or damage has been reported.

The quake struck at 7.59am, had a depth of 10km and its epicentre was around 85km south-east of Portsmouth, Hampshire, according to the BGS.

It was the largest earthquake in the area for almost 300 years. One worker said it felt like a "big lorry had gone by in a hurry".

Hampshire Police, Sussex Police, Solent Coastguard, Hampshire Fire and Rescue Service and West Sussex Fire and Rescue Service said they had not been called to incidents related to it.

David Kerridge, from the BGS, said: "This is the largest earthquake in this area since a magnitude 4.5 event in 1734. Historically, there have been two other significant events nearby - a magnitude 5.0 earthquake in 1878 and a magnitude 4.3 earthquake in 1750.

"In the UK, we experience a earthquake of this magnitude approximately every two years."

Brian Baker, data manager at the Sussex Safer Roads Partnership, felt the earthquake

in his office on the coast in Shoreham, near Brighton.

He said: "The office wobbled slightly, the building shook, monitors on the table rattled and the roof creaked a bit. It lasted about two to three seconds. There was no damage as far as we can see.

"It felt as if a big lorry had gone by in a hurry, except we don't have lorries go through here."

The quake struck at 7.59am, had a depth of 10km and its epicentre was around 85km south-east of Portsmouth, Hampshire, according to the BGS.

Over the years in watching quakes all over the world, I've watched with interest in how many of these occur at a depth of 10 km. No doubt in my mind these are induced.

TheUnhivedMind - July 14, 2011 03:02 AM (GMT)

Wildfire at ex-nuclear test area in Nevada continues

2:50 AM, Oct. 7, 2011
http://www.rgj.com/article/20110709/NEWS07...evada-continues

LAS VEGAS — A wildfire at the government's former nuclear testing area in southern Nevada poses no threat of kicking up radiation, federal officials said Saturday.

National Nuclear Security Administration spokeswoman Kelly Snyder said the lightning-caused blaze was not burning near any site where 100 above-ground tests left radiation in the soil.

"We have all the locations mapped and know where the contaminated areas are and this fire is not burning near them," she told the Associated Press. "It's further than two miles from the nearest impacted soils."

More than 900 other tests were conducted between 1951 and 1992 at the former Nevada Test Site, about 65 miles northwest of Las Vegas, but the fire would not affect other sites because the tests took place underground, she said.

"Our underground range starts from 90 feet down and obviously fire won't impact something that far below ground," she said, adding officials were keeping an eye on radiation levels as a precaution.

No injuries were reported, and no structures were threatened at what now is called the Nevada National Security Site.

Federal officials were unable Saturday to provide any updated figures for the blaze, which was 60 percent contained after burning about 5 square miles Friday night.

But Snyder said ground and air crews were still trying to contain the blaze Saturday and there was no estimated containment time. The fire was burning brush as well as pinon-juniper woodlands.

“This is an active fire. We have a variety of aircraft dropping water on the fire,” she said.

A separate 2-square-mile fire and another smaller blaze have been contained.

The fires were sparked by lightning Monday in a remote restricted area east of Beatty.

Title: Monsanto Now Owns Blackwater (Xe)
Description: *[KNIGHT OF MALTA MONSANTO AND XE]*

craig-oxley - October 15, 2010 05:36 PM (GMT)

Monsanto Now Owns Blackwater (Xe)

October 14, 2010 Military, Security 1 Comment
http://www.darkgovernment.com/news/monsant...-blackwater-xe/

A report by Jeremy Scahill in The Nation (Blackwater's Black Ops, 9/15/2010) revealed that the largest mercenary army in the world, Blackwater (now called Xe Services) clandestine intelligence services was sold to the multinational Monsanto. Blackwater was renamed in 2009 after becoming famous in the world with numerous reports of abuses in Iraq, including massacres of civilians. It remains the largest private contractor of the U.S. Department of State "security services," that practices state terrorism by giving the government the opportunity to deny it.

Many military and former CIA officers work for Blackwater or related companies created to divert attention from their bad reputation and make more profit selling their nefarious services-ranging from information and intelligence to infiltration, political lobbying and paramilitary training – for other governments, banks and multinational corporations. According to Scahill, business with multinationals, like Monsanto, Chevron, and financial giants such as Barclays and Deutsche Bank, are channeled through two companies owned by Erik Prince, owner of Blackwater: Total Intelligence Solutions and Terrorism Research Center. These officers and directors share Blackwater.

One of them, Cofer Black, known for his brutality as one of the directors of the CIA, was the one who made contact with Monsanto in 2008 as director of Total Intelligence, entering into the contract with the company to spy on and infiltrate organizations of animal rights activists, anti-GM and other dirty activities of the biotech giant.

Contacted by Scahill, the Monsanto executive Kevin Wilson declined to comment, but later confirmed to The Nation that they had hired Total Intelligence in 2008 and 2009,

according to Monsanto only to

keep track of “public disclosure” of its opponents. He also said that Total Intelligence was a “totally separate entity from Blackwater.”

However, Scahill has copies of emails from Cofer Black after the meeting with Wilson for Monsanto, where he explains to other former CIA agents, using their Blackwater e-mails, that the discussion with Wilson was that Total Intelligence had become “Monsanto’s intelligence arm,” spying on activists and other actions, including “our people to legally integrate these groups.” Total Intelligence Monsanto paid $ 127,000 in 2008 and $ 105,000 in 2009.

No wonder that a company engaged in the “science of death” as Monsanto, which has been dedicated from the outset to produce toxic poisons spilling from Agent Orange to PCBs (polychlorinated biphenyls), pesticides, hormones and genetically modified seeds, is associated with another company of thugs.

Almost simultaneously with the publication of this article in The Nation, the Via Campesina reported the purchase of 500,000 shares of Monsanto, for more than $23 million by the Bill and Melinda Gates Foundation, which with this action completed the outing of the mask of “philanthropy.” Another association that is not surprising.

It is a marriage between the two most brutal monopolies in the history of industrialism: Bill Gates controls more than 90 percent of the market share of proprietary computing and Monsanto about 90 percent of the global transgenic seed market and most global commercial seed. There does not exist in any other industrial sector monopolies so vast, whose very existence is a negation of the vaunted principle of “market competition” of capitalism. Both Gates and Monsanto are very aggressive in defending their ill-gotten monopolies.

Although Bill Gates might try to say that the Foundation is not linked to his business, all it proves is the opposite: most of their donations end up favoring the commercial investments of the tycoon, not really “donating” anything, but instead of paying taxes to the state coffers, he invests his profits in where it is favorable to him economically, including propaganda from their supposed good intentions. On the contrary, their “donations” finance projects as destructive as geoengineering or replacement of natural community medicines for high-tech patented medicines in the poorest areas of the world. What a coincidence, former Secretary of Health Julio Frenk and Ernesto Zedillo are advisers of the Foundation.

Like Monsanto, Gates is also engaged in trying to destroy rural farming worldwide, mainly through the “Alliance for a Green Revolution in Africa” (AGRA). It works as a Trojan horse to deprive poor African farmers of their traditional seeds, replacing them with the seeds of their companies first, finally by genetically modified (GM). To this end,

the Foundation hired Robert Horsch in 2006, the director of Monsanto. Now Gates, airing major profits, went straight to the source.

Blackwater, Monsanto and Gates are three sides of the same figure: the war machine on the planet and most people who inhabit it, are peasants, indigenous communities, people who want to share information and knowledge or any other who does not want to be in the aegis of profit and the destructiveness of capitalism.

craig-oxley - October 15, 2010 05:37 PM (GMT)

Please remember that it was a Knight of Malta by the name of John Francis Queeny who created Monsanto. We've always known the connection of Blackwater to the Knights of Malta such as Blackwater's leader Erik Prince being a member of the crusading order.

treadingserpents - October 17, 2010 03:58 AM (GMT)

In 1981, Tim LaHaye was the founder of a highly secretive conservative think tank called the **Council for National Policy** dedicated to turning the nation to the right. One of the founding members was named Edgar Prince, father of **ERIK PRINCE**, the secretive founder of the **BLACKWATER** mercenaries:

"But **Erik Prince's** philanthropy has certainly not been limited to Catholic causes. The Prince family was deeply involved in the secretive **Council for National Policy**, described by the New York Times as "a little-known club of a few hundred of the most powerful conservatives in the country [which has] met behind closed doors at undisclosed locations for a confidential conference" three times a year "to strategize about how to turn the country to the right." The Council was started in 1981 by the Rev. Tim LaHaye, one of the founders of the modern right-wing Christian movement in the United States and author of the apocalyptic Left Behind novels."' The idea was to build a Christian conservative alternative to the Rockefeller Council on Foreign Relations, which LaHaye considered too liberal. CNP membership is kept secret, and members are instructed that 'The media should not know when or where we meet or who takes part in our programs, before or after a meeting.'" (Scahill, Blackwater: The Rise of the World's Most Powerful Mercenary Army, p. 16).

"Other notable members and supporters in recent years have included Jeffrey Bell, Jack Kemp, Edwin Meese, Richard Allen, and Tommy Thompson. The family of Erik Prince, founder of the controversial private security company Blackwater Worldwide, has also been closely associated with the council. Erik's father Edgar Prince was a

longtime board member before his death in 1995; Elsa Prince Broekhuizen, Erik's mother, served as CNP president for several years and was a board member as of 2006; and Erik Prince's (now-defunct) Freiheit Foundation donated money to the group.18 "

http://www.rightweb.irc-online.org/profile...National_Policy

Ed Prince - CNP Vice-President (1988); Executive Committee (1994). In 1997, helped to provide funding for a new headquarters for the Family Research Council in Washington, D.C.

Elsa Prince - CNP Board of Governors (1996). Family Research Council Board of Directors. Focus on the Family Board of Directors

http://watch.pair.com/database2.html

"**Prince**, who converted to **Roman Catholicism** from the Calvinist Dutch Reform Church in 1992,[35] supports rightist Christian groups via the Edgar and Elsa Prince Foundation, where he is vice president.[36] In fiscal 2006, the nonprofit foundation contributed nearly $8 million in grants to predominantly, if not exclusively, socially conservative groups, including $510,000 to the Family Research Council; $500,000 to the international proselytizing group Haggai Institute; $1,000,000 to the Alliance Defense Fund; and more than $1 million to the Christian Calvin College in Michigan."

craig-oxley - September 13, 2008 04:48 PM (GMT)

CONTRIVED SHORTAGES AND THE NEW REALITY

A Psychological and Economic War on the People is Being Waged

http://www.texemarrs.com/contrived_shortages.htm

"Though hand join in hand, the wicked shall not be unpunished: but the seed of the righteous shall be delivered." —
Proverbs 11:21

Never before have the American people been in such terrible danger as they are now. On every side, the elite have created fire-breathing dragons that are steadily advancing and threatening to destroy us.

First, there is the hocus-pocus, contrived energy

The planet is awash in oil, but the elite have fabricated lies of "scarcity" to drive prices skyward to astronomical levels.

crisis. The establishment story is that we are fast running out of oil. The earth's petroleum stores are almost depleted—supplies are peaking and now economic and human tragedy is at our doorstep. Predictably, the price of gasoline has rocketed into the stratosphere, leaving the ordinary working public terribly depleted of income and financially up against the wall.

Are we really running out of oil? No! Of course not. In fact, the planet is awash with the gooey black stuff. Earth is truly Planet Petroleum. Recent drilling successes in Brazilian waters, in the Gulf of Mexico, in the Bakken oil region of North and South Dakota, in Canada and Alaska, and around the globe prove that mankind will never run out of oil. Never!—Never!—Never!

The unscientific theories of "fossil" fuel depletion and hoax of "Peak Oil" are absurd

nonsense, lies designed by oil corporation hucksters and their paid shills to justify their highway robbery of the American and world consumer.

And More Contrived Crises

The contrived crises of "Global Warming" and "Climate Change" are similar scams. The entire environmentalist movement was founded—and funded—by the huge multinational oil corporations: Exxon, Mobil, Shell, etc. They want the Mother Earth crazies to act-up. It gives the greedy oil potentates an excuse to shelve most of the world's oil that is discovered and cap-off tens of thousands of producing oil wells. It also provides the elite an excuse for their failure to build new gasoline refineries and pipelines.

Remember: It was President Richard Nixon, a supposedly "conservative" Republican, who created Big Brother's energy bureaucracy in Washington that today is in bed with the oil companies. It was Nixon who gave us the unconstitutional Endangered Species Act and Environmental Protection Act with their goal of taking away the citizen's private property rights. And it was during Nixon's ill-fated presidency that we had our first taste of long lines of autos waiting desperately at gas station pumps for "limited" and expensive gasoline for their tanks.

Regrettably, we now have con-artists like former Vice President Al Gore out on the hustings, pimping for the oil companies with his pretentious, undocumented and preposterous claims of "Global Warming." The Gore family—Al, Jr. and his corrupt father before him, Albert Gore, Sr.—were and are shills for Occidental Petroleum, owned by Communist/Capitalist (I know it sounds like an oxymoron, but it's the truth!) greedster, Armand Hammer. Gore's ambition is to become a billionaire and he doesn't intend to let a little thing like "truth" hold him back from achieving that aim.

Everyone Will Go Hungry

There is now also the new "scare"—the global shortage of food and the outrageous runup in the prices of commodities such as corn, wheat, rice, and other staples. Again, this is a contrived crisis designed to line the pocketbooks of corporate Mafia. Yes, the food riots by angry and hungry mobs of starving people in countries like Somalia, Ethiopia, Haiti, Bangladesh, and Indonesia are real. And the pictures of hungry emaciated children in Africa are, too. There is a food crisis—but it's an artificial crisis. The fact is, new technologies in agriculture have increased production potential 100-fold in the past quarter of a century. Like the oil situation, the planet is awash in food. Thus, while the poverty-stricken masses overseas are begging for crumbs and some shortages are beginning to rear up even in the U.S.A. and developed nations, the distribution warehouses of the agribusiness corporations are bursting at the seams with surplus grains and other foodstocks. No one, anywhere, should be going hungry.

Agribusiness corporations now own over 90% of farm capacity. To gouge consumers, they lie and contend that food is scarce. Thus, prices are escalating fast.

So, why the crisis? Look, at what has been happening on the commodity markets in Chicago and you'll find the answer. The well-fed Illuminati billionaires have bid up the "futures" prices for soybeans, wheat, rice, corn, cattle and every other product to ridiculously high levels. Now, to get their market manipulation to pay off, they must engineer global food shortages to drive prices through the roof. The fat cats are getting more and more wealthy off the misery of the hungry, fear-filled masses.

The Coming Great Thirst

Water is also an area where the rich are scamming the citizenry. There is a reason why Maurice Strong, former head of the UN's Environmental Program, owns most of the underground water reservoirs in Colorado and New Mexico, and has water interests in Canada, and why billionaires like T. Boone Pickens are investors in water supplies. Water is going to join oil and food as scarce resources so that, once again, the average person is scalped. I predict that within a few short years the price of water will escalate so much and shortages will be so severe that convenience stores won't even have bottled water to sell and restaurants will start charging customers $2, $3, or more for a small glass of H2O!

And when the water crunch comes, don't even think about watering your lawn or using scarce water supplies to grow your home garden. Satellites overhead will be monitoring backyards to catch "violators" of new water regulations that are already on the drawing boards.

Illuminist billionaires like T. Boone Pickens (left) and Maurice Strong (right) now control water rights to underground aquifers throughout the U.S.A. and Canada. Look for prices of water to go through the roof in coming years and for the media to print more absurd lies about how the world is running out of drinkable water.

Schemes to Soak the Public

In the State of Texas, they've been working on a plan to tax citizens according to the amount of rain that annually falls on a person's property. That's right, if it is a wet year and you own even a postage stamp-sized suburban home, you could get socked with a new "rain use" tax of hundreds or thousands of dollars. That'll teach you to have the audacity to build your home in a place where it rains.

Taxing for the rain that falls on a person's property is only one of countless sinister methods being cooked up by the elite to plunder individual citizens of their hard-earned income and drive the masses into abject screaming poverty.

The United Nations has a scheme to charge every person who operates a tractor, a lawn mower, auto, power tool, or any other energy-using device a "carbon tax." A punishing tax will also hit homeowners and businesses that have air conditioning systems. Meanwhile, a global pollution tax will be placed on every gallon of gas you buy for vehicles.

[/IMG]

This huge complex is the Rome, Italy headquarters of the United Nations' World Food Authority, formally known as the "Food and Agriculture Organization of the United Nations" (FAO). Its Latin motto, fiat panis, means "Let there be bread!"

The contrived food crisis gives the elite many golden opportunities to rip us off financially and consolidate their Big Brother police state control of the people.

The UN has erected a gigantic building in Europe to house its new globalist agency, the World Agriculture and Food Organization. From this gargantuan complex, bureaucrats will tell farmers in the U.S.A. and around the world what and when to plant. No one will be able to buy or sell food not approved by the global organization. This is the reason why the U.S. Department of Agriculture is demanding that every farm animal—horses, cows, sheep, goats—be microchipped and tagged and that ranchers and farmers maintain exhaustive records of the birth, death, and life of each and every animal. Soon, you will not be able to own livestock or any other farm animal without obtaining a government permit. Not even a single cow.

This is similar to what the oil industry is doing to keep mavericks and independents from drilling for and producing oil. Anyone who tries finds that they must first obtain a thousand permits from the "authorities" and face a blizzard of environmental and energy regulations. Only the multinationals—the Exxons and Mobils—are allowed to make money by bilking the public.

The New Reality

The Illuminati elite are processing and pushing humanity psychologically into a New Reality. Their goal is to force us all to accept this New Reality and to willingly enter their artificially created, new Age of Scarcity. Naturally, they, the High Priests, claim to have the solutions necessary to fix each and every crisis. If, however, we do not accept their prefabricated solutions, we will be crushed—the whole world will grind to a halt due to lack of oil, and we will all starve and thirst to death. What monstrous beasts and liars these elitist human devils are!

What You and I Can Do

I encourage you to obtain some of the resources—books, audios, and videos—we offer this month. My pivotal book, Days of Hunger, Days of Chaos, remains the classic text exposing the plot of the globalist elite and the government to control our food and bring forth panic and food chaos. My video and audio, The Coming Great Thirst (available on Tape or VHS or DVD), predicted the current squeeze and contrived crisis in water supplies, and my recent audiotapes/CDs, Planet Petroleum (available on Tape or CD) and Everyone Will Go Hungry (available on Tape or CD), provide extensive facts about our current predicament.

Please order these resources, stay informed, then go forth and educate others. Only by spreading the truth far and wide do we have any hope at all of defeating the sick, disastrous schemes of the elite and their media cohorts who are Satan's allies. With God's help, we will prevail.

craig-oxley - September 13, 2008 04:49 PM (GMT)

Leading Edge: Encounters with Scarcity

24 Jun 2008
http://urbansurvival.com/week.htm

It's not the lead story in the national news because it's not a pretty, or simple, or big enough story to report, yet I'm compelled to bring it to your attention this morning because it seems likely to be the leading edge of something that could blossom later into a much bigger problem, at least based on the recent linguistics run. I tend to watch such things carefully.

The specific story is headlined by the AP as "Scuffle breaks out in line for Wis.(consin) food vouchers" and it comes out of Milwaukee and occurred at about this time Monday morning..

The key thing to note is that:

"The food crisis in Milwaukee — and throughout the United States — is worse than many of us have realized," [Milwaukee Common Council President Willie] Hines said in a statement. "We expect long lines for free food in Third World countries; we don't expect a line of 2,500 people waiting for food vouchers at the Marcia P. Coggs Center."

For more than a year, we've been looking to this summer as the beginning of larger troubles of governance because of the ever-increasing gap between the 'haves/PTB/corpgov/sheep-with-jobs' and the 'have-nots/disenfranchised/foreclosed upon/unemployed/hungry' which seem to be increasing in numbers, if not in government

statistics, at least by anecdotal reports of tent counts at freeway underpasses and such.

To be sure, the MSM is not completely ignoring the changing terms of the social compact that ties the nation together. Another AP story, this one headlined "L.A. seeing more people living out of their cars" as reported on the International Herald Tribune site, certainly demonstrates that well enough.

But the actual mechanics and the scale of human suffering only comes into focus if you have the gumption to go looking for it, and then, once found, taking the time to weave things together into a coherent picture.

A typical "dot" worth connecting - but which will never make 'prime time' is the headline in the Connecticut Courant which advises us that "Connecticut Marshals Make Millions Serving Foreclosure Papers." Some disturbing points:

"The marshals serve papers on banking institutions, homeowners and town clerk offices, pocketing a state-established fee that typically ranges from $350 to $400 per service."

Six state marshals grossed more than $500,000 last year, including four who earned nearly all of their money serving foreclosure notices for..."

And the story continues from there.

Again, not making the top of the MSM news, we read in Silicon Valley's "The Merc" as locals call it, that "Food banks see huge increase in clients". A relevant quote:

For some, having their kids home for the summer has been the breaking point. Families used to having their children receive subsidized breakfasts and lunches at school are now scrambling to provide the extra meals at home. It happens every summer but on top of everything else, it's worse this year."

That "everything else" they refer to is the huge squeeze on consumers who are faced with resetting home loans, soaring food costs, and increases in gasoline that in some cases have pushed American families 'over the edge'.

At some point - and linguistically it will be over summer - the snowball begins to roll as the dynamics of the social pressure begin to feed upon one another. A recent MarketWatch headline sums it up this way: "Shaky job market threatens housing recovery: Housing slump rivals deepest slowdowns in 60-plus years: Report"

Since this site is primarily about longwave economics, although lately a good dose of predictive economics, too, I want to draw your attention to the use of the term "60-plus years. The math says that would be 1948. But, housing was not collapsing in 1948 - servicemen were coming home for WWII and following that plus sign back further, there was not housing collapse to speak of in WWII itself, so what seems to be implied (after applying a little thought) is that this is the worst housing mess since the last Depression. It's just this one isn't called by its proper name yet. Doing so might spook the herd.

It is against this background that the Federal Reserve begins two days of meetings today which will likely result in no action other than a hawkishly-worded statement about the returning danger of inflation; one of those Home Simpson-like "Doh!" outcomes that errant policies bring.

Not that I'm the only one expecting this come 2:30 Wednesday when the Fed statement is due. "Fed seeking finely tuned message to ward off inflation" says and AFP report.

But the Fed's in a box. Lower interest rates might bail out some homeowners, but in case you haven't noticed, the big banks have been busy keeping their credit card rates high, ostensibly because they need to make up for the losses incurred by mountain default rates. It's a circular reference.

The banks, for their part, seem to be busily writing the new Housing Bill so that it will have maximum benefit, or at least mi0nimal damage to the banks involved in the housing mess. Outrageous reports are circulating widely on the 'net today that "Bank of America May Have Influenced Dodd-Shelby Housing Bailout Package".

Quick, look surprised, It's just one more reason that Chris Dodd is on my "People never to vote for" list, along with the growing list of powercrats, such as what's-her-name, who seem to think socialism for the rich and corporatized indentured servitude for the rest of us is the Natural Order of the Universe. If it wasn't for the Constitution, I fear what conditions would become.

By the way, that brings up an interesting question - if you have a legal mind or practice. You know that the President (the office, not the guy in office) has been using Executive Orders for years to create laws without the involvement of Congress, as required by the Constitution.

But, I didn't see until yesterday when I happened to thumb through the State of Texas Constitution, that the only laws Texas is required to follow are only what's in the Constitution of the United States:

"Texas is a free and independent State, subject only to the Constitution of the United States, and the maintenance of our free institutions and the perpetuity of the Union depend upon the preservation of the right of local self-government, unimpaired to all the States. "

I can only assume that when a KatRita-sized event happens, that Governors trying to follow the letter of the law - which doesn't mention anything about States having to follow Executive Orders - find themselves in a showdown with the more heavily armed Central government. Or, more accurately of late, the Washington Politburo/ Politicheskoye Buro.

Remind me again, who won the Cold War?

So there you have it - the stew-of-the-day recipe that seems to be simmering over there on the back burner. Two weeks from our earthquake window, waiting for the regional power outage, the Middle East mistake to come, and all the rest of what's ahead from the linguistics, we have just witnessed an important message to the PowersThatBe delivered by hungry Americans in Milwaukee.

This one calmed down quickly. I'm not so helpful out 'next ones.' There is a message from Milwaukee.

craig-oxley - September 13, 2008 04:49 PM (GMT)

"By controlling energy, we can control nations; by controlling food, we can control individuals" -**SMOM Henry Kissinger**

How to manufacture a “global food crisis”

June 2, 2008 — Stefan Fobes
by Stefan Fobes
http://warofillusions.wordpress.com/2008/0...al-food-crisis/

Go green! Reduce your carbon footprint! Nonstop, we are permeated with this programming wherever we go. I understand the word carbon footprint is actually a real word in the dictionaries now. A lot of cash and time is devoted to this. Our loving Big Brother must really care about us. Let’s see what they’ve been doing to help us out. Over in Britain, their Parliament wishes to force people to carry “carbon cards”. The UK Daily Mail says:

Every adult should be forced to use a ‘carbon ration card’ when they pay for petrol, airline tickets or household energy, MPs say.

The influential Environmental Audit Committee says a personal carbon trading scheme is the best and fairest way of cutting Britain’s CO2 emissions without penalising the poor.

Under the scheme, everyone would be given an annual carbon allowance to use when buying oil, gas, electricity and flights.

Anyone who exceeds their entitlement would have to buy top-up credits from individuals who haven't used up their allowance. The amount paid would be driven by market forces and the deal done through a specialist company.

Forcing us to pay. You know, the thing of it is, every time there's some jerk saying we are overpopulating the planet and have to stop having so many children or accept some police state legislation, you never see them having one of their ceremonies with them crowding around a table signing their rights away to the government. What needs to be done is if you are a politician or big name person that says we have to do these things, we should put you on a special reality show where you sterilize yourself or install a cam system in your home, where everyone around the world can tune in at any time. But no, they need active reproductive status so they can pass their superior genes on, and they need their privacy so they can relax, away from our barbarian eyes…and think of new ways to love us. To death.

In America, Obama has proposed as one of the planks of his campaign what he calls a cap and trade program. What this means is explained by the sweet marketwatch.com writer here:

Under a cap-and-trade plan, companies that produce carbon dioxide and other greenhouse gases receive or buy credits that give them the right to emit a certain amount. Companies that emit less carbon than their credits allow can profit by selling any excess credits on the open market, while those that exceed their emission allowance have to make up the difference or face heavy fines.

Obama's plan would require all credits to be purchased at auction, rather than allocated by industry — a move his campaign said would ensure that all polluters pay for every ton of emissions released.

What company or government agency is going to be overseeing the selling of these carbon credits? And they are going to be sucking up energy from the power grids too, so would it, itself be in the grip of the same cap and trade cuffs that everyone else would? Knowing how things work, definitely not. Some people would call this socialism, communism, or some plan by the far center liberal rightists. Look past the boxes and see it for what it is — a desire for pure control. Simple as that.
In London and Stockholm they have a thing in place called congestion pricing where you are charged a fee for entering the city. It has a whole gamut of rules and regulations that go along with it that are almost like a part-time job. Here in New York, Michael "illegal guns, illegal guns" Bloomberg tried to get it in under the global warming banner. And failed miserably because for once the people actually lived up to the myth that you can't get anything past us. You may have noticed a pattern here. These countries issuing the same policies, or trying to, with the people who run things in business, the media, banking, world leaders, and royalty, meeting in secret and refusing

to tell the public what is going on at secretive groups such as Bilderberg and the Freemasons, shows the same central agenda being dictated by these people to world “leaders”. If the owners of the teams playing the Super Bowl met in secret before the game, you would quite rightfully believe it was fixed. The same thought process should be at work here.

And recycling. In Britain the London regional administrations are testing their toys on the people. One such thing is called a bin bug which is a penny sized microchip on the trashcan which weighs the garbage. They say they do this because they want more recycling. Sure. Putting trash out on the wrong day will earn you the title of envirocriminal and a fine. They catch these dangerous “envirocriminals” with motion-activated cams which email photos of you in the act right to the government. One London regional government spokesman had the balls to say the government makes no apologies for stressing citizens out like this while admitting you can leave trash out in the street without getting fined. Ugh.

Global warming, or as they now are being forced to call it because of all the freak blizzards, global climate change, is an on its face absurdity which I have throughly exposed in a previous article, They blinded us with pseudoscience. If global whatever its name is today is real, then why is it that Jupiter, Mars, Neptune, and icy Pluto are heating up? Hmm? Might it be that big yellow ball in the sky?
The Illuminati love to shut people down, make them suffer. Just think of whatever it is that gets you the most excited, and multiply that by a hundred. That’s pretty much it. Look at the eyes of some of the spawn here. Looks like ol’ Harry is fully demonized now that they got rid of Diana. Do any of these guys look like the hero type to you?

I hope not. Sorry to have to put you through that, all!

If the governments really cared about the environment, they would ban all pesticides which are also spermicides. They would go after Shell Oil and force them to take responsibility for choking the seas with their damn oil spills. They would stop taking unrecyclable material like plastic, computer monitors, and TVs which countain copious amounts of mercury and lead and shipping it off to China and third world countries where it gets dumped in streams and incinerated in fields staffed by workers with no protection who live nearby with their kids. And while they're at it maybe the UN would do something real about the chopping down of the 20% of our oxygen producing Amazon rainforest. These guys aren't stupid. They are all organic food fanatics with fancy air and water filtration systems in their mansions who wouldn't dare even sniff the stuff most of us scarf down daily. They are anal about protecting themselves and if the world goes to hell you can bet they got a plan to ride it out somehow. Again, it's about obedience training and control of us the "slaves".

In the stock markets, people are stampeding to buy gold. The prices have never shot this high this fast, ever. We're having insane rates of inflation. And the prices of food worldwide are going up at mach speed. What are the triggers here? War. We cannot have an Iraqi occupation which costs $12 billion a month and have stable prices at the same time. Since the dollar is the world's reserve currency, nations have to buy oil in dollars. If there is more money being printed to fund these occupations by the Federal Reserve, the government's private lender chairman'd by the man who says he will print more money to stave off inflation, then the dollar is worth less. And those pundits telling you about we need to stop borrowing from Saudi Arabia, that's misdirection there. That is only 10% of it all. Since the dollar is plummeting, it takes more and more cash to buy the same stuff and we see higher oil, food, and gold prices. But even that is only about

half of it. I knew Bush was up to something when he said we needed to go on ethanol to beat Mideast oil dependency. I was like, what the hell? He's in so deep with the oil companies he probably sweats the stuff. This is the guy who planned to get Iraq into war by flying a unmanned plane painted in UN colors in Iraq and provoking Saddam into shooting it down. Ethanol is helping tie the noose also. As University of Minnesota economists C. Ford Runge and Benjamin Senauer write up in in a Foriegn Affairs article, How Biofuels Can Save the Poor, it takes over a stunning 450 pounds of corn to make a gallon of ethanol. From Rolling Stone:

Thanks in large part to the ethanol craze, the price of beef, poultry and pork in the United States rose more than three percent during the first five months of this year. In some parts of the country, hog farmers now find it cheaper to fatten their animals on trail mix, french fries and chocolate bars. And since America provides two-thirds of all global corn exports, the impact is being felt around the world. In Mexico, tortilla prices have jumped sixty percent, leading to food riots. In Europe, butter prices have spiked forty percent, and pork prices in China are up twenty percent. By 2025, according to Runge and Senauer, rising food prices caused by the demand for ethanol and other biofuels could cause as many as 600 million more people to go hungry worldwide.

Incidentally the Irawaddy rice paddy region of Burma was one of the world's prime breadbaskets, producing 1% of the world's rice. That hurricane wiped it out. Very convenient, that. A little something from Undersecretary-General of the UN Catherine Bertini back in 2004: "Food is power! We use it to change behavior. Some may call it bribery. We do not apologize." Don't have to, sweetheart. No one would believe you if you did. For those of you who believe that those running things would not be cruel enough to deliberately starve people to control them, then just read or watch what the governor of Jefferson Parish, Louisiana had to say about FEMA's criminal conduct during the aftermath of Hurricane Katrina.

Let me give you just three quick examples. We had Wal-Mart deliver three trucks of water, trailer trucks of water. FEMA turned them back. They said we didn't need them. This was a week ago. FEMA–we had 1,000 gallons of diesel fuel on a Coast Guard vessel docked in my parish. The Coast Guard said, "Come get the fuel right away." When we got there with our trucks, they got a word. "FEMA says don't give you the fuel." Yesterday–yesterday–FEMA comes in and cuts all of our emergency communication lines. They cut them without notice. Our sheriff, Harry Lee, goes back in, he reconnects the line. He posts armed guards on our line and says, "No one is getting near these lines." Sheriff Harry Lee said that if America–American government would have responded like Wal-Mart has responded, we wouldn't be in this crisis.

The official death toll was about 2,356 as of 2006. I myself saw on the CNN scrollthingy that the government had ordered 75,000 body bags. There are many questions about this event that need answering.

Illuminati controlled corporations like Monsanto and Dow Chemical have long hungered to make their poison pill genetically modified food a permanant staple of our diets. Now they have the world in their crosshairs. Countries that were furiously against GM poison are now rushing to let it in. Europe and Asia, who have always been against it, are wanting to take it. This is one of the central reasons why the US has to stay in Iraq and Afghanistan, other than using them as Mideast beachheads for a future war with China. Initiate circumstances and events that send inflation through the roof and when the people cry out for cheap food, give em GM. And here it is playing out:

In Britain, the National Beef Association, which represents cattle farmers, issued a statement this month demanding that “all resistance” to such crops “be abandoned immediately in response to shifts in world demand for food, the growing danger of global food shortages and the prospect of declining domestic animal production.”

The chairman of the European Parliament’s agriculture committee, Neil Parish, said that as prices rise, Europeans “may be more realistic” about genetically modified crops: “Their hearts may be on the left, but their pockets are on the right.”

US using food crisis to boost bio-engineered crops headlines this Chicago Tribune story. A proposal that Bush put out for a $770 million food aid package included a $150 million setaside specifically for growing GM crops in poor countries. The UN’s World Food Program has tried to come into African countries like Zambia without consent, saying the people are hungry and need GM food. When shown the door, they said that there was not enough natural corn to give them. But tons to make ethanol for the US. The World Bank (full name World Bank Group) in its 2008 World Development Report encourages richer countries to push GM development by upping aid to poor countries that will embrace genetically modified food with open arms. This is cause for a bigtime red alert as it signifies something nasty in the works with this agenda. The World Bank is not controlled by saints. They have refused to give Burma emergency funds, despite the mayhem there. Just let em rot, basically. The World Bank is infamous for its structural adjustment programs where they give third world nations loans, with a stipulation that they must kick people off food growing land so it can be used to grow food for wealthy nations. The biotech companies are racing to get this into Africa. The Illuminazis really love Africa. There is a reason for that and it has nothing to do with skin color which I will get to in a bit. But first let’s look at the biotech big dog, Monsanto.

“Monsanto should not have to vouchsafe the safety of biotech food. Our interest is in selling as much of it as possible. Assuring its safety is the F.D.A.’s job” - Phil Angell, Monsanto’s director of corporate communications. “Playing God in the Garden” New York Times Magazine, October 25, 1998.

They engage in shadow tactics that would make the CIA proud, Employing a personal

army of spies, informants, and private investigators who infiltrate community meetings, secretly follow, photograph, and videotape farmers, store owners. They pass back info to Monsanto about farming activities so they can shake down anyone they see as weak or poor enough not to fight back. They say they go to these lengths to protect their seed patents from “pirates” who use their seeds without paying for them. One man who was unfortunate enough to get caught up in this was Percy Schmeiser, whose farm was polluted by cross-pollination of Monsanto canola seed. Even though they admitted their seed polluted his land, they still sued him and said he was illegally violating their patent. After hundreds of thousands of dollars, four appeals and ten years, Monsanto finally settled for just….$660. Six short of the magic number.

GM food is made by literally shooting gene guns with bacteria genes loaded in them into a target organism’s DNA. Also, viruses are changed which infect the organism they want to engineer with the DNA they want in it. Can you imagine eating that?!! This causes numerous proven hazards to human and animal life. Because gut bacteria can take on the bacterial genes from the food, horrible mutations can occur. Once in the target organism, the DNA codes can cause toxic chemical compounds to be produced which the body has never encountered and does not know how to deal with, causing all sorts of crazy stuff to happen. Ever seen that old Star Trek episode where that race used viruses to manipulate their DNA and mutated into horrible monsters? Yeah.

And the effects of GM food on the poor test rats, according to Dr. Arpad Pusztai who was a protein and food safety scientist who worked at Britain’s biggest food safety research lab, the Rowett Institute, went on TV and said he wouldn’t eat GM food if he had a choice, and then he and his wife who also worked there was fired, his research data confiscated, and was prohibited from talking to any of his colleagues about his work. He has since suffered two heart attacks because of this and is on medication for high blood pressure. Monsanto called Clinton to talk to Blair about him. In the words of another former Rowett scientist: “Clinton rang Blair and Blair rang (head of Rowett) James.” In one group, GM tomatoes caused necrotic lesions in 7 out of 20, in another 7 out of 40 died. GM soybeans caused low weight gain, GM soybeans with inserted herbicide genes caused allergens to form, and GM corn caused dropping of digestive ability.

Monsanto wouldn’t be able to get away with this stuff without being stopped if it wasn’t part of the agenda. Just because a person is rich doesn’t mean a free pass to the captain’s table. The heir to the Exxon Mobil fortune, HIram Royall, decided he wanted to build a hotel, so him and the city worked to take through eminent domain Wright Gore’s Western Seafood processing facility, a company making $40 million a year away. If you are not of the bloodline you are in the slum of commoners.

The Illuminati are desperate to get GM as the only food we eat because it will place us in a weakened physical condition, place us in a state of permanent dependency on them, and cut us off from our real mental abilities, which they have worked so hard to suppress over thousands of years. Look at all of the cultures they have targeted for genocide and you will see the peoples who are treasure troves of the ancient knowledge of true history, Earth energies, science, medicine, other dimensions, spirituality, the mind, and what the body really is. The Jews, with their Cabalistic tradition. The Chinese, Japanese, and other Oriental peoples. The Black African peoples who hold vast medical, spiritual, and historical knowledge so ignored by the world today. And the Caribbean and South American peoples with Santeria and Voodoo, which hold the knowledge of medicine, other dimensions, and history which they guard well. A perfect example is the Tibetan mental technique of tum-mo, where by heating their bodies with focused thought, monks can endure with ease the subzero Himalayan temperatures. Stewart Swerdlow, who worked in the secret projects for many years, says that these peoples are less controllable than people with blue eyes/ blonde hair. I'm not entirely certain about that, but one thing's for sure, they don't treat the blondes they get their hands on like pampered Aryan royalty despite how much they say they find them desirable. Read some Trance Formation of America by Cathy O'Brien. All paths to our true consciousness must be destroyed or put in a self damaging and unworkable context, from their perspective, to keep control. They wouldn't be this desperate if they weren't afraid of us. Food is power? No. We are the power. When we assert ourselves, nonviolently, and refuse to hold it all together, then they have lost, because no army can ever stand against a world united in friendship and love.

Vandals Destroy 10 Acres Of Big Island Papayas
Police Investigation Underway
Keoki Kerr KITV4 News

POSTED: 4:31 pm HST July 19, 2011
UPDATED: 2:01 pm HST July 20, 2011
http://www.kitv.com/news/28603480/detail.html

HONOLULU -- Vandals struck three farms in the Kapoho area on the Big Island between Monday and Tuesday, cutting down about 10 acres of papaya trees, according to Big Island police.

The farmers said the criminals struck three separate but adjoining papaya farms, chopping the trees down using a machete and leaving the fruits on the ground.

At J and L Papaya Farm, five of seven acres of its Rainbow and Sun Up papayas were destroyed.

"They were mostly ready to pick. We were going to pick them tomorrow. We were going to harvest them tomorrow," said farmer Lea Bernardo, whose parents own J and L Papaya Farm.

SLIDESHOW: Vandals Destroy Big Island Papaya Crops

Bernardo and the other farmers said they're still tallying the financial damage, but it will be severe.

"That farm that they cut down had really nice papaya. And we were relying on that

because we're kind of in debt a little bit. We're trying to make more money and that papaya might have helped us," Bernardo said.

A second smaller farm had its entire papaya crop -- three acres' worth -- cut down. A third farm saw two and a half acres out of its eight acres of papayas destroyed.

"It's a very sad sight. You have to feel for the growers because it is their livelihood. The trees were like stumps, they were just fallen over, cut and left," said Karen Umehara, office manager for the Hawaii Papaya Industry Association, who travelled from her Hilo office to visit the farms Tuesday.

Some farmers suspect a group of at least four people carried out the destructive raids, because they were so widespread. Some people in the farm industry theorize it's a case of environmental terrorism, perhaps carried out by people opposed to genetically modified fruits, like the papayas cut down overnight.

But Umehara, of the Hawaii Papaya Industry Association, said there are no suspects.

"It's something so random and so isolated that you'd never think it would happen to these growers," Umehara said.

In July of 2010, vandals trashed more than 8,000 papaya trees at another farm in the Kapoho area of the Big Island. There have been no arrests in that case.

The farmers called an emergency meeting Tuesday night.

They came together at the Pahoa Community Center to talk about how they can protect themselves.

"If you put enough reward out there somebody will say something. That will be the only way to find out who is behind this," said one farmer who didn't want to be identified.

"It affects everybody, farmers hotels consumers, everyone If everyone just chipped in a little bit and puts a significant amount into that reward, somebody knows something about this," he added.

Someone else suggested regular patrols similar to a neighborhood watch.

TheUnhivedMind - July 21, 2011 03:55 AM (GMT)

Remember this is one of the kings of fruit against Cancer but you can bet the GM Papaya is totally useless compared to God's creation of life. Expect Cancer from the GM poison.

The USDA “Invasive Species” Sham

July 19, 2011 by ppjg
Debbie Coffey Investigative Reporter/Journalist
http://ppjg.wordpress.com/2011/07/19/invasive-species-sham/

USDA’s APHIS assessment determined that while the plant meets the definition of a “noxious weed,” Kentucky bluegrass has not been found to cause impacts significant enough to warrant regulation at the Federal level

---

The U.S. Department of Agriculture (USDA) is the center of one of government’s biggest shams.

As a member of the National Invasive Species Council, the USDA has a mandate to “not authorize, fund, or carry out actions that it believes are likely to cause or promote the introduction or spread of invasive species in the United States or elsewhere.”

Your tax payer dollars are paying for the eradication of invasive species like stink bugs and salt cedar.

Meanwhile, more of your tax dollars are funding the vast promotion of the ultimate invasive species: genetically engineered plants and cloned animals. This includes USDA’s National Institute of Food and Agriculture (NIFA) which was formerly CSREES, Agricultural Research Service (ARS), Agricultural Marketing Service (AMS), Economic Research Service (ERS), Food Safety and Inspection Service (FSIS) and Foreign Agricultural Service (FAS).

Invasive species are any species not native to an ecosystem, and with an intentional or unintentional release, are likely to cause, or does cause, economic or environmental harm, or harm to human health.

Consider this when you see what the USDA has allowed to be field tested in the U.S.:
Human genes in barley, corn, tobacco, rice, and sugarcane
Mouse genes in corn, along with human genes
Simian immunodeficiency virus (SIV) and Hepatitis B genes in corn
Rat genes in soybeans
Fruit fly genes in potatoes
Pig genes in corn
Cow genes in tobacco
Jellyfish genes in corn and rice

What else?

In May, 2007 (Greenpeace): “WASHINGTON approved the open field trial cultivation of a genetically engineered (GE) rice that contains human proteins, defying the US rice industry’s opposition to the trial and ignoring the economic impacts that would be caused by contamination of GE-free rice…

The ‘cannibal rice’ is intended to produce drugs for alleviation of diarrhea and if contamination to rice food crops occurs, the effects could be disastrous.

Crossing human genes into rice is bad enough, but to engineer drugs into a food crop and then release it into the environment, is completely insane,” said Jeremy Tager, Agriculture Campaigner with Greenpeace International.”

Common sense should dictate that drug-producing plants should be kept in locked laboratories and not released into our environment.

In 2007, U.C. Davis and Cornell University received permits to field test experimental GE grapes inserted with Trichoderma harzianum, a fungus found in soil, anywhere in California. Other grapes were genetically altered with “CBI” or Confidential Business Information. What genes did they use that made them feel the need to hide the information from the public? And what steps did they take so the grapes weren’t eaten by birds, wildlife or people passing by? What prevented the dispersal of seed and pollen?

In 2000, GE StarLink corn, which was supposed to be used as animal feed or for industrial use (biofuel), was found in the human food supply. John Wichtrich, a top Aventis CropScience executive said that the food supply will never be rid of the new strain of corn that their company genetically engineered, and called for a change in federal regulations to allow some level of StarLink corn in human food.

In 2010, the USDA gave ArborGen permits to plant over 200,000 GE eucalyptus trees on 28 secret sites in 7 southern states. Eucalyptus trees are wildly invasive, spread into native ecosystems and displace wildlife. Additionally, the oil in these eucalyptus trees is extremely flammable. California spends millions each year to eradicate invasive eucalyptus because of the threat of wildfires.

In 2011, the USDA was sued for not doing an Environmental Impact Statement (EIS) of GE sugar beets. The USDA then implemented a “partial deregulation” of GE sugar beets, so they could be planted until the USDA completed the EIS for the court.

Now, the USDA is moving from extremely lax oversight to no oversight at all.

Earlier this month, the USDA announced their decision NOT to regulate Scotts Miracle Gro GE strain of Kentucky bluegrass, which is designed to withstand Monsanto’s “Roundup” herbicide.

Jeremy Bloom, in his article “Here Come The Superweeds – USDA Approves Invasive GMO Grass” noted the USDA isn’t doing tests on GE Kentucky bluegrass. The USDA only did an “assessment.” USDA’s APHIS assessment determined that while the plant meets the definition of a “noxious weed,” Kentucky bluegrass has not been found to cause impacts significant enough to warrant regulation at the Federal level.

Does the USDA only begin to regulate after some disaster, when it’s too late?

The continual spraying of Roundup has given rise to SUPERWEEDS, and farmers are now being forced to apply even more Roundup or more toxic products.

Bloom also notes that Michael C. Gregoire, who oversees biotechnology crop regulation at the Agriculture Department, has no background in either biotechnology or science. His degrees are in political science and public administration. He’s been a budget analyst… and the Chief Information Officer of the USDA. Bloom wonders “How being the department’s PR flack prepares one for making cutting-edge science decisions…”

Reports of risks:

In 2003, the report “RAISING RISK: Field Testing of Genetically Engineered Crops in the United States” by Richard Caplan, he noted that from 1987-2002, the USDA authorized 15,461 field releases of genetically engineered organisms on 39,660 field test sites spanning 482,226 acres. Monsanto submitted the most requests (3,309). USDA rejected only 3.5% of applicants, for incomplete applications or minor paperwork errors. 69% of field tests conducted in 2002 were done with genes that were considered Confidential Business Information.

That report was 9 years ago, so just imagine how many more field tests and releases

have occurred since then. Not to mention all of that Confidential Business that affects all of us.

In 2005 an audit report by the U.S. Inspector General, found that USDA’s APHIS (which issues permits for field tests of high risk crops, such as those designed to produce pharmaceutical and industrial compounds) “lacks basic information…the precise locations of all GE field test sites planted in the United States are not always known. After authorizing field tests, APHIS does not follow up…in some cases, APHIS may only be aware of the state and county where an applicant plans to conduct a field test.

Before approving field tests, APHIS does not review…applicants’ containment protocols, which describe how the applicant plans to contain the GE crop within the field test site.

…APHIS does not effectively track information required during field tests, including… results of the field tests, including any harmful effects on the environment.

At the conclusion of the field test, APHIS does not require permit holders to report on the final disposition of GE pharmaceutical and industrial harvests…which may pose a threat to the food supply if unintentionally released.”

In 2008, the General Accounting Office (GAO) found that unauthorized releases of GE crops into food, animal feed and the environment occurred, but that the total number of releases was unknown.

The sham

The USDA, along with 13 other government agencies, is part of the National Invasive Species Council, which was formed in 1999 by Executive Order 13112 (signed by President Clinton) and is tasked with preventing the introduction of invasive species. Yet, the USDA promotes the ultimate invasive species, genetically engineered plants and cloned animals, both nationally and internationally. With your tax dollars.

And even more ironic, guess what company has been on the Invasive Species Advisory Committee, which is to “provide advice” to the National Invasive Species Council? Monsanto.

Does this seem like a farce?

AUTHORS NOTE: Thank you to researcher/writer Diana Hunter for her many hours of diligent research and consultations on Invasive Species and the United Nations’ Agenda 21.

Talk's Fine But Rothschild Can Cut The Food Supply

By Dick Eastman
7-20-11
http://rense.com/general94/talk.htm

The fact that Ruppert Murdoch is being questioned by Parliament instead of being arraigned for these crimes shows he has already won. If the politicians had any intention of allowing Murdoch to be nailed for his tapping phones and computers they would have let the statute law find application.

The fact that they are just bringing Murdoch in for a secret chat shows that they realise he has the power to blackmail all of them -- and that all they can do is come to terms and together find the best way to quiet the public on the issue.

Nothing is going to happen to Murdoch. His crimes are too big to fail.

We are about to see the false self-image Britain collide the reality of Rothschild criminal domination. Have no illusions about which of the two will crumble to dust.

Talk is fine, but Rothschild can cut of the food supply.

Use of chemicals 'threaten grain output'

Updated: 2011-07-18 06:59
By Jin Zhu (China Daily)
http://www.chinadaily.com.cn/china/2011-07...nt_12919648.htm

BEIJING - The heavy use of agrochemicals has led to a severe deterioration of arable soil and poses a serious threat to domestic grain output.

The situation has led to some leading ecologists calling on authorities to reduce the use of pesticides and chemical fertilizers.

Despite floods and droughts, China's grain production hit 546.4 million tons in 2010, the seventh consecutive year of growing output.

"But this (grain growth) will not last long if the government fails to take timely and effective measures, as the soil is already too poor to support high-yield crops," Jiang Gaoming, a leading researcher at the Chinese Academy of Sciences, said.

The average level of organic matter in soil, which is crucial in determining crop output, is now 1 to 5 percent for northeast China's arable land, compared with 8 to 10 percent in the 1950s, according to figures from the academy's institute of soil sciences.

Statistics from the Chinese Academy of Agricultural Sciences (CAAS) also show that more than one-third of land now has harder and thinner tillage layers, which mean crops cannot be planted as deep.

Jiang said the problems have been caused by the massive overuse of chemical fertilizers over the past 30 years, following China's pledge to realize grain self-sufficiency.

Annual grain output increased from 320.56 million tons in 1980 to 546.4 million tons in 2010, according to the National Bureau of Statistics.

However, since 2007 China has been the world's largest consumer of chemical fertilizers, using more than 50 million tons every year, four times the amount in the 1980s.

"More chemical fertilizer, more grain output - that's been a common misunderstanding among government officials and farmers for dozens of years. Crops were always fertilized, regardless of cost, to guarantee high production," Jiang said.

Experts also argue that an increase in plant disease and the deterioration of the environment have been triggered, partly, by years of chemical fertilizer use.

"Farmers usually only care about crop output and income. They seldom consider the soil damage and potential risks to human health from overusing fertilizers," Li Shilin, director of the agricultural technical station in Anhui province's Fengtai county, said.

China uses 1.3 million tons of pesticides annually, with usage per unit area 2.5 times the global average, Zhang Weili, a CAAS professor on soil and fertilizer, told China Daily, citing official figures.

Also, the country's surface water pollution is grave while its seven major rivers and coastal waters are also polluted, a report by the Ministry of Environmental Protection said in June.

Of the 26 lakes and reservoirs under monitoring, 42.3 percent are "eutrophicated", a process that can lead to a proliferation of plant life caused by excessive levels of phosphorous and nitrogen, the report adds.

"China can no longer boost grain production by relying on agrochemicals," Zhang said.

Together with her colleagues at the CAAS, Zhang conducted a field investigation on the effects of agrochemicals on soil fertility across the country over the past 10 years.

"More cultivated land will face risks of greater yield decreases in the next few years since the soil is too fragile to withstand natural disasters, which will become more severe and longer due to climate change," she said.

Jiang, from the Academy of Sciences, highlighted the importance of government support.

"More subsidies are needed to support intensive cultivation, a traditional way to protect soil fertility. At present, almost no farmers are willing to do so because of higher costs in

terms of time and money," he said.

Lu Bu, another CAAS professor, said farmers needed practical help.

"The government should encourage companies to help local farmers with intensive cultivation, such as providing advanced equipment that ordinary farmers cannot afford."

TheUnhivedMind - July 21, 2011 03:14 AM (GMT)

Biofuel demand in US driving higher food prices, says report

Government support for ethanol has led to an increase in corn production and a steep rise in soybean imports

Suzanne Goldenberg, US environment correspondent
guardian.co.uk, Tuesday 19 July 2011 19.23 BST
http://www.guardian.co.uk/environment/2011...-us-fuel-prices

Demand for biofuels in the US is driving this year's high food prices, a report has said. It predicts that food prices are unlikely to fall back down for another two years.

The report, produced by Purdue University economists for the Farm Foundation policy organisation, said US government support for ethanol, including subsidies, had fuelled strong demand for corn over the last five years.

A dramatic rise in Chinese imports of soybeans was also putting pressure on prices and supply, the report said.

Since 2005, a growing number of US farmers have switched to corn and soybeans from other crops. Farmers in other countries have also switched to corn but, the report said, the demand kept growing.

"In 2005, we were using about 16m acres [6.4m hectares] to supply all of the ethanol in the United States and Chinese soybean imports," Wallace Tyner, one of the authors said. It took 18.6m hectares (46.5m acres) last year, just to satisfy that demand.

The US department of agriculture reported earlier this month that US ethanol refiners were for the first time consuming more corn than livestock and poultry farmers.

It took 27% of last year's corn crop to meet the demand for corn ethanol. Only about 10% went to make ethanol in 2005, Tyner said.

The Centre for Agricultural and Rural Development at Iowa State University has estimated that 40% of the US corn crop now goes to make ethanol. But Tyner said the cobs and husks of corn used to make ethanol would go on to be used for animal feed.

The other driver of rising food prices was China, which has been building up its soybean reserves since the last big global food price rises of 2008.

But the report focused strongly on a US government mandate for ethanol production and $6bn (£3.7bn) in annual subsidies for ethanol refineries. Others have also been putting the corn ethanol industry in the spotlight.

In an interview with the Financial Times, General Mills, which produces Cheerios cereal, Häagen-Dazs ice-cream and other major brands, also blamed ethanol subsidies for driving up food prices. Ken Powell the company's chief executive said the price of corn and oats was up by 30 to 40% over last year.

"We're driving up food prices unnecessarily," Ken Powell, chief executive of General Mills, said in the interview. "If corn prices go up, wheat goes up. It's all linked."

Even if US ethanol production plateaus, as the report predicts, food prices are unlikely to recede – at least within the next year – because global soybean and corn crops are now in relatively tight supply.

The authors warned there just was not enough cropland available to shift to corn and soybeans.

"We don't think these prices are going to come down in a year," said Tyner. "It's going to take at least a couple of years to see a significant reduction in price."

The report warned that US corn and soybean stocks were also dangerously low, with the department of agriculture projecting supplies at about half typical levels.

"These are scary, scary numbers," said Christopher Hurt, another author. "The cupboard is absolutely bare. We just are going to get out of this, at least on the basis of crops for this year."

View Full Version: Grocery price inflation likely to pass 5%

Title: Grocery price inflation likely to pass 5%

TheUnhivedMind - July 21, 2011 01:29 AM (GMT)

Grocery price inflation likely to pass 5%

Grocery prices increased by 4.8% over the 12 weeks to 11 July compared with the same period last year, according to Kantar Worldpanel

Rebecca Smithers Consumer affairs correspondent
The Guardian, Wednesday 20 July 2011
http://www.guardian.co.uk/business/2011/ju...-beat-forecasts

Prices at UK supermarkets are rising faster than expected and will continue to put pressure on households in the coming months, figures on Wednesday showed.

Kantar Worldpanel said grocery prices rose by 4.8% in the 12 weeks to 11 July compared with a year ago, up from 4.6% in the middle of May.

The market research firm, which previously said that inflation would not rise above 5% this year, now expects the target to be exceeded.

Martin Whittingham, director at Kantar Worldpanel, said: "While we previously predicted that grocery inflation would not exceed 5% in 2011, we believe this no longer to be the case.

"The increasing inflation rate is putting extra pressure on shoppers' ability to manage their household budgets. With this in mind, we expect the grocery market to slow in the coming months."

It also revealed that Morrisons emerged as the fastest growing of the big four retailers with sales growth of 5.6%, increasing its market share from 11.8% to 11.9%. The discounters Aldi and Lidl showed the greatest growth at 20.2% and 15.6% respectively, and combined they now account for 6.1% of the overall market.

Spending in supermarkets overall rose by 4.6% to £23.8bn over the three months compared with 2010, suggesting a 0.2% drop in sales volumes over the period.

Waitrose increased its share of the overall spend from 4.1% to 4.3%, but only Morrisons of the big four supermarket chains managed to grow by more than the rise in grocery spending overall. Separately, British shoppers splashed out £31.5bn online in the first half of this year – a fifth more than they did in 2010 – boosted by the royal wedding celebrations and the recent wet weather.

New figures released on Wednesday reveal that online sales growth not only beat the depressed high street, but exceeded earlier forecasts by 1%. June was a bumper month, when £5.3bn was spent – 21% more than last year and with a large proportion spent on clothing. The royal wedding in April encouraged Britons to get into the party spirit with a 10% year-on-year lift in spending on beers, wines and spirits.

The latest figures from the IMRG Capgemini e-retail sales index revealed a better-than-expected performance for online sales during the first six months of 2011. IMRG, the trade body for global e-retail, and the international consultancy Capgemini said growth was due to several key factors: a struggling economy and high street has driven shoppers online for better deals, while a scorching April saw shoppers jump online early to add to their summer wardrobes. Regular downpours since then have increased the appeal of home shopping.

The sales growth far exceeds that witnessed on the high street, which – through the British Retail Consortium – last week reported a like-for-like drop of 0.6% on the same period last year.

Consumers rushed to stock up on more clothing, with sales increasing by nearly a third (31%) on the same time last year. This is in stark contrast to the stagnant sales of clothing witnessed offline. Spending on travel also increased last month, rising 14% year on year and 4% on May.

Chris Webster, head of retail consulting and technology at Capgemini said: "A 21% year-on-year increase in June is a perfect way to round off the first half of 2011, as it is consistent with what has been to date a very strong year. Bank holidays, soggy weekends and major sporting events encourage us to go online for our shopping – it's quick, it's convenient and we can do it 365 days a year."

Russ Carroll, UK Managing Director of Shopping.com added: "Shopping behaviour clearly reflects the weather and time of year, with sports and outdoor equipment registering the largest year-on-year growth on Shopping.com. Baby care, mobile phones and toys all showed strong growth too as people turned online to find the best deals."

View Full Version: U.S. Congress Turns Up The Heat On Genetically

Title: U.S. Congress Turns Up The Heat On Genetically
Description: *Engineered Salmon*

TheUnhivedMind - July 20, 2011 01:59 AM (GMT)

U.S. Congress Turns Up The Heat On Genetically Engineered Salmon

Washington, D.C. – July 18, 2011 –
http://www.centerforfoodsafety.org/2011/07...ineered-salmon/

23 Members of Congress say "GE fish would not be in the public interest"

NEWLY PUBLISHED STUDIES HIGHLIGHT ENVIRONMENTAL RISKS OF ESCAPED GE FISH

Members of Congress turned up the heat on the U.S. Food and Drug Administration (FDA) last Friday, sending strongly worded, bipartisan letters calling on the agency to halt approval of a controversial genetically engineered (GE) salmon under review.

"Members of Congress have once again raised the stakes in the GE salmon debate," said Andrew Kimbrell, Executive Director of the Center for Food Safety. "FDA simply cannot continue to ignore the growing calls to stop this misguided approval."

The two letters were sponsored by Sen. Mark Begich (D-AK) and Rep. Don Young (R-AK) and joined by 21 members of the House and Senate. The letters remind FDA of an "ever-growing Congressional opposition" to the fish and call on the agency to shift priorities in light of the Young-Woolsey amendment that was included in the house-passed Agriculture Appropriations Act of 2012 that would bar the FDA from using funds in the 2012 fiscal year to approve GE salmon.

More than 90 environmental, consumer, health, and animal welfare organizations, along with fishing groups and associations and food companies and businesses have celebrated the passage of the Young-Woolsey amendment, which is currently awaiting

debate in the Senate.

In September 2010, more than 40 members of Congress sent letters requesting FDA halt the approval of the long-shelved AquaBounty transgenic salmon, the first GE animal intended for human consumption. The mounting Congressional opposition not only cites major environmental, health and economic concerns with the GE salmon in question but with the FDA approval process.

The FDA currently approves GE animals through its new animal drug law, yet critics fault the process as failing to require adequate safety assessments and lacking transparency and public engagement. The decision to regulate GE animals as animal drugs was announced by FDA in 2009 in the form of a Guidance to Industry, a non-binding form of regulation.

The House letter ends by saying, “Given the strong and ever-growing Congressional opposition to the approval of GE salmon in both chambers, we conclude that spending more time and additional taxpayer money on reviewing GE fish would not be in the public interest.”

Also released last week were two pivotal new studies highlighting the serious risks that escaped GE fish can pose for wild salmon. One study conducted by Canadian researchers found that transgenic Atlantic salmon can pass their genes on to wild salmon if they escape into the wild. Echoing the concerns raised by members of Congress and the public over the past year, lead author Darek Moreau from the Memorial University of Newfoundland, Canada said, “little is known about the potential impact on wild salmon populations if the GM species were to escape captivity.”

View Full Version: GMO Deregulation: An Act of War

Title: GMO Deregulation: An Act of War

TheUnhivedMind - July 20, 2011 12:50 AM (GMT)

GMO Deregulation: An Act of War

By Barbara H. Peterson
http://farmwars.info/?p=6444

Scotts Miracle Gro has applied for and received complete deregulation for genetically engineered Kentucky Bluegrass from the USDA. Scotts “is Monsanto’s exclusive agent for the international marketing and distribution of consumer Roundup®.” The main ingredient in Roundup is glyphosate. This strain of Kentucky Bluegrass will be “herbicide resistant” to Monsanto’s Roundup, and there will be absolutely no oversight of this genetically engineered plant, which can be used as turf or livestock feed. The reason that this was allowed to happen is because actual regulation of genetically modified organisms (GMOs) was designed just for such an opportunity. The program was meant to fail from the very beginning. This is no less than an act of war against the world’s population.

How Scotts GE Kentucky Bluegrass achieved complete deregulation

Scotts’ genetically engineered (GE) Kentucky Bluegrass will not be regulated as either a plant pest or noxious weed, and these are the ONLY two ways that GMOs can be regulated by the USDA. The genetic engineering process itself is not considered a factor in determining if a plant should fall under regulation by the USDA. If a “plant pest” designated by the USDA’s Animal and Plant Health Inspection Service (APHIS) is used in the genetic engineering process, then the plant falls under APHIS’ regulatory authority. Also, if a plant is considered a noxious weed by APHIS, then its GMO counterpart can be considered a noxious weed. Conversely, if neither condition exists, then the plant falls through the loophole, and is deregulated completely. No oversight whatsoever. APHIS has no grounds on which to enforce regulations.

Plant pest strategy:

The situation with the Kentucky bluegrass arises because genetically engineered crops are regulated under rules pertaining to plant pests.

The rules are really meant for pathogens and parasites, not corn stalks. Still, they could be stretched to cover the crops because most of them contain a snippet of DNA from a plant virus that functions as a genetic on-switch. And the foreign gene is often inserted using a bacterium that can cause a disease in plants.

But in creating its bluegrass, Scotts deliberately avoided using any material from plant pests. The herbicide resistance gene and the genetic on-switch came from other plants and were fired into the grass's DNA with a gene gun, rather than being carried in by a bacterium.

Doug Gurian-Sherman, a senior scientist at the Union of Concerned Scientists, said many of the genetically engineered crops now under development did not use viral material so they could conceivably escape regulation. (LINK)

Noxious Weed strategy:

In a 2002 petition from the ICTA and CFS, the organizations asked if APHIS would regulate GE Kentucky bluegrass under its Federal "noxious weed" authority in the Plant Protection Act. In response to the petition, APHIS conducted a risk assessment to determine the level of weed risk posed by Kentucky bluegrass, and subsequently evaluated whether the impacts posed by the plant would warrant it being regulated as a Federal noxious weed. As a result of its assessment, APHIS determined it would not regulate Kentucky bluegrass, GE or traditional, as a Federal noxious weed.(LINK)

It would seem that the ICTA and CFS knew of the problem long before deregulation became a reality. So, why didn't we hear about it until it was a done deal?

The GMO regulatory fiction

The fiction of GMO oversight created by the USDA to deceive the public was designed to disintegrate over time so that GMOs could be completely deregulated. It is all one big lie – a facade to enable a complete planetary takeover by mega-corporate interests. If the intent was to actually regulate them, then why not create regulations with teeth? Regulations that would address the unique properties of genetically engineered food/ feed instead of using already existing "plant pest" and "noxious weed" regulations? All that needs to be done under the current system is to change the manufacturing process slightly, and GMOs drop right off the USDA radar.

Introduced Substantial Equivalence

The USDA does not recognize the difference between GMOs and traditional plants,

based on the “substantial equivalence” doctrine. Therefore, by removing the offending “plant pest” from the manufacturing process, the regulations no longer apply. And if a traditional version of the plant is not considered a noxious weed, then the GMO version will not be considered a noxious weed. See how easy that was?

It is interesting to note that even though Kentucky Bluegrass rates high on establishment/spread potential, the USDA decided that the benefits outweigh the risks, and since traditional Kentucky Bluegrass is not considered a noxious weed, the GE version cannot be either, because the only difference is herbicide tolerance. The genetic engineering process is not a consideration.

Case precedent has been set by Scotts. All that is left now is for Monsanto and its cohorts in crime to invest in this new manufacturing technique to bypass any sort of regulation at all for future GMOs. Since Monsanto was already recently given the green light to do its own Environmental Impact Statements (EIS), it was only a matter of time until complete deregulation was achieved, and Scotts achieved that. So, with no testing required by the USDA, biotech companies such as Monsanto will actually save a bit of time and money in the long run by not even needing to fill out an EIS, or submit any paperwork for approval, because no approval is necessary.

What’s the big deal?

If there are no plant pests used in the creation of a GMO, then it should be okay, right? Wrong. The very act of genetic engineering is dangerous and highly unpredictable. According to Arpad Pusztai, world renown scientist and GMO whistleblower,

… the existing data support our suggestion that the consumption by rats of transgenic potatoes expressing GNA has significant effects on organ development, body metabolism and immune function that is fully in line with the significant compositional differences between transgenic and corresponding parent lines of potatoes. The results also suggest that a major part of these differences was not caused by the expression of the GNA gene in the transgenic potato lines but that these could have been due to the presence of one or more of the other gene(s) in the vector used in the gene transfer or to the possibility of disturbances in the functioning of potatoes’ own genes caused by the random incorporation of the vector in the potato genome (positioning effect). (LINK)

In other words, whatever you insert in the cell is positioned randomly. This affects the way the cell operates, and no one in the industry has studied this. The cell is essentially wounded, and never heals up the same way twice. Yet, the only testing done is to look at the grown plants to see if they are similar in appearance. Cells are not Legos. You cannot simply remove one block and insert another and have the exact same structure as you had when you started. Something, somewhere is going to be different, and we have no idea how that difference will manifest itself. It is a game of Russian roulette, with people as the unwitting participants.

What this means to you

All new genetically modified crops can now be completely deregulated if one processing ingredient is changed (APHIS definitions for plant pests), because they will no longer qualify for regulation under the USDA. This means that there will be absolutely no accountability regarding GMOs at all. The labeling movement that has been growing stronger and stronger, will be a moot point because retailers and manufacturers won't even know if what they are selling contains GMOs. No regulations, no oversight. Simply thrown into the market without distinction from traditional items, the only way we will be able to tell if something is genetically engineered is if…. well, we won't. Period. As an official at the USDA told me: "I don't know why GE Kentucky Bluegrass would be regulated, almost all plants are genetically engineered." That is the USDA's attitude.

Enter the Terminator

It seems that the plan all along was to deregulate GMOs completely, but the charade had to be maintained until a prestigious time to avoid public backlash too soon, such as what happened with the Terminator seed moritorium. Public outcry caused this technology to be put on hold, but testing continues to this day. Watch and wait for the Terminator to be released without any regulation or oversight, due to this new deregulation salvo launched on the American public. The stage is set. First take over all plant life with genetically modified plants, then introduce the Terminator to wrap it all up in a pretty package.

But the Terminator has sterile seeds and cannot reproduce you say? Wouldn't this be a solution to GM contamination? Well, one of the problems with Terminator technology is that it cannot be proven to be 100% reliable, and it is possible that not all seeds will be sterile, and the Terminator gene could be spread to viable plants, thus infecting the entire food chain with plants unable to produce offspring. Not to mention horizontal gene transfer. The norm would become plant sterility, with viable seeds becoming rare. The only way to get viable seeds would be to buy them. No more saving seeds, because the seed you save would be sterile.

If all plant life is owned by mega-corporations due to total contamination by invasive GMOs, and no regulations are in effect that apply to them, then Terminator technology can be instituted at will with no roadblocks. After all, if you own all of the plants, then you can do with them as you like. This may well be part of a well planned strategy for the complete takeover of every living plant on earth by corporate interests. Man the torpedoes, full speed ahead. Maybe we can now get a glimpse of just why the Svalbard Global Seed Vault might have been built, and why it contains only viable, foundation seeds – no GMOs.

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/lXW_vzQppGI?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/lXW_vzQppGI?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Conclusion

The regulations for GMOs contain no teeth and are just there for show – to fool the public into thinking there is real oversight when in actuality, there isn't. The USDA is a rogue agency of the Federal government that has proven time and time again that its only purpose is to provide a distraction for the American public so that corporate interests are able to completely take over our food supply with little to no interference from the people they are injuring.

This Kentucky Bluegrass case precedent has the potential to be the single biggest food event on the planet. The complete deregulation of all GMOs means that anything goes. As long as there are no plant pests involved in the genetic engineering process that are listed on the APHIS site, then it is possible that just about anything else can be inserted into the plants, including pharmaceuticals, vaccines, psychotropic substances, etc., without our knowledge or consent. Pandora's box has just been opened, and closing it is quickly becoming 'not an option.'

View Full Version: Aquaponic Food Production for Long Term Survival,

Title: Aquaponic Food Production for Long Term Survival,
Description: *by Stone of Scone*

TheUnhivedMind - July 20, 2011 12:38 AM (GMT)

Aquaponic Food Production for Long Term Survival, by Stone of Scone

By James Wesley, Rawles on July 19, 2011 10:44 PM
http://www.survivalblog.com/2011/07/aquapo...uction_for.html

Food storage is important for short term survival, and everyone should have at least a six months to a multi-year food supply. But long term survival requires that you grow your own food. Whether it is TEOTWAWKI or just losing your income because you were laid off from your job, a home food production system is essential to your security.

Most successful food production systems involve using a greenhouse for year round food production, as a greenhouse extends the growing season, and shields your crops from severe weather. Another advantage is that a greenhouse is better protected from nuclear, biological, and chemical warfare than open field farming. And a greenhouse has greater physical security than an open field against pests and animals that might want to share in your harvest, whether they have four legs or two.

One problem with a greenhouse is providing an efficient watering system that doesn't require you to hand water your plants, and that will reclaim the run-off or excess water that would otherwise be lost into the floor of the greenhouse. Water is always an expense, and if your city water supply or electric powered well pump is not working, then it would be almost impossible to manually haul enough water by hand to maintain your greenhouse plants. Another problem is how to keep the temperature of the greenhouse stable without using propane or electric heaters. A greenhouse needs to store the heat collected during the day, and slowly release this heat so that the plants won't freeze when the sun goes down. I believe that the concept of "Aquaponics" solves both of these problems, and is the perfect technique for growing food off the grid in a greenhouse.

Aquaponics is a combination of Hydroponics (growing plants in water), and Aquaculture (growing fish in water). Aquaponics uses low energy water pumps to move the water from the fish tank through a gravel-filled bed to filter the water for the fish, while providing water for the plants growing in the gravel bed. The low pressure water pumps recycle the water for continuous use, and require a very small amount of electricity power which can be provided by a solar panel.

The fish in an Aquaponic system are a good survival protein source, but more importantly the fish create ammonia as a waste product, which provides fertilizer for the plants. The fish ammonia is converted into liquid nitrate fertilizer by autotrophic bacteria that reside in the gravel-filled growing beds, which is where the plants are raised. The water pump moves the water from fish tank into the gravel filled grow beds and back to the fish tank, thereby watering all of the plants automatically, while purifying the water for the fish by removing the ammonia. Around 98% of the water is conserved and reused, with very little makeup water needed. This solves the large water consumption problem that most greenhouses have. And, the large amount of water contained in the fish tank (ours has nearly 1,000 gallons) acts as a temperature buffer, which moderates the daily swings in temperature in the greenhouse by storing the excess heat during the day, and gently emitting the heat each night to keep the plants from freezing. The thermal storage capacity of the water based Aquaponic system fully complements any "Solar Greenhouse" design.

Aquaponics produces a large amount of organically grown food, as much if not more than a standard hydroponic greenhouse, without purchasing any hydroponic chemicals. Once you have the system set up, it pretty much runs itself with much less effort than traditional gardening. And if you can grow your own fish food from duckweed, black soldier fly larvae, earthworms, crickets, etc., then the system becomes almost completely self contained.

Our setup is pretty simple, and cost around $1,500. We built a small greenhouse frame using recycled wood. Inside we built our Aquaponic structure that is 8' x 8' wide and 8' tall. The foundation of the structure is an 8' x 8' wide by 2' deep fish tank made out of 2x12 lumber lined with a 12 mil rubber liner, all of which rests on concrete blocks. Above the fish tank are 4 gravel filled grow-beds mounted on 8' tall 4x4 posts. The grow beds are wooden boxes made from 2x12 lumber that are 8' long, 2' 6" wide, and one foot deep. The grow-beds are spaced 5' and 8' off the ground directly above the fish tank, mounted on top of each other like bunk beds with a walkway between them. Since the grow-beds are only 2' 6" wide, there is room between them for a 3' catwalk over the fish tank to let us stand and work between the two sets of stacked grow-beds.

There are a lot of ways to build a cheaper aquaponic system. Once way is by using recycled plastic barrels for the fish tanks, and making the grow beds by cutting plastic barrels longways and laying them on their sides on a wooden rack and filling them with

gravel, and then plumbing everything together with PVC pipe. You can also do it on a small scale with a standard aquarium and small water pump to push water through your potted plants on the windowsill, as long as you have a place for a "biofilter" such as a gravel filled bed or refugium where the bacteria that changes the ammonia into nitrogen can reside.

A working "biofilter" is the key ingredient to a good aquaponics system, as the bacteria in the biofilter keeps the fish water clean, and changes ammonia into nitrogen for the plants. The bacteria need to reside in a wet environment that has plenty of oxygen, and little or no light. A gravel bed that is alternately flooded and drained, is perfect for this type of bacteria to thrive in. Other aquaponic solutions, such as Nutrient Film Technique (NFT) and Deep Water Raft Technique, use a large amount of netting submerged in the water to give a place for the bacteria to reside. We chose a grow-bed filled with 1 foot of gravel as our biofilter, as it is simpler to build.

The bacteria in the gravel biofilter changes the ammonia into nitrogen in two steps. The first step is performed by the Nitrosomonas bacteria, which changes the total fish ammonia (NH3 and NH4+) into nitrite (NO2). The next process is accomplished by the Nitrobacter bacteria that changes the nitrite (NO2) into nitrate (NO3), which the plants use as fertilizer. The ammonia and nitrites are very toxic to fish, while the nitrates are fairly harmless, so it is important to monitor the bacteria by testing the water quality using the inexpensive aquarium test strips sold at any pet store. As long as you have a large amount of gravel or other media for the bacteria to colonize, your water quality won't be an issue. If you are using sterile media, you won't have any bacteria to start with, and you will need to purchase the bacteria from an aquarium shop or from Fritz-Zyme. We used gravel from a creek, as the Nitrosomonas and Nitrobacter bacteria is always abundant in river gravel. Since these two types of bacteria work in tandem and do not reproduce quickly, it may take anywhere from 2 to 4 weeks to ramp up the bacteria to full production. So, it may important not to add a large number of fish at the same time unless you already have a good supply of bacteria at work in your system.

Our first step in construction of our Aquaponic system was to lay an 8' x 8' "carpet" of around 40 concrete blocks for the foundation of the fish tank. It took a long time to get the blocks level using a spirit level and a long 2x4, but this is probably the most crucial part of the construction. The next step was to build the fish tank out of wood, that would ultimately be fitted with a rubber liner. I created a square box out of 2x12 lumber standing on their edges, that was a little less than 8' x 8' and held together by wood screws. I designed it so that the 2x12's had an extra 3.5" overlap or "flap" on each of the corners, so I could drill holes and put carriage bolts through the 4x4 posts and 2x12 sides from two different directions on each of the outside corners. This holds the wood seams together. It is very important to "overbuild" the tank seams on a wooden fish tank with carriage bolts, wood screws, etc. as the water pressure is very great. Once I had my square box built, I made sure it was perfectly "square" by measuring the distances diagonally across from each corner. When these two distances were the same, I knew it

was square. Then I covered what was to be the bottom of the tank with 8' long 2x4s, nailed into the 2x12s with a 2" gap between each 2x4. When I turned the 8'x8' box over and placed it on the concrete block foundation, the gaps between the 2x4s allowed me to put shims between the blocks and the 2x4s, so that each concrete block was helping to evenly support the 2x4s that held up the fish tank.

For the bottom of the fish tank, I nailed an 8'x8' section of heavy duty 1" flooring over the 2x4s that were shimmed against the concrete blocks. The next step was to secure the second set of 2x12s standing on edge on top of the first set, to bring the fish tank up to two feet in depth. I again secured it to the 4x4s with carriage bolts in all of the corners, all the while making sure the 4x4 posts were plumb. Copious amounts of wood screws were added wherever possible. After this I inserted the rubber liner to make the tank hold water.

I calculated the weight of the water in the tank as follows: 8' x 8' x 2' equals 128 cubic feet of water, times 7.5 gallons per cubic foot, equals 960 gallons of water. With around eight pounds per gallon, this would give a total of 7,680 pounds of water, not to mention the gravel beds. So, I am giving a lot of detail on how to over-engineer the fish tank, as with this much weight and water, there will be no small failures, only big ones.

Now this is a very large tank, and as you can always add more grow-beds or an NFT system to the tank, but it is not so easy to add another fish tank that is incorporated with the pumps into the same aquaponic system. The general ratio from the research I have read is that you can use 2 cubic feet of gravel growbed for each cubic feet of water in the fish tank. Since I plan to feed my family off this system, I thought it was better to start with a moderately large fish tank, and then add more grow beds later. And, the larger your tank, the less problems you will have with any rapid changes in temperature, pH, Ammonia, or other problems. A larger tank with over 500 gallons of water buffers most problems, and gives you more time to find a solution and correct it.

The construction of the grow beds was much easier, as there were no real water pressure issues. I nailed 2x12s to the upright 4x4 posts to form boxes that are 8' long, and 2'6" wide. For the bottom of the grow-beds, I nailed 2x4s laid on their sides, and covered them with 1" flooring, topped off with the same 12 mil rubber liner I used on the fish tank, which I purchased at FarmTek.

The next part was the plumbing. I used rubber Uniseal bulkheads to hold the 1" PVC pipe straight up for a stand pipe drain in the bottom of each grow bed. The Uniseal is great, you just drill a hole with a hole saw through the rubber liner and 1" flooring in the growbed, and insert the rubber Uniseal bulkhead, and then slide the PVC pipe through the bulkhead. The 1" PVC pipe is a tight fit, but there are no leaks, and you can pull the pipe out later if you have a problem. To keep the gravel away from the stand pipe, I used a 3" PVC pipe about 8" long that I drilled with about 50 ¼" holes and nested the 3" pipe around the 1" standpipe.

By stacking the grow-beds on top of each other like bunk beds and placing the inputs and drains on opposite ends, and I make the water traverse the entire length of each of the two gravel-filled grow-beds in the stack before it can return to the fish tank. I use two 330 gallon per hour fountain pumps I got from Lowe's to pump water to the top growbed. Since it takes about 15 minutes for the grow-beds to fill up, and about 45 minutes for them to drain, I set a timer that runs the pumps for 15 minutes on the hour. This gives me the "ebb and flow" water system that is crucial to aquaponics. Each growbed needs to fill up with water to irrigate the plants and the bacteria for the system to operate. But each growbed also needs to dump all of the water back out, so that oxygen can reach the plant roots, and the bacteria can function. If you don't drain the water, you will have an anaerobic condition (no oxygen), and your plant roots will die and harmful types of bacteria will begin to develop.

One way to create an "ebb and flow", or "flood and drain" cycle is to use a Bell Siphon, which will automatically siphon all of the water out of the grow bed once it reaches a certain depth. Bell siphons are widely used in Aquaponics, and the University of Hawaii has a good research PDF on how to build one. However, the bell siphon can malfunction, and they assume that your water pumps will run continuously. That is, with a bell siphon, if your pumps quit working, you may end up with a grow bed half full of water and no drainage. I opted to build something simpler, with just a 6" long stand pipe out of 1" PVC, with a ¼" drain hole just above the bulkhead. The stand pipe is the main drain pipe, that sticks straight up and keeps the water from ever cresting higher than 6" deep, as it will just flow into the pipe. The ¼" drain hole just above the bulkhead keeps a continual drain going, but the amount of water it relieves is less than the 330 gallon per hour pump is putting into the growbed. So, after the growbed fills up and the water crests over the standpipe, the timer will shut the water off and the rest of the water will slowly flow back out through the ¼" hole at the bottom of the standpipe. I found this approach to be more energy efficient for an off-grid system, and the water retention period in the growbeds is long enough for the ammonia-eliminating bacteria to function completely.

Using "free" river gravel for the media in the grow bed is the cheapest option possible, but other media options are vermiculite, perlite, expanded clay balls (which are sold under the trade names of Hydroton and LECA for Lightweight Expanded Clay Aggregate), and coconut fiber, which is also called "coir". We have tried adding a layer of coir over our river gravel, and found that it makes it easier to start the plants from seed over planting directly in the river gravel. The coir does not deteriorate, is PH neutral, and wicks the water up to keep the seeds moist for germination. You can get 35 pounds of coir in compressed bricks from Terra Prima Industries for around $70 with shipping.

Fish selection is another topic for Aquaponics. Tilapia are the most commonly used fish, as they are herbivores that eat algae and aquatic plants, grow very fast, handle

crowding well, and are very prolific breeders. Tilapia are mouth-brooders, and raise their young inside the mother's mouth. Tilapia have a lot of advantages, but they cannot handle cold water. The White Nile Tilapia, which grows the fastest of the species, will show stress at water temperatures less than 62 degrees, and will die at 55 degrees. The Blue Tilapia is the most cold tolerant, but will die at temperatures less than 50 degrees. Tilapia really need 80 degree water. If you are off the grid in a cold climate with Tilapia, you will need to find a way to heat the water to these temperatures, year round. This means some sort of solar thermal panel that will thermo-siphon or otherwise pump hot water up to the fish tank. Fish cannot handle thermal shock or any quick changes in water temperature, so you will have to construct some sort of heat exchanger that can fit inside the fish tank. This adds a lot of complexity to an off grid food production system.

For this reason, I chose to go with Bluegill, as they can handle water temperatures down to 39 degrees, and the greenhouse always keeps the water at least that warm without assistance. Another reason I chose Bluegill is that they are much cheaper than Tilapia, as I cannot get Tilapia locally. The "Tilapia Source" is a great company to work with, but they would have to overnight them to me for $70, plus charge $2 a fish – for a total of $170 for 50 Tilapia fingerlings. Instead, I bought 100 Bluegill for only $40.00 from Farley's Fish Farm from their truck that came to our local Farmer's Co-Op. Farley's serves about 12 or 13 states here in the Southeast USA, and I found them to be a very reasonable resource for fish.

Bluegill is a good fish for Aquaponics, as they handle crowding well, can tolerate various PH and other water quality issues, and do not generally eat each other. Other fish used in Aquaponics are Catfish, Yellow Perch, Bass, Koi, Goldfish, and sometimes Trout.

I had a minor problem in the beginning with a fish disease called "Columnaris", which I diagnosed from from a "Fish Pharmacy" web site. Columnaris is a small white growth that occurs on the fins. The Fish Pharmacy web site had a toxic pharmacy solution for every fish problem. However, in Aquaponics you are not going to be able to treat the fish with anything that is not organic, or that you would not eat yourself. This excludes all of the anti-fungal treatments, or any medicine that contains some type of poison. Even the regular antibiotics that are meant for fish are not meant for humans to eat, and need to be excluded. I found from research on the web that Columnaris responds well to the addition of salt and other minerals to the water, on the order of 1 tablespoon for every 50 gallons of water. For my setup, I put over a cup of sea salt into the water, and the disease has began to retreat, with only one fish still showing signs. Columnaris is in almost every fish tank, and probably came in with the fish, or in the river gravel I used. It finds an opening when the fish are mishandled in some way. My mistake was to not acclimate the temperature of the fish when I brought them home in a bag from the fish truck, which created a lot of stress. We should have let the bag float in the water for 15 minutes before letting the fish out. The thermal shock and other rough handling I did on

day one is probably the reason for the Columnaris problem. But since I only had to add sea salt to the fish tank to correct the problem, I will have no worries about eating the fish at some point. I can discard any fish that show signs of Columnaris, if they still have that problem when I harvest, and only eat the best. I know exactly how these fish have been raised, and what has gone into them, which is much better than what you buy at the supermarket. But what I find most reassuring about raising and eating fish I raise is that when the fish are eaten fresh, there are very few diseases that fish have can be passed on to humans, unlike the trichina worms that pigs can give to humans, tularemia in rabbits, tetanus in horse meat, etc. These diseases can kill you if you live in a time without access to modern medicine. Columnaris won't hurt humans, and aquaponically raised fish will not generally have diseases that affect humans, and so are a very healthy source of protein.

But the real purpose of the fish in Aquaponics is not just for food, but to provide the ammonia to power the bacteria-based fertilization system. If you don't have fish, any organic ammonia source can work. In a TEOTWAWKI situation, the ammonia contained in human urine can work just as well as what the fish produce, and while waiting for my fish to arrive, I actually used this technique to jump start the bacteria in the system. The result was that the water clarity improved once the bacteria were given enough ammonia to thrive. Another option if you don't have fish is to use the ammonia and nitrogen found in a "manure tea", which is made by placing horse manure in a burlap bag and immersing it in the water tank for short periods of time.

Dissolved oxygen in the water is another important topic. Using an air pump to diffuse oxygen through airstones in the fish tank improves water quality by helping the aerobic bacteria to grow and the fish to be active and healthy. Without an air pump, you cannot raise enough fish to power the nitrogen needs of the plants. I purchased a 65 liter/minute Eco Plus Commercial Air Pump from AquaCave for $79.95. This pulls 35 watts on 110 AC, and is quite sufficient, as it easily powers four 12 inch airstones in the tank, plus 4 48" flexible air curtain diffusers I buried under the gravel in the grow-beds to help aerate the bacteria there. This is a floating piston commercial type of air pump, as the standard diaphragm pumps would not have enough power or longevity. For a backup system when the power goes out, I bought a 25 watt 12 volt DC air compressor from AquaCave that runs directly from a 125 amp-hour marine battery, which gives over 2 days of run time. To kick in the DC compressor when the 110 AC power goes out, we used a small plug-in DC transformer to hold open a relay, both of which we ordered from Jameco. When the 110 power goes out, the transformer loses current, and the relay closes which completes the circuit for the DC compressor to draw power from the battery. For a large Aquaponic system with over 100 fish, you have to have redundant air systems, for if the fish go for more than four hours without air they will asphyxiate.

In calculating our total power consumption for running the Aquaponic system using solar panels, the two 330 gallon per hour water pumps for the grow-beds draw 13 watts each, but run only 15 minutes each hour, for an average hourly usage of 6.5 watts.

Adding the 25 watt DC air compressor gives a very low total power consumption rate of 31.5 watts. Solar panels and a few marine batteries can easily power this system if you are permanently off grid, and I hope to do this soon.

But to be truly off-grid with Aquaponics involves more than just using solar panels, as you need to create your own fish food as input to the system. Right now, I am using some water containers to grow Duckweed (which is an aquatic plant with high protein that the fish love), but mainly rely on Purina catfish food to feed the fish. To close the loop that would make me independent, I will be building a compost pod that harvests Black Soldier Fly Larvae, along with giving the fish the earthworms from the compost pile. Another protein source I am using is a small electric light about 4 inches over the fish tank with a timer that turns on at night. The bugs fly in and bounce against the light and into the fish tank, where the bluegill snap them up. Now that's a good bug lamp!

The output of produce from the Aquaponic setup is phenomenal. The cucumbers, tomatoes and basil are growing about 3 times faster than in my container garden, and 5-6 times faster than using traditional soil techniques. For more scientific proof on the superiority of Aquaponic gardening, a Canadian research group has written a paper that indicates how Aquaponics outperforms hydroponics. Will Allen of Growing Power has a great video that shows how he grows 1 million pounds of food on 3 acres using Aquaponics. The tremendous production potential of Aquaponics over traditional gardening techniques should make anyone that has a greenhouse investigate Aquaponics.

My next step for the Aquaponic project has been to develop a Nutrient Film Technique (NFT) setup, which consists of running the fish effluent through 20' long sections of vinyl gutters, which feeds the plants that are mounted with their roots in the gutters. Thin plywood is mounted on top of the gutters, with a 2" hole drilled every 6 to 8 inches. Inside the holes I put nylon netting that holds some pea gravel to provide support for the plant roots in the nutrient-rich fish water. The top of the plants grow on top of the plywood. The gutters have a 40:1 slope (6" over 20'), and a small pump puts water into the high end, with the water transversing the gutters and draining back into the fish tank. This is nearly identical to a standard hydroponic setup, except I am using renewable fish effluent from the fish tank instead of purchasing standard hydroponic chemicals to feed the plants.

YouTube is an excellent video resource for understanding the various Aquaponic systems. A quick search on YouTube for "Aquaponics" will bring up many videos. Be sure to find the videos by Will Allen at Growing Power (an aquaponic farm in downtown Milwaukee), or by Nelson and Pade who did much of the original Aquaponic research, or any videos by "Backyard Aquaponics" which is located in Western Australia. Aquaponics is very big in Australia as it is a good solution for gardening in a dry climate. One of the best technical articles online to understand the technology of Aquaponics is "Optimization of Backyard Aquaponic Systems." Any articles written by Dr. James

Rakocy of the University of the Virgin Islands would provide another expert source for Aquaponics. Wikipedia also has a good article that gives an excellent overview of Aquaponics, and the picture in Wikipedia of the "small portable Aquaponic system" (which came from Growing Power) is the model I used for my system. I just kept looking at this picture, and it finally dawned on me how simple this is. For more technical advice, the book "Aquaponic Food Production" by Nelson and Pade will teach you everything you need to know.

Most preppers live, or hope to live, as far away from the city as possible. But the problem with rural life is the lack of a steady income. An Aquaponic greenhouse can potentially earn enough to make rural living possible, as long as you can occasionally get to a market to sell your produce. Aquaponics is the only type of hydroponic vegetables that can be certified 100% organic, as all other types of hydroponic vegetables use inorganic chemicals for their nutrients. Premium organically raised vegetables will command much higher prices at restaurants and stores that cater to health conscious buyers. But Aquaponics gives you something that no other organic producer can create, and that is, organic produce with roots that have never touched any soil. You can sell lettuce and other vegetables with the roots attached, as no dirt will have ever been on your roots. By leaving the roots attached and not injuring the plant, the "living lettuce" and other vegetables you sell will keep much longer and your profit will be greater.

The one final thing I have to say about Aquaponics is that it gives any prepper something even better than a nearly endless supply of food, and that is, a large quantity of water. If everything else fails and I end up eating all my fish and produce, I still have 960 gallons of water that I can filter and use. In fact, if I extract the water as it comes out of the gravel-filled grow beds, it already has a good amount of filtration, and is probably healthier to drink than the chlorinated and fluoride filled water that comes out of a city tap. Every prepper needs a large amount of stored water, and this is a great way to do it.

TheUnhivedMind - July 19, 2011 05:43 PM (GMT)

UN expected to declare famine in south Somalia

Announcement expected from humanitarian co-ordinator for Somalia based on data from the food security and nutrition analysis unit

Mark Tran
guardian.co.uk, Tuesday 19 July 2011 18.10 BST
http://www.guardian.co.uk/global-developme...e-south-somalia

The UN is expected on Wednesday to declare that parts of southern Somalia are now in famine amid the worst drought to hit east Africa in 60 years.

Mark Bowden, humanitarian co-ordinator for Somalia, is expected to make the announcement in Nairobi, based on data from the food security and nutrition analysis unit, part of the Food and Agriculture Organisation.

The drought in east Africa has left an estimated 11 million people at risk, but Somalia has been the worst hit country as it is already wracked by decades of conflict. There has not been an official famine since 1984-85, when about 1 million people in Ethiopia and Sudan died. A famine is measured by rates of hunger, malnutrition and deaths, but the key to it is that it must be widespread.

Technically, a famine is a crude mortality rate of more than two people per 10,000 per day; acute malnutrition reaching more than 30%; water consumption becoming less than four litres a day; and intake of kilocalories of 1,500 a day compared with the recommended 2,100 a day.

The UN refugee agency, the UNHCR, said it was seeking further security guarantees

from armed rebels in Somalia in order to deliver greater amounts of assistance and prevent more hungry people from becoming refugees, Reuters reports. Al Shabaab, Islamist insurgents affiliated to al-Qaida, control pockets of the capital Mogadishu and parts of southern and central Somalia.

The group last week said it would allow foreign aid agencies into territories it controlled, reversing a ban imposed two years ago on the grounds that they were anti-Muslim.

Hundreds of thousands of people have fled Somalia due to the drought and conflict, and refugees are dying of causes related to malnutrition either during the journey or very shortly after arrival at aid camps. On Sunday, the UNHCR began emergency airlift flights in Nairobi to help hundreds of thousands of Somalis who have taken refuge in neighbouring countries.

A giant cargo jet chartered by UNHCR landed in Nairobi with 100 tonnes of tents for the Dadaab refugee camp complex near the Kenya-Somalia border.

The airlift will support efforts to help more than 430,000 Somali refugees in Kenya and Ethiopia, including 164,000 who have arrived in the two countries since the beginning of the year.

Three thousand continue to arrive daily, fleeing continuing insecurity, drought and hunger in Somalia.

UN agencies have asked for $1.6bn to pay for essential programmes in east Africa, but have only received half that amount. Kenya, Somalia, Ethiopia and Djibouti are all facing a crisis that is being called the worst in 50 years.

One in 10 children in parts of Somalia is at risk of starving to death, the International Committee of the Red Cross (ICRC) said last week. The independent aid agency, one of very few with access to Somalia's worst-hit areas, said that even in the Bay and Lower Shabelle regions, Somalia's traditional breadbaskets, nearly 11% of children under five had severe acute malnutrition.

An appeal by the Disasters Emergency Committee, an umbrella group of UK charities, has raised £20m since it launched its east Africa appeal.

Title: Genetically Modified Rice Overview

TheUnhivedMind - July 19, 2011 02:33 AM (GMT)

Genetically Modified Rice Overview

http://www.ricefarmersclaim.com/

Rice is among the three most important crops in the world. It is the main food source for nearly half of the world's population, and is grown in tropical and subtropical regions globally.

Modern plant breeders have begun to produce genetically modified (GM) rice in an effort to create rice that can withstand disease, pests, herbicides and regional conditions including salinity and drought.

China is the leader in genetically modified rice research and has produced rice that is tolerant to insects. Traditional Chinese rice farmers have to spray their crops 3 to 4 times each season, whereas GM rice doesn't have to be sprayed at all.

The development of genetically modified rice is extremely controversial, and to date, no large scale production of GM rice is happening. Most companies are currently testing GM rice for research purposes.
Genetically Modified Rice Affects U.S. Farmers

One type of GM rice has been approved in the U.S., although farmers have not begun cultivating it. The rice, called LL62, has been engineered to be tolerant to a certain type of herbicide that would make the control of weeds easier for American rice farmers. An application for human and animal consumption s of LL62 has been submitted to the EU.

As of now, the EU will not import any genetically modified products form the U.S. In fact, in 2006 it denied all imports of American long-grain rice after discovering that the supplies were contaminated. The GM rice was part of research being conducted by Bayer CropScience in 1998 in Louisiana test fields. The rice was being genetically engineered to be resistant to a type of weed killer produced by Bayer.

The modified rice somehow drifted to nearby fields and infected crops that were intended for export and consumption. By 2006, approximately 30 percent of U.S. long-grain rice lands were contaminated. Both the EU and Japan have closed their doors the American long-grain rice imports. The industry experienced an immediate loss of $168 million. The total loss is expected to reach $1.25 billion.

Down on the farm, investors see big potential

They believe food will only get more expensive around the world

7/16/2011 6:23:18 PM ET
http://www.msnbc.msn.com/id/43773090/ns/bu...ss-us_business/

NEW YORK — Braden Janowski has never planted seeds or brought in a harvest. He doesn't even own overalls.

Yet when 430 acres of Michigan cornfields was auctioned last summer, it was Janowski, a brash, 33-year-old software executive, who made the winning bid. It was so high — $4 million, 25 percent above the next-highest — that some farmers stood, shook their heads and walked out. And Janowski figures he got the land cheap.

"Corn back then was around $4," he says from his office in Tulsa, Okla., stealing a glance at prices per bushel on his computer. Corn rose to almost $8 in June and trades now at about $7.

A new breed of gentleman farmer is shaking up the American heartland. Rich investors with no ties to farming, no dirt under their nails, are confident enough to wager big on a patch of earth — betting that it's a smart investment because food will only get more expensive around the world.

They're buying wheat fields in Kansas, rows of Iowa corn and acres of soybeans in Indiana. And though farmers still fill most of the seats at auctions, the newcomers are growing in number and variety — a Seattle computer executive, a Kansas City lawyer, a publishing executive from Chicago, a Boston money manager.

Regulators sounding alarms

The value of Iowa farmland has almost doubled in six years. In Nebraska and Kansas, it's up more than 50 percent. Prices have risen so fast that regulators have begun sounding alarms, and farmers are beginning to voice concerns.

"I never thought prices would get this high," says Robert Huber, 73, who just sold his 500-acre corn and soybean farm in Carmel, Ind., for $3.8 million, or $7,600 an acre, triple what he paid for it a decade ago. "At the price we got, it's going to take a long time for him to pay it off — and that's if crop prices stay high."

Buyers say soaring farm values simply reflect fundamentals. Crop prices have risen because demand for food is growing around the world while the supply of arable land is shrinking.

At the same time, farmers are shifting more of their land to the crops with the fastest-rising prices, which could cause those prices to fall — and take the value of farms with them. When the government reported June 30 that farmers had planted the second-largest corn crop in 70 years, corn prices dropped 8 percent in two days.

And even if crop prices hold up, land values could fall if another key prop disappears: low interest rates.

Better investment returns
When the Federal Reserve cut its benchmark rate to a record low in December 2008, yields on CDs and money market funds and other conservative investments plunged, too. Investors were unhappy with earning less, but they were too scared about the economy to do much about it.

As they grew more confident — and more frustrated with their puny returns — they shifted money into riskier assets like stocks and corporate bonds. To many Wall Street experts, this hunt for alternatives also explains the rapid rise in gold, art, oil — and farms.

Those who favor farms like to point out that, unlike the first three choices, you can collect income while you own it. You can sell what you grow on the farm or hand the fields over to a farmer and collect rent.

In Iowa, investors pocket annual rent equivalent to 4 percent of the price of land. That's a 60-year low but almost 2.5 percentage points more than average yield on five-year CDs at banks. That advantage could disappear quickly. If the Fed starts raising rates, farmland won't look nearly as appealing.

For now, though, investors can't seem to get enough of it.

A lot more investors

At a recent auction of 156 acres in Iowa, the 50 or so farmers who showed up withheld their bids out of respect for a beloved local farmer who had rented the land for two decades and wanted to own it. But his final bid of $1.1 million was topped by a California insurance executive. In Iowa, 25 percent of buyers are investors, double the proportion 20 years ago.

"They were angry, but what are they going to do about it?" says Jeffrey Obrecht of Farmers National, the brokerage that ran the auction. He told the farmers they shouldn't worry because some of the new investors will find a new way to make money in a few years and start selling their land.

Other dangers lurk for investors. In Iowa, corn prices are high partly because corn is used to make ethanol, a fuel additive subsidized by the federal government. The U.S. Department of Agriculture expects 40 percent of the nation's corn crop this year will go to factories that make it. But with Washington running up record deficits, it's anyone guess how long the subsidy will remain.

As with stocks, U.S. farms can swing wildly in value along with the economy. Despite the fragile recovery, though, farm prices are nearing records now, capping a decade of some of the fastest annual price jumps in 40 years. In Iowa, farm prices rose 160 percent in the decade through last year to an average $5,064 per acre, according to Iowa State University.

Concern that farm prices may be inflated is serious enough that the Federal Deposit Insurance Corp. held a conference for farm lenders in March titled "Don't Bet the Farm." Thomas Hoenig, head of the Federal Reserve Bank of Kansas City, oversaw dozens of bank failures when a farm boom turned bust 30 years ago. Today, he suggests prices may be in an "unsustainable bubble."

Agriculture wakes up
Veteran bond trader Perry Vieth doesn't think so. Vieth, the former head of fixed income investments for PanAgora Asset Management in Boston, started buying farms with his own money five years ago, when buyers with no farming experience were rare.

"Agriculture was sleepy," he says. "People looked at me like, 'What are you doing?'"

Now he's buying for 71 wealthy investors. Ceres Partners, his 3½-year-old private investment fund, owns 65 farms, almost half bought since November. He says he's returned 15 percent annually to his investors overall.

Though Vieth says prices in some places have climbed too high — he won't buy in Iowa, for instance — he says the price of farms elsewhere will rise as big money managers start seeing them as just another tradable asset like stocks or bonds and start buying.

"When Goldman Sachs shows up to an auction, then I'll know it's time to get out," he says.

Bullish on farmland
Janowski, the Tulsa software executive, is bullish for other reasons. A self-described serial entrepreneur, he has built four companies, including a software developer that he sold for $45 million three years ago.

Listen to him speak, though, and you'd think he was an economist. He'll talk your ear off about how inflation could rage out of control, and how farmland is more likely to keep up with inflation than other assets. Janowski sold all his stock in April.

He plans to move most of his money into farms and has clearly done his homework. In the past five years, he has flown to more than a dozen farms up for sale, often with an agronomist in tow. Before bidding on that Michigan farm last summer, he visited five times to walk the property, which includes a house and land for commercial development as well as tillable fields.

The day of the auction, which drew more than 100 bidders to the Century Center in South Bend, Ind., he didn't leave anything to chance. Janowski arrived two and a half hours early to get a seat near the entrance so he could size up rival bidders as they walked in.

Then he kept quiet as an auctioneer carved the farm up into lots numbered 1 through 40 and began taking bids for each. After 30 minutes, Janowski broke his silence with an offer to buy the whole thing: "One through 40 ... $4 million." For the tillable parts, he figures he paid about $6,000 an acre.

"I'm probably on the fringe of being a nut job," he says. "But as each month goes by, I become less nutty."

Outlook ‘worrying’ for Canada’s wheat farmers

Prairie wheat farmers just can’t seem to get a break.

Rain and flooding have already wiped out much of their acreage this spring and raised fears this could be one of the worst wheat harvests ever in Western Canada. Now wheat prices are falling because farmers in Russia, Ukraine and Kazakhstan are enjoying bumper harvests and ramping up exports.

“There are a lot of things that are worrying if you isolate your thoughts on wheat,” said Neil Townsend, a grain market analyst at the Canadian Wheat Board.

Russia and Ukraine are major wheat producers but they sharply restricted exports last year after drought ruined many crops. Those restrictions came off July 1 and both countries have started pouring grain on to world markets at discount prices in an effort to win back customers. Russia recently signed a deal to sell 180,000 tonnes of winter wheat to Egypt reportedly at a $40 (U.S.) a tonne discount to competing grain from the European Union and the United States.

The competition could get even tougher once this year’s spring crop is harvested. Russia’s crop is expected to jump 30 per cent to 53 million tonnes, while Ukraine’s will be up 5 per cent to 18 million tonnes. Exports from Russia, Ukraine and Kazakhstan are expected to double to 32 million tonnes in total. Other major wheat producers, including the U.S. and EU, are also predicting decent crops and even countries like China, India

and Iran have enjoyed good harvests making them unlikely buyers. Canada should export about 15 million tonnes.

As a result, the price of wheat on the Chicago Board of Trade has been dropping steadily and hit an 11 month low last month at $6.17 a bushel.

Canadian wheat prices could be pushed higher if the heat wave across much of the U. S. ruins some of the corn crop, Mr. Townsend said.

Corn is particularly vulnerable to hot weather now because the plants are just starting to pollinate and a lack of moisture will hurt crop yields. “The biggest ray of hope [for Canadian wheat farmers] would be if we do see tangible yield damage to the corn crop,” Mr. Townsend said. “You hate to say that but that’s the absolute key right now.”

Any drop in the amount of corn harvested will reverberate across all grain markets, especially wheat. That’s because wheat and corn are often interchangeable as feed for livestock. Corn prices also tend to drive the price of other grains because it is such a massive and lucrative crop, worth far more than any other crop.

The hot weather is already having an impact on prices. Wheat and corn gained about 7 per cent last week in Chicago. However, by Friday wheat had fallen back on concerns about Russian selling, dropping 12.25 cents to close at $6.94.

One other hope for Canadian farmers is a mild September. That’s critical because bad weather forced many farmers to plant their crops much later this spring, meaning harvesting will be pushed back as well. If the weather holds, the quality of the crop will improve and more will be harvested. Better quality wheat tends to fetch a higher price.

“Right now, Russian wheat is starting to win some world tenders,” said Jerry Klassen, manager of the Winnipeg office of Switzerland-based GAP SA Grains and Products. “But that’s not usually the tenders that Canadian wheat competes in. Russia will export about 15 to 20 million tonnes this year, but it’s usually lower quality wheat.”

The Russian spring crop is still growing and it is not clear yet how it will fare, he said. Overall, “the influence of the Russian wheat crop will be felt stronger once we have the first frost [in Canada],” he said.

Drought cripples southern US farms

By Gregory Meyer in New York
July 17, 2011 6:03 pm
http://www.ft.com/cms/s/0/dc615ace-b056-11...l#axzz1SQN406rf

Half of Dahlen Hancock's cotton fields are dead. The other half are clinging to life.

The 5,800 acres he farms near Lubbock, Texas, are half irrigated and half at the mercy of the clouds. And the past nine months have been the driest in Texas on record.

The Lone Star state is at the epicentre of a once-in-a-generation drought stretching from Arizona to Florida. The US's southern underbelly is scorched like meat on a grill.

The drought has spawned wildfires, turning grasslands to ash. In Texas, the leading cotton producer in the US, 59 per cent of the cotton crop is in poor condition or worse. Harvests of hard winter wheat, prized for yeasted breads, have plummeted in Kansas, Oklahoma and Texas as yields and acreage contracted. Ranchers cannot feed their cattle on parched pastures.

Mr Hancock, a fourth-generation farmer, says the cotton seeds he planted on his 3,000 dryland acres never germinated. "All I see is dry, barren farmland. The weeds really haven't even grown," he says.

His irrigated crop is also "right on the edge", as temperatures in Lubbock have hovered near 38C all month. Last month was the hottest June in Texas on record, breaking the previous peak in 1953.

The pain is spreading to businesses that serve the farms. West of Mr Hancock, the Meadow Farmers Co-op Gin – the machine that strips cotton fibres from the seeds –

will hire only one 16-person crew at autumn harvest time, rather than the two round-the-clock crews that handled last year's bumper crop.

"I am hoping for a third of what we ginned last year," says Dan Jackson, general manager. "But with each day that we don't get measurable moisture, that kind of dims."

Texas grew 43 per cent of last year's 18m-bale cotton crop in the US, the world's top exporter of the fibre, with the main cotton lands in the high plains encircling Lubbock. The US Department of Agriculture last week cut its forecast for this year's domestic cotton crop by 1m bales to 16m, as farmers abandoned a record 30 per cent of their fields.

In May, the drought had already caused $1.5bn in agricultural losses, a number that is sure to rise as the drought persists, according to the Texas Agrilife Extension Service. The USDA has declared most of Texas a primary disaster area, making farmers eligible for emergency benefits.

The state has more than 13m cattle, more than any other. But the size of the herd, dwindling for years, may shrink faster as ranchers are forced to sell calves and breeding cows they cannot feed.

"There's no green," says George Enloe, a cattle broker in Amarillo, Texas. "It looks like the dead of winter, except when you roll the window down it's 100 degrees (38C)."

The drought began about a year ago. Rain stopped falling last autumn, and has remained scarce partly because La Niña, the Pacific weather phenomenon, steered moisture away during the winter. Now an inert dome of broiling air appears clamped over much of the south. With little evaporation from dry soils, thunderstorms do not form, says Texas state climatologist John Nielsen-Gammon.

Old-timers are comparing the situation to a legendary "big drought" of the 1950s. The parallel is not encouraging, as that one lasted years.

"What sets this one apart is that it is extremely intense, although at this time relatively shortlived," says Mark Svoboda, climatologist at the national drought mitigation centre at the University of Nebraska-Lincoln.

Although the situation in the US is helping to buoy cotton above its average cost of production, global prices have been falling. An intense rally last year spurred farmers elsewhere, notably Australia and India, to plant more cotton. Textile mills have also responded to costly cotton by weaving more polyester into fabrics.

The USDA estimates the just-harvested domestic hard winter wheat crop will this year total just 791m bushels, down from 1bn last year. Wheat prices, which took off last year

after a grain export ban was declared in the Black Sea, have remained supported by the dismal US outlook.

The drought has led some in Texas to wish for a hurricane to attack the heat dome from the Gulf of Mexico. Arlene, the first named storm of the season, doused a sliver of southern Texas in late June.

“They can be a life saver,” said Rosalee Coleman, a Live Oak county cattle rancher and immediate past president of the Texas Independent Cattlemen’s Association.

“Of course, we don’t wish anyone harm. I always wish that it would go between Corpus Christi and Brownsville because that is ranchland. There’s not a lot of houses and a hurricane can blow across there and not do any damage – then it curves up and we get all the moisture.”

View Full Version: North Korea faces famine: 'Tell the world we are

Title: North Korea faces famine: 'Tell the world we are
Description: *starving'*

TheUnhivedMind - July 18, 2011 12:27 AM (GMT)

North Korea faces famine: 'Tell the world we are starving'

More than a decade after North Korea was struck by a famine that killed up to a million people, the country's poorest are once again facing starvation, reports Peter Foster in Yanji

By Peter Foster, Yanji
7:00PM BST 16 Jul 2011
http://www.telegraph.co.uk/news/worldnews/...e-starving.html

It was an ice-cold day in the North Korean border town of Musan when a small crowd gathered round what looked like a bundle of rags on the platform of the railway station.

"I went up to see what they were looking at," recalled 63-year-old Lee Sun Ok, a North Korean farmer who had come to the city to sell some small rice-cakes she had made to earn money. "And then I saw it was the body of an old man with a piece of cloth placed over his face.

"I asked if he had fallen down because he was sick, but the people shook their heads and said, 'No, he was just too hungry and died for lack of something to eat.'"

Mrs Lee's account is among shocking first hand testimony about the dramatically worsening living conditions in the secretive Stalinist state obtained by The Sunday Telegraph last week.

In almost 10 hours of interviews during clandestine meetings with The Sunday Telegraph just inside China, four North Koreans who recently risked their lives to flee across the tightly-guarded border from their homeland described the desperate plight of those left behind.

Kim Yeong, 68, told how families were being forced to scour the countryside for wild plants to boil up for food in a desperate attempt to stave off starvation.

"People are very poor again, they are going to the mountains to get grasses and weeds to make into soup," he said. "Some people are having to eat manure when they cannot get any rice or corn."

The UN's World Food Programme says North Korea faces its worst food shortage in a decade, with six million people at risk - a consequence of poor economic management of its centrally planned system, a series of bad harvests caused by harsh winters, flooding and exhausted agricultural land, and the regime's unwillingness to spend its dwindling hard currency reserves on buying food for its 24 million people.

But the world has been slow to react for fear of propping up the increasingly belligerent government of Kim Jong-il, which is vigorously pursuing a nuclear weapons programme and threatening its South Korean neighbour - leading the US to suspend food aid in 2008.

Aid agencies report that government food rations for some have been cut to just 200g a day - barely one tenth of what is needed.

Last week, after making its own assessment, the European Commission offered €10m in emergency food aid to Pyongyang, warning that 500,000 people faced possible starvation, with children already suffering acute malnutrition.

Ordinary North Koreans are denied the chance to speak openly by the all-controlling regime of Kim Jong-il and are almost never heard by the outside world. The four who spoke to The Sunday Telegraph - a businessman, a farmer, a factory worker and a housewife - did so in the Chinese town of Yanji, where they are living and working in secret to support their families back home.

Many Chinese citizens in this border region are Korean by ethnic origin and maintain their language and customs, making it possible for illegal migrants to blend in.

When we met in an empty apartment in a nondescript suburb of Yanji, Mrs Lee was visibly nervous, fretful for her security in a city where the police pay rewards to anyone who denounces a North Korean migrant. The interviews, arranged through intermediaries, were conducted sitting on the floor of the sparsely furnished apartment, below the line of sight of anyone outside.

Mrs Lee was carefully made up and nervously fingered her cheap, plastic jewellery as she spoke - knowing that if caught she would be sent back to North Korea to spend months in the gulags on starvation rations.

But, she said, the situation at home was so desperate she had no option but to risk all and leave, and now she wanted the world to know what was happening in her country.

In January, a month after seeing the dead man in the station, Mrs Lee stood in the doorway of her farmhouse, surveyed the barren hillsides around, and decided it was time to go. Everything that could be used for firewood had been stripped from the land over previous decades as families battled for warmth winter; now all was bare and infertile.

"When I was young, the woods outside my house were so thick you could get lost coming home," she recalled. "But now there is only bare land – even the roots of the trees are gone. I couldn't see how I could continue to live in North Korea."

So in a leave of absence from her agricultural work unit, timed to coincide with a moonless night, she put on her warmest clothes and walked eight miles to the frozen Tumen river, the dividing line between destitute North Korea and economically booming China.

She crouched in long grass waiting for the time when she had been told the border guards would be resting between shifts. Then, her heart in her mouth, she stepped on to the thick white ice and walked across as quickly as she could to China. Nobody saw her.

Some 20 miles inside the border she reached a village where she could connect with the network of sympathetic ethnic Koreans who help illegal immigrants, often taking them on as domestic servants while shielding them from Chinese police.

Now Mrs Lee works as a carer for the grandmother of an ethnic Korean family in Yanji, and earns 1,200 yuan (£115) a month - a small fortune in North Korea. She sends most of it back to her family via smugglers who take a 30 per cent cut.

Mrs Lee, whose husband, grown-up daughter and son-in-law all depend on her wages, says the time for international debate about the food crisis has passed. "I don't know what they are saying, but what I do know is that there is a real shortage of food in North Korea," she said.

"People who cannot go out to find food, or grow food or do some business to earn money, are already starving to death. When an elderly person misses a meal they get tired or they get sick. They gradually become too weak to get food for themselves for the next meal and then they die. This is common. I have seen this myself."

In the late 1990s the total collapse of the North's food distribution system led to the deaths of up to a million people, and the refugees say the signs of a repeat disaster are now appearing.

"During the famine then, people did not have clothes to wear, because they had sold everything. Now the people are dressed, but many have holes in their clothes," said Mr Kim.

He has five grandchildren across the border, to whom he is devoted. "They are very weak," he said, fighting to control his emotions. "My heart hurt every time I saw them; the impact of what they are suffering will take two generations to heal."

Unlike Mrs Lee, Mr Kim is not a poor farmer but a member of North Korea's "revolutionary class" whose parents fought against the Japanese occupation - entitling him, until North Korea's economic collapse, to additional rice, oil, salt and sugar rations.

A former government servant who left the industrial city of Hamhung four months ago on a short-term travel permit to do business in China, he remembers when Communist North Korea boasted higher living standards than the capitalist South, and he talks with anger at his country's collapse.

"On the day we have nothing to eat, we have to go out that night and collect edible grasses from the roadside or the mountains. This happened very often during the last famine, but now it is happening again.

"This applies even to my own family, but just imagine how others are faring if we have reached that point? Some families now eat grasses almost every day. They have nothing else.

"People walk around with cloth bundles on their backs, and inside them they carry their whole lives: whatever they have to sell or to eat, some small household items, some rice-cakes they have made. It is all they have."

The food crisis has been compounded, Mr Kim believes, by the botched introduction of a new currency two years ago, which wiped out the meagre savings of millions overnight.

Many small businesses, technically illegal but tolerated by the government collapsed, and the black markets that delivered extra food at higher prices have still not fully recovered, he said.

"In North Korean train stations you see piles of boxes, carriages filled with items that people are hoping to sell, but now those piles are getting ever smaller," he said.

"The train runs on electricity, but the power is very unreliable, so it can stop any time. You could be there for one hour, one day, or even two days. People have to start selling or exchanging things, like a watch or a hat, just to get food to eat."

Other parts of the economy are also in dire straits.

Kim Hua, 45, from Hamhung, North Korea's second city, said barely one in 10 of its factories were working, exposing to the regime's indoctrinated subjects the absurdity of its claims to be creating a "prosperous nation".

Her factory, which makes textile machine parts, is closed most days and workers must instead mend roads or repair the city's crumbling houses, without pay.

"People complain because the factories don't give them salaries and it's too difficult to do business. You complain among your friends and people who are close to you.

"You can still get into trouble if someone with political power hears you and denounces you. You can be sent to another province or to prison. I know people that has happened to but it's less often than before."

Twice a week she had to attend political indoctrination classes where officials lionised the portly Kim Jong-un, who is being groomed to succeed his ailing father Kim Jong-il as leader.

"They tell us he's going to be a great success and is very good at politics, economy and culture," said Mrs Kim. "The top leaders have chosen him. Some say that he's too young, they're suspicious of whether he can do the work, that he can be successful. But what can anyone do? You have to believe in him, even when you don't."

The best hope, all four migrants agreed, was that commercial ingenuity learned during the last famine might limit the coming disaster.

"During the famine many people I know died," said Park Boksun, a 59-year-old woman from Chongjin, a northeastern coastal city. "But it is also true that the people learned how to live. They learned to do 'business', going to the hills to find wood and vegetables to sell, or buying household products in the city and going to the villages to barter for food."

Mrs Park, who came to China seven months ago, said she was previously in constant hunger. "In North Korea you work all day just to earn enough for one cob of corn. Even when you eat, you're never ever satisfied."

Mrs Kim, who has a husband and grown-up daughter depending on her in North Korea, said that is why the US and rest of the world should send food aid. "It is true that hardly any of it will come to us ordinary people. It will be sold [on the black market], and the government officials and the army will make all the money," she said.

"The people will get very little - but it will be enough to help people to survive."

The names of the people interviewed for this article have been changed to protect their

identities.

TheUnhivedMind - July 18, 2011 12:03 AM (GMT)

Wealthy Suburbs Not Immune To Hunger Struggle

July 16, 2011
http://www.ctnow.com/news/hc-suburban-hung...2C1741641.story

For 28 years, Cathy Hartley of Glastonbury brought home a good paycheck from her job at Aetna.

But last Tuesday, she was in line with her two young granddaughters for free produce from Mobile Foodshare at the First Church of Christ Congregational on Main Street.

For Hartley, who said she was laid off from her job as a project manager about six years ago and then laid off from a subsequent job two years ago, every little bit helps. Her eligibility for unemployment ran out two months ago.

Get Our FREE iPhone, Droid & BlackBerry Apps!

"It supplements our food," Hartley said of the Foodshare truck. "They've been very helpful, and it's fresh, healthy food."

Hartley is among a growing number of people who live in Connecticut's upper-middle class suburbs and who need help putting food on the table.

"Not a week goes by that we don't hear at a mobile site or … from a pantry somewhere saying this family came in that said 'I used to give to this program. I never thought I'd need help, but I got laid off or my wife got laid off or we both got laid off, and here we are because we need to feed our kids,'" said Gloria McAdam, president and CEO of Foodshare.

Since the Great Recession started, Foodshare, a Bloomfield-based nonprofit that serves as the food bank for Hartford and Tolland counties, has expanded its mobile program to towns like Glastonbury, Avon and Hebron.

The Mobile Foodshare program fills trucks with donated produce and sends them to different sites every day. It started with deliveries in places like Hartford and New Britain, and now makes nearly 50 stops in 20 towns.

Food pantries in these and other seemingly idyllic communities are serving a population that is growing at a rapid rate.

Foodshare served 128,000 people in Connecticut last year, or one in eight. Of those, 50,000 were children, according to McAdam. That's up from 100,000 people just two years ago, an increase that can be attributed to need and not just Foodshare's growth, she said.

"The need has grown by 30 percent, but we're only growing 3 or 4 percent each year," she said.

In Glastonbury, usage of the social services department's food bank has tripled since the 2007-2008 fiscal year, said Janine Fiedler, social services coordinator. That year saw 153 people visit the food bank, compared with 450 in 2010-2011.

"I can say that we've been having people come in and say, 'Well, we always gave to the food bank, and now we have to receive,'" Fiedler said. "It's true — people are in their houses and have their mortgages and then they get laid off. Where does the money come from?"

Hartley, whose husband teaches at Guitar Star Studio, is one of those people.

"I made a lot of money at Aetna. Every year, I got stars on my performance reviews," she said. And then one day, she said, she was asked to pack up her desk and leave by the time the Christmas luncheon ended.

"I try to accept the fact that here is where I am right now," said Hartley, who cares for her three grandchildren while her daughter works. "God must have wanted me to be a full-time grandma at some point in my life."

In Avon, the number of households using the food bank at the Church of St. Ann has tripled in the past two or three years, according to Alan Rosenberg, the town's director of social services. In June, 94 households, or 263 people, were served, he said.

"In the old days, it would be 25 or 30 households," Rosenberg said. "There are around 300 families that are actually eligible. That's gone up at least double in the past couple

years."

Avon had 140 eligible households in 2008.

"In addition to [single-parent households or a household headed by an elderly or disabled individual], we are seeing many more traditionally structured families, typically consisting of two parents with two to three children," he said.

In Simsbury, the town's "Cheese Day" program, where qualified families receive bags full of fresh food and canned goods, has increased almost 200 percent to 206 people from 70 in 2006-2007. Usage of the weekly "Bread Day" program has gone up 400 percent, from 10 people each week to 50 people.

Get Our FREE iPhone, Droid & BlackBerry Apps!

"It's not huge numbers, but for a suburb to go up that much in a few years is unusual," said Mickey Lecours-Beck, director of social services in Simsbury.

The sheer numbers of hungry people may not compare to those in the inner cities, but the rates at which the numbers are increasing are high for suburban towns.

"It surprises people that it's not just the Staffords and the Rockvilles of the suburbs, but we also have mobile sites in Glastonbury, Farmington and Avon," McAdam said, "suburbs that you think of as being wealthy."

Many local food services are aimed at getting people back on their feet until they can find another job. McAdam said that about one-third of Foodshare's clients use the program for six months or less, one-third use it for six to 18 months, and the rest use it for the long term, usually because of a disability or another hurdle.

"There will always be people who need assistance, whether for the short term or the long term, but it doesn't have to be one out of eight of our neighbors," she said.

Until places like Foodshare can reach their ultimate goal — eliminating hunger — they try to arm people with the tools necessary to rectify their situations. They make sure eligible clients are enrolled in the federal food stamp program, and provide as much fresh food as possible.

"We're one of the few people that would like to be out of work because there wasn't a need for us to be doing what we're doing anymore," McAdam said. "I think there'll always be a need for what we do, but I believe that need could be smaller."

View Full Version: Eco-activists destroy Australia GM wheat crop

Title: Eco-activists destroy Australia GM wheat crop

TheUnhivedMind - July 16, 2011 12:34 AM (GMT)

Eco-activists destroy Australia GM wheat crop

AFP – Thu, Jul 14, 2011
http://news.yahoo.com/eco-activists-destro...-043321004.html

Environmental activists broke into an Australian government research farm Thursday and destroyed an experimental crop of genetically-modified wheat protesting against what they said were safety issues.

Armed with weed trimmers, three Greenpeace activists scaled a fence at the Canberra facility in the early hours of the morning and razed the crop, which had been modified to lower its glycemic index and increase fibre.

The government science agency running the trials, CSIRO, confirmed there had been "a break-in overnight at their crop trial site" and it was assessing the damage.

"The police, and the government's gene technology regulatory authority ... have been informed and are inspecting the site," a CSIRO spokesman told AFP.

"CSIRO is currently assessing the damage to the trial crops and considering next steps."

Greenpeace said the activists, three women, wore hazardous materials suits to keep them from carrying GM organisms out of the site, and were motivated by concerns about the trial's safety.

"The government has said they would commercialise GM wheat by 2015 in Australia, that would make us the first country in the world to approve GM wheat to be commercially grown," said campaigner Laura Kelly.

"But the polling shows Australians don't want to eat it."

Kelly said GM wheat had been proven to contaminate other crops and there was no evidence it was safe to eat, with major exporters including the European Union, Russia and Canada rejecting the crop.

Japanese flour mills, a major market for Australian wheat, had also made it clear they would not buy GM products and Kelly said the nation's Aus$4.7 billion bulk export market was at stake.

The half-hectare CSIRO crop is intended for dough baking trials for feeding to rats and pigs, with an eye to human trials, though the agency would have to get a fresh licence to test the grain on people.

The CSIRO said it had taken a series of precautions to limit contamination, enclosing the crop with a two-metre double-reinforced fence and bird netting over the top, and spreading mouse traps throughout the site.

There was a two to four-metre buffer zone and the 10 metres beyond the fence were treated regularly with herbicide.

But Kelly said the agency was clearly not taking biosecurity seriously enough.

"Greenpeace activists went in in full Hazmat gear and have walked out uncharged without speaking to a single security person," she said.

"They're not taking GM contamination issues particularly seriously."

A police spokeswoman said no charges had yet been laid and "at this stage investigations are just still ongoing", but Kelly said she would be surprised if a criminal case was not launched.

Monsanto and Gates Foundation Push GE Crops on Africa

Tuesday 12 July 2011
by: Mike Ludwig, Truthout | Report
http://www.truth-out.org/second-green-revo...rica/1310411034

Joel Mbithi (left), farm manager of the Kenya Agricultural Research Institute's Kiboko Research Station, and Yoseph Beyene, CIMMYT maize breeder, discuss experimental plots. They are developing drought tolerant top-cross hybrids as part of the Water Efficient Maize for Africa (WEMA) project. This is run by the African Agricultural Technology Foundation (AATF) in partnership with Monsanto and CIMMYT, which supplies germplasm and expertise. (Photo: Anne Wangalachi/CIMMYT.)

"The World According to Monsanto," a groundbreaking documentary on this insidious company's massive influence, was a recent Truthout Progressive Pick of the Week. Get the DVD by making a donation of $30 or more to Truthout!

Skimming the Agricultural Development section of the Bill and Melinda Gates Foundation web site is a feel-good experience: African farmers smile in a bright slide show of images amid descriptions of the foundation's fight against poverty and hunger. But biosafety activists in South Africa are calling a program funded by the Gates Foundation a "Trojan horse" to open the door for private agribusiness and genetically engineered (GE) seeds, including a drought-resistant corn that Monsanto hopes to have approved in the United States and abroad.

The Water Efficient Maize for Africa (WEMA) program was launched in 2008 with a $47 million grant from mega-rich philanthropists Warrant Buffet and Bill Gates. The program is supposed to help farmers in several African countries increase their yields with

drought- and heat-tolerant corn varieties, but a report released last month by the African Centre for Biosafety claims WEMA is threatening Africa's food sovereignty and opening new markets for agribusiness giants like Monsanto.

The Gates Foundation claims that biotechnology, GE crops and Western agricultural methods are needed to feed the world's growing population and programs like WEMA will help end poverty and hunger in the developing world. Critics say the foundation is using its billions to shape the global food agenda and the motivations behind WEMA were recently called into question when activists discovered the Gates foundation had spent $27.6 million on 500,000 shares of Monsanto stock between April and June 2010.

Water shortages in parts of Africa and beyond have created a market for "climate ready" crops worth an estimated $2.7 billion. Leading biotech companies like Monsanto, Syngenta, Bayer and Dow are currently racing to develop crops that will grow in drought conditions caused by climate change, and by participating in the WEMA program, Monsanto is gaining a leg up by establishing new markets and regulatory approvals for its patented transgenes in five Sub-Saharan African countries, according to the Centre's report.

Monsanto teamed up with BASF, another industrial giant, to donate technology and transgenes to WEMA and its partner organizations. Seed companies and researchers will receive the GE seed for free and small-scale farmers can plant the corn without making the royalty payments that Monsanto usually demands from farmers each season.

Monsanto is donating the seeds for now, but the company has a reputation for aggressively defending its patents. In the past, Monsanto has sued farmers for growing crops that cross-pollinated with Monsanto crops and became contaminated with the company's patented genetic codes.

In 2009, Monsanto and BASF discovered a gene in a bacterium that is believed to help plants like corn survive on less water and soon the companies developed a corn seed know as MON 87460. It remains unclear if MON 87460 will out-compete conventional drought-tolerant hybrids, but the United States Department of Agriculture could approve the corn for commercial use in the US as soon as July 11. Monsanto plans to make the seed available to American farmers by next year.

GE crops like MON 87460 can only be tested and sold in countries that, like the US, are friendly toward biotech agriculture. WEMA's target areas could add five countries to that list: South Africa, Uganda, Tanzania, Kenya and Mozambique. The Biosafety Centre reports that WEMA's massive funding opportunities pressure politicians to pass weak biosafety laws and welcome GE crops and the agrichemical drenched growing systems that come with them. Field trials of MON 87460 and other drought-tolerant varieties are already underway in South Africa, where Monsanto already has considerable political

influence. Kenya, Tanzania and Uganda are expected to begin field trials of WEMA corn varieties in 2011.

Make a tax-deductible donation to Truthout this week, and your contribution will be doubled by an anonymous foundation! Keep independent journalism strong - support Truthout by clicking here.

The agency that is implementing WEMA is the African Agricultural Technology Foundation (AATF), a pro-biotechnology group funded completely by the US government's USAID program, the United Kingdom and the Buffet and Gates foundations. The AATF is a nonprofit charity that lobbies African governments and promotes partnerships between public groups and private companies to make agricultural technology available in Africa. The Biosafety Centre accuses the AATF of essentially being a front group for the US government, allowing USAID to "meddle" in African politics by promoting weak biosafety regulation that makes it easier for American corporations to export biotechnology to African countries.

WEMA and AATF swim in a myriad alphabet soup of NGOs and nonprofits propped up by Western nations and wealthy philanthropists that promote everything from fertilizer to food crops with enhanced nutritional content as solutions to world hunger. Together, these groups are promoting a Second Green Revolution and sparking a worldwide debate over the future of food production. The Gates Foundation alone has committed $1.7 billion to the effort to date.

There was nothing "green" about the first Green Revolution of the 1950s and 1960s. As population skyrocketed during the last century, multinationals pushed Western agriculture's fertilizers, irrigation, oil-thirsty machinery and pesticides on farmers in the developing world. Historians often point out that promoting industrial agriculture to keep developing countries well fed was crucial to the US effort to stop the spread of Soviet Communism.

The Second Green Revolution, which is focused on Africa, seeks to solve hunger problems with education, biotechnology, high-tech breeding, and other industrial agricultural methods popular in countries like the US, Brazil and Mexico.

Africa has landed in the center of a global food debate over a central question: with the world's growing population expected to reach nine billion by 2045, how will farmers feed everyone, especially those in developing countries? The lines of the debate are drawn. The Second Green Revolutionaries are now facing off with activists and researchers who doubt the West's petroleum and technology-based agricultural systems can sustainably feed the world.

The African Centre for Biosafety and its allies often point to a report recently released by IAASTD, a research group supported by the United Nations (UN), the World Health

Organization, and others. IAASTD found that industrial agriculture has been successful in its goal of increasing crop yields worldwide, but has caused environmental degradation and deforestation that disproportionately affects small farmers and poorer nations. Widespread use of pesticides and fertilizer, for instance, cause dead zones in coastal areas. Massive irrigation projects now account for 70 percent of water withdrawal globally and approximately 1.6 billion people live in water-scarce basins.

Increasing crop yields is the bottom line for groups like the Gates Foundation, but the IAASTD recommends that sustainability should be the goal. The report does not rule out biotechnology, but suggests high-tech agriculture is just one tool in the toolbox. The report promotes "agroecology," which seeks to replace the chemical and biochemical inputs of industrial agriculture with resources found in the natural environment.

In March, a UN expert released a report showing that small-scale farmers could double their food production in a decade with the simple agroecological methods. The report flies in the face of the Second Green Revolutionaries.

"Today's scientific evidence demonstrates that agroecological methods outperform the use of chemical fertilizers in boosting food production where the hungry live - especially in unfavorable environments," said Olivier De Schutter, the UN Special Rapporteur on the right to food and author of the report. "Malawi, a country that launched a massive chemical fertilizer subsidy program a few years ago, is now implementing agroecology, benefiting more than 1.3 million of the poorest people, with maize yields increasing from 1 ton per hectare to 2 to 3 tons per hectare."

De Schutter said private companies like Monsanto will not invest in agroecology because it does not open new markets for agrichemicals or GE seeds, so it's up to governments and the public to support the switch to more sustainable agriculture. But with more than a billion dollars already spent, the Second Green Revolutionaries are determined to have a say in how the world grows its food, and agroecology is not on their agenda. To them, sustainability means bringing private innovation to the developing world. The Gates Foundation can donate billions to the fight against hunger, but when private companies like Monsanto stand to benefit, it makes feeding the world look like a for-profit scheme.

View Full Version: Hungary destroys all GMO maize fields

Title: Hungary destroys all GMO maize fields

TheUnhivedMind - July 15, 2011 06:39 PM (GMT)

Hungary destroys all GMO maize fields

July 15, 2011
http://www.allaboutfeed.net/news/hungary-d...elds-11994.html

Some 400 hectares of maize found to have been grown with genetically modified seeds have been destroyed throughout Hungary deputy state secretary of the Ministry of Rural Development Lajos Bognar said.
The GMO maize has been ploughed under, said Lajos Bognar, but pollen has not spread from the maize, he added. Unlike several EU members, GMO seeds are banned in Hungary.

Authorities have been checking for GMO crops since the beginning of this year as a new regulation came in force this March which stipulates GMO checks before seeds are introduced to the market.

The checks will continue despite the fact that seed traders are obliged to make sure that their products are GMO free, Bognar said.

Compensation unlikely
Controllers have found Pioneer and Monsanto products among the seeds planted. The free movement of goods within the EU means that authorities will not investigate how the seeds arrived in Hungary but they will check where the goods can be found, Bognar said.

Regional public radio reported that the two biggest international seed producing companies are affected in the matter and GMO seeds could have been sown on up to thousands of hectares in the country.

Local farmers complain that the use of GMO seeds has only been revealed now when it

is too late to sow again and the entire year's harvest has been lost.

Another problem is that the company that distributed the seeds in Baranya county is under liquidation, therefore if any compensation is paid by the international seed producers, the money will be paid primarily to that company's creditors, rather than the farmers.

TheUnhivedMind - July 15, 2011 06:26 PM (GMT)

First study into GM Atlantic salmon mating reveals danger of escape to wild gene pool

July 14, 2011
http://www.eurekalert.org/pub_releases/201...w-fsi071311.php

If genetically modified Atlantic salmon were to escape from captivity they could succeed in breeding and passing their genes into the wild, Canadian researchers have found. Their research, published in Evolutionary Applications, explores the potential reproductive implications of GM salmon as they are considered for commercial farming.

“The use of growth-enhancing transgenic technologies has long been of interest to the aquaculture industry and now genetically modified Atlantic salmon is one of the first species to be considered for commercial farming. Yet, little is known about the potential impact on wild salmon populations if the GM species were to escape captivity,” said lead author Darek Moreau from the Memorial University of Newfoundland, Canada.

One of the key concerns about a transgene escape is the “Trojan gene effect”, caused when a GM fish outcompetes or reproduces equally against wild rivals, however if the resulting offspring are genetically inferior this could lead a species towards eventual extinction. Until now there is no empirical research to demonstrate the ability of transgenic Atlantic salmon to breed naturally and infiltrate the wild gene pool.

In the wild, reproducing males present two main forms of rivals which any escaping transgenic male would have to compete with; large males which have migrated and returned from the sea and smaller male parr which have matured in freshwater. The large males are aggressive and develop attributes to fight off their rivals, while the smaller male parr use cryptic colouring and ‘sneak fertilisation’ to compete.

To measure the ability of transgenic males to complete with wild males during the reproductive season the team monitored breeding behaviour in a naturalised laboratory setting and used genetic analysis to determine the success of competing individuals at producing offspring.

Large, migratory wild males outperformed their captivity-reared transgenic counterparts in terms of a variety of spawning behaviours. Moreover, despite being less aggressive, non-transgenic male parr were also able to outperform their GM rivals in terms of spawning behaviour, and as a result, achieved higher overall fertilisation success.

“While the transgenic males displayed reduced breeding performance relative to their non-transgenic rivals they still demonstrated the ability to successfully participate in natural spawning events and thus have the potential to contribute modified genes to wild populations,” said Moreau. While the study provides an estimate of breeding performance under only a single set of physical and demographic environmental conditions, it does mimic a likely invasion scenario where the genetic background of the transgenic population differs from that of the wild population.

“Our study provides the first empirical observations on the natural reproductive capacities of growth hormone transgenic Atlantic salmon,” concluded Moreau. “While the resulting ecological and genetic effects of a transgene escape remain uncertain, these data highlight the importance of preventing reproductively-viable GM salmon from entering natural systems.”

Title: Belgian Blues Will Blow Your Mind, These Cows Are
Description: *Totally Ripped [STAY CLEAR OF THIS]*

TheUnhivedMind - July 15, 2011 05:20 PM (GMT)

Belgian Blues Will Blow Your Mind, These Cows Are Totally Ripped

by Aaron Saenz July 13th, 2011
http://singularityhub.com/2011/07/13/belgi...totally-ripped/

It’s been more than a decade since humans have cracked their own genetic code, but we’ve yet to wake up to a world of engineered lifeforms on the Island of Dr. Moreau. While we’re waiting for genetic science to mature maybe we should take a good long look at cows. Specifically, the Belgian Blue. This muscle bound meathead is a monument to the genetic power of selective breeding. A single genetic defect, a faulty myostatin gene, is responsible for its enormous bulk, and that defect was carefully passed on through the breed for more than a century before it was even known what was causing the cattle’s impressive ‘double muscling.’ Watch the introduction to life of the modern Belgian Blue in the video from National Geographic below. Before we dive into modifying the human gene pool, we better learn the lessons that working with the Belgian Blue has taught us: even the most primitive genetic tools are immensely powerful, they raise serious ethical concerns, and their results are so impressive as to almost guarantee their use. With genetic testing on the rise, and artificial insemination more prevalent, sex is primed to undergo a major renaissance in the years before it’s outdone by genetic engineering.

For those who have never seen a Belgian Blue in person, the experience is…dramatic. Imagine walking past a dozen or so regular bulls and being intimidated by their sheer size and strength. Then imagine passing a bull so heavily laden with muscle it makes all those scary bulls look like cupcakes. That’s the Belgian Blue, and despite the breeds docility, it never fails to impress onlookers as a very frightening animal.

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/Nmkj5gq1cQU?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/Nmkj5gq1cQU?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

In the clip above we hear about some of the amazing advantages associated with the Belgian Blue strain. They can have 40% or more additional edible muscle mass, most of which is lean meat! They gain weight well, and quickly, and produce high protein milk for their young. While they comprise a relatively small percentage of the international market, the meat itself is highly prized as its lean nature makes it healthier (and some say more tender and juicy as well). Unless you’ve specially requested it, I doubt most of you have tasted Belgian Blue, but if you are interested here’s a listing of where you can find it offered in the US and Canada.

(Based on a 4 oz. raw serving)	Certified Belgian Blue Ground Beef*	USDA Regular Ground Beef**	USDA Average Chicken Breast (w/skin)***
Fat (g)	7.0	30.0	10.5
Moisture (g)	71.7G/per 100g	63.34	79.18
Protein (g)	25	18.78	23.7
Cholesterol (mg)	64	96	72.1

*Warner Lab, USDA Cert#4786 Report 9/19/96
**USDA Handbook AH 8-13 (1985),NDB No. 13309,Pg. 339
***USDA Handbook AH 8-5 (1978),NDB No. 05057,Pg. 83

What the breeder in the National Geographic video doesn't have time to outline is the physical problems associated with uninhibited muscle growth. The Belgian Blue and the Piedmontese, another breed with myostatin problems, are viable farm strains of cattle. They can live, reproduce, give milk, and be consumed with no risk to humans. To themselves, however, these Conan-looking cows are less friendly. They experience a wide range of health risks associated with their muscle – calves can develop enlarged tongues and stiff legs which make it difficult, if not impossible, to feed, leading to early death. Many of the cattle develop cardio-respiratory ailments. In almost all modern herds, Caesarean sections are common due to complications in pregnancy, and in some cases C-section rates have climbed to nearly 90% of all births!

Caesarean scars are clear on this cow, and are common in most herds.

Both the impressive bulk and health issues of the Belgian Blue have been maintained through the relatively simple technology of line breeding. Essentially, a very few bulls are selected to be the fathers for calves in all of the females. By choosing those bulls

which clearly demonstrate the myostatin defect phenotype, breeders can make more and more of the muscled cattle. Once semen is collected from bulls (as the video so graciously shows us – eww) it can be tested and then used to impregnate cows through artificial insemination. Anecdotally it is suggested that most of the world's current Belgian Blue herds were derived from just three bulls and their descendants. While that may be an exaggeration, the truth is certainly that in efforts to perfect the breed very few male genetic lines are allowed to continue.

When shaved, the muscle of the Belgian Blue is even more obvious.

That's true for all types of cattle and livestock, really. Traditional selective breeding pushes us towards a narrower gene pool. It's unclear if that is going to get much worse or much better as modern genetic testing takes hold. We've already discussed how cheaper DNA tests are allowing cattle breeders to choose the absolute best bulls for line breeding. Those cheap tests mean that any rancher can now see if they have a prize bull. That may open up breeders to using new fathers, or it may simply replace the very small number of current stud bulls with a new, but equally small, generation of replacements.

Either way, what's good for cattle is slowly becoming good for humans. Though no one seems to want to phrase it in this way, humans are starting to adopt selective breeding habits and technologies. There are now several companies that sell genetic tests in association with in vitro fertilization (IVF) clinics. With good cause, I might add. Successful testing for Tay-Sachs has helped dramatically reduce the occurence of that disease in the US. Most of these newer genetic testing companies are looking to repeat that success for more than a hundred other genetic conditions. Wouldn't you want to know before you got pregnant if your children would be at high risk for crippling ailments? If you are a genetic carrier for such a disease then Preimplantation Genetic Diagnosis (PGD) can allow you to select fertilized embryos without the disease. IVF and PGD are giving us the tools necessary to, at least in terms of our own gametes,

become selective breeders. Breeders informed with rudimentary genetic information, which is a step up from those Belgian farmers who first started propagating their mutant cows.

(Left) Trout given a mutant gene from the Belgian Blue are notably more muscular than regular trout (right).

We've discussed before how genetically engineered animals are on the horizon and could be on our plates in the near future. The Belgian Blue's mutant myostatin gene variation has even been spliced into rainbow trout to give them more bulk (and thus more more worth as food). Animals are already being genetically engineered, and if work in primates is any indication, we're slowly approaching the time when scientists will be able to waltz inside a human embryo, tinker with its DNA, and get the child to come to term. That possibility, however, scares the sh*t out of most people, and angers the rest. The chances that human genetic engineering is going to have a smooth transition into becoming a popular technology is almost nil. Expect legal and social hurdles to abound. Hell, I wouldn't be surprised if armed conflict arose around this controversy as well. It could take decades before we accept such technology, though my bet is eventually that we will.

Meanwhile, modern sex powers on. PGD and IVF aren't universally excepted, but they aren't fueling riots either. Morally, they are a much more widely acceptable technology. Personally, I know a few IVF (possibly even PGD) kids and my world would be a lot poorer if they weren't around. I'm glad it's an option for parents.

But that doesn't keep it from being a stepping stone to some pretty amazing selective breeding opportunities that could give us the equivalent of designer babies even without genetic engineering. See the Belgian Blue? That's a single mutant gene that turned out to be helpful, and that simple breeding habit was propagated for more than a century. We've already seen human children who were born with the equivalent of the myostatin defect seen in the monstrous cattle. Picture a time when we discover other, relatively rare but potentially advantageous, genetic mutations. Imagine if everyone had the

ability to comb through their sperm and find those mutant gametes with the desired traits you want. You could optimize your offspring – give yourself super babies with no genetic tampering required. Long before genetics is ready to replace it with something better, sexual reproduction is going to get more and more impressive thanks to modern technology.

I look forward to seeing all your Belgian Blue-like children in the future.

Killer Combo of High Gas, Food Prices at Key Tipping Point

Published: Thursday, 21 Apr 2011 | 2:22 PM ET
By: Christina Cheddar Berk
http://www.cnbc.com/id/42704213

The combination of rising gasoline prices and the steepest increase in the cost of food in a generation is threatening to push the US economy into a recession, according to Craig Johnson, president of Customer Growth Partners.

Johnson looks at the percentage of income consumers are spending on gasoline and food as a way of gauging how consumers will fare when energy prices spike.

With gas prices now standing at about $3.90 a gallon, energy costs have now passed 6 percent of spending—a level that Johnson says is a "tipping point" for consumers.

"Energy is not quite as essential as food and water, but is a necessity in today's economy, and when gasoline costs more than bottled water—like now—then it takes a huge bite out of disposable spending," he said, in a research note.

Of the six US recessions since 1970, all but the "9-11 year 2001 recession" have been linked to—of not triggered by—energy prices that crossed the 6 percent of personal consumption expenditures, he said. (During the shallow 2001 recession, energy prices had risen to about 5 percent of spending, which is higher than the long-term 4 percent share.)

What may make matters worse this time around, is there has been a steep increase in food prices that occurred as well. In other recent recessions food costs were benign, at between 7.5 percent and 7.8 percent of spending.

This year food prices have climbed 6.5 percent since the beginning of early January, according to Consumer Growth Partners.

"The combined increase in the necessities of food and energy creates a harsh double whammy for already stressed consumers," Johnson said. The last time this happened was in the recession that lasted from 1973 to 1975.

Johnson estimates that food and energy eat up about 15 percent of consumer spending at today's prices, compared with about 12.7 percent two years ago.

Of course, at lower income levels, these percentages are much higher. One sign of the stress some consumers are already feeling is that some AAA offices have already seen an increase in out-of-gas service calls, as motorists try to put off filling their tanks or drive around trying to seek out the gas station with the least expensive price.

Also some regions are being hit harder than others. Gas prices in Hawaii continue to set new highs, according to AAA data. The average price on Wednesday was $4.51, topping the prior record of $4.50 for a gallon of regular unleaded set in July 2008.

Brazilian president announces $19 billion investment program for family farms

By Associated Press, Published: July 12
http://www.washingtonpost.com/business/ind...HBBI_story.html

BRASILIA, Brazil — Brazil says it will invest $10 billion to help family farms in Latin America's biggest country.

President Dilma Rousseff announced the investment program on Tuesday in the southern state of Parana.

The investment will help small farmers working on land received from Brazil's agrarian reform program, indigenous communities and communities of descendants of runaway slaves that started being formed in the 17th century.

The program includes a minimum price policy and harvest purchase guarantees.

Lower interest rates for farm loans are also part of the program.

According to official figures, family farms account for 70 percent of the food consumed in Brazil.

TheUnhivedMind - July 13, 2011 05:53 PM (GMT)

Families face £260-a-year surge in food bills as prices jump by 6.5%

By Becky Barrow
Last updated at 8:15 AM on 13th July 2011
http://www.dailymail.co.uk/news/article-20...s-jump-6-5.html

The average family has to spend an extra £260 a year on the weekly food shop, official figures showed yesterday.

Although the overall cost of living is falling, few families will have noticed because food prices are continuing to rise at an alarming rate.

The Office for National Statistics said the annual inflation rate dropped from 4.5 per cent in May to 4.2 per cent in June.

But over the last 12 months, food prices have jumped by 6.5 per cent, the biggest rise for more than two years.

The ONS said meat is 7.2 per cent more expensive than last year, bread and cereals are up 8.5 per cent and soft drinks and mineral water are up 10.6 per cent.

A typical family with two children spends £76.50 a week on food and soft drinks, according to the ONS.

But the recent rise in food prices means the same basket of goods is now costing an extra £5 a week, or £260 a year.

To add to the pressure on cash-strapped families, the rate at which food prices are rising is far higher than the rate at which their pay is going up.

The average private sector worker has received a pay rise of only 1.8 per cent, but this is being wiped out by the jump in their food bills. All public sector workers earning £21,000 or more are being hit by a two-year pay freeze.

Many families are being forced to make cutbacks, by buying cheaper food or simply buying less.

And economists predict food prices may continue to rise over the next few months.

It comes at a crippling time for families whose income is being eaten away by tax rises, such as VAT, record petrol prices and rising energy bills.

Last week British Gas came under fire for adding almost £200 a year to the cost of heating and lighting from next month.

Gas is going up 18 per cent and electricity by 16 per cent, taking the average annual dual-fuel bill to a record £1,288.

Inflationary British Gas is raising its prices for home energy customers from next month

Brendan Barber, general secretary of the Trades Union Congress, said Britons are facing ‘a toxic mix’ of attacks on their living standards.

‘The cost of living is still rising twice as fast as wages, so our income squeeze is getting tighter every month – and will continue for some time,’ he said.

James Foord, from the price comparison website mySupermarket, said: ‘Although we have seen a drop in inflation, this drop has not benefited shoppers.

‘They will not notice inflation coming down as food prices are still on the up. Shoppers need to be as clever as possible and look for the best deals around when doing the supermarket run in order to save their wallets.’

A report from another comparison website, MoneySupermarket, showed the extent to which people are being forced into using their credit cards to survive until pay day.

One in four are running out of cash around a week before their next pay day.

Kevin Mountford, the website’s head of banking, said ‘most of the population’ are ‘feeling the pinch’.

For savers, although inflation may be falling, it is still far too high for them to have much chance of keeping up with the cost of living.

Inflation has been above the Government’s 2 per cent target for 19 consecutive months.

It is estimated savers have lost £72billion of interest since the Bank of England base rate was cut to 0.5 per cent in March 2009. Some banks have cut their interest rates as low as 0.01 per cent.

Simon Rose, from the campaign group Save our Savers, said: ‘Savers are getting burned.’

The Institute of Directors said falling inflation ‘kills any chance of a rate rise this year’, adding: ‘There may not be any rate rise next year either.’

View Full Version: Kan. poultry farm loses 4,300 turkeys in heat wave

Title: Kan. poultry farm loses 4,300 turkeys in heat wave

TheUnhivedMind - July 13, 2011 03:58 AM (GMT)

Kan. poultry farm loses 4,300 turkeys in heat wave

By ROXANA HEGEMAN - Associated Press | AP – 4 hrs ago
http://news.yahoo.com/kan-poultry-farm-los...NkZS0xMWUwLWJmZ

WICHITA, Kan. (AP) — A heat wave that has pushed temperatures well over 100 degrees has killed tens of thousands of turkeys and chickens in Kansas and North Carolina and left farmers across the lower part of the country struggling to cool off their flocks.

In North Carolina, about 50,000 chickens died at a farm after the power went off for less than an hour. In Kansas, one couple lost 4,300 turkeys that took 26 hours to bury.

"It felt like a war zone. It felt like hell," turkey grower Holly Capron said.

The heat wave that started over the weekend has been spreading east. Four of the nation's top turkey-producing states — Arkansas, Missouri, North Carolina and Virginia — were under a heat advisory Tuesday. Arkansas and North Carolina are also leading chicken producers.

Temperatures in Kansas on Sunday reached 110 degrees, with a heat index of 118. It was 106 in the buildings near Columbus where Capron and her husband raise 22,000 turkeys for Butterball LLC. She said they've been running big fans and fog nozzles in their poultry buildings, and they've had a tractor pulling a spray wagon to water down the birds. They lost 140 birds on Saturday, but nothing prepared them for Sunday, when 4,300 died.

After receiving approval from state regulators, the Caprons, their workers and friends began digging a massive hole — 60 feet long, 40 feet wide and 10 feet deep — to bury

the nearly 50-pound birds. They started at 11 p.m. Sunday, and the last turkey was buried 26 hours later. The crew worked around the clock. No one slept.

"It was literally overwhelming during the night," Capron said. "I honestly wanted to start crying. My husband was in shock."

She blamed the deaths on a heat spike that hit about 5:30 p.m. Sunday. The Kansas Department of Agriculture's Division of Animal Health confirmed that heat, not disease, caused the deaths, department spokeswoman Chelsea Good said.

In North Carolina, the heat wave killed about 50,000 broiler chickens at a Johnston County farm when the power went out for about 45 minutes, said Gary Rhodes, a spokesman for Colorado-based Pilgrim's Pride Corp., which owned the chickens.

Farmers in the Carolinas outfit their poultry barns with cooling systems that use fans to push mists of water over the birds or pull air through the sheds at high speed like an air tunnel. The cooling systems have prevented family-owned turkey growers Prestage Farms from suffering a mass die-off from heat for more than five years, said co-owner Scott Prestage.

"If outside the heat index is at 107, like it is right this minute, the bird in that house is feeling something that tends to be in the mid to high 80-degree range," said Prestage, whose operations produce more than 425 million pounds of live turkey a year in North Carolina and South Carolina. "We tend not to lose birds in those houses, not as long as all the equipment is operating properly."

A power outage, though, can be deadly.

"With the new ventilation systems in these houses, they can handle the heat pretty good," said Bob Ford, executive director of the North Carolina Poultry Federation. "Most everybody's converted their houses to that type of system, and you just have to keep your fingers crossed I guess."

John Bryan, spokesman for the Missouri Poultry Federation, a trade organization, said he hadn't heard of the heat causing similar problems in Missouri. But he said producers are vigilant during the summer, making sure the turkeys move around and get plenty of water.

"It's summer in Missouri, and they know the routine," Bryan said. "They're constantly out checking their flocks. They've got field managers and that's what they do every day. They all watch them a little more closely because it's such a heat wave. ... It's the same with the chicken people. They're out there watching."

One thing farmers watch for, he said, is making sure the turkeys haven't bunched up together in the heat, which can cause them to smother.

"A lot of them will just get in a pile," Bryan said "They do sometimes get by the doors, which maybe will have a breeze, and sometimes they'll just get in a heap."

Drought Spreads Pain From Florida to Arizona

Grant Blankenship for The New York Times

By KIM SEVERSON and KIRK JOHNSON
Published: July 11, 2011
http://www.nytimes.com/2011/07/12/us/12drought.html?_r=2&hp

COLQUITT, Ga. — The heat and the drought are so bad in this southwest corner of Georgia that hogs can barely eat. Corn, a lucrative crop with a notorious thirst, is burning up in fields. Cotton plants are too weak to punch through soil so dry it might as well be pavement.

Farmers with the money and equipment to irrigate are running wells dry in the unseasonably early and particularly brutal national drought that some say could rival the Dust Bowl days.

“It’s horrible so far,” said Mike Newberry, a Georgia farmer who is trying grow cotton, corn and peanuts on a thousand acres. “There is no description for what we’ve been through since we started planting corn in March.”

The pain has spread across 14 states, from Florida, where severe water restrictions are in place, to Arizona, where ranchers could be forced to sell off entire herds of cattle because they simply cannot feed them.

In Texas, where the drought is the worst, virtually no part of the state has been untouched. City dwellers and ranchers have been tormented by excessive heat and high winds. In the Southwest, wildfires are chewing through millions of acres.

Last month, the United States Department of Agriculture designated all 254 counties in

Texas natural disaster areas, qualifying them for varying levels of federal relief. More than 30 percent of the state's wheat fields might be lost, adding pressure to a crop in short supply globally.

Even if weather patterns shift and relief-giving rain comes, losses will surely head past $3 billion in Texas alone, state agricultural officials said.

Most troubling is that the drought, which could go down as one of the nation's worst, has come on extra hot and extra early. It has its roots in 2010 and continued through the winter. The five months from this February to June, for example, were so dry that they shattered a Texas record set in 1917, said Don Conlee, the acting state climatologist.

Oklahoma has had only 28 percent of its normal summer rainfall, and the heat has blasted past 90 degrees for a month.

"We've had a two- or three-week start on what is likely to be a disastrous summer," said Kevin Kloesel, director of the Oklahoma Climatological Survey.

The question, of course, becomes why. In a spring and summer in which weather news has been dominated by epic floods and tornadoes, it is hard to imagine that more than a quarter of the country is facing an equally daunting but very different kind of natural disaster.

From a meteorological standpoint, the answer is fairly simple. "A strong La Niña shut off the southern pipeline of moisture," said David Miskus, who monitors drought for the National Oceanic and Atmospheric Administration.

The weather pattern called La Niña is an abnormal cooling of Pacific waters. It usually follows El Niño, which is an abnormal warming of those same waters.

Although a new forecast from the National Weather Service's Climate Prediction Center suggests that this dangerous weather pattern could revive in the fall, many in the parched regions find themselves in the unlikely position of hoping for a season of heavy tropical storms in the Southeast and drenching monsoons in the Southwest.

Climatologists say the great drought of 2011 is starting to look a lot like the one that hit the nation in the early to mid-1950s. That, too, dried a broad part of the southern tier of states into leather and remains a record breaker.

But this time, things are different in the drought belt. With states and towns short on cash and unemployment still high, the stress on the land and the people who rely on it for a living is being amplified by political and economic forces, state and local officials say. As a result, this drought is likely to have the cultural impact of the great 1930s drought, which hammered an already weakened nation.

“In the ’30s, you had the Depression and everything that happened with that, and drought on top,” said Donald A. Wilhite, director of the school of natural resources at the University of Nebraska in Lincoln and former director of the National Drought Mitigation Center. “The combination of those two things was devastating.”

Although today’s economy is not as bad, many Americans ground down by prolonged economic insecurity have little wiggle room to handle the effects of a prolonged drought. Government agencies are in the same boat.

“Because we overspent, the Legislature overspent, we’ve been cut back and then the drought comes along and we don’t have the resources and federal government doesn’t, and so we just tighten our belt and go on,” said Donald Butler, the director of the Arizona Department of Agriculture.

The drought is having some odd effects, economically and otherwise.

“One of the biggest impacts of the drought is going to be the shrinking of the cattle herd in the United States,” said Bruce A. Babcock, an agricultural economist at Iowa State University in Ames. And that will have a paradoxical but profound impact on the price of a steak.

Ranchers whose grass was killed by drought cannot afford to sustain cattle with hay or other feed, which is also climbing in price. Their response will most likely be to send animals to slaughter early. That glut of beef would lower prices temporarily.

But America’s cattle supply will ultimately be lower at a time when the global supply is already low, potentially resulting in much higher prices in the future.

There are other problems. Fishing tournaments have been canceled in Florida and Mississippi, just two of the states where low water levels have kept recreational users from lakes and rivers. In Texas, some cities are experiencing blackouts because airborne deposits of salt and chemicals are building up on power lines, triggering surges that shut down the system. In times of normal weather, rain usually washes away the environmental buildup. Instead, power company crews in cities like Houston are being dispatched to spray electrical lines.

In this corner of Georgia, where temperatures have been over 100 and rainfall has been off by more than half, fish and wildlife officials are worried over the health of the shinyrayed pocketbook and the oval pigtoe mussels, both freshwater species on the endangered species list.

The mussels live in Spring Creek, which is dangerously low and borders Terry Pickle’s 2,000-acre farm here. He pulls his irrigation from wells that tie into the water system of which Spring Creek is a part.

Whether nature or agriculture is to blame remains a debate in a state that for 20 years has been embroiled in a water war with Alabama and Florida. Meanwhile, Colquitt has allowed the state to drill a special well to pump water back into the creek to save the mussels from extinction.

Most farmers here are much more worried about the crops than the mussels. With cotton and corn prices high, they had high hopes for the season. But many have had to replant fields several times to get even one crop to survive. Others, like Mr. Pickle, have relied on irrigation so expensive that it threatens to eat into any profits.

The water is free, but the system used to get it from the ground runs on diesel fuel. His bill for May and June was an unheard of $88,442.

Thousands of small stories like that will all contribute to the ultimate financial impact of the drought, which will not be known until it is over. And no one knows when that will be.

The United States Department of Agriculture's Farm Service Agency has already provided over $75 million in assistance to ranchers nationwide, with most of it going to Florida, New Mexico and Texas. An additional $62 million in crop insurance indemnities have already been provided to help other producers.

Economists say that adding up the effects of drought is far more complicated than, say, those of a hurricane or tornado, which destroy structures that have set values. With drought, a shattered wheat or corn crop is a loss to one farmer, and it has a specific price tag. But all those individual losses punch a hole in the food supply and drive prices up. That is good news for a farmer who manages to get a crop in. The final net costs down the line are thus dispersed, and mostly passed along.

That means grocery shoppers will feel the effects of the drought at the dinner table, where the cost of staples like meat and bread will most likely rise, said Michael J. Roberts, an associate professor of agricultural and resource economics at North Carolina State University in Raleigh, N.C. "The biggest losers are consumers," he said.

Title: Corn Rallies to Highest Price This Month as USDA
Description: *Forecasts Inventory Drop*

TheUnhivedMind - July 12, 2011 06:29 PM (GMT)

Corn Rallies to Highest Price This Month as USDA Forecasts Inventory Drop

By Whitney McFerron and Jeff Wilson - Jul 12, 2011 5:56 PM GMT+0100
http://www.bloomberg.com/news/2011-07-12/c...tend-rally.html

Corn rose to the highest price this month after the government said U.S. stockpiles will be smaller than expected, heightening concern that costs for food and fuel will climb.

U.S. corn inventories before next year's harvest may total 870 million bushels, the lowest since 1996, the Department of Agriculture said today. Analysts in a Bloomberg News survey expected 1.029 billion. The USDA boosted its export forecast and said a record 5.15 billion bushels will be used to make ethanol, more than estimated last month.

"We're a lot more inelastic on corn demand than people think," said Jason Britt, the president of brokerage Central States Commodities Inc. in Kansas City, Missouri. "Sure, the world economy is going into a horrible funk, but there's still a certain amount of animals that have to be fed and a certain amount of ethanol that's going to be produced."

Corn futures for December delivery rose 19.25 cents, or 3 percent, to $6.52 a bushel at 11:54 a.m. on the Chicago Board of Trade, after touching $6.52, the highest since June 30. Before today, the price was up 60 percent in the past year.

Global food costs climbed to a record in February, a United Nations index showed. High prices and corruption have spurred unrest in northern Africa and the Middle East this year, ousting leaders in Tunisia and Egypt. The U.S. is the world's largest exporter of corn, soybeans and wheat.

Consumption Rising

Corn consumption globally will rise 4.1 percent to 877.6 million metric tons in the year that begins Oct. 1, up from a record 842.8 million estimated this year, the USDA said. World inventories before the 2012 harvest will fall to 115.66 million tons, from 120.88 million. Stockpiles will be equal to about 13 percent of consumption, the lowest since 1974, USDA data show.

World wheat and soybean inventories will fall for a second straight year, the USDA said. Wheat supplies before the 2012 harvest will decline to 182.2 million tons from 190 million estimated on June 1 this year, the agency said. Soybean reserves on Oct. 1, 2012, will shrink 5.9 percent to 61.97 million tons, down from 65.88 million this year.

“We are not rebuilding inventories in the U.S. or the world,” said Sal Gilbertie, the president of Santa Fe, New Mexico-based Teucrium Trading LLC, which last year started an exchange-traded product linked to corn futures. “As global consumption goes up, the competition for acreage will increase from all crops.”

U.S. Exports Surge

Exports of agricultural products from the U.S. jumped to $60.2 billion in the first five months of 2011, up 33 percent from a year earlier, the government said last month. Shipments last year jumped 18 percent to a record $115.81 billion. China became the leading market for U.S. farm goods by boosting purchases 34 percent.

China, the biggest buyer of soybeans, became a net importer of corn last year for the first time since 1996. The USDA said today that China will import 2 million tons of corn in the year that begins Oct. 1, up from an estimated 1.5 million this year.

“China is the most critical factor for prices,” and there are no signs that demand is slowing, Gilbertie said. “Unless we have a major economic hiccup,” livestock producers will buy “more corn to produce more meat,” he said.

View Full Version: Alternative Markets, Barter Systems, and Local

Title: Alternative Markets, Barter Systems, and Local
Description: *Co-ops are the Lifeboats That Will Save*

TheUnhivedMind - July 12, 2011 01:41 AM (GMT)

Alternative Markets, Barter Systems, and Local Co-ops are the Lifeboats That Will Save Us

Interview with Brandon Smith, founder of Alt-Market.com

Eric Blair
Monday, July 11, 2011
http://www.activistpost.com/2011/07/altern...ystems-and.html

More and more people are becoming aware of the complete system failure we're experiencing in the United States and around the globe. As the true nature of the control system is revealed, people tend to feel as Howard Beale did in Network when he said, "first, you've got to get mad...and scream, I'm mad as hell and I'm not going to take it anymore!"

But once that anger at being lied to for so long subsides, then we must get on with the business of taking action to make the world more just and hopeful for our children. Many people will take to the streets to protest certain aspects of the current system. Others will do everything in their power to inform or warn their peers of the coming iceberg. Those are good and necessary functions, but they won't stop the Titanic from sinking.

It seems the broken system will continue to take on water despite the best efforts to affect change within it. That's why some are suggesting to jump ship now before they run out of lifeboats. By jump ship, I mean function outside of the system as much as possible. The faulty economic system is only propped up by our belief and support of it.

When we operate outside of it using alternative markets, barter systems, local cooperatives, and competing currencies, we not only provide a lifeboat to many frightened passengers, but the paddles as well.

Below is my email interview with alternative market activist and founder of Alt-Market.com, Brandon Smith. He explains the need and benefits of using alternative markets as a form of protest and survival:

EB: What was your motivation for starting Alt-Market?

BS: I had been writing for years under the pen-name “Giordano Bruno” on my first website, Neithercorp.us, which is now retired. My original purpose when I began was simply to provide as much clarity as I could for people who were feeling overwhelmed by the wash of mainstream media disinformation, especially in terms of economic analysis. This was back in 2007 at the onset of the credit collapse, and there were a lot of good writers and researchers already doing great work, but most of it was geared towards people who had a pretty intensive understanding of the common terminology. The MSM, on the other hand, was a highly concentrated example of educational dissuasion through obscure linguistics. That is, they talked big and thought small, and the rest of us were left confused and frustrated. . .

Average Americans believe economics is mind numbingly tedious, and they are right. Primarily, because mainstream financial pundits on your typical FOX News or MSNBC afternoon market show spew vocabulary particular to their field that most of us are not exposed to on a regular basis. They might as well be speaking Sumerian and posting stock quotes in Cuneiform. I really felt this was just a byproduct of the inbred banking and investment world. The complex language makes them appear knowledgeable, almost unreachably superior. In reality, once you learn the terminology of micro and macroeconomics, you begin to discover that these guys actually HAVE been talking gibberish the whole time. It wasn’t you that was incapable of understanding; it was they who were incapable of giving valid explanations. I set out in my own little way to help people realize that they could grasp finance easily, and far better than any talking head on cable television.

Until the past year, I hadn’t really considered taking the reigns of a project dedicated to organizing people around anything. I just didn’t see myself as the “frontman” type. I had written numerous articles on the concept of decoupling from the corrupt establishment system, including pieces on what I call “Alternative Markets”. I figured that launching the ideas and strategies out onto the Web would be enough. “Let some of the heavy hitters in the Liberty Movement pick them up and run with them“, I thought. Some of these guys can jump in front of a camera or a microphone and talk for hours, non-stop about any number of subjects. That just wasn’t me.

Almost out of nowhere I received an email from Stewart Rhodes of Oath Keepers, an organization I have a lot of respect for. Its one of the few that have gone beyond the sphere of education and produced tangible results, and whose members are willing to take substantial risks to their careers and themselves. Stewart was looking for someone to help him with solutions on the economic side of the globalist problem. We agreed that the military, even honorable oath keeping men and women, would feel compelled to participate in a martial law scenario if there was no alternative in place for Americans to utilize during a breakdown. If we were tearing each other apart for food and water, the DHS, FEMA, and NORTHCOM, would have the perfect rationalization for complete lock-down, and a lot of the troops would go along with it.

I brought up my work on decentralization, localization, alternative markets, and barter networks. He basically said “Great, let’s do it. You take the lead.” I was reticent, but Stewart is a Constitutional lawyer, and damned persuasive. It’s almost impossible to dissuade the guy. So, with the help of my good friend and web designer Josh Ogden, Alt-Market.com was born.

EB: How would you define alternative markets? In other words, what constitutes an alternative market?

BS: It was all theory based on diametric opposition; the idea that there is an opposing methodology for every political or social strategy, that defuses the effects of that strategy. If you want to fight elitist centralization of a system, for example, you have to develop your own working system based on decentralization. If you want to stop the destructive effects of globalism, you have to turn away from participation in it, and focus more on localism. The purpose of centralization is to remove options from a cultural system until the only options left are those that YOU want people to bow to, and become dependent on. If the Liberty Movement wants to fight back against this, we have to have the determination to create our own options and stop playing by their rules. I feel that an Alternative Market is one of those options.

As for what an Alternative Market is; it is essentially any method of trade outside the establishment-controlled economy. It could be based on the barter of goods and skills, or the proliferation of precious metals to break our dependence on the fiat dollar (or Federal Reserve Note), etc. It could be a network of people across a county or state, or, an agreement between two friends.

The Federal Government would call this “black market trade”, and they have called it that in the past. After the recent Liberty Dollar case was concluded and they railroaded Bernard von NotHaus with the broadest and most ridiculous interpretation of counterfeiting law I’ve ever seen, the DOJ even compared barter groups and sound money advocates to “domestic terrorists”. This was meant to shoo us away from such organization, but, really, all it did was reveal what they are afraid of. They are desperate, and I do mean DESPERATE, to keep us from developing our own private

economies. If we are successful, we will no longer be in the position of dependency on the dollar or the sham economy. When it implodes, we will be relatively unfazed, and certainly not tearing each other apart. Meaning, their rationalization for martial law goes straight down the drain. The thought of that possibility really pisses them off…

EB: Why are alternative markets important? Explain to our readers what the benefits are to supporting alternative markets, barter systems, local co-ops, or competing currencies.

BS: I went into this a little bit above, but I believe widespread alternative trade and barter will solve a large portion of our problems. We deny the Federal Reserve the ability to collect income taxes to pay off the debt they generate out of thin air to enslave the country. We remove ourselves from dependency on the dollar, a fraudulent fiat currency backed by nothing but more debt, which is on the verge of hyperinflating into oblivion anyway. We rekindle the bonds of meaningful community once again, bonds which we have neglected for far too long. And, we openly declare our independence from a bad system run by despicable people. I see very little downside.

Another thing to remember is that barter networks are inevitable. I pursued a comprehensive study of barter markets throughout history before I even began writing my ideas down on paper, and I can tell you, every single modern economic collapse from the Great Depression on resulted in the immediate and natural formation of barter groups, some of them containing tens of thousands of participants. It's going on in Greece right now! Alternative markets are a necessity when the mainstream economy falters. They work. Period.

I suppose my project is only original in that I changed the timing. I propose that instead of waiting until the whole edifice comes crashing down, we are preempting collapse by building barter networks now. That way we are insulated from the effects of the disaster before it happens.

Another important benefit is that barter networking is the gateway to other forms of organization. You might trade with each other, but you also might work towards mutual defense if things really go downhill, which I'm sure most of us are aware is a distinct possibility.

EB: Do you consider them a form of protest of the current system?

BS: Absolutely. A lot of people naively call America a "free market economy". This is simply not so. If you have only two options; use the dollar and play the game, or starve to death, then this is not freedom. In a true free market economy, you should be able to participate in a particular system all you want, but also have the choice of walking away at any time. If you can't walk away, or if you are punished for walking away, then you are slave. That's the bottom line. Think "feudalism". The most effective anti-

establishment movements are those that create a “third option”; a way of thinking or a means of living outside of mainstream conditioning. This is what really draws the ire of the authorities, because it presents an actual threat to their base of power.

Normal protest in itself is fine and it gives exposure to your ideas, but, really, true protest involves independent action with tangible benefits. This requires nonconformity, and risk. Without risk, there is no chance of gain. Not to disparage street actions, but waving around signs is a minimal risk, and you can see that in the behavior of our government. Nearly 80% of the country was against the bailouts, and many protested admirably, yet they passed the bills anyway without a second thought. They don’t feel threatened by traditional protest. We’re going to have to do much more than that to stop globalization in its tracks, and I think Alternative Markets are a good start.

EB: What do you think is the major reason for the current system's failure?

BS: Oh man! That’s a loaded question. I suppose if I was to go to the very bottom of it all and pick out the primary root from which the whole poisonous vine sprang, it would have to be the establishment of the private Federal Reserve Bank in 1913. It’s funny, because you couldn’t even call the damn thing private four years ago without media sock puppets jumping all over you like feral cats. It’s “quasi-governmental” they used to say. Frankly, I don’t know what the hell that means. Either it is an institution under the direct authority of Congress and the American people, subject to audit and to public scrutiny, or, it is a private corporate bank outside of public control. You can’t be both. Sorry. Them’s the breaks.

Now, Alan Greenspan has finally admitted to the fact that the Fed is private and answers to no one, not even Congress, and the MSM stooges have shut up. However, the reality of that has not set in with the American people yet. Think about it; our entire economy is fully in the hands of a group of private corporate bankers who are almost all open proponents of globalization and the disintegration of national sovereignty for the sake of further centralization under the purview of an unaccountable global governing body. They go to meetings like Bilderberg or Davos along with many of our political leaders in violation of the Logan Act, where no press is allowed, and write foreign and domestic policy which is then implemented without our consent here at home. This isn’t “conspiracy theory”. This is just what’s admitted! Our taxes pay for this monstrosity to exist. We are paying for our own chains.

In terms of the immediate cause of collapse, anyone who has done the research behind the Fed’s activities knows, whether they admit it or not, that the whole nightmare is engineered. I welcome those who are skeptical to read my research papers on the derivatives crisis and the devaluation of the dollar, or the papers of many other alternative economists. It’s all there. The Fed knew it was creating a credit and mortgage bubble all through the '90s and early 2000s. The Fed and entities like

Goldman Sachs knew that the derivatives and mortgage markets were an utter farce and on the verge of meltdown (just look into the writings of Catherine Austin Fitts, the former Assistant Secretary of Housing). The Fed knew that the banks were ridiculously insolvent (it has recently been discovered that Lehman Bros. received $18 Billion in secret Fed funds months before they declared bankruptcy, and they warned no one). The Fed knew it all!

So, the only logical conclusion one can come to is that they wanted a financial disaster to take place. Why? They are globalists! They want a global currency, a global economic infrastructure, a global government. The U.S. is simply being prepared for that transition, whether the American people want it or not.

EB: We share the belief that a genuine free market is the answer to current global consolidation, but do you think free markets, or underground markets, will be permitted beyond the local level?

Who knows if they'll be "officially" permitted at the local level, let alone the national level. I guess there will come a point where Americans will have to ask themselves where the line is. In my opinion, the line was crossed a long time ago, but human beings will put up with a lot of trouncing for the sake of "not making waves". Under a corrupt government, the law is not for us, and it is not "just". It is not an equalizer for the safety of the citizenry. Under a corrupt government, the law is a weapon to be used to subjugate the public. That is all. Ultimately, if we wish to survive, and if we wish our principles of liberty to survive, we will have to break the law, because it is in direct opposition to our survival. To be quite honest, I would rather be called a criminal or an "extremist", than be called an "abiding subject".

My suspicion is that many people feel the same way, and that free markets will spring up everywhere regardless of what is permitted.

EB: Once local alternative markets are established to weather the transitional storm that is coming, what do you think should replace the Federal Reserve System?

BS: Not the IMF or some other global central bank, even though that appears to be the plan. Alternative Markets are a shield against the storm, but eventually, we'll have to rebuild our government, only then can we replace the Federal Reserve with something honorable. The way any transition would naturally progress would probably be through the implementation of numerous decentralized markets which would then take on gold, silver, and maybe copper as a common currency mechanism (being that precious metals are the only practical replacements at this time). The power to create and regulate money would have to be given back to the Treasury as was originally intended by the Founding Fathers. A new paper currency is certainly plausible, but this time its production would have to be limited by a metals standard.

People who don't comprehend how a metals standard works always blubber about how there's not enough gold or silver to support a currency anymore. They don't understand that the value of metals increases with demand, and therefore, it wouldn't matter if there was only one ounce of gold in the entire country. That one ounce would be worth trillions, and each paper currency note would represent a tiny fraction of that ounce, while at the same time forcing a level of commodity backing. There can still be some inflation, but a metals standard sets limits, and it limits the government's ability to spend with wild abandon. Keynesianism is a travesty. It doesn't work (obviously), and Keynes himself was a globalist cretin with aspirations of total centralization. Let's dump his wretched theories and move on, please!

EB: Wouldn't Wall Street have to be completely overhauled as well for a new monetary system to function properly?

BS: I'm not even sure what Wall Street is anymore. It's certainly not a representation of free markets or of true Capitalism (in the Adam Smith sense). It's a kind of nasty bulbous tumor now, leaching off the lifeblood of the real economy. The bull market rally we've had over the past couple years is completely fiat driven. If the Fed raised interest rates tomorrow, I guarantee stocks would plummet to 2008 levels or lower. The bailouts and Quantitative Easing are the only things keeping it alive. Fiat injections are like formaldehyde for the Dow; it's a corpse, but a pretty corpse, with blush and a nice suit. It looks almost alive, but it died a long time ago, and its starting to smell a little. I think speculative markets have a place in any economy, and investment must be encouraged. But, it should be investment based on legitimate performance, not cooked books and fabricated securities. In a new stock market, transparency would have to be demanded with no exceptions. That's the only way it would work.

EB: What do you ultimately hope to achieve with your alternative market social network?

BS: We began with the goal of 50,000 members before collapse escalates towards hyperinflation. Right now we have around 1200 members, so we have a long way to go, though there has been a very exciting snowball effect in membership over the past month. The website itself is just a springboard for local action. I try to impress this on all our members. It's not enough to merely join the site and start a group in your town or city; you have to leave your freaking house and meet each other face to face. You have to commit to real organization and real trade. You know . . . what people used to do before the Internet. My hope is that through Alt-Market, we can facilitate strong community building across the country and help people to remember that they do have a choice. That they can walk away from the rigged game and play by their own rules. Most importantly, my hope is that it will save lives, and save our country. It's not a perfect country, but that shouldn't stop us from aspiring to something better.

We can sit around on our asses and complain about the terrible state of the world, or we can take it upon ourselves to clean up the mess. That's all there is. If you are afraid

to take action, then I suggest you consider what will happen if you don't. I see far more danger in complacency and fear than I see in defiance and courage.

EB: Where do we go from here, what can people do to stimulate alternative markets?

BS: My website is only one way to build a barter network. You don't have to join to do it, we just try to make the process easier for you. Food production should be a priority for any new alternative market, especially in the face of inflation. Approaching farmer's co-ops or garden co-ops, or even starting your own and trying to develop a barter plan, would be a good first step. Getting people to meet bi-weekly and discussing goals would be more than what most in the movement do. It's a lost art form. It's going to take a little time for us to relearn how barter is done.

Stewart Rhodes and I will actually be driving Alternative Markets even further with our Safe Haven State Project, which will be ready for launch soon. For those who feel the area in which they live is too unreceptive to barter networking, we'll be building barter communities in states and counties that have a strong existing foundation. The first state we will be focusing on is Montana. We also hope to work with other Free State Projects like those in New Hampshire and Wyoming to give people more moving options. The plan is to set up coordination committees and welcome wagons within certain areas that will make your move smoother, as well as help you to find housing and employment. On top of this, as more people move to these Safe Havens, barter networks will grow until a full bore alternative economy is in place. I will be putting my money where my mouth is and moving to one of these areas shortly.

At bottom, we need to set aside our cynicism and our nihilism and become human again. There is nothing to lose and everything to gain. Honestly, I don't know many people that have better things to do. There is no excuse for failure. In the words of Carl Jung; we make our own epoch.

Please visit Alt-Market today to begin building your local alternative market connections. And please consider making a donation to their summer fundraiser; the movement needs lifeboats and paddles. You can reach Brandon at brandon@alt-market.com.

Wait, Did the USDA Just Deregulate All New Genetically Modified Crops?

A Kentucky bluegrass trial in Fayetteville, Arkansas

In a surprise move, the agency green-lights Roundup Ready lawn grass—and perhaps much, much more.

— By Tom Philpott
Fri Jul. 8, 2011 12:23 PM PDT
http://motherjones.com/environment/2011/07...philpott?page=2

It's a hoary bureaucratic trick, making a controversial announcement on the Friday afternoon before a long weekend, when most people are daydreaming about what beer to buy on the way home from work, or are checking movie times online. But that's precisely what the US Department of Agriculture pulled last Friday.

In an innocuous-sounding press release titled "USDA Responds to Regulation Requests Regarding Kentucky Bluegrass," agency officials announced their decision not to regulate a "Roundup Ready" strain of Kentucky bluegrass—that is, a strain genetically engineered to withstand glyphosate, Monsanto's widely used herbicide, which we know as Roundup. The maker of the novel grass seed, Scotts Miracle Gro, is now free to sell it far and wide. So you'll no doubt be seeing Roundup Ready bluegrass blanketing lawns and golf courses near you—and watching anal neighbors and groundskeepers literally dousing the grass in weed killer without fear of harming a single precious blade.

Which is worrisome enough. But even more worrisome is the way this particular product was approved. According to Doug Gurian-Sherman, senior scientist at the Union of Concerned Scientists' Food and Environment Program, the documents released by the

USDA's Animal and Plant Health Inspection Service (APHIS) along with the announcement portend a major change in how the feds will deal with genetically modified crops.

Notably, given the already-lax regulatory regime governing GMOs (genetically modified organisms, click here for a primer), APHIS seems to be ramping down oversight to the point where it is essentially meaningless. The new regime corresponding with the bluegrass announcement would "drastically weaken USDA's regulation," Gurian-Sherman told me. "This is perhaps the most serious change in US regs for [genetically modified] crops for many years."

Advertise on MotherJones.com

Understanding why requires a brief history of the US government's twisted attempts to regulate GMOs. Since the Reagan days, federal regulatory efforts have been governed by what's known as the Coordinated Framework for Regulation of Biotechnology. Despite its name, the Coordinated Framework amounts to a porous hodgepodge of regulations based on the idea that overseeing GMOs required no new laws—that the novel technology could be effectively regulated under already-existing code.
The new regime laid out in the bluegrass announcement would "drastically weaken USDA's regulation" of genetically modified crops.

Long story short, it means that the USDA theoretically regulates new GMO crops the same way it would regulate, say, a backyard gardener's new crossbred squash variety. Which is to say, it really doesn't. But that's absurd. GM crops pose different environmental threats than their nonmodified counterparts. The most famous example involves the rapid rise of Roundup Ready corn, soy, and cotton, which were introduced in the mid-late 1990s and now blanket tens of millions of acres of US farmland. Spraying all of that acreage every year with a single herbicide has given rise to a plague of Roundup-resistant "superweeds," forcing farmers to apply more and more Roundup and also resort to other, far-more-toxic products. Crops that aren't engineered to withstand an herbicide could never have created such a vexation.

From the start, in a tacit acknowledgement that modified crops really are different, the USDA has resorted to a fiction that allows it to at least nominally regulate GMOs, Gurian-Sherman told me. A '50s-era law called the Plant Pest Act gave the USDA power to restrict the introduction of organisms that might, well, harm plants. Genetically modified crops technically qualified as "plant pests" because industry scientists used DNA "promoters" derived from natural plant pathogens, most notably cauliflower mosaic virus, to amplify the genetic traits they introduced into new crops. "These promoters ensure that the desired trait is always 'on,' that is, expressed," Gurian-Sherman explains.

The promoters—short stretches of DNA—are not themselves expressed by the engineered plant. In other words, the cauliflower mosaic virus used to bolster, say, Roundup Ready soybeans, poses no threat to actual cauliflower plants. In addition to promoters, GMO developers also use plant-pest substances at other points in the genetic-modification process—but again, they don't express themselves in the finished project. "The Plant Pest Act was always just a regulatory hook to give the USDA authority to regulate engineered crops," notes Gurian-Sherman. "Everyone—the industry, industry watchdogs, the USDA—always knew it was a fiction."
"The Plant Pest Act was just a regulatory hook," says Gurian-Sherman. "Everyone—the industry, industry watchdogs, the USDA—always knew it was a fiction."

Yet the fiction has endured. The industry accepted it, Gurian-Sherman says, because cursory oversight gave companies from a "fig leaf...They could say that their crops are regulated and have been deemed 'safe' by the USDA." GMO foes accepted it as well, he adds, because without the plant-pest fiction, the USDA would have no authority to regulate genetically modified crops. Indeed, this plant-pest business has given activists important tools to force better oversight. For instance, the USDA is required by the National Environmental Policy Act to assess the environmental impact of the novel crops it regulates, and by the Endangered Species Act to gauge potential impact of GM crops on endangered species. Well, in recent years, the Center for Food Safety has successfully sued the agency for failing to conduct proper environmental-impact statements and endangered-species analyses for crops it removed from its plant-pest list.

Then, in 2000, Congress passed the Plant Protection Act, which broadened the Plant Pest Act slightly, adding one more regulatory hook (Gurian-Sherman's words) to the USDA's sparse GMO-regulation toolkit. That was the "noxious weed" status—any engineered crop that threatens to go rogue in the field and become a hard-to-control weed may be regulated.

That, roughly speaking, is where things stood. Until last Friday.

Obviously, a regulatory regime based on a lie was never really durable. Gurian-Sherman says the plant-pest schtick has been wearing thin for years now, because the industry has begun using nonpest material to develop novel crops. "If the companies don't use plant pests, then the USDA ostensibly doesn't have a legal hook to regulate the crops," he says. To compensate, Gurian-Sherman says, the agency has resorted to tacitly acknowledging that it has no jurisdiction, but doing so quietly to avoid exposing the fiction.

But the agency's decision on Scotts Miracle Gro's Roundup Ready bluegrass may have changed all that. Scotts essentially shattered the code of silence in a Sept. 13, 2010 letter (PDF) to the USDA, which the agency released Friday. The company declared:

Because Kentucky bluegrass itself is not a plant pest, no plant pest components will be involved in the transformation, and the native plant genomes that will be used are fully classified, there is no scientifically valid basis for concluding that transgenic Kentucky bluegrass is or will become a plant pest within the meaning of the Plant Protection Act.

Based on that impeccable logic, the company went in the for the kill: "Scotts requests that [USDA] confirm that Kentucky bluegrass modified
without plant pest components...is not a regulated article within the meaning of the current regulations."

In its July 1 response, the USDA agreed: "[N]one of the organisms used in generating this genetically engineered (GE) glyophosphate tolerant Kentucky bluegrass...are considered to be plant pests," so Roundup Ready bluegrass "does not meet the definition of a 'regulated article' and is not subject" to the Plant Protection Act. In other words, go forth and multiply.
Next Page: USDA "is a rogue agency...rebuked time and time again for its failed oversight."

On Friday, the agency also retracted its only other hook for regulating GM crops—the noxious-weeds provision. The Center for Food Safety had petitioned the USDA to classify genetically modified bluegrass as a noxious weed. The case for this is strong: Gurian-Sherman explains that bluegrass has light pollen that can be carried for miles on the wind, meaning that genetically modified bluegrass can easily transfer its genes to established conventional bluegrass.

And like most grasses, bluegrass spreads rapidly. Anyone who has ever grown a garden can testify that it's tough to get rid of unwanted turf grass. In fact, Scotts is also seeking deregulation of Roundup Ready bentgrass, another grass that has proven hard to control. In 2005, Scotts grew trial plots of its bentgrass in Oregon. It escaped the boundaries of the experimental plot and is still creating problems for homeowners miles away.
For homeowners, dealing with rogue Roundup Ready bluegrass may mean resorting to chemicals far more toxic than Roundup.

In one of the documents (PDF) released last Friday, the USDA conceded that, by its own reckoning, Scotts' genetically modified bluegrass "can be considered for regulation as a Federally listed noxious weed that shows potential to cause damage to crops and natural resources of the United States." But to avoid actually declaring it a noxious weed, the agency simply claimed that the weed risks posed by genetically engineered and conventional are "essentially the same."

That's highly debatable, since anyone who wants to address weed problems from conventional bluegrass can turn to Roundup, the nation's most-used herbicide, whereas

dealing with rogue Roundup Ready bluegrass means resorting to chemicals far more toxic. Starting with the "essentially the same" premise, the USDA notes that conventional bluegrass is already widely planted across the country without causing much harm; from there it assumes that Scotts' engineered bluegrass won't be a problem either, concluding that it need not be declared a "noxious weed" after all. And if it's neither a plant pest nor a noxious weed, the USDA has no right or obligation to regulate it. Game, set, match to Scotts Miracle Gro. Or, to use a more appropriate sports metaphor: a hole in one for Scotts!

So where does this leave us? If the plant-pest fiction no longer applies (Gurian-Sherman says fewer and fewer novel crops rely on it), and if even crops that carry an obvious noxious-weed risk won't be regulated as such, then what happens?

Well, if the USDA doesn't regulate novel GMOs, then it has no obligation to perform environmental-impact or endangered-species analyses of new organisms in the biotech pipeline, including plants engineered as pharmaceutical substances and biofuel feedstocks. In an email exchange, a USDA press officer confirmed that the agency would not be conducting an environmental-impact statement on Roundup Ready bluegrass—and by extension, any other crops that don't count as plant pests or noxious weeds.
The USDA "is a rogue agency...It has been rebuked time and time again by the courts for its failed oversight of these crops."

And that means watchdogs like Center for Food Safety will no longer have a legal foothold to sue the USDA for regulating those things badly—which is usually how it's done. In the wake of several recent deregulations—including Roundup Ready sugar beets, alfalfa, and bentgrass—federal courts have sided with Center for Food Safety and rebuked the USDA for failing to properly assess risks. Are such lawsuits, essentially the last line of defense for GMO regulation, a thing of the past? "We're still analyzing the documents," says George Kimbrell, the center's senior attorney.

But Kimbrell made an important point: "Look, [the USDA] is a rogue agency," he said. "It has been rebuked time and time again by the courts for its failed oversight of these crops."

Implication: Take away the plant-pest and noxious-weed hooks and the courts can no longer intervene. The industry gets free rein to plant whatever it wants—wherever it wants. This development worries Gurian-Sherman. "Will some companies still want to have the fig leaf of USDA regulation even if they're not using plant-pest material? Probably," he says. "But they don't have to. It's now their choice."

Moreover, he adds, "the noxious-weed standard has been set so high as to be virtually meaningless." The message to industry is clear: "You can completely skirt the regulatory process."

Super spud on menu as genetic code is cracked

By Steve Connor, Science Editor
Monday, 11 July 2011
http://www.independent.co.uk/news/science/...ed-2311643.html

The full genetic code of the potato plant has been deciphered by scientists who say that it will lead to the rapid development of new disease-resistant varieties of the world's most important non-cereal food crop.

An international consortium of research organisations has sequenced the 840 million DNA "base pairs" that make up the 12 chromosomes of the potato genome. The breakthrough should lead to the identification of important genes that confer resistance to potato diseases such as late blight, a fungal infection that triggered the Irish potato famine of 1845.

It takes 10 to 12 years to breed a new variety of potato, but knowing the genome could cut the time by half and improve the end product by targeting the individual genes responsible for the desired traits, the scientists said.

"Anything that allows us to link genes with traits now will improve the rate at which we can produce a whole range of varieties by different methods," said Professor Iain Gordon, of the James Hutton Institute in Dundee, which took a lead role in the project. "We now understand, in effect, the book of life of the potato, we understand the genes and we can relate that to the traits that the potato has, to improve its productivity and to reduce the impact of pests and pathogens."

Each year some 200 million tons of potatoes are eaten worldwide and they form the fourth-largest staple crop after rice, wheat and maize. The rice genome was completed in 2005 – the first of a crop plant – and a draft sequence of wheat was published last

year. Unlike cereals, potatoes are rich in nutrients such as vitamin C and folic acid and are seen as a critical crop in the effort to boost food production for a growing world population – expected to increase from to nine billion in the next 40 years.

Professor Robbie Waugh, also of the James Hutton Institute, said that cross-breeding domestic potato varieties with wild varieties that grow in South America had improved disease-resistance but success has been limited because these introduced traits tended to break down over time.

"The potato has been bred here for probably less than 400 years," Professor Waugh said. "Despite all the effort, we still grow potato varieties that are over 100 years old. Potato improvement is a very slow process. What the potato genome allows us to do is to identify particular genes that most potatoes have that may have a unique function, such as a resistant gene that is unique to a certain variety to potatoes. It could be transferred using genetic technology to a well-known cultivar grown today."

Growing popularity: a short history of the potato

* Domesticated between 7,000 and 10,000 years ago by the natives of southern Peru in South America, where the potato grows in the wild on the slopes of the Andes.

* In 1536, Spanish conquistadors take potatoes grown by the Inca back to Europe to impress royalty.

* The word "potato" is derived from the Spanish "patata", which is a compound of the native words "batata" and "papa".

* In 1538, Sir Francis Drake and the astronomer Thomas Harriot were credited with bringing the potato from the Americas to Britain, where it was quickly found to grow well in the cool, damp climate. By the 19th century it had established itself as the staple crop that fed the workforce driving the Industrial Revolution.

* French scientist Antoine Parmentier in 1774 discovered the nutritional benefits of the potato which lead to the plant's promotion in France.

* The potato crop of Ireland was devastated by the late blight fungus in 1845, triggering the Irish potato famine.

* In 1995, the potato became the first crop plant to be grown in space.

Description: *Growing Veggies*

TheUnhivedMind - July 11, 2011 10:39 PM (GMT)

Stop the Prosecution of the Bass Family for Growing Veggies

http://www.thepetitionsite.com/1/oak-park-hates-veggies/

As health and environmental concerns rise, so does the popularity of urban homesteading. While growing your own carrots may seem like a harmless enough practice, Oak Park resident Julie Bass now faces serious charges for setting up a vegetable garden in her front yard.

Bass set up her garden in the hope that she and her family could eat organic without having to buy from expensive grocery stores. The garden has become a community favorite as neighborhood children are encouraged to help her maintain the garden and eat from it.

However, the City of Oak Park is now charging her with a misdemeanor for not having a "suitable" lawn in accordance with city code. The city prosecutor is pursuing a full trial against Mrs. Bass bringing charges against her that could carry a 93 day jail sentence.

Protect residents' rights to urban homesteading and demand that the ridiculous charges brought against Julie Bass be dropped.

TheUnhivedMind - July 10, 2011 11:53 PM (GMT)

US farmers fear the return of the Dust Bowl

For years the Ogallala Aquifer, the world's largest underground body of fresh water, has irrigated thousands of square miles of American farmland. Now it is running dry

By Charles Laurence
7:00AM GMT 07 Mar 2011
http://www.telegraph.co.uk/earth/8359076/U...-Dust-Bowl.html

There is not much to be happy about these days in Happy, Texas. Main Street is shuttered but for the Happy National Bank, slowly but inexorably disappearing into a High Plains wind that turns all to dust. The old Picture House, the cinema, has closed. Tumbleweed rolls into the still corners behind the grain elevators, soaring prairie cathedrals that spoke of prosperity before they were abandoned for lack of business.

Happy's problem is that it has run out of water for its farms. Its population, dropping 10 per cent a year, is down to 595. The name, which brings a smile for miles around and plays in faded paint on the fronts of every shuttered business – Happy Grain Inc, Happy Game Room – has become irony tinged with bitterness. It goes back to the cowboy days of the 19th century. A cattle drive north through the Texas Panhandle to the rail heads beyond had been running out of water, steers dying on the hoof, when its cowboys stumbled on a watering hole. They named the spot Happy Draw, for the water. Now Happy is the harbinger of a potential Dust Bowl unseen in America since the Great Depression.

'It was a booming town when I grew up,' Judy Shipman, who manages the bank, says. 'We had three restaurants, a grocery, a plumber, an electrician, a building contractor, a doctor. We had so much fun, growing up.' Like all the townsfolk, she knows why the fun has gone. 'It's the decline in the water level,' she says. 'In the 1950s a lot of wells were drilled, and the water went down. Now you can't farm the land.'

Those wells were drilled into a geological phenomenon called the Ogallala Aquifer. It is an underground lake of pristine water formed between two and six million years ago, in the Pliocene age, when the tectonic shifts that pushed the Rocky Mountains skywards were still active. The water was trapped below the new surface crust that would become the semi-arid soil of the Plains, dry and dusty. It stretches all the way down the eastern slope of the Rockies from the badlands of South Dakota to the Texas Panhandle. It does not replenish.

Happy is the canary in the coalmine because the Ogallala is deepest in the north, as much as 300ft in the more fertile country of Nebraska and Kansas. In the south, through the panhandle and over the border to New Mexico, it is 50-100ft. And around Happy, 75 miles south of Amarillo, it is now 0-50ft. The farms have been handed over to the government's Conservation Reserve Programme (CRP) to lie fallow in exchange for grants: farmers' welfare, although they hate to think of it like that.

The first ranchers, and the Plains Indians before them, knew of water below the ground from the watering holes that sustained buffalo and then cattle far from any river. The white man learnt to drill, leaving primitive windmills on top of wooden derricks silhouetted against Wild West horizons.

But it was only in the 1940s, after the Dust Bowl (the result of a severe drought and excessive farming in the early 1930s), that the US Geological Survey worked out that the watering holes were clues to the Ogallala, now believed to be the world's largest body of fresh water. They were about to repeat the dreams of man from the days of Ancient Egypt and Judea to turn the desert green, only without the Nile or Jordan. With new technology the wells could reach the deepest water, and from the early 1950s the boom was on. Some of the descendants of Dust Bowl survivors became millionaire landowners.

'Since then,' says David Brauer of the US Agriculture Department agency, the Ogallala Research Service, 'we have drained enough water to half-fill Lake Erie of the Great Lakes.' Billions upon billions of gallons – or, as they prefer to measure it, acre-feet of water, each one equivalent to a football field flooded a foot deep – have been pumped. 'The problem,' he goes on, 'is that in a brief half-century we have drawn the Ogallala level down from an average of 240ft to about 80.'

Brauer's agency was set up in direct response to the Dust Bowl, with the brief of finding ways to make sure that the devastation never happens again. If it does, the impact on the world's food supply will be far greater. The irrigated Plains grow 20 per cent of American grain and corn (maize), and America's 'industrial' agriculture dominates international markets. A collapse of those markets would lead to starvation in Africa and anywhere else where a meal depends on cheap American exports. 'The Ogallala supply is going to run out and the Plains will become uneconomical to farm,' Brauer

says. 'That is beyond reasonable argument. Our goal now is to engineer a soft landing. That's all we can do.'

Estimates vary, but with careful conservation, less wasteful irrigation and seeds for corn, cotton, wheat and sorghum genetically engineered for drought conditions, farming may yet go on for 60 years. That would be over the deepest stratum of the Ogallala. But the husbanding of water, soil, minerals or anything else has never been the Texan way, and without it the dust will start blowing in as few as 10 years.

Water – not oil – has always been the most valuable resource in the West. Wars have been fought over it, feuds maintained, and fortunes won or lost. Apart from the Ogallala, the main source remains the Colorado River, flowing west from the Rockies, its annual bounty of snow melt providing the drinking water for Las Vegas, irrigation for California's Central Valley, and the swimming-pools of Los Angeles. No one is surprised that the mighty Colorado now runs dry before it reaches the Pacific, nor that climate change, with falling rain and snow levels, spells potential disaster for the Sunshine States. There are at least public controls over most of this water, even if it is actually owned by corporations and very rich people with 'water rights'.

But Texas, true to its self-conscious style of 'rugged individualism', has no such legal controls. It maintains its Wild West-era laws of 'right to capture'. This means that if you have water under your land, or in a river running through it, you can take and use as much of it as you like. You can water the corn or the cows, or you can make a buck by selling it to the nearest thirsty suburb. If you want to drain your land into desert, you may.

With the American 'can-do' faith in technology, Brauer's own hopes are for the 60-odd years of reduced but viable farming. 'We don't want it to be a bust,' he says. 'We have to be optimistic.'

In Happy, that sounds more like wishful thinking. The early December sun sinks towards the winter solstice at a few minutes after six, leaving Main and its crossroads with the railway tracks in darkness but for a few street lights. A miniature suburban-style housing grid stretches between Main and the high school on the eastern edge of town. The football team is the Happy Cowboys, their cheerleaders the Happy Cowgirls. Old pick-up trucks in the car-park denote an away match, their drivers piled into yellow school buses for the trip. Most of the houses are still lived in, valued at about half the Texas average. Some are dilapidated, their gardens planted with rusting detritus, others spruce with the Stars and Stripes flapping in the breeze. Nowadays, the working population drives an hour or so north or south to small cities where they find employment.

The temperature drops below freezing. Kay Horner sits in My Happy Place, her diner on Highway 87, hoping for traffic and customers. She has moved back from Arkansas,

snapping-up a Main Street store for only $10,000 to turn into her home. 'There used to be 50,000 head of cattle, now there's 1,000,' she says. 'Grazed them on wheat, but the feed lots took all the water so we can't grow wheat. Now the feed lots can't get local steers so they bring in cheap unwanted milking calves from California and turn them into burger if they can't make them veal. It doesn't make much sense. We're heading back to the Dust Bowl.'

Less than 20 miles south, towards Lubbock, the next town down Interstate 27, Barry Evans is still farming. His 2,200 acres came from his great-uncle Freeman, who watched it turn to dust in the 1930s. Evans's father, in his eighties, still works the farm next door. Evans has sunk new wells to make up supply as old ones dry from producing 1,000 gallons a minute to 100, but the aquifer is deeper here and they have enough Ogallala water left to pump and make a profit. They want to make it last, their eyes fixed on the future so that Barry's son, Eric, can take over for a fourth generation. He is in his last year at high school and is raising four pigs of his own for the 4H (young farmers) competition at the County Fair. It will not be easy, but at 48 Evans has taken himself to the cutting edge of farm technique and technology. If there is a future for Ogallala farming, it depends on men such as Evans.

'You have to see this as a business like any other,' he says. 'To earn a living, to stay on the land, you have to maintain the margin between cost and product value. Our water level is 10 per cent of what it was 30 years ago, and we have to make up for that by technique. That means looking for more yield from less water.'

Evans went to the local university for an agriculture degree, and stayed on to complete half a master's in business. He does not own a cowboy hat, and pulls on a winter coat bearing the logo of a seed company, a salesman's gift, as he sets out to tour his 'sections', fields of a square mile each. At ground level the rows look faintly curved, but from the air you can see that the fields are circles, and from passenger jets at 30,000ft they look like the crop circles of Salisbury Plain. They are ugly and alien on the wide-open land, but they have become the landscape of Ogallala agriculture because they are cut to fit the sweep of the enormous arm of a pivot irrigator, turning like the hand of a clock, a hand a half a mile long. They cost $180,000 each.

Evans stops by a well. There is no derrick, only a concrete block sprouting heavy pipes, because nowadays the pump is at the bottom of the well. Inside a steel box is a computer: it controls the pivoting arm to lay down an average of an inch in eight days. Every drop counts. On many farms you can see the effects of drought from the air as a quarter or a third of the land is left dry to burn brown in the sun. 'During the 90s, I really thought it would never rain again,' Evans says. 'But with a bit of luck, we get eight to 10 inches a year, and we have learnt to capture it. I aim for half-and-half, half rainfall and half aquifer.' He can now grow crops using five acre-inches a year, rather than acre-feet. 'That's a big difference,' he says.

He strides into the field along the line of the pivot arm, 12ft over his head. Every few yards a spray nozzle dangles on a hose, low enough to spray below the canopy of the crops. That is one way to minimize waste through evaporation. Next, he stoops to the soil to show the flattened stubble of last year's crop, and of the year's before that. He no longer ploughs – nothing dries the surface to turn the soil to dust like ploughing. Instead, the old stalks hold down the soil, keep the moisture in, and rot down to nutrients. The seeds, themselves 'engineered', are dropped below the surface by a machine that opens a narrow channel in front of the dispenser, and closes it behind them.

Then there is the choice of crops. Evans has switched from corn, wheat and cattle to cotton and sorghum, which makes oil and ethanol for fuel, alternating them around his circular fields. They use less water, and he has got rid of the cattle altogether. 'I don't want to drill more wells,' he says. 'Why would I want to own a desert?'

At the Ogallala Research Service's experimental farm just west of Amarillo, soil scientist Steve Evett nods his approval and says, 'The smart, educated farmer survives: the ones that fall behind do not.' He is out in his half-sized 'pivot' field, showing off the next generation of irrigation systems. This one is fully automated and, with a bit of luck, may save another drop or two. It starts with a new nozzle, a 'sock', which drips the water right on to the ground by each root. Between each dangling pipe is a cable with a sensor at one end, and a computer relay at the other. It measures the amount of moisture in the canopy, and takes a light-spectrum scan of each plant to determine its health, just as the gardener judges the colour of his leaves. This information goes back to the computer mounted at the well-head for even finer metering.

In another field, there is what might become the last resort: a system buried underground, watering only individual roots, with evaporation limited to any that might reach the surface. 'We are already seeing much less water used,' Evett says, 'and there is going to be less and less to use. Things will get harder and harder, but we can use technology to offset the drying for as long as we can.'

All may come to nought in the face of a threat that has nothing to do with corn or beef, but everything to do with the American devotion to making money at any cost. The Texas oil billionaire and corporate raider T Boone Pickens is after their water. He is proving to be the ultimate test of their free market gospel of the 'right to capture'.

Ten years ago Pickens concluded that the prophets of climate-change may well be right, and if they were, that water would become more valuable than the oil that had made his fortune. He formed a company called Mesa Water, and began buying up Panhandle land with water rights over the Ogallala. He is now the largest individual water owner in America, with rights over enough of the aquifer to drain an estimated 200,000 acre-feet a year, at least until the land goes dry. That is 65 billion gallons a year, or, to put it another way, 124,000 gallons a minute. The plan? Ninety-five per cent

of Ogallala water is now used for agriculture, but Pickens plans to pipe it 250 miles to Dallas, expected to triple in size in 30 years, with a demand for water far exceeding supply. Pickens is making the hottest of climate-change bets: that water's value will rocket as it runs dry. One man's thirst is another man's fortune. Irrigation farming would simply follow gold mining, open-range ranching and oil drilling in the traditional cycle of boom and bust. 'There are people who will buy the water when they need it. And the people who have the water want to sell it,' Pickens has said. 'That's the blood, guts, and feathers of the thing.'

'Obviously it would be a disaster for the Panhandle,' Steve Walthour, manager of the North Plains Groundwater Conservation District, says. 'But if there are no limits, he can take all he wants. That's the law of capture.'

Texas conservatives, at the core of America's faith-and-business culture, root for Pickens. Brent Connett, a policy analyst for the Texas Conservative Coalition Research Institute, pushes the view that trading farming for selling water is a 'right' upheld by 100 years of Texan law, and can only bring new prosperity. 'The water business, if allowed to bloom,' he believes, 'can be the advent of another multi-billion-dollar business that will tremendously benefit all Texans, especially those who hold the rights to the water in the Panhandle.'

Connett does not offer a count of winners versus losers. But a group of landowners in the far north of the Panhandle could certainly be winners. Taking advantage of another quirk of Texas law, they have voted against joining Walthour's Conservation District. That was their democratic right even as it defied the attempts of their fellow farmers to protect water supplies for the benefit of all. The other Ogallala states all have some form of government controls metering water use. Texas has the Conservation Districts instead, with the local farmers voting their own restrictions. The problem is that these are voluntary. 'The idea,' Walthour says, 'is to balance individual water rights with the common interest. It's the best thing to do. Otherwise the biggest pump wins – and everyone goes dry.'

Will Allen, among the 'opt-out' owners with a 'spread' close to the Oklahoma border, does not see it that way. 'In Kansas, the state owns the water – not so in Texas,' he says. 'We own it, and we don't see why we should give up our right to capture. We would be giving away property that belongs to us.' His family settled here in 1905 and he holds to their belief that the aquifer is less of a lake than a series of 'pockets', private to the land immediately above. Only the prospect of Pickens draining the water from underneath him seems to dent Allen's stand-alone verities. Would he chase him out of town? He chuckles, a little uncertainly. 'Well, I wouldn't want him as a neighbour,' he says. 'But if he takes out water he owns, that is his right.'

There is an air of fatality hanging over the farmers of the Panhandle. At the Elk Junction Restaurant in Stratford, a crossroads village 70 miles north of Happy at the heart of the

'opt-out' district, a group of half a dozen farmers has gathered to gossip over pies and coffee. Most are retired, or planning to quit, handing over to their sons if they want the land. Not all do. These men are mostly losing the struggle for water and the slender margins of profit that can keep them on the land. They have worked long and hard through often brutal weather, farming vast tracts with a couple of sons until they quit for college or city jobs. The land they have hung on to is worth a pension, as long as there is still some water for irrigation, but their real reward is their pride. To a man they loathe Pickens, while defending his 'right to capture'. This is Texas, and they are Texan.

The water boards would like to stop him but they know that state government would not dare challenge individual rights to ownership. Their only real chance is to persuade the county authorities to stall on 'zoning' permits when he starts to build his pipeline, and that is an outside chance.

'The heart of the Dust Bowl was here, you know,' says Wayne Plunk, whose great-great-grandfather came over from Germany. He is big and round, strong as an ox in his day, but now he looks a good 10 years older than his 69 years. 'When I was six I was asking my dad for a $1 umbrella against the sun for the tractor I drove all day. He said no, and bought me a 25-cent hat instead.' He has not stopped working since. He went to college to train as a teacher, and for 25 years taught at local schools while farming in the remaining hours. 'We are drying up. People don't learn from history, and if we keep breaking the ground and run out of water, it'll happen again.'

Plunk believes that one way or the other, farming the High Plains will have to end. Like the farmers of Happy, he has handed his land to the CRP to let it return to the Plains that nature intended. He misses the life. 'I used to go out on the land before dawn when I worked at school,' he says, 'and I would always plough to the east. I ploughed into the rising sun, and I knew there was a God.' He pushes back his cap, and stares into the distance.

TheUnhivedMind - July 10, 2011 02:07 AM (GMT)

Corn, Soybeans Rise as Hot, Dry Weather Threatens U.S. Crops

By Jeff Wilson - Jul 8, 2011 8:33 PM GMT+0100
http://www.bloomberg.com/news/2011-07-08/c...-u-s-crops.html

Corn rose, capping the first weekly gain since May, and soybeans climbed on concern that hot, dry weather in the next two weeks will erode crop prospects in the U.S., the world's biggest producer and exporter.

Temperatures will approach 100 degrees Fahrenheit (38 Celsius) next week from Nebraska to southwestern Indiana with overnight lows expected to be above average, increasing stress on crops, Commodity Weather Group LLC said in a report. Dry, hot weather will continue from July 19 to July 23, the forecaster said.

"The U.S. forecast is a little more threatening today," said Dax Wedemeyer, a broker at U.S. Commodities Inc. in West Des Moines. "Heat will rob yield potential from crops."

Corn futures for December delivery jumped 21.5 cents, or 3.5 percent, to close at $6.37 a bushel at 1:15 p.m. on the Chicago Board of Trade. The most-active contract gained 6.7 percent this week, the first advance in seven weeks, and is up 61 percent in the past year.

Soybean futures for November delivery rose 8.75 cents, or 0.7 percent, to $13.465 a bushel. Earlier, the price reached $13.495, the highest for a most-active contract since June 22. The oilseed rose 2.6 percent this week, capping the first two- week rally since May.

Grain prices also got a boost from a U.S. Department of Agriculture report yesterday showing exports of corn, the main ingredient in livestock feed, to China, the world's

leading pork producer.

U.S. exporters sold 540,000 metric tons to China and an additional 300,000 tons to unknown destinations for delivery in the year that begins Sept. 1.

China may buy as much as 5 million tons from the U.S., Argentina and other suppliers to replenish inventories, Wedemeyer said.

Corn is the biggest U.S. crop, valued at $66.7 billion in 2010, followed by soybeans at $38.9 billion, government figures show.

Title: LS9 Planning Brazil’s Biggest Plant to Make
Description: *Biofuels, Chemicals*

TheUnhivedMind - July 10, 2011 12:20 AM (GMT)

LS9 Planning Brazil’s Biggest Plant to Make Biofuels, Chemicals

By Stephan Nielsen - Jul 8, 2011 6:53 PM GMT+0100
http://www.bloomberg.com/news/2011-07-08/l...-chemicals.html

LS9 Inc., a closely held U.S. biotechnology company, may build Brazil’s biggest biofuel and specialty chemicals factory as more companies seek to produce new products from sugar cane, the world’s cheapest fuel crop.

The company is planning a facility may be able to produce as much as 200 million gallons (758 million liters) of fuel and chemicals a year, more than two-thirds bigger than Brazil’s largest biofuels plant, South San Francisco, California-based LS9’s Chief Executive Officer Edward Dineen said in an interview.

LS9 plans to take advantage of Brazil’s domestic demand for petrochemicals and its productive sugar cane crops to convert plants into specialty chemicals that may replace products derived from petroleum. At least three other companies are pursuing a similar strategy.

“Brazil is going to be a focal point for us,” Dineen said. “We envisage multiple production units there.”

The company’s plans are not complete and the factory may be smaller, he said. “The ultimate size will depend on feedstock availability and offtake interest,” he said. Another possibility is a factory that will only produce chemicals with annual production capacity of 75 million gallons.

LS9 uses genetically engineered bacteria to produce diesel fuel and specialty chemicals that are used to make such products as detergents and cleaning materials.

Cheapest Fuel Crop

"Cane production costs are really low," Salim Morsy, an analyst at Bloomberg New Energy Finance, said today. "It's known as the cheapest fuel crop in the world."

Brazilian cane is produced on about 7.8 million hectares, or 2.2 percent of the country's arable land, and can produce as much as 50 percent more ethanol than U.S. corn a hectare, he said.

Brazil's biggest biofuels plant is owned by Sao Martinho SA (SMTO3) and can produce 450 million liters of ethanol a year, according to New Energy Finance.

LS9 operates a small-scale production plant in Florida that may be expanded to 38 million liters a year by 2014, Dineen said

Amyris Inc. (AMRS), an Emeryville, California-based biotechnology company, is also producing fuel and chemicals derived from sugar cane in Brazil.

Brazilian biodiesel makers BSBios Industria e Comercio de Biodiesel Sul Brasil SA and BioVerde Industria e Comercio de Biocombustiveis SA both unveiled plans to tap Brazil's specialty chemical markets in the past week.

BSBios plans to build a 60,000-ton a year canola and flaxseed-based lubricants factory through a partnership with the state-controlled oil company Petroleo Brasileiro SA (PETR4), and Bioverde expects to produce from vegetable oils as much as 100 million liters of chemicals a year by 2013.

View Full Version: Sugar Surges Most in Nine Months on Dim Outlook

Title: Sugar Surges Most in Nine Months on Dim Outlook
Description: *for Brazil Crop*

TheUnhivedMind - July 8, 2011 11:46 PM (GMT)

Sugar Surges Most in Nine Months on Dim Outlook for Brazil Crop

By Debarati Roy and Isis Almeida - Jul 7, 2011 7:33 PM GMT+0100
http://www.bloomberg.com/news/2011-07-07/s...razil-crop.html

Sugar jumped the most since October after an industry group said output would decline in Brazil, the world's biggest grower.

Production in the Center South, Brazil's largest growing area, may drop by as much as 1 million metrics in the current season compared with a year earlier, Unica said today. The sweetener has gained 73 percent in the past 12 months.

"People are getting extremely pessimistic about the Brazilian crop," said Bruno Lima, a risk-management consultant at FCStone Group Inc. in Campinas, Brazil.

Raw sugar for October delivery climbed 1.84 cents, or 6.6 percent, to settle at 29.52 cents a pound at 2 p.m. on ICE Futures U.S. in New York, the biggest gain since Oct. 7.

"Funds are back in the market," said Jeff Bauml, a senior vice president at R.J. O'Brien & Associates, a broker in New York. Prices will rise to 32 cents this month, he said.

Cane processing will total 535 million metric tons in the 2011-2012 season, or 40 million tons less than the previous estimate and below last year's harvest of 557 million, C. Czarnikow Sugar Futures Ltd. said in a report yesterday. Goldman Sachs Group Inc. said today that the revised output estimate represents an "upside risk" to the bank's three-month price forecast of 25 cents.

Production in the Center South region has declined almost 25 percent this season from

a year earlier, according to Unica.

“Persistently weak crushing data out of Center South Brazil has supported prices as the market begins to price in a full-year cane crush below 540 million metric tons,” Morgan Stanley analyst Hussein Allidina wrote in a report dated yesterday.

In London, refined-sugar futures surged 5.5 percent to $745 a metric ton on NYSE Liffe. That’s the largest advance since Nov. 18.

View Full Version: Starving North Korea faces suspicious donors

Title: Starving North Korea faces suspicious donors

TheUnhivedMind - July 8, 2011 11:28 PM (GMT)

Starving North Korea faces suspicious donors

Humanitarian groups warn that about 6 million North Koreans face severe food shortages but international donors say they want better oversight before giving more, alleging that most aid is diverted by the regime.

By John M. Glionna and Richard Simon, Los Angeles Times
July 7, 2011, 3:14 p.m.
http://www.latimes.com/health/la-fg-north-...,0,215012.story

Reporting from Seoul and Washington— As humanitarian groups warn of increasing food shortages in North Korea, the authoritarian government faces diminishing prospects for international aid, with allegations from both the United States and South Korea that donations rarely reach the poor and starving.

The European Union recently announced a plan to provide $14.5 million in emergency aid to the impoverished nation of 24 million as officials expressed concern at food shortages caused by seasonal flooding and a severe winter.

Washington and Seoul, meanwhile, appear to be solidifying a strategy to end any further food shipments until a monitoring system is instituted for such assistance, analysts say.

Last month, the Republican-controlled House approved a measure to bar aid to North Korea, which lawmakers said would serve only to prop up the repressive government. Many said they believed Pyongyang was exaggerating its needs and storing food for national celebrations in 2012 to mark the 100th birth anniversary of founder Kim Il Sung.

North Korea's food problems are systemic, critics allege, the result of a creaky state-run communist economic system resistant to reform or oversight. Only when changes are

enacted should aid be granted, they say.

"North Korea will always cheat," said Rep. Ed Royce (R-Calif.), who sponsored the amendment. "Providing food aid not only allows Kim Jong Il's oppressive regime to divert scarce resources towards its military program — one that has grown increasingly threatening over the past several years — but it delays the day when real, structural reform will come to North Korea."

The Obama Administration has yet to take a stand on food aid to North Korea, but a State Department spokesman said this week that Washington "understood" the European Union's decision. She did not elaborate.

South Korea suspended such assistance in 2008 with the election of President Lee Myung-bak, who has said Kim Jong Il must give up his nation's nuclear arsenal and meet other conditions before Seoul will resume aid.

Critics say Washington and Seoul are playing politics with poverty and that arguments for withholding aid are based on misperceptions of the situation in North Korea.

After conducting a food assessment there this spring, five nongovernment aid agencies concluded that food for the nation's most vulnerable groups — children and the elderly, as well as pregnant and nursing mothers — was running dangerously low and would likely run out during what's known as the summer "lean season" before fall harvest.

"I don't believe the need in North Korea is fabricated," said David Austin, a program director for Portland-based Mercy Corps, who led the assessment. "I saw children and elderly who were acutely malnourished. These people will die first as everyone is consumed with accessing food."

Former U.S. President Carter, who recently traveled to Pyongyang, said, "One of the most important human rights is to have food to eat.

"For South Korea and the U.S. and others to deliberately withhold food aid for North Korea and its people is really a human rights violation," he added.

Many high-ranking Democrats, including Sen. John F. Kerry (D-Mass.), chairman of the powerful Senate Foreign Relations Committee, also support humanitarian aid to North Korea.

A reported 2 million North Koreans died of starvation in the 1990s, a debacle that rallied donor nations and international humanitarian groups to focus on aid.

More than a decade later, a debate still rages over the extent of the continued need there. A U.S. assessment team led by Robert King, special envoy on North Korean human rights issues, spent two weeks in the country in spring. At a recent hearing, King

told Congress that any aid to North Korea should be heavily monitored.

He said the U.S. would provide only "the kinds of food that are less desirable for the elite, for the military. For example, we would not provide rice. We would focus on some kind of a nutrition program that would provide other kinds of food that would be harder to divert."

Though North Korean officials have resisted foreign oversight, European Union officials say they plan to send 50 personnel to ensure proper monitoring of any aid.

Humanitarian groups are calling for quick action. The World Food Program estimates that one-fourth of the North Korean population is in urgent need of assistance, recommending that the international community provide more than 478,000 tons of food assistance to support children and pregnant women.

Description: *Exit in Germany*

TheUnhivedMind - July 6, 2011 09:22 PM (GMT)

BASF Said to Consider Genetically Modified Crop Exit in Germany

By Sheenagh Matthews and Richard Weiss - Jul 6, 2011
http://www.bloomberg.com/news/2011-07-05/b...in-germany.html

BASF SE (BAS), the world's biggest chemical maker, may withdraw genetically modified crop research from Germany in response to growing political opposition, three people familiar with discussions said.

The maker of the Amflora scientific potato is considering the future of its research facility in rural Limburgerhof in southwestern Germany, said the people, who asked not to be identified because the plans aren't public. A move to the U.S. is possible for the plant biotechnology operations, which employ 700, said one of the people.

Germany plans to close all 17 of its nuclear reactors by 2022, exiting atomic power after a meltdown in Japan stoked safety concerns. The move has strengthened the Green Party, which rejects nuclear energy and is now a junior coalition partner in BASF's home state. The risks of genetically modified organisms are difficult to calculate, the Greens say.

"GMOs may be just like atomic energy," said Ulrike Hoefken, the Green Party's regional environment minister. "The risks are masked and big benefits are claimed. But it's the general public who is left with the costs for any damage."

The flight of research means Germany may lose out on the $12 billion market for genetically modified plants, which is set to grow 5 percent annually over the next five years, according to advisory firm Phillips McDougall. BASF founded the agricultural center in Limburgerhof in 1914 and now has 11,000 square meters of greenhouses and

some 40 hectares of fields.
Weighing Politics

BASF, in an e-mailed response to questions, said it's too early to comment on the future of plant biotechnology research, though the company will take regional politics into account. The company has already halted projects focusing solely on the European market, it said. The Green Party tripled its vote in Rhineland-Palatinate, home to BASF's Ludwigshafen headquarters, on March 27.

"We are committed to green biotechnology," Peter Eckes, head of BASF's plant science unit, said in an e-mail. "We value the open and constructive dialogue we have had with Rhineland- Palatinate's government in the past and want to continue this dialogue with the members of the new government. This also includes the clarification of the new government's attitude toward green biotechnology."

The potential setback comes a year after BASF won permission to plant its Amflora potato for use as a thickening agent for paper, overcoming 13 years of opposition from environmental groups in Germany and Sweden who cited possible damage to health and ecology.
Missing Out

Developing countries will overtake industrialized nations in planting genetically modified crops before 2015, said Clive James, founder of nonprofit International Service for the Acquisition of Agri-biotech Applications, or ISAAA.

A European Union plan to let individual member states ban the cultivation of GM crops won support this week. Legislators endorsed a draft law that would give governments an opt-out from rules making the EU a single market for goods. The aim is to accelerate approvals of applications to plant scientific seeds.

"The price countries like Germany will have to pay if they decide against biotech will be very high," James said in an interview on June 15. "The money and the scientists would go elsewhere. That's a long-term loss."

James estimates 15.4 million farmers use biotech crops, 90 percent of those being "among the poorest of the poor." The crops are an "essential element" to help reach the United Nation's goals of cutting poverty and hunger, James said.
Monsanto's Moves

German seed maker KWS Saat AG (KWS) carries out research and plants test fields in its home country, while commercial planting takes place in the U.S. because of regulatory hurdles in Europe, according to spokeswoman Sabine Michalek. Bayer, based in Leverkusen, Germany, located its plant biotechnology research in Belgium.

Monsanto Co. (MON), the world's largest seed company, has pared plant development

in Germany to a sole project with two test fields because the country's "basic framework doesn't lend itself to further products," company spokesman Andreas Thierfelder said.

"We're keeping the minimum required to retain our accreditation," Thierfelder said by telephone on June 22. "It's just enough to keep our foot in the door." Monsanto does most of its research in Missouri, where the company is based.

China may be spending the most on researching crops engineered for specific traits or resistance to pests, ISAAA's James estimates, with Brazil and India also investing heavily.

"China sees it as a strategic issue, a question of independence and of food security," he said.

Title: Families face ever tighter squeeze as droughts and

TheUnhivedMind - July 6, 2011 06:16 PM (GMT)

Families face ever tighter squeeze as droughts and floods force food prices up by 6%

Prices of corn, wheat, beef, pork and sugar have all risen in last year
More than a THIRD of groceries now bought are on special offer
Fastest rise in overall index for two years

By Harry Glass
Last updated at 4:48 PM on 6th July 2011
http://www.dailymail.co.uk/news/article-20...s-says-BRC.html

Hard-pressed families are facing an even tighter squeeze as food prices surged again, with inflation now at its highest rate for more than two and a half years.

Household budgets are now so tight that more than a third of groceries bought are on offer from increasingly struggling retailers, it emerged today.

Shop prices in June rose by 2.9 per cent compared with a year ago, with food prices rising by 5.7 per cent, according to the British Retail Consortium (BRC).

The increase is the fastest in the overall index since October 2008.

A combination of floods in southern Asia, droughts in Russia, China, central Asia and North America and cyclones in Australia have put pressure on global supply chains.

Corn (maize) prices have increased by 78 per cent over the past 12 months, with wheat, beef, pork and sugar prices all up by more than 20 per cent.

BRC director general Stephen Robertson said: 'Overall shop price inflation is being driven by surging world commodity prices, the effect of the weak pound on import costs and higher VAT -- all beyond retailers' control.'

The BRC said some 39 per cent of grocery spending is now on goods on promotion, which shows 'there are lots of offers available' and 'savvy shoppers are taking advantage to minimise the impact on real-life bills'.

Shops are increasingly having to use discounts to generate sales at the expense of profit margins.

A number of retailers, including Marks & Spencer, have started sales two weeks earlier than 2010, with the result that some products, such as clothing and footwear, are now cheaper than a year ago.

Online retailer N Brown proved that the tactic can be successful as it reported revenues up 5.1 per cent - but gross margins down 0.2 per cent as the increased sales generated less money.

Month-on-month, prices rose by 0.5 per cent, with food prices ahead by 0.6 per cent - the same as May - while non-food product inflation rose by 0.5 per cent compared with

a decline in May.

Increased petrol costs are also outside the control of retailers, who are struggling to pass on higher wholesale costs.

High-profile chains are falling into administration - including, in the past fortnight, Habitat, Jane Norman and TJ Hughes.

TheUnhivedMind - July 6, 2011 12:30 AM (GMT)

Uncle Sam Food History Exhibit Promotes Food Control

Rady Ananda
Thu, 30 Jun 2011 19:29 CDT
Tuesday, July 5, 2011
http://redactednews.blogspot.com/2011/07/u...t-promotes.html

Oh, gag me with a bowl of propaganda. The National Archives is hosting an historical exhibit on government say in what we eat and grow and how to cook it: "What's Cooking, Uncle Sam: The Government's Effect on the American Diet." From the opening lines of the website, you know our control freak "Uncle" has launched another major psyops campaign to convince us that Government Knows Best when it comes to food:
"We demand that our Government ensure that it is safe, cheap, and abundant. In response, Government has been a factor in the production, regulation, research, innovation, and economics of our food supply."
Though painting Uncle Sam as Mrs. Doubtfire, when it comes to the results of government intrusion into the food supply, he's more like Joseph Mengele. Over the last hundred years, we've seen climbing rates of cancer, diabetes, obesity, heart disease and neurological disorders, thanks to Uncle Sam's "regulation" of food additives and environmental pollutants. We've also seen the number of farms decline by 98%.

Kerry Trueman of Eating Liberally is only too happy to regurgitate the promotion of government control of food, pointing out when Uncle Sam actually provides a social safety net, to wit: the SNAP program, otherwise known as food stamps.

She fails to mention that 184 House Democrats (along with 217 Republicans) just voted to make deep cuts in US food assistance in the 2012 Agricultural Appropriations bill

(HR 2112), which I summarized here, based on the analysis of several different experts, and my own stumbling thru the massive bill.

One analysis I relied on, by Congressmen Sam Farr and Norman Dicks, points out that though the Women, Infants and Children program got a slight boost, the $6 billion budget nowhere near meets the needs of the 50 million+ US citizens who live in poverty, most of them women and children. That's less than $150 per year for each hungry person.

But, hey, how about those foreign resource wars that Uncle Sam funds to the tune of $1.2 trillion?

Two years ago, the estimate of those in poverty reached 47 million. Since then, unemployment has boomed while thenumber of jobs has declined. You do the math; I'm sure the number of those truly living in poverty is much higher than 50 million, though recent government figures assert that the number in poverty hovers at 40 million.

Trueman hails a feature of SNAP that allows recipients to buy seeds and vegetable plants. Yes, that is a good feature. Too bad that HR 2112 made the following cuts, note Farr and Dicks:
"Funding for the Commodity Supplemental Food Program, which serves predominantly low-income seniors, is $138.5 million. This is $38 million (22%) below the 2012 request and $37 million (21%) below 2011.

"Funding for the Emergency Food Assistance Program (TEFAP), which works with states to assist food banks, is $38 million. This is $12 million (24%) below the 2012 request, and about $11 million (23%) below 2011. The bill also cuts $51 million (20%) from the funding that TEFAP receives annually from the SNAP program.

"The bill reduces the WIC Farmers Market Nutrition Program to $15 million, which is $5 million (25%) below the $20 million level that has been provided for many years. The program gives vouchers to WIC participants for the purchase of fresh fruits and vegetables at state-approved farmers' markets."
Trueman does acknowledge that Big Ag's lobby has twisted Uncle Sam's arm to the detriment of the public, but fails to acknowledge that the Obama Administration is well known for appointing those lobbyists to key positions.
He's got Monsanto heading his newly created Food Safety czar in the person of Michael Taylor, whom Jeffrey Smith describes as the "person who may be responsible for more food-related illness and death than anyone in history."
Obama appointed biotech poster boy Tom Vilsack as head of the USDA, who's been sued twice so far for violating law by approving genetically modified crops without proper environmental assessments.
He made Monsanto lobbyist and pesticide-pusher Islam Siddiqui the US Ag Trade Representative.

Obama also put Elena Kagan on the US Supreme Court. In the No-GMO world, she is most notorious for her government-funded support of Monsanto when she served as Solicitor General.
Speaking of the "economics of our food supply," which the exhibit touts, the new ag appropriations bill also made deep cuts to local and regional food system development programs. Agribusiness giants dominate the market today. This is Uncle Sam setting US priorities. The Senate is now reviewing HR 2112.

Without expressing any comprehension of the impact of food control legislation, Trueman blows the horn of the Food Safety Modernization Act:
"Sure, Uncle Sam's always been kind of a drag, with his stern face and wagging finger. But to 'nanny-state' haters, he's a Beltway busybody in drag, democracy's Mrs. Doubtfire, a Maryland Mary Poppins. If you believe that government is always the problem, never the solution, then you have no use for, say, more stringent food safety regulations..."
Really? Mrs. Doubtfire? The FSMA promises to enforce irradiated foods, promote genetic engineering, and run out of business small and midsize operators on which we've thrived for hundreds of years. Burdensome hyper-regulation will force them to upgrade their facilities to the tune of tens of thousands of dollars or lose their license. A veritable Big Food dream, and an Oliver Twist nightmare.

"Safety" has nothing to do with the FSMA - this is about forcing us to eat factory-produced foods adulterated with GMOs, chemicals, drugs and nanomaterials, where most of the nutrition has been removed. It's really a nice racket - for the medical profession, pharmaceutical industry, and chemical manufacturers, as well as Big Ag.

In fact, this kind of regulated contamination of US food (and the environment) prompted the making of The Idiot Cycle, an excellent film showing how Uncle Sam's "nanny-statism" is making us all sick so that chemical companies and Big Pharma (sometimes one and the same) can earn obscene profits. (My review here.)

Like all the "modernization" acts, the Food Safety Modernization Act is but another in a long line designed to enhance profits of Big Business at the expense and health of the rest of us, including the environment.

Though this probably deserves its own essay, let's take a brief look at some of those "modernization" acts and their impact on us:

The Financial Services Modernization Act of 1999 deregulated the financial services industry, leading to the collapse of global finance, from which we have still not recovered (except for those banksters and their bailouts, which both Bush and Obama signed despite 95% of the public opposing them.)

Commodity Futures Modernization Act of 2000 also deregulated Wall Street, allowing

for credit default swaps, unlimited trading in food commodities futures, and the infamous "Enron loophole," which benefited (among others) the wife of the congressman who authored it: Phil Gramm.

Farr and Dicks also point out that the 2012 ag appropriations bill defunds the Dodd-Frank financial reform legislation that seeks to rein in food commodities trading.

Also see, e.g.:

F. William Engdahl's Getting Used to Life Without Food;

Ellen Brown's How Banks and Investors Are Starving the Third World; and

Frederick Kaufman's The Food Bubble: How Wall Street starved millions and got away with it.

Help America Vote Act of 2002 (a modernization act) replaced hand-count and lever technologies with software, which can be hacked without detection. By 2004, 95% of the U.S. said goodbye to verifiable election results, no matter what election officials say. (See my annotation of 21 scientific reports condemning computerized voting systems.)

Voter Registration Modernization Act of 2009 didn't pass, but don't ignore it. This bill seeks to set up online voting, another ludicrous assault on democracy. There is no way to ensure these votes are valid.

Food Safety Modernization Act of 2011 Already discussed here, but in more detail in several pieces listed here. Steve Green's famous piece, S.510 Is Hissing in the Grass, woke up fans of food freedom and food sovereignty with Canada Health whistleblower Shiv Chopra's quote:
"If accepted [S 510] would preclude the public's right to grow, own, trade, transport, share, feed and eat each and every food that nature makes. It will become the most offensive authority against the cultivation, trade and consumption of food and agricultural products of one's choice. It will be unconstitutional and contrary to natural law or, if you like, the will of God."
Oh, we're seeing that. Not only has the FDA increased its raids on natural food producers and sellers, but (as many readers know), it also recently claimed authority under the FSMA to seize food without credible evidence it's been contaminated.

When you think about what's in 90% of US food, the risk of becoming ill from natural foods and supplements is far, far below what's happening to the majority of Americans, with climbing rates of diabetes, obesity, heart disease and neurological disorders. Yet natural food producers are under attack by Uncle Sam given his commitment to global trade rules.

This isn't Mrs. Doubtfire or Mary Poppins. This is Adolph Hitler, Benito Mussolini and

Josef Stalin all rolled up into one. This isn't a nanny state; this is food fascism - criminalizing our right to eat the foods of our choice, grown and prepared as we like, while destroying the ability of family and mid-size farms to earn a living.

I'm sure the "What's Cooking, Uncle Sam" exhibit will provide a fascinating study - not into enhanced food safety or increased health invoked by federal policy, because that clearly has not happened - but in the power of propaganda.

Bob Koehler says these types of efforts "abandon us in a state of feel-good pseudo-security." Despite that, and you can blame this on morbid curiosity, I hope to see it.

What's Cooking is on display thru January 3, 2012.

TheUnhivedMind - July 6, 2011 12:29 AM (GMT)

Growing A Revolution: America's Founding Gardeners

July 1, 2011
http://www.npr.org/2011/07/01/137555246/gr...nding-gardeners

The founding fathers won a war, established a government and birthed a nation. And through it all, they never forgot to water the plants. Monticello garden director Peter Hatch and historian Andrea Wulf discuss how Washington, Adams, Jefferson and Madison helped create the uniquely American garden.

IRA FLATOW, host: When you think of the Founding Fathers, where do you see them? Waging war at Lexington, Concord, Brooklyn; maybe gathered around the table, signing the "Declaration of Independence." Or how about seeding rose in their gardens? Have you ever imagine Jefferson stooped over a tomato plant? Well, it turns out that the first four presidents were avid gardeners. Their estates were home to huge plots of fruits, vegetables and ornamentals. Some of them experimented with exotic crops like African okra, sesame, and others insisted on cultivating America's native plants.

And while the farmers of the Constitution garden for many of the same reasons that we do today - to relax in the outdoors, to have some fresh food ready at hand, or for the simple pleasure of working the soil - their gardens were more than that. They were the first truly American gardens inspired by European designs, but infused with a rugged, independent nature that made them sort of a political statement as well. Yankee ingenuity.

What was so American about their gardens? And what gardening tips might we take from these revolutionary green thumbs? That's what we're going to be talking about. If you'd like to talk about it too, our number: 1-800-989-8255. Also tweet us: @scifri, or go

to conversation going there on our Facebook page: /scifri.

Peter Hatch is the director of gardens and grounds at Monticello. He joins us from the studios of Virginia Public Radio in Charlottesville, Virginia. Welcome to SCIENCE FRIDAY, Peter.

PETER HATCH: Yeah, good afternoon, Ira.

FLATOW: Good afternoon. Andrea Wulf is a historian and author of "The Founding Gardeners." She joins us by phone from Germany. Welcome to SCIENCE FRIDAY.

ANDREA WULF: Hello.

FLATOW: Peter, there's so much we don't know about what was going on in Monticello, with Jefferson as a gardener?

HATCH: Well, it's too bad 'cause it's a fascinating story. It reflects as much who Thomas Jefferson was as, in some ways, the writing of the "Declaration of Independence." It's a great, great story.

FLATOW: Did he actually putter in the garden himself or did he have his slaves and other people do that for him?

HATCH: Yeah, Jefferson was a gentleman gardener. He'd sow seeds in the garden. And one of his slaves, Isaac, years after Jefferson died, recalled how Jefferson would work at a white hot pace in a coolly evening, sowing seeds in the - in his kitchen garden at Monticello.

FLATOW: Was he a good gardener, have a green thumb? Or did he wreck stuff when he tried it himself?

HATCH: Well, you might say that few gardeners failed as often as Thomas Jefferson, or at least wrote down his failures as unrelentingly as he did. He kept a garden journal called "The Garden Book." And you can hear - see the word fail time and time again. But Jefferson was an experimenter. He documented the planting of some 330 varieties of vegetables and 170 varieties of fruit. And he wrote that in gardening, the failure of one thing is repaired by the success of another. And he said that if he could successfully grow something, some new crop one time out of 100, he'd consider himself a successful horticulturist.

FLATOW: Interesting. Andrea Wulf, your book, "The Founding Gardeners," talks about how not just Jefferson gardened, but you had Washington and Adams and Madison. Tell us about some of them.

WULF: Well, so I'm talking about Jefferson, Washington, Madison and Adams as really

- kind of as farmers and as gardeners. And what I'm saying is that we have to look at them as farmers and as gardeners, not just as politicians to understand the making of America. So my argument is basically that their passion for nature, plants, gardens, and agriculture is deeply woven into the fabric of America, and very much aligned with their political thought. So they are, I mean, it kind of works on several levels.

So you have the very obvious level is really the economic importance of agricultural crops, which was important for them in terms of that the country became self-sufficient and independent, but it also worked on an ideological level, which is very much Jefferson's idea of America as an agrarian republic. It also works in terms of national identity because they all understood the importance of nature, really, for America's national identity because nature became invested with patriotic meaning. And then it works, and I think that's very important, kind of literally and symbolically, in their gardens, which they used as a canvass to paint or, you know, maybe we should say to grow a political statement.

FLATOW: Did they avoid using British plants and try to cultivate American - native American plants?

WULF: Well, there's wonderful story, I think, which is - happens in the summer of 1776, when America has just declared independence. And George Washington is the commander in chief of the army. And he is New York, and New York is facing the British army, so there are 30,000 British troops about to arrive in New York. And Washington has about half the manpower, and none of his officers have ever seen these kind of imposing warships which come sailing towards New York.

And he sits down a few evenings before the Battle of New York and writes a letter to his estate manager in Mount Vernon, asking him to design a new garden. So you have this kind of situation where the city is kind of facing the first and largest battle of the War of Independence. And Washington sits down and asks for a new garden.

And what is even more remarkable than the timing is that he's only asking for native species. So he's creating or he wants his estate manager to kind of plant a garden that is entirely made of native species. So it's almost like, at that moment when America is kind of facing the almighty British army, he doesn't want a single English tree to have their claw in the roots of Mount Vernon. So he's very - I think it's very much his kind of horticultural Declaration of Independence, if you like, so...

FLATOW: Yeah. This is SCIENCE FRIDAY from NPR. I'm Ira Flatow, talking with Andrea Wulf and Peter Hatch. They've written some very - they're - they've written some really interesting stuff about Washington. Andrea Wulf is author of the "Founding Gardeners," talking about not just George Washington, but all the Founding Fathers and their use of their gardens, not just to grow veggies but to make political statements. Peter Hatch is director of Gardens and Grounds in Monticello.

And if you're in Virginia and you want to take a great trip down to Monticello and see the gardens there, they're terrific. Maybe the holiday weekend is a good time to do that. We'll take a break. We'll be right back and talk more about Founding Fathers and their gardening habits. So stay with us. We'll be right back after this break. I'm Ira Flatow. This is SCIENCE FRIDAY from NPR.

(SOUNDBITE OF MUSIC)

FLATOW: You're listening to SCIENCE FRIDAY. I'm Ira Flatow.

We're talking about gardening in Revolutionary War times with my guests, Andrea Wulf, a historian and author of the "Founding Gardeners," Peter Hatch, director of Gardens and Grounds at Monticello. Our number: 1-800-989-8255.

Peter, do the gardens there look about the same as they did? Did you keep them the way Jefferson had them?

HATCH: Yeah, the gardens, the flower gardens and the grove and the fruit and vegetable garden at Monticello have been really restored with uncommon accuracy. We actually used years of archaeological research to put back the bones of these gardens. And Jefferson wrote so much in his garden book about planting and where the gardens were and the structure, that we've been able to put them back pretty faithfully to their existence during Jefferson's lifetime.

FLATOW: What kind of veggies did he grow?

HATCH: Well, they said he grew some 330 different varieties of vegetables.

FLATOW: No kidding.

HATCH: He was a real - probably grew more vegetables perhaps than any man had ever grown before in one place - some 89 different species, some 330 different varieties, from sesame to tomatoes, from okra to sesame. It's just a great variety of things, particularly a lot of hot season vegetables, which were unusual in Virginia gardens around 1800.

FLATOW: What kind of gardening practices did he do that we wouldn't be doing today?

HATCH: That we wouldn't be doing today? Yeah, he did some - he did things - he sometimes planted things in the same place...

FLATOW: Right.

HATCH: ...although being a great believer in rotating crops. So he used a lot of manure

in his garden, which I think good gardeners still do today. He believed that healthy plants growing and strong soil will bid defiance to pests and diseases and droughts, really the banner of the organic gardening movement, but reflecting a belief in sort of this holistic balance of wild nature on the one hand and the cultivated garden on the other.

FLATOW: Andrea Wulf, British gardens are so well-kept. Was that tradition still kept by our Founding Fathers, or did they want to make their own statement about what their gardens wanted to look like?

WULF: I think that they took some inspiration from the English garden, which is quite interesting to actually look at because Jefferson and John Adams went, in 1786, on a garden tour through England. And what they really discovered there is that the English garden was, in fact, kind of densely populated with American trees and shrubs, which had been imported over five decades by an American gardener called John Bartram (ph). So when they walked through the English garden, they realized that the English garden is kind of American. So it was relatively easy to do this in America without feeling unpatriotic. So that's the one thing.

And the other thing, I think, what is kind of uniquely American, really, is that they brought together the kind of - the useful and the beautiful. So they created gardens that combined, say, agricultural fields, vegetable plots, with shrubberies and growth. And I think this is - this combination is very American. And there are some - you know, other examples.

For example, James Madison built a temple in his garden in Montpelier, which you could argue is, you know, purely ornamental. But what he did is he put an icehouse underneath it. So he kind of gave it that kind of, you know, usefulness in the garden. And Washington, for example, built outside toilets in his garden, and he puts them in the shrubbery at the end of a kind of meandering path. And in the English garden, you would normally find a statue or a temple there. And he built them as little temples, but there were, you know, after all, an outside toilet. So it's this combination, I think, which is very different in the American garden to the English garden.

FLATOW: I would call it Yankee ingenuity in the early day. Why waste a good space with just a statue?

WULF: Exactly.

(SOUNDBITE OF LAUGHTER)

FLATOW: Let's go to the phones. Tyler(ph) in Salem, Morgan. Hi, Tyler.

TYLER: Ira, it's a pleasure to talk to you. I was curious if Angela(ph) and Peter could clarify something for me, and that was I heard that the Founding Fathers also grew

hemp in their gardens and the Declaration of Independence was written on hemp paper.

FLATOW: Hmm. Anybody...

TYLER: I'll take my question - answer off the air.

HATCH: Yeah, Jefferson certainly grew hemp for cloth, but I don't think Thomas Jefferson was smoking marijuana in Monticello, despite what we - a lot of people would like to believe. I'm not sure about the Declaration of Independence being written on hemp paper. But certainly hemp was a - not an important, but it was a - kind of a subsidiary economic crop at the time.

WULF: Well, it was relatively common. And Washington definitely grows it. Adams grows it. I'm not quite sure about Madison, but I think they're all growing it for cloth, not to smoke it.

FLATOW: Well, it was grown in this country all over the place until World War II. It was a huge crop, if I'm not mistaken. 1-800-989-8255. Let's go to Gary in Washington. Hi, Gary.

GARY: Hi. How you doing?

FLATOW: Hi there.

GARY: You briefly mentioned slaves and their contributions, but it was very brief. I don't really think Washington or Madison or even Jefferson spent a great deal of time out in the garden with a shovel and a hoe and building these elaborate gardens and structures. It was obviously the slaves who did the labor. So what are their contributions?

HATCH: Yeah. In Monticello, there was a - the head gardener was a man named Wormley Hughes, an enslaved African-American who sort of a beloved figure in - among the African-American community. But Jefferson did actually sow the seeds himself in the garden. His garden book is amazing for the details. And one of his friends who came to Monticello described a seed rack that was carried from planting site to planting site.

And from that, Jefferson, with his own hands, would actually sow the seeds. He was a fairly handy guy in the sense that he would make locks and keys and work in the blacksmith shop. But still the slaves were...

GARY: Can you tell more about Washington and Madison?

WULF: So Washington, for example, I mean, you know, I think we have to be very

clear. I mean, the kind of - the backbreaking labor was obviously done by the slaves. But all of them are very practical hands-on gardeners. We just, you know, don't hear about it that much because they have been, you know, portrayed as these kind of demigods of the revolution who, you know, who are more politicians than farmers.

But Washington, for example, always surprised visitors for, you know, and there are a lot of visitors accounts who actually, you know, describe how he's working next to his man, how he kind of, like, throws off his coat when he gets hot, how he comes in with muck-splattered boots, how he's actually there, you know, digging in the ground. So that's very much kind of described. So he's out there working in the garden. All of them are outside most of the day when they're on their plantations.

Madison, for example, has a pair of gardening trousers, which are described as so worn that he has patches on the knees. So he must have been out there in the garden doing some weeding. Otherwise, you don't have holes on the knees. So I think they're all out there but, obviously, at the same time, the slaves are doing kind of the backbreaking work.

FLATOW: Thanks for calling, Gary. 1-800-989-8255 is our number. I found it interesting that you mentioned, Andrea, that right - I guess you said it - was at 1786 that they took a trip over to Great Britain and look at the gardens? Right after the war was over.

WULF: Yes. So what happened is actually that Jefferson is the American minister in Paris and Adams is the American minister in London. And Adams had some problems with the trade negotiation with the British because the British, quite frankly, don't want to help their former colony. So he's writing in spring 1786. He's writing to Jefferson, saying, look, come over to London and, you know, give me a hand, basically.

And they had no luck. The British, you know, hate the Americans. And Jefferson, in fact, thinks they're so rude that he says - that he speculates that it's the amount of meat consumed by the British that makes their character so insusceptible to civilization, as he says.

(SOUNDBITE OF LAUGHTER)

WULF: So what do they do? I mean, what would you do in a situation like this? They go off on a garden tour.

FLATOW: Right.

WULF: And it's not, you know, this is not a leisurely trip. They're, I mean, they are traveling every day, 40 to 50 miles, and they see several gardens a day. So they're literally taking off as many gardens as possible because both of them don't know if they're going to see them again. So, again, they want to see what they have read about because the English garden, at that point, is the most famous kind of - type of

gardening in the Western world. So they want to see as much as possible.

And Jefferson is actually taking lots of notes, which - he's kind of questioning the gardeners. He wants to find out how many, you know, workmen are needed to create gardens, such as, like Blenheim or Stowe or something like that. So he's clearly thinking about recreating some of it in Monticello and trying to find out, you know, how much it would cost him.

FLATOW: Did Ben Franklin have any interest? He was so busy with so many things. Did he have time to do any gardening or known for any of it?

WULF: Well, Benjamin Franklin, as always, has his fingers in the pie unsurprisingly. I mean, he's actually the first of the revolutionaries who puts plants really at the struggle of the country. And he's - when he's in London during the 1760s and early 1770s, in the kind of run-up to the Declaration of Independence, he very quickly understands the importance of useful crops and seeds. And he, you know, he's always been part of this kind of network of farmers and gardeners. He's always been kind of exchanging seeds beforehand.

But the more he thinks that declaring independence is inevitable, the more frantically he starts sending seeds over from London to America because he's very much aware of the importance of the country having to be self-sufficient. But he also has - in Philadelphia, he has a couple of fields just to the north of the city where he's also planting new types of crops and experimenting with it. He's experimenting with manure. So he's, I mean, he's not as much a gardener as you would say the other four are, but he is very much kind of part of this thinking and network.

FLATOW: Peter, are there any sort of heirloom seeds still available from Jefferson's garden?

HATCH: You know, we have a collection of vegetables at Monticello, as well as flowers, that we grow as sort of a seed bank of not only Jefferson varieties but varieties that were around in the early 1800s, from tennis ball lettuce to red calico butterbean. So we have a nice collection of things that we try to preserve year in and year out by saving the seeds every year.

FLATOW: Yeah. We don't think much about how valuable all these seeds are.

HATCH: Yeah. I think that, you know, they're even growing in Michelle Obama's White House kitchen garden. There's a special section there devoted to Thomas Jefferson...

FLATOW: Is she...

HATCH: ...and the legacy of - go ahead.

FLATOW: Is she the first lady since, you know, victory gardens, to actually talk about, you know, the importance of gardening that you can recall?

HATCH: I think other first ladies may have been brought that up, but no first lady has said like Michelle Obama that it was among the most important thing she's ever done in her life. So I think she's certainly been an advocate for gardening. And it's nice to have that Jefferson legacy promoted there.

FLATOW: Andrea, are there any other first ladies that you can think of in...

WULF: I - no, I can't think of any.

FLATOW: Yeah. What - so what is the takeaway? What should we take - as we approach our own Independence Day this weekend, what would be the legacy of gardening nearly - of our Founding Fathers gardening in America?

HATCH: I think Jefferson looked at plants as sort of a vehicle for social change. And I think he set a real model for the things that we're talking so much about today in terms of sustainable farming and seed saving and organic gardening and local food. When he was president, he kept a chart of 37 different vegetables as they appeared in the farmers' market and when they first came and when they first disappeared from that market. And he was a great supporter of that market. So Jefferson could be looked upon, (unintelligible) being first in food and first in gardening and first in wine. And his legacy, I think, is really quite profound for the things that people are interested in today.

WULF: Yeah. And I think - I totally agree with Peter, and I - well, I would add to that if maybe the - James Madison, really, is this, I mean, that - for me that has been the most surprising thing when I was writing this book, is that James Madison really is the forgotten father of American environmentalism. So that's, you know, a real legacy, which, you know, should be maybe a little bit more applied in America today, because he was - in 1818, he gave a speech that was really remarkable for that time because he was trying to convince the Americans that if they wanted America to survive as a nation, they would have to stop destroying the forests and stop depleting the soil in Virginia.

And he said something, which I think is really remarkable. He said that man had to return to nature what man took from nature. So he's talking about the balance of nature. He's talking about nature as a very fragile ecological system that could be easily destroyed.

FLATOW: We're talking about Founding Fathers this hour in SCIENCE FRIDAY from NPR. And talking about - I think that's interesting - even back then, you know? It's got to be so politically polarized now. Back then, the Founding Fathers all agreed on it.

HATCH: When Jefferson was...

WULF: Yes. I think, in fact, that nature and gardening and agriculture was - at a time when they, you know, when the Founding Fathers started to become more partisan and their hardening of their political lines became more obvious, these topics: Agriculture, nature, gardening was, you know, still very much the one subject they all agreed upon.

FLATOW: Peter, you agree?

HATCH: Yeah. I think, certainly. Even Jefferson, you know, has been called - he's been called the father of a lot of things. He's been called the father of American weather observers, and his interest in meteorology was in large part based in his belief that the weather was changing and it might the responsible parties may have been American farmers clearing the land. So he looked at weather also in, kind of, terms that the modern people can relate to very well.

FLATOW: Penelope in Little Rock, hi. Welcome to SCIENCE FRIDAY.

PENELOPE: Hello.

FLATOW: Hi there.

PENELOPE: How can we order some Founding Father vegetable seeds from Monticello?

HATCH: We have a website, and you can order these seeds over the Internet at www.monticello.org. And flowers and vegetables we have for sale throughout the year. And we feel the best way to sort of share these things is by distributing them to as many people as possible. And we have a small cottage industry in which we collect seeds from the gardens.

FLATOW: All right. Penelope, good luck in your gardening. We lost Penelope. She took - she was writing down that website. What's the website again? One more time for us.

HATCH: It's www.monticello.org.

FLATOW: And we'll have that upon our website if - well, before the hour is out and people can get up here to look at it. I want to thank you both for taking time to be with us today because I - we talk a lot about the American Revolution, we talk lot about over the battles that go on, but we never really talk very much about the united environmentalism and the gardening efforts that were essential, obviously, from the way you've written and all talked about it that our Founding Fathers had in common. So I want to wish you all a great holiday weekend, even you over there across the pond, Andrea.

WULF: I won't have the Monday off.

(SOUNDBITE OF LAUGHTER)

WULF: But I will be raising a glass to Jefferson.

FLATOW: Thank you very much for taking time to be with us. Have a good weekend. Andrea Wulf is...

WULF: Thank you.

FLATOW: ...a historian and author of "The Founding Gardeners," a great book. It's on our reading list, "The Founding Gardeners" you want to know about this holiday weekend, some good reading. Peter Hatch, thank you also.

HATCH: We're looking forward to our naturalization ceremony on July 4th with 77 citizens will be naturalized. It's a big event at Monticello, and a real testament to Jefferson's authoring of the Declaration of Independence.

FLATOW: Well, we'll send everybody...

HATCH: Hope people will join us.

FLATOW: Well, you'll get a crowd now. Thanks for taking time to be with us. Good holiday weekend to you.

HATCH: Thanks a lot.

FLATOW: You're welcome.

WULF: Bye.

Title: Graziers say they will have to cull thousands of
Description: *cattle because of the ban on live export*

TheUnhivedMind - July 5, 2011 06:53 PM (GMT)

Graziers say they will have to cull thousands of cattle because of the ban on live exports to

Updated Tue Jul 5, 2011 3:57pm AEST
http://www.abc.net.au/news/stories/2011/07/05/3261362.htm

The owners of a Western Australian cattle station say they are being forced to cull about 3,000 cattle in the wake of the ban on live exports to Indonesia.

Australia's live cattle trade with Indonesia was suspended last month after public outrage at footage of cruelty to cattle in some Indonesian abattoirs.

But Nico Botha from Moola Bulla Station near Halls Creek in the Kimberley says they will have to start shooting the animals on his property tomorrow.

Mr Botha says there are currently 25,000 head of cattle on his property and those numbers need to be reduced because there is not enough natural grass to feed them all.

"We'd rather shoot them now than go through over grazing, dying in the paddocks, struggling to get the paddocks better again," he said.

"That's going to take us another three years, so [we'd] rather do our decision now than go through all the other dramas."

Mr Botha says he knows of other pastoralists who will also have to cull.

He says the Federal Government does not realise that cattle are going to die on paddocks in the thousands.

"They're just going to starve themselves to death, and that's what (the Federal Government) created - the biggest animal welfare issue in the history of Australia," he said.

"Animals are going to die on the paddocks in huge numbers and we're not talking hundreds, we're talking thousands."

The WA Pastoralists and Graziers Association (PGA) says station owners are trying to send a message to Canberra.

PGA president Rob Gillam says it is an extreme move, but the station owners are struggling.

"I just hope it doesn't take place but I think this is really a signal of the frustration that people are now beginning to feel," he said.

"In this particular case, Nico is thinking 'well, I've got nowhere else to go'."

Federal Agriculture Minister Joe Ludwig has told the Senate there is emergency funding that can be accessed by the cattle station.

"My office asked the ABC for the contact details for Mr Botha so that we can see what assistance we can provide to him," he said.

"I've asked Centrelink through the Minister for Human Services to make contact with Mr Botha."

The Federal Opposition also says the growing number of cattle stranded in Australia is creating an animal welfare crisis at home.

The Opposition spokesman for agriculture and food security, John Cobb, says if the live export ban is not lifted soon, the number of cattle left behind will cause serious environmental and animal welfare issues.

Mr Cobb has returned from a three-day trip to Indonesia to look at the impact of the ban.

He says those MPs calling for a total ban do not comprehend the impact on the animals.

"If these cattle do have to be all shipped down south, that is far more stressful for them than getting on a boat where they can stand around and feed and water," he said.

"[It would] make them far happier going up north to the tropics in terms of climatic condition than coming down south to the cold."

Stranded cattle

Meanwhile, nearly all of the 2,000 cattle stranded in a South Hedland holding yard in the wake of the ban have left the property.

The cattle have been at the yard for about a month.

Hedland export depot owner Paul Brown says about 400 are left but they should be gone by the end of the week.

"Some have gone to another exporter for another market, others have gone to different locations, various locations with different buyers with different intentions," he said.

Yesterday, WA pastoralists called for Senator Ludwig to be sacked from his portfolio following his handling of the situation.

PGA president Mr Gillam says the industry has lost confidence in Senator Ludwig.

"The industry is now very much aware that Minister Ludwig has been to Indonesia and has exacerbated the situation by embarrassing the Indonesians in the way he went about it," he said.

"People are saying quite clearly that he is not capable of dealing with the current situation so he needs to be replaced."

Mr Gillam says Senator Ludwig has done nothing but upset the Indonesians.

Every year more than 500,000 Australian cattle are exported to Indonesia. The trade made up 60 per cent of live cattle exports last year and generated $319 million.

Title: The Seed Bullet and the Seed Shield

TheUnhivedMind - July 5, 2011 05:52 PM (GMT)

The Seed Bullet and the Seed Shield

By Gareth,on July 5th,2011
http://dont-tread-on.me/the-seed-bullet-and-the-seed-shield/

A few thousand years ago,mankind learned the art of locally-produced food by studying how seeds grow and how to collect subsequent seed for the following season. This great art of cultivation allowed civilisations to settle in a certain location,and thus progressed man from the hunter-gatherer status in which he previously lived. Although nomadic cultures existed –and still exist today in some areas of the world –new cultures rich in philosophy,science,arts,and economic activity emerged as man was able to avoid the turbulent task of following a sometimes unpredictable herd of wild animals. Since that time,and particularly in the past century,the common,everyday,run-of-the-mill man and woman has forgotten this great skill,and is neither nomadic nor a gardener. This situation is perilous,and needs to be addressed immediately.

The current food supply is a global mega-farm wherein certain countries produce specific food types for the international market. This in-the-nick-of-time system relies upon the removal of import/export duties,cheap labour,the combustion engine,artificial pesticides and fertilisers,freezers and refrigerators,artificial preservatives,and,above all, cheap oil. This system,similar to global debt-based fiat currency system,is intrinsically fragile,amoral,and is implemented by the same people that are often referred to as ‘the elite’,‘the ruling classes’,or as how I prefer to regard them – ‘the parasitical classes’.

With the same philosophy that underpins the ‘Silver Bullet and Silver Shield’, growing your own organic produce both withdraws power from the parasitical class,whilst preserving your own ability to feed yourself. Food is THE most important thing we should consider,even before purchasing silver,as you cannot be sustained with metal alone –no matter how shiny or rare it is. The parasitical elites know the end game is approaching,and will seek to trick,bully,harass,lie,and ultimately murder and pillage as

this paradigm unravels. Do you really want these psychopaths in control of your food supply? As time progresses,these so-called ‘global leaders’ will push all sorts of lies, spin,and deception onto the unsuspecting public,and the strategies they employ will vary from country-to-country,so be mindful of the movements within your own government,both regional and national,when considering the global system.

Parasites that they are,the elites have noticed the growing trend for desiring home-grown foods in my home country – England –and instead of fighting against the trend using propaganda via the media;they have instead embraced it by supplying F1 hybrid seeds onto the market. There are ‘grow your own’ seed packets in most supermarkets and garden centres that unless stated as ‘organic’ will undoubtedly be F1 hybrids.

The parasitical class are well aware that the term ‘organic’ is ambiguous,and there is indeed a slightly subjective slant to the concept. For some people it means you cannot utilize any pollutants,whereas a local for-the-market farmer will most probably use a van to deliver goods to customers. The latter will emphasize minimal use of pollutants in their slant on what organic gardening is. However,every organic farmer will state the importance of purchasing real seed. This is because the resulting crops produce fertile seeds for future use,thus ensuring the ability to both maintain and expand your seed-bank. If you purchase and grow F1 hybrid seed you will need to purchase new packets in the future. In other words,the parasitical elite will still control your food supply.

Similar to the currency versus silver thinking:imagine being left holding a seed-bank of F1’s instead of a seed-bank consisting of real seed. What’s more,for the cost of just two ounces of silver,and with the correct knowledge and some practice,you can provide yourself with fresh,delicious vegetables for the rest of your life.

In England,the parasitical elite are conscious that their power diminishes if people grow their own food using real seed. So far,they’ve been successful in hood-winking the people into purchasing their F1 hybrids. Indeed,in my conversations with various people, many of whom are new to the grow-your-own’ trend,I’ve ascertained certain beliefs that are under-pinned by the mistaken concept that they’ll be able to purchase seed in the future easily,and at a fairly cheap price. F1 hybrid seed,however,is intrinsically linked to the global system we’ve unfortunately allowed to flourish whilst foolishly following our so-called ‘leaders’. The system is flawed,due to break,and so also,therefore,is the supply of F1 hybrids.

To tackle such a misconception common amongst my fellow man,I only engage in themes regarding the global,PONZI,debt-based,parasitical,amoral,unjust,murdering,and downright evil system that we live in with those that I know well,and feel comfortable around. After all,not everyone is ready to listen to the truth – at least not at this particular point in time. So instead,the most common justification I use for purchasing real seed is this: the crops taste better.

Unlike F1 ‘Frankenstein’ seed –that is produced to be grown using large amounts of petroleum-based fertiliser and pesticides in vast open fields –real seed is intended to be grown on a small scale,just like nature intended. The seed you collect will be even more suited to your micro-environment than the initial seed you purchased,resulting in even tastier produce for your dinner table year-on-year. Indeed,you should be extremely mindful of your micro-climate when selecting what crops to grow and methods to employ when undertaking organic gardening. I shall address such topics in chapter two: Food glorious food. This chapter is intended to justify the importance of recognizing the role of real seed in undoing the parasitical elite’s web-of-control.

The populace of England have been appeased thus far with their desire for home grown produce,but as the world awakens,many will listen to the reasons behind the philosophy of purchasing real seed. The elite could then become more desperate and instruct their prostitute-media to inform the masses “about the dangers of not using F1 seeds”. Or even worse,they’ll get very aggressive towards those selling organic produce/seeds whilst subsidizing firms peddling their Frankenstein alternatives. Whatever the British Parliament does,the game may be played-out differently in various parts of the world. Throughout this paradigm shift it will be wise to understand your locality in the context of law,culture,and,of course,designing and implementing your own organic garden. Purchasing and growing real seed not only enriches you dietary-wise,it is also an attack upon the parasitical elites who’ve cheated,lied,and murdered their way to control of the global food supply. When the music stops on their game,it’s wise to have had the foresight to acquire knowledge of organic farming,be in possession of a real seed-bank, have persuaded those around you of the benefits and of course,to have some physical silver bullion.

View Full Version: East African drought 'worst food crisis of 21st

Title: East African drought 'worst food crisis of 21st
Description: *century*

TheUnhivedMind - July 5, 2011 04:35 PM (GMT)

East African drought 'worst food crisis of 21st century'

Benedict Moore-Bridger
5 Jul 2011
http://www.thisislondon.co.uk/standard/art...21st-century.do

Aid agencies have launched emergency appeals after warning "millions of people" face a fight for survival because of the worst drought in East Africa in decades.

Today leading British charities said famine could be declared within days if more food does not arrive in the area.

Oxfam has launched a £50million appeal, its largest ever in Africa, in response to the crisis, which is affecting more than 12million people in Ethiopia, Somalia and Kenya.

Save the Children launched a £40million appeal to help children in Somalia and Kenya and the British Red Cross is also calling for funds.

In the worst-hit areas 60 per cent of livestock has died.

Jane Cocking, Oxfam's humanitarian director, said: "This is the worst food crisis of the 21st century and we are seriously concerned. The crisis is only going to get worse over the coming months - we need funds to help us reach people with life-saving food and water."

View Full Version: Would you eat a two-week-old sandwich?

Title: Would you eat a two-week-old sandwich?
Description: *[STICK IT UP YA BACKSIDE]*

TheUnhivedMind - July 5, 2011 04:29 PM (GMT)

Would you eat a two-week-old sandwich? Long-life lunch will soon be rolling its way to a shop near you

Last updated at 4:02 PM on 5th July 2011
http://www.dailymail.co.uk/sciencetech/art...-old-lunch.html

For most of us, a fortnight-old sandwich can have only one destination - the bin.

But we could soon be raiding the fridge for last week's lunches without a thought of food poisoning.

Scientists say they have discovered the secret to a longer-living sarnie, and it is being rolled out at corner shops and convenience stores across the UK.

The new sandwiches have a shelf-life of an unbelievable 14 days, with manufacturers claiming they are as good on day 14 as they are on day one.

The concept goes against everything most modern food suppliers stand for - with many taking pride in preparing food freshly every morning.

LONG LIFE: HOW DOES IT WORK?

The secret is to suck out the oxygen from the packaging and replace it with nitrogen and carbon dioxide.

All fillings are mixed with a slightly acidic mayonnaise, which acts as a preservative.

Lettuce and tomatoes are a no-no as they tend to go soggy.

And while the humble supermarket sandwich normally lasts barely 12 hours, the new

‘super-sandwich’ sold by Booker, will still be safe to eat after two weeks.

The flavours include chicken tikka, ham and cheese, chicken and bacon, tuna mayonnaise and cheese and onion - all on oatmeal bread.

The range aims to minimise wastage for retailers and is aimed at the budget shopper, at just £1.49 a packet.

Steve Fox, sales director of Retail, said: 'Booker is committed to increasing our choice of products. They are convenient and with shelf ready packaging easy to introduce into stores.

'They look and taste great and with a longer shelf life than most sandwiches, they are ideal to reduce retailers wastage.

'I would encourage retailers to buy these products little and often to maintain fantastic availability and make their store a destination for food to go.'

TheUnhivedMind - July 5, 2011 04:31 PM (GMT)

Don't eat any bought sandwiches, you must make your own with your own ingredients. Your bread must be chemical free and made with wholemeal flour. You should be using only 100% butter from organic grass fed cattle and no margarines and vegetable oil poisons.

TheUnhivedMind - July 16, 2011 01:39 AM (GMT)

It's official: Territory chill sets record for books

Gail Liston, Friday July 15, 2011 - 13:31 EST
http://www.weatherzone.com.au/news/its-off...for-books/18075

Strong winds and heavy rain have caused havoc in Darwin. - ABC

The weather bureau has confirmed the Northern Territory has experienced its lowest average minimum temperature for June since records began in 1950.

The finding is in an international report from the National Oceanic and Atmospheric Administration in the United States.

Climatologist Joel Lisonbee says the cool temperatures are a remnant of a strong La Nina weather pattern that dumped rain all over the Territory earlier this year.

"Basically, it gave us a really wet, wet season and as we transitioned into dry season there was still a lot of water around," he said.

"As this water evaporated it cooled the air and lowered our temperatures, especially our minimum temperatures."

The record is both for maximum and minimum temperatures.

"Our average maximum temperatures were 1.5 degrees Celsius below the climatological average," Mr Lisonbee said.

"Our minimum temperatures were three degrees below average across the Territory so that's quite significant.

"That has never been done before."

Mr Lisonbee says a surge of high pressure systems over the Australian Bight in May and June had pushed cold air north over the Territory.

Long-range predictions for the next three months indicate temperatures will return to normal.

TheUnhivedMind - July 13, 2011 02:45 AM (GMT)

No surprises here: Perth's on another record cold spell

Lucy Rickard
July 11, 2011
http://www.smh.com.au/wa-news/no-surprises...0711-1ha94.html

Perth is on track to experience longest cold spell in 13 years.

Perth is on track to breaking another weather record as low daytime temperatures continue this week.

Weatherzone meteorologist Robert Wood said widespread cloud cover was contributing to the "massive reduction" in day-time temperatures experienced across WA so far this month.

Perth is set to record its second day in a row where the mercury won't reach 14 degrees, which hasn't occurred for 13 years.

Despite the low maximums, Perth's overnight temperatures remained around 10 degrees for the past two nights, and today's highest temperature – 11.6 degrees at 12.30pm – is just 1.3 degrees higher than the overnight low recorded at 5.30am.

So far this month, Perth has had five consecutive days where the overnight temperatures dropped below five degrees, and on every day except one, the maximum had not exceeded 17 degrees.

Yesterday, the Gascoyne Junction recorded its coldest day in 45 years, with the temperature climbing to a chilly 13 degrees.

Jurien Bay also had its coldest July day in 39 years, reaching just 13 degrees yesterday.

Mr Wood said that in addition to a chilly Sunday, Gascoyne Junction also had some heavy rainfall over the weekend.

"The Gascoyne district was the focus of the heaviest falls in the 24 hours to 9am on Sunday," he said.

"Carnarvon picked up 3o millimetres through this period, while further inland, Milly Milly had 50mm."

Rainfall was not quite as heavy in the 24 hours to 9am today, although Morawa and Dalwallinu each recording more than 20 millimetres.

Mr Wood said cloudy and wet conditions had now taken hold of WA, bringing a burst of useful rainfall in addition to the record cold conditions.

"An upper level low formed to the west of Geraldton in the last 48 hours, drawing on abundant moisture from over the Indian Ocean, is leading to widespread cloud cover, rainfall and chilly day-time temperatures across WA," Mr Wood said.

Title: Thousands stranded by worst snows in Bolivia for
Description: *20 years*

TheUnhivedMind - July 13, 2011 02:30 AM (GMT)

Thousands stranded by worst snows in Bolivia for 20 years

Thousands of people have been left stranded by the worst snow storms in Bolivia for 20 years.

By Robin Yapp, Sao Paulo
8:39AM BST 12 Jul 2011
http://www.telegraph.co.uk/news/worldnews/...r-20-years.html

President Evo Morales was reported to be considering declaring a state of emergency in the region of Potosi to mobilise the army and national guard.

Some 7,000 people belonging to farming families are in need of help in the region, according to officials.

More than 40,000 llamas and alpacas are also without food and farmers have lost their crops under a thick blanket of snow.

The snow has hit the remote highlands of Potosi, which lies in the south-west of the country and generally remains dry.

Bolivia's government has asked for help from neighbouring countries, including helicopters to drop aid for people in isolated regions and heavy machinery to clear roads.

Bolivia's central government has already "sent food, supplies and medicine" to the area, according to Cecilia Chacon, the defence minister.

On Sunday the authorities ordered the rescue of a family of Dutch tourists stranded near the border with Chile due to the heavy snowfall.

A cold snap that brought fog and snow to the capital La Paz at the start of this month killed at least 35 people.

TheUnhivedMind - July 12, 2011 03:33 AM (GMT)

Montana ultra-marathon race cancelled due to snow

9 Jul 2011
http://www.greatfallstribune.com/article/2...ext%7CFrontpage

MISSOULA — The race director of a 100-mile ultra-marathon foot race through the Flathead National Forest has cancelled the event due to lingering snow on the route that he says would make the course too dangerous for runners and likely prevent anyone from finishing within the required 36-hour limit.

Brad Lamson said that portions of the course for the Swan Crest 100 have deep snow that is concealing signs that mark trail intersections.

He said he’s convinced the snow won’t melt in time for the event scheduled for July 29.

He said postponing the race would pose problems with shortening daylight hours and increased grizzly bear activity.

This is only the second year for the race. Last year, 44 people started but only 20 finished.

Chile's Atacama Desert Hit With Record Snowfall (VIDEO)

First Posted: 7/7/11
http://www.huffingtonpost.com/2011/07/07/c...-_n_892524.html

One of the driest places on the planet has just experienced its heaviest snowfall in almost two decades.

As the BBC is reporting, the Atacama desert region in Chile was virtually buried with an estimated 31.5 inches of snow after a cold front brought subzero temperatures to much of South America, including Argentina and Uruguay.

Officials from Chile's Directorate of Meteorology said the area had not seen this amount of snow in close to 20 years. Local media reports said authorities rescued a total of 36 people who had been caught in the storm, the Associated Press reports.

View Full Version: China Coal Consumption Linked To Global Cooling

Title: China Coal Consumption Linked To Global Cooling
Description: *[BULLSHIT, ITS THE SUN AS COOPER SAID]*

TheUnhivedMind - July 6, 2011 01:40 AM (GMT)

China Coal Consumption Linked To Global Cooling

4 July 2011
http://www.huffingtonpost.com/2011/07/04/g...n_n_889897.html

WASHINGTON -- Scientists have come up with a possible explanation for why the rise in Earth's temperature paused for a bit during the 2000s, one of the hottest decades on record.

The answer seems counterintuitive. It's all that sulfur pollution in the air from China's massive coal-burning, according to a new study.

Sulfur particles in the air deflect the sun's rays and can temporarily cool things down a bit. That can happen even as coal-burning produces the carbon dioxide that contributes to global warming.

"People normally just focus on the warming effect of CO2 (carbon dioxide), but during the Chinese economic expansion there was a huge increase in sulfur emissions," which have a cooling effect, explained Robert K. Kaufmann of Boston University. He's the lead author of the study published Monday in Proceedings of the National Academy of Science.

But sulfur's cooling effect is only temporary, while the carbon dioxide from coal burning stays in Earth's atmosphere a long time.

Chinese coal consumption doubled between 2003 and 2007, and that caused a 26 percent increase in global coal consumption, Kaufmann said.

Now, Chinese leaders have recognized the effects of that pollution on their environment and their citizens' health and are installing equipment to scrub out the sulfur particles,

Kaufmann said.

Sulfur quickly drops out of the air if it is not replenished, while carbon dioxide remains for a long time, so its warming effects are beginning to be visible again, he noted. The plateau in temperature growth disappeared in 2009 and 2010, when temperatures lurched upward.

Indeed, NASA and the National Oceanic and Atmospheric Administration, have listed 2010 as tied for the warmest year on record, while the Hadley Center of the British Meteorological Office lists it as second warmest, after 1998.

Sulfur's ability to cool things down has led some to suggest using it in a geoengineering feat to cool the planet. The idea is that injecting sulfur compounds very high into the atmosphere might help ease global warming by increasing clouds and haze that would reflect sunlight. Some research has concluded that's a bad idea.

Using enough sulfur to reduce warming would wipe out the protective Arctic ozone layer and delay recovery of the Antarctic ozone hole by as much as 70 years, according to an analysis by Simone Tilmes of the National Center for Atmospheric Research in Boulder, Colo. This is the ozone layer that is high above Earth and protects against harmful UV rays, not the ground level ozone that is a harmful pollutant.

"While climate change is a major threat, more research is required before society attempts global geoengineering solutions," said Tilmes.

Overall, global temperatures have been increasing for more than a century since the industrial revolution began adding gases like carbon dioxide to the air. But there have been similar plateaus, such as during the post-World War II era when industrial production boosted sulfur emissions in several parts of the world, Kaufmann explained.

Atmospheric scientists and environmentalists are concerned that continued rising temperatures could have serious impacts worldwide, ranging from drought in some areas, changes in storm patterns, spread of tropical diseases and rising sea levels

TheUnhivedMind - July 5, 2011 05:24 PM (GMT)

SO MUCH FOR GLOBAL WARMING AS PLANET EARTH GETS COLDER

The Hubbard Glacier in Alaska, one of those at risk if global warming really is a threat to our plan

Tuesday July 5,2011
By John Ingham Environment Editor
http://www.express.co.uk/posts/view/256855...rth-gets-colder

THE controversy over global warming hotted up last night after US scientists revealed that the Earth's temperature declined over the past decade.

They said a surge in the use of coal-fired power stations in China may have helped cool the climate by pumping sulphur into the atmosphere.

But they also warned that the build-up of greenhouse gases such as carbon dioxide from fossil fuels like coal and oil means that respite will be short-lived – particularly as China is cleaning up its power stations and sulphur quickly drops out of the air.

The paper in the US Proceedings of the National Academy of Science comes amid continuing cracks in the consensus over climate change.

Global warming has long been blamed for the gradual melting of glaciers and scientists have warned over a rise in sea levels as a result.

Dr David Whitehouse of the Global Warming Policy Foundation said: "It is good news that the authors recognise that there has been no global temperature increase since

1998.

The masking of carbon dioxide-induced global warming by short-term sulphur emissions is well known

Piers Forster, professor of climate change at the University of Leeds

“Even after the standstill appears time and again in peer-reviewed scientific studies, many commentators still deny its reality.

“We live in the warmest decade since thermometer records began about 150 years ago, but it hasn’t got any warmer for at least a decade.”

He added: “There is as yet no convincing explanation for the global temperature standstill of the past decade.” The study by Robert Kaufmann, of Boston University, found that the Earth’s temperature declined between 1998 and 2008 even though the atmospheric concentration of carbon dioxide increased steadily. It said this was due to factors such as a quiet period of solar activity and cyclical shifts of ocean currents in the Pacific.

Most importantly, China doubled coal consumption between 2003 and 2007 – the same as the worldwide increase in coal in the previous 22 years – releasing sulphur into the atmosphere.

The researchers said this cooling effect may have counteracted warming expected from increased carbon dioxide concentrations.

But they warned: “The proposed explanation may portend a future period of rapid global warming as solar input rises and as China installs scrubbers that remove aerosols from coal-fired boilers.”

Piers Forster, professor of climate change at the University of Leeds, said the blip in warming would be “short-lived”. He added: “The masking of carbon dioxide-induced global warming by short-term sulphur emissions is well known.”

Title: IS BRITAIN ABOUT TO PLUNGE INTO A LITTLE ICE-AGE?
Description: *[MSM FOLKS COTTONING ON FINALLY!]*

TheUnhivedMind - July 3, 2011 06:37 PM (GMT)

Is Britain about to be plunged into a Little Ice Age?

Last updated at 1:13 PM on 3rd July 2011
http://www.dailymail.co.uk/sciencetech/art...ce-Age-way.html

Scientists think Britain and Europe could be in for a chilly few years predicting a 'Little Ice Age' could be on its way in just a few decades time.

Average temperatures in Britain could fall by two degrees centigrade, according to the study led by Mike Lockwood, professor of space environment physics at Reading University, because of a drop in the amount of sunspot activity.

Sunspots are darker patches seen in the sun's surface which are caused by small areas of magnetic activity which disrupts the normal flow of intensely heated gases.

Scientists have discovered that a drop in sunspots, pictured in black could block winds that can keep Europe from excessive cold in winter

But last year, Professor Lockwood discovered that a drop in sunspots could block winds that can keep Europe from excessive cold in winter, according to the Daily Telegraph.

Professor Lockwood's team looked at the sun's activity of the past 9,300 years using Met Office data.

His findings, published by the Institute of Physics, (IoP) showed that in the next 50 years there is a one in 10 chance of the sun returning to conditions seen between 1645 and 1715 when the River Thames in London regularly froze over, as did the Baltic Sea.

Known as the Maunder Minimum during these years astronomers could not see any sunspots and Europe endured unusually harsh winters which came to be known as the Little Ice Age.

A scene from the 2004 film The Day After Tomorrow where temperatures dropped freezing New York

Professor Lockwood's findings could mean the average winter temperature could drop below 2.5C, compared to the average British winter now of 5C, the newspaper reported.

In June, three different studies all concluded that sunspot activity looks set to decline over the next 10 years.

Experts said the next upswing in sunspot activity, which follows an 11-year cycle, will not be as strong as normal - or might not even happen at all.

The findings were presented at a meeting of the American Astronomical Society's solar physics division.

They said a decrease in global warming might result in the years after 2020, the approximate time when sunspots are expected to disappear for years, maybe even decades.

Snowy weather brings a Scottish road to a standstill last year. Scientists say the average winter temperature could drop below 2.5C, compared to the average British winter now of 5C

Deep Snow Delaying Opening of Sunrise Area at Mount Rainier National Park

Submitted by Kurt Repanshek on June 21, 2011
http://www.nationalparkstraveler.com/2011/...tional-park8356

Too much snow will keep the Sunrise area in Mount Rainier National Park closed through the Fourth of July weekend and until at least July 8, according to park officials. Also, the White River Campground won't open until July 1.

As the accompanying photos show, there really is a lot of snow still waiting to melt away at Sunrise.

According to a park news release, road crews, "using bulldozers and a rotary snow blower," have been working every daily to clear snow from the road leading to Sunrise. "Once access is available, additional park and Washington Conservation Corps crews will be brought into the area to shovel out buildings and activate the power and water systems," the release added.

Since July 1, 2010, a total of 907 inches of snow have fallen at Paradise. The record for the park is 1,122 of snowfall during the 1971-72 winter season. Cool and wet temperatures have persisted into June, delaying snow melt in the upper elevations and slowing snow removal operations that began in March. Washington State Department of Transportation road crews have faced similar deep snow conditions on Highway 410, delaying the opening of Chinook Pass on the east side of the park. WSDOT's projected opening for Chinook Pass is June 23 at 10:00 a.m.

Persistent snow conditions will also delay the opening of the White River Campground until July 1. The road to the campground is open and accessible. Mowich Road opening

operations will be delayed until snow removal at Paradise and Sunrise are completed. All other park roads and areas are open. Travelers are advised to check the park's website prior to a visit to get updated information on road and trail conditions, services and activities. Mount Rainier National Park's website is at: www.nps.gov/mora.

Holy cow. I've been living at the foot of Mt. Rainier for eighteen years and I've never seen photos of Sunrise that looked like that this late in the season. Looks like my annual wildflower pilgrimage had better be postponed till August.

Freak cold weather grips southern Brazil

(philstar.com) Updated June 29, 2011 01:12 PM Comments (0)
http://www.philstar.com/Article.aspx?artic...bCategoryId=200

RIO DE JANEIRO (Xinhua) – The southern parts of Brazil, a tropical country, have been stricken by cold snaps since Monday, driving down temperatures to record-low levels and bringing snow in some areas, a local weather service has reported.

The weather monitoring department of Santa Catarina state said the temperature fell to 8.8 Celsius degrees below zero in the small town of Urupema on Tuesday, while in Cambara do Sul, in Rio Grande do Sul state, along the southern border, the temperature dropped to minus 6.2 degrees.

The three cities of the southern region on Tuesday also recorded record-low temperatures for the year, and the lowest temperature was monitored in Curitiba, capital of Parana state, where the temperature hovered around one degree above zero.

In Sao Paulo state, in the southeastern region, temperatures also fell to record-low levels: in Sao Paulo, the state capital, the mercury fell to 2.3 degrees, the lowest since 2003, and in Campos do Jordao, a mountainous town, the temperature dropped to 3.8 degrees below zero, the lowest since 1998.

Several towns of Rio Grande do Sul and Santa Catarina even had snow on Monday.

The weather service predicted that the cold weather would stay for the next few days, and there would be fresh snow in some areas.

Chilean Volcano Eruption Could Lead To Climate Cooling

By Mark Dunphy - Wed Jun 29, 10:20 pm
http://www.irishweatheronline.com/news/ear...ling/22054.html

woman looks at volcanic ash on the shores of Nahuel Huapi lake in Bariloche, Argentina, on 12 June 2011, after the eruption of the Chilean Puyehue-Cordon Caulle volcano.

The volcanic eruption in Chile has eased for the first time in more than three weeks allowing evacuated residents to return to their homes.

Airborne ash from the volcano in Chile's Puyehue-Cordon Caulle chain, which erupted on June 4, spewed an ash cloud that caused air traffic chaos around the world. However, experts say fine ash particles could continue to affect air travel for months. Airlines, Jetstar and Qantas announced Wednesday their decision to ground flights in and out of Christchurch, Wellington and Queenstown in New Zealand on Thursday.

According to SERNAGEOMIN, Chile's ministry of mining and geology, the eruption has subsided, with fewer and lower intensity tremors and earthquakes. Ashfalls, lahars, and landslides are the primary threat at the moment.

The Advanced Spaceborne Thermal Emission and Reflection Radiometer (ASTER) on the Terra satellite captured the below night-time view of the volcanic complex on June 27, 2011. In this thermal infrared image, hot areas are bright and cold areas are dark. The white feature in the centre of the image is an active lava flow.

Effects On Climate

Meanwhile, Auckland-based climate change scientist Jim Salinger has claimed that if sulphur dioxide(SO_2) in the plumes mixed with water it could cause some climate cooling in the next two months. "It is like putting a curtain around the hemisphere, which reflects the sunlight, and cools the air [below the ash]."

Dr Salinger, who was elected President of the Commission for Agricultural Meteorology at the World Meteorological Organization (WMO) in 2009, said the cooling effect would be barely noticeable – the tens of thousands of tonnes of sulphur units could lead to a cooling of 0.2C over two months.

Chile's chain of about 2,000 volcanoes is the world's second-largest after Indonesia's. Some 50 to 60 volcanoes are on record as having erupted, and more than 500 are potentially active.

TheUnhivedMind - June 29, 2011 11:13 PM (GMT)

The myth of the melting ice caps

http://arabnews.com/opinion/letters/articl...ce?comments=all

In his letter “Global warming,” Steven Corcoran claims that one of us (FA) has been given “volumes of references” over the years that prove anthropogenic global warming.

This is a mighty exaggeration to say the least. The only “reference” Corcoran has given is Al Gore who has no scientific background whatsoever. Al Gore is a politician — and a not very good one at that!

Corcoran mentions CO2 in the atmosphere. It is a trace gas in terms of our terrestrial atmosphere as it constitutes no more than two percent of the Earth's atmosphere. Water vapor and nitrogen are far more effective greenhouse gases than carbon dioxide. Furthermore, without the greenhouse gases, the planet would freeze over, thus making life impossible. And then we have the issue of cause and effect. It is increases in global temperatures that releases CO2 from the oceans which are the regulators of atmospheric levels of this gas. So increased levels of CO2 are the effect and not the cause of global warming. Furthermore CO2 does not hold in heat; a major property of CO2 is that it can only hold in 8 percent of radiation frequencies available. Only 1 percent of the heat leaves the Earth as radiation, the other 99 percent by conduction, convection and evaporation.

Let's now bust the myth of the melting ice caps. Last year the Danish Meteorological Institute actually claimed that measurements taken between 1958 and 2009 show very little temperature differences in the Arctic. Data from NASA's Goddard Institute for Space Studies (GISS) actually shows a cooling trend from the 1940s.

TheUnhivedMind - June 22, 2011 12:13 AM (GMT)

Snow Falling in Colorado on Eve of Northern Hemisphere's Summer Solstice

By Brian K. Sullivan - Jun 20, 2011
http://www.bloomberg.com/news/2011-06-20/s...r-solstice.html

The calendar says summer starts tomorrow in the Northern Hemisphere. The snow falling in the mountains of Colorado tells a different story.

A storm that has prompted a tornado watch across Nebraska and Kansas today also left 2 to 4 inches of snow in the Rocky Mountains, said Joe Ramey, a weather service meteorologist in Grand Junction, Colorado.

"It is unusual," Ramey said. "Here it is the last day of spring."

A winter storm advisory has been posted in the mountains of Colorado above 10,000 feet until 6 p.m. local time, and at least one tornado was reported in Kansas, according to the weather service. The Northern Hemisphere summer starts at 1:16 p.m. New York time tomorrow.

Ramey said the lingering effects of the La Nina ocean cooling are still playing havoc with local weather patterns. Normally at this time of year the daytime high temperature in Grand Junction, at an altitude of almost 4,600 feet, is 88 degrees Fahrenheit (31 degrees Celsius), according to the weather service. Yesterday it was 59, Ramey said.

La Ninas can bring more rain and stormy conditions to the northern U.S., while drying out the southern half of the country. The most recent La Nina was declared over earlier this month by the U.S. Climate Prediction Center in Camp Springs, Maryland.

The atmosphere is still showing signs of the phenomenon, however.

Ramey said the snow won't mean ski slopes will be able to reopen. The snow is in patches, he said.

"You could ski a little bit, pick up your skis and walk some, and then ski a little more," Ramey said.

View Full Version: Sun's Output to Fall ... Leading to a Mini Ice Age

Title: Sun's Output to Fall ... Leading to a Mini Ice Age

TheUnhivedMind - June 19, 2011 11:11 PM (GMT)

Sun's Output to Fall ... Leading to a Mini Ice Age?

Saturday, June 18, 2011
http://georgewashington2.blogspot.com/

The Register notes:

What may be the science story of the century is breaking this evening, as heavyweight US solar physicists announce that the Sun appears to be headed into a lengthy spell of low activity, which could mean that the Earth – far from facing a global warming problem – is actually headed into a mini Ice Age.

***

The announcement made on 14 June (18:00 UK time) comes from scientists at the US National Solar Observatory (NSO) and US Air Force Research Laboratory. Three different analyses of the Sun's recent behaviour all indicate that a period of unusually low solar activity may be about to begin.

***

This could have major implications for the Earth's climate. According to a statement issued by the NSO, announcing the research:
An immediate question is whether this slowdown presages a second Maunder Minimum, a 70-year period with virtually no sunspots [which occurred] during 1645-1715.

As NASA notes:
Early records of sunspots indicate that the Sun went through a period of inactivity in the late 17th century. Very few sunspots were seen on the Sun from about 1645 to 1715. Although the observations were not as extensive as in later years, the Sun was in fact well observed during this time and this lack of sunspots is well documented. This period of solar inactivity also corresponds to a climatic period called the "Little Ice Age" when rivers that are normally ice-free froze and snow fields remained year-round at lower altitudes. There is evidence that the Sun has had similar periods of inactivity in the more distant past.

During the Maunder Minimum and for periods either side of it, many European rivers which are ice-free today – including the Thames – routinely froze over, allowing ice skating and even for armies to march across them in some cases.

"This is highly unusual and unexpected," says Dr Frank Hill of the NSO. "But the fact that three completely different views of the Sun point in the same direction is a powerful indicator that the sunspot cycle may be going into hibernation."

***

According to the NSO:
Penn and Livingston observed that the average field strength declined about 50 gauss per year during Cycle 23 and now in Cycle 24. They also observed that spot temperatures have risen exactly as expected for such changes in the magnetic field. If the trend continues, the field strength will drop below the 1,500 gauss threshold and spots will largely disappear as the magnetic field is no longer strong enough to overcome

convective forces on the solar surface.

In parallel with this comes research from the US Air Force's studies of the solar corona.

***

"Cycle 24 started out late and slow and may not be strong enough to create a rush to the poles, indicating we'll see a very weak solar maximum in 2013, if at all. If the rush to the poles fails to complete, this creates a tremendous dilemma for the theorists ... No one knows what the Sun will do in that case."

According to the collective wisdom of the NSO, another Maunder Minimum may very well be on the cards.

"If we are right," summarises Hill, "this could be the last solar maximum we'll see for a few decades. That would affect everything from space exploration to Earth's climate."

***

The big consequences of a major solar calm spell, however, would be climatic. The next few generations of humanity might not find themselves trying to cope with global warming but rather with a significant cooling. This could overturn decades of received wisdom on such things as CO2 emissions, and lead to radical shifts in government policy worldwide.

The Telegraph confirms:

Sunspot activity, which follows an 11-year cycle, is due to peak in 2013 after which it will start to wane slightly.

But astronomers think the next upswing will be less intensive than normal, or could fail to happen at all.

That could affect weather on Earth because low solar activity has been linked to low global temperatures in the past.

Between 1645 and 1715 almost no sunspots were observed, a solar period which came to be called the Maunder Minimum.

During those decades Europe suffered frequent unusually harsh winters, and the time was later termed the Little Ice Age.

***

Three studies, presented at a meeting of the American Astronomical Society's solar physics division, all point towards declining sunspot activity into the next decade.

Frank Hill, of the National Solar Observatory in New Mexico, who worked on one of the studies, said: "The fact that there are three separate lines of evidence all pointing in the same direction is very compelling."

But Joanna Haigh professor of atmospheric physics at Imperial College London, said global warming could override any cooling effect on the Earth's climate.

However, she cautioned: "Even if the predictions are correct, the effect of global warming will outstrip the sun's ability to cool even in the coldest scenario.

"And in any case, the cooling effect is only ever temporary. When the sun's activity returns to normal, the greenhouse gases won't have gone away."

And Agence France-Presse reports:

For years, scientists have been predicting the Sun would by around 2012 move into solar maximum, a period of intense flares and sunspot activity, but lately a curious calm has suggested quite the opposite.

According to three studies released in the United States on Tuesday, experts believe the familiar sunspot cycle may be shutting down and heading toward a pattern of inactivity unseen since the 17th century.

The signs include a missing jet stream, fading spots, and slower activity near the poles, said experts from the National Solar Observatory and Air Force Research Laboratory.

"This is highly unusual and unexpected," said Frank Hill, associate director of the NSO's Solar Synoptic Network, as the findings of the three studies were presented at the annual meeting of the American Astronomical Society's Solar Physics Division in Las Cruces, New Mexico.

"But the fact that three completely different views of the Sun point in the same direction is a powerful indicator that the sunspot cycle may be going into hibernation."

Solar activity tends to rise and fall every 11 years or so. The solar maximum and solar minimum each mark about half the interval of the magnetic pole reversal on the Sun, which happens every 22 years.

Hill said the current cycle, number 24, "may be the last normal one for some time and the next one, cycle 25, may not happen for some time.

"This is important because the solar cycle causes space weather which affects modern technology and may contribute to climate change," he told reporters.

Experts are now probing whether this period of inactivity could be a second Maunder

Minimum, which was a 70-year period when hardly any sunspots were observed between 1645-1715, a period known as the "Little Ice Age."

"If we are right, this could be the last solar maximum we'll see for a few decades. That would affect everything from space exploration to Earth's climate," said Hill.

This trend could explain why we haven't experienced any warming recently. As AFP notes:

"Recent solar 11-year cycles are associated empirically with changes in global surface temperature of 0.1 Celsius," said Judith Lean, a solar physicist with the US Naval Research Laboratory.

If the cycle were to stop or slow down, the small fluctuation in temperature would do the same, eliminating the slightly cooler effect of a solar minimum compared to the warmer solar maximum. The phenomenon was witnessed during the descending phase of the last solar cycle.

This "cancelled part of the greenhouse gas warming of the period 2000-2008, causing the net global surface temperature to remain approximately flat -- and leading to the big debate of why the Earth hadn't (been) warming in the past decade," Lean, who was not involved in the three studies presented, said in an email to AFP.

A study in the March 2010 issue of Geophysical Research Letters explored what effect an extended solar minimum might have, and found no more than a 0.3 Celsius dip by 2100 compared to normal solar fluctuations.

"A new Maunder-type solar activity minimum cannot offset the global warming caused by human greenhouse gas emissions," wrote authors Georg Feulner and Stefan Rahmstorf, noting that forecasts by the Intergovernmental Panel on Climate Change have found a range of 3.7 Celsius to 4.5 Celsius rise by this century's end compared to the latter half of the 20th century.

"Moreover, any offset of global warming due to a grand minimum of solar activity would be merely a temporary effect, since the distinct solar minima during the last millennium typically lasted for only several decades or a century at most."

View Full Version: Solar cycle may go into 'hibernation'

Title: Solar cycle may go into 'hibernation'
Description: *[WELCOME TO THE ICE AGE]*

TheUnhivedMind - June 16, 2011 02:51 PM (GMT)

Solar cycle may go into 'hibernation', scientists say

The next 11-year pattern when dark spots appear on the sun's surface may be delayed, say astronomers

Damian Carrington and agencies
guardian.co.uk, Thursday 16 June 2011 15.10 BST
http://www.guardian.co.uk/science/2011/jun/16/sun-astronomy

The next solar cycle – the 11-year pattern when dark spots appear on the sun's surface – may be delayed or even go into "hibernation" for a while, according to US scientists.

But this does not mean a new ice age is coming, said astronomer Frank Hill of the US National Solar Observatory. "We have not predicted a 'little ice age'," Hill said, speaking from an astronomical meeting in New Mexico. "We have predicted something going on with the sun."

Hill and other scientists cited a missing jet stream, fading spots and slower activity near the sun's poles as signs that our nearest star is heading into a rest period.

"This is highly unusual and unexpected," he said. "But the fact that three completely different views of the sun point in the same direction is a powerful indicator that the sunspot cycle may be going into hibernation."

That hibernation would not begin now, as the current sunspot cycle, the 24th, has recently passed its minimum. Hill and his colleagues pondered a slowdown in sunspot activity in the 25th cycle, expected sometime around 2019.

They also wondered whether this possible slowdown, or even a long cessation of

sunspot activity, indicates an upcoming return of the Maunder Minimum, a 70-year sunspot drought seen from 1645-1715.

They had no evidence as to whether this might be true, and said nothing about whether the Maunder Minimum was related to a long cold period in Europe and other parts of the Northern Hemisphere known as the little ice age.

How strong a connection is there between a little ice age and a Maunder Minimum? "Not as strong a connection as people would like to believe," Hill said. "The little ice age actually lasted for hundreds of years, of which the Maunder Minimum was only a small segment. My opinion is that there is only an anecdotal connection without a whole lot of scientific background behind it."

Some commentators have argued that the potentially cooling influence of a lower level of sunspot activity could cancel out the warming caused by human activities that generate climate-warming greenhouse gases. Hill disputed this. "In my opinion, it is a huge leap to an abrupt global cooling, since the connections between solar activity and climate are still very poorly understood," he said.

Across the sun's 11-year solar cycle, the total solar energy reaching Earth varies by less than 0.1%, and even across the period since the little ice age chill, solar output climbed no more than about 0.12%, according to the 2007 IPCC report. Subsequent estimates by Judith Lean of the Naval Research Laboratory and others have pegged the solar contribution to 20th-century warming at 10% or less.

Mike Lockwood, professor of space environment physics at the University of Reading, said: "Our research based on the behaviour of the sun over the past 9,000 years shows that there is indeed an 8% chance that we will return to Maunder Minimum conditions over the next 40 years. But there is no evidence at all that this will cause an ice age and, given the observed and predicted rise in greenhouse gases, we find it would do no more than slow global warming a little."

Prof Joanna Haigh, an atmospheric physicist at Imperial College London, said: "It would certainly be very risky to suggest that we rely on the sun's activity to compensate for global warming. In a future Grand Minimum the sun might perhaps again cool the planet by up to 1C. Greenhouse gases, on the other hand, are expected to raise global temperatures by between 1.5 and 4.5C by 2100.

"So even if the predictions are correct, the effect of climate change will outstrip the sun's ability to cool even in the coldest scenario; and in any case, the cooling effect is only ever temporary. When the sun's activity returns to normal, the greenhouse gases won't have gone away."

Grabs In South America, <st1:place w:st="on">Africa</st1:place><o:p></o:p>

By: Sorcha Faal, and as reported to her Western Subscribers <o:p></o:p>

A grim secret report prepared by the Russian Foreign Ministry for President Medvedev is warning today that American fears of an “Ice Age Doomsday” caused by the Sun could ‘very well likely’ lead to open Global conflict between the US and China as both of these Superpower Nations have begun a vicious fight for farm land in South America and Africa.

According to this report, new research led by the United States National Solar Observatory and Air Force Research Laboratory (NSO) on the long expected major solar cycle expected to climax in 2012 has lead to findings that have shocked American scientists leading them to claim our planet is fast approaching an “ice age” on a scale not seen since the 17th Century; an event that was so catastrophic it plunged the pre-industrial Earth into total chaos shattering forever the then existing Old World Order.

According to three studies released by the NSO in the <st1:country-region w:st="on"><st1:place w:st="on">United States</st1:place></st1:country-region> yesterday, American experts believe the familiar sunspot cycle may be shutting down and heading toward a pattern of

inactivity unseen since the 17th century. The signs include a missing jet stream, fading spots, and slower activity near the poles, said these NSO experts. “This is highly unusual and unexpected,” said Frank Hill, associate director of the NSO's Solar Synoptic Network, who further added “…the fact that three completely different views of the Sun point in the same direction is a powerful indicator that the sunspot cycle may be going into hibernation.”<o:p></o:p>

The Little Ice Age (LIA) was a period of cooling that occurred after the Medieval Warm Period. While not a true ice age, the term was introduced into scientific literature by François E. Matthes in 1939. It is conventionally defined as a period extending from the 16th to the 19th centuries, though climatologists and historians working with local records no longer expect to agree on either the start or end dates of this period, which varied according to local conditions. NASA defines the term as a cold period between 1550 AD and 1850 AD and notes three particularly cold intervals: one beginning about 1650, another about 1770, and the last in 1850, each separated by intervals of slight warming.<o:p></o:p>

The main historical event caused by the 17th Century LIA is commonly referred to as “The Second Wave,” a term popularized by the American writer and futurist, Alvin Toffler, who stated in his research that with the destruction of European farming due to this extreme cold event the Monarchies who were then in power were forced to expand their empires throughout the world, a move which ultimately led to their destruction as they were forced to switch their economies from ones of agriculture to industrial thus causing massive changes in the way their societies were governed.<o:p></o:p>

The most important of these revolutionary changes wrought by the 17th Century LIA were led by the American

Revolution (1775-1783) and the <a
href="http://en.wikipedia.org/wiki/French_Revolution">French Revolution
(1789-1799), both of which threw off the yoke of monarchial rule leading to the
Russian
Communist Revolution (1917) barely a Century later and setting the stage
for both World War I and
World War II. <o:p></o:p></

href="http://www.amazon.com/Third-Wave-Alvin-Toffler/dp/0553246984/ref=sr_1_1?
ie=UTF8&qid=1308078961&sr=8-1">The
Third Wave" he lists as follows the <i style='mso-bidi-font-style:
normal'>"waves"
human civilization has thus far undergone:<o:p></o:p>

<span
style='mso-bidi-font-size:14.0pt'>The First Wave<i
style='mso-bidi-font-style:normal'> is
the settled agricultural society which prevailed in much of the world after the
Neolithic Revolution, which replaced hunter-gatherer cultures.<o:p></o:p></
p>

<span
style='mso-bidi-font-size:14.0pt'>The Second Wave<i
style='mso-bidi-font-style:normal'> is
Industrial Age society. The Second Wave began in <st1:place w:st="on">Western
Europe</st1:place> with the Industrial Revolution, and subsequently spread across
the world. Key aspects of Second Wave society are the nuclear family, a
factory-type education system and the corporation. <o:p></o:p>

<span
style='mso-bidi-font-size:14.0pt'>The Third Wave<i
style='mso-bidi-font-style:normal'> is
the post-industrial society. Toffler says that since the late 1950s most
countries have been transitioning from a Second Wave society into a Third Wave
society. He coined many words to describe it and mentions names invented by
others, such as the Information Age. <o:p></o:p>

As the European Monarchies sought
new territories to keep their Nations intact during the LIA, this report
continues, so today are <st1:country-region w:st="on">China</st1:country-region>
and the <st1:country-region w:st="on"><st1:place w:st="on">United States</st1:

place></st1:country-region>
seeking to expand theirs too as a new Ice Age descends upon them. <o:p></o:p>

Unlike the European Monarchies, however, <st1:country-region w:st="on">China</st1:country-region> and the <st1:country-region
w:st="on">United States</st1:country-region> of today, this report says, have no “new land” to conquer and have opted, instead, during this “early stage” of the crisis to begin a “conquest” of vast farm lands in South America and <st1:place w:st="on">Africa</st1:place> they will be able to utilize to feed their soon to be starving populations. <o:p></o:p>

<st1:country-region w:st="on">China</st1:country-region><span
style='mso-bidi-font-size:14.0pt'>, this report continues, is in worse shape than the <st1:country-region w:st="on"><st1:place w:st="on">United States</st1:place></st1:country-region>
as it has roughly 20% of the World’s population, but only 7% of the World’s arable land to grow food upon…and what little it does have is now <a
href="http://seekingalpha.com/article/232631-china-running-out-of-farmland-what-this-means-for-u-s-stocks">disappearing
at an alarming rate. With <st1:place w:st="on"><st1:country-region w:st="on">China</st1:country-region></st1:place>, also, being the World’s largest wheat producer the United Nations was forced this past February to <a
href="http://www.nytimes.com/2011/02/09/business/global/09food.html">issue an alert warning that this Communist Nation was fast nearing a point where it would no longer be able to feed its people from the food it produces for itself.<o:p></o:p>

Though the United States, this report continues, is better positioned than China, it nevertheless is suffering through one of its worst droughts in decades in its Southwestern and Lower Midwest Regions with vast areas of its Middle and Upper Western “heartland”
areas suffering <a
href="http://www.usatoday.com/weather/floods/2011-03-17-usa-spring-flooding-forecast_N.htm">catastrophic
floods affecting nearly half of its Nation leading to a <a
href="http://www.usatoday.com/money/industries/food/2011-03-17-food-costs-world-

hunger.htm">soaring
rise in food costs that Russian economists warn are ‘recipes for rebellion’ as millions of poor will be unable to feed themselves. <o:p></o:p>

To prepare themselves for the catastrophes to come, this report says, China and United States have embarked on what has been described as the largest “land grab” since 19th Century with the Chinese alone buying up enough farmland in Africa to have sent to that Continent <a
href="http://jutiagroup.com/20090706-china-buying-up-african-farmland/">over 1 million of their farmers in the past 4 years alone.<o:p></o:p>

Not just to Africa, either, have the Chinese gone in their quest for farmland, but to South America too where Carlo Lovatelli, president of the Brazilian Association of Vegetable Oil Industries, warned this past week, <a
href="http://www.cnbc.com/id/43197816/
China_s_Interest_in_Farmland_Makes_Brazil_Nervous">“They
are moving in. They are looking for land, looking for reliable partners. But what they would like to do is run the show alone.” <o:p></o:p>

The United States, in keeping pace with China, this report continues, has enlisted its vast army of private hedge funds to begin <a
href="http://www.observer.com/hedge-funds-running-farms-05172011">acquiring massive tracts of South American farmland, and through secretive US Defense Department payments worth Billons-of Dollars to many of America’s top universities have allowed these “institutions” of higher learning to become some of the <a
href="http://www.guardian.co.uk/world/2011/jun/08/us-universities-africa-land-grab">largest
landowners in all of Africa, all being done without either the knowledge or consent of the American people themselves. <o:p></o:p>

As we had reported on in our March 8th
report “<a
href="http://www.whatdoesitmean.com/index1456.htm">Global Resource War Warned Has Begun Between East-West,” the point that will move these “land grabs” from simply buying the massive amounts of farmland they need, to begin fighting over it has already

begun in Libya after Western led NATO forces “evicted” tens-of-thousands of Chinese farmers from that Northern African Nation, which just happens to have the largest underground water resources on the entire Continent. <o:p></o:p>

With vast areas of the United Kingdom, France and Northern Europe, likewise, suffering through historical and catastrophic droughts, and when coupled with the massive drought fueled fires devastating Russia and the Ukraine this past year, this report warns the greater conflicts lie ahead of us all, not behind.

Most interesting to note, however, about the <st1:country-region w:st="on"><st1:place w:st="on">United States</st1:place></st1:country-region> announcing their fears yesterday that a “Doomsday” new Ice Age may be fast approaching (and as we have reported on many times before) their new warning comes 7 years after the terrifying secret 2004 Pentagon Report that warned:

“Climate change over the next 20 years could result in a global catastrophe costing millions of lives in wars and natural disasters.<o:p></o:p>

A secret report, suppressed by US defence chiefs and obtained by The Observer, warns that major European cities will be sunk beneath rising seas as Britain is

plunged into a 'Siberian' climate by 2020. Nuclear conflict, mega-droughts, famine and widespread rioting will erupt across the world. <o:p></o:p>

The document predicts that abrupt climate change could bring the planet to the edge of anarchy as countries develop a nuclear threat to defend and secure dwindling food, water and energy supplies. The threat to global stability vastly eclipses that of terrorism, say the few experts privy to its contents. <o:p></o:p>

'Disruption and conflict will be endemic features of life,' concludes the Pentagon analysis. 'Once again, warfare would define human life.'

To the American people knowing about the catastrophic future that awaits them, let alone protecting themselves from it, remains in grave doubt because for the last fortnight they have been consumed with news that one of their Congressman took pictures of his private male parts and sent them to women who weren't his wife. So consumed have they been by this "not-news" that new reports from America now state that a website selling a doll of this disgraced politician collapsed because of the number of people going to it.

So as our World continues to burn (or freeze, take your pick) the American people above all others stand to be the most shocked when the World around them finally collapses. They won't have shelter or food, of course, but, perhaps, their new "Weiner Doll" will give them comfort….nothing else surely will. [/dohtml]

View Full Version: Slideshow of Jupiter Fusion theory...

Title: Slideshow of Jupiter Fusion theory...
Description: *Simplified version of theory*

Goliathan - June 10, 2011 03:04 PM (GMT)

http://members.cox.net/jabbing-jupiter/ind...les/LP-Pres.pps

Theory above, as condensed as possible...

As density increases, the critical potential increases for a fissionable material. This is why .006 lbs. of Pu-Dioxide can eventually go super under 10's of millions of bars of pressure.

People following this theory, of course, are thinking that more should be going on at the surface if fusion has been started deep inside, but this is not true. The problem with Jupiter is that it is so large things like this seem to happen in slow motion to us.

For instance: an immediate nuclear reaction was originally predicted by the theorists when the actual Galileo craft (not the probe) went in in 2003, but it actually took 27 days for something to occur.

Another related point is that fusion reactions inside the sun are said to take thousands of years to manifest at the surface, however the sun's temps are in equilibrium so that accounts for most of the wait. With Jupiter's temps not being in equilibrium, if indeed there is new heat inside, the delta T (temp diff) would cause massive changes to occur, yet we still would have to wait some time for this to manifest at the surface. This is the big question -- how long will this take?

Recently, we have seen a slight rise in UV at the equator, and a recent mainstream article highlighted the fact that "we are expecting Jupiter's equatorial temps to rise significantly in the next few years based on what is going on now..."

Article on rising Jupiter temps:
http://www.usatoday.com/tech/news/2004-04-...ots-going_x.htm

Goliathan - June 10, 2011 03:28 PM (GMT)

One of the proposed reasons for making Jupiter stellar is to help keep a new Earth ice age diminished.

Goliathan - June 14, 2011 06:12 PM (GMT)

Solar scientists just announced today that the sun shows all indication of missing a sunspot cycle and producing less output in the coming years!

This means a potential ice age IS imminent.

What’s to Be Done With 15 Feet of Snow in June? Utah Knows

Tom Smart for The New York Times

The Rieders family, Josh, left, Brandon and their father, Brad, also planned to golf while in Utah.

By WINA STURGEON
Published: June 10, 2011
http://www.nytimes.com/2011/06/11/sports/s...knows.html?_r=4

LITTLE COTTONWOOD CANYON, Utah — At the base of a slope that at this time of year usually tests the skills of mountain bikers, roughly 60 skiers and snowboarders, hoping to get first tracks on the mountain, waited for the 8 a.m. opening of the tram at Snowbird resort.

These were not bitter-enders hoping to eke out runs on a thin swatch of snow. At this northern Utah resort, it is still winter. There is hardly a bare spot on the mountain. Piles of snow line the vast parking lot. With much of the country in the grip of record-high temperatures, it was 31 degrees here Friday morning. Snowbird has announced that it will be open for snow sports three days a week until July 4. And it could stay open even later.

An unusually heavy winter snowfall and a cold, wet spring have resulted in a record snowpack in much of the mountain regions of the West. Bob Bonar, the general manager at Snowbird, said the mountain received more than 775 inches of snow this season, well above its average of 500.

“We even got 20 inches of powder over Memorial Day weekend, and our current

average base is more than 15 feet,” Bonar said. “The holiday may not even be the end. We may stay open a few weekends longer if the snow stays good.”

But if the giant snowpack remains a boon to skiers at Snowbird and at Snowbasin Resort about 70 miles to the north, it has been problematic to others.

Ed Chauner, director of the Intermountain Cup Mountain Bike Racing Series, said he had to change the site of a race last month because the original site, Sundance Resort, still had 10 feet of snow. A race planned at Snowbird on July 2 is also in jeopardy because, Chauner says, “there’s still 20 feet of snow on parts of the course.”

“All this weather is killing us,” Chauner said. “No one can get out and train during the week, because it’s been so cold and wet. If they can’t train, they don’t come out to race. Our rider numbers have been way down.”

The La Niña phenomenon is behind the weather anomaly, said Lindsay Storrs, a meteorologist at KUTV in Salt Lake City. In a La Niña year, she said, cooler than normal water temperatures in the Pacific off the coast of Chile leads to cooler and wetter weather in winter and spring in the western United States.

“Troughs develop along the West Coast of the U.S. when this occurs,” Storrs said. “That allows storms to continuously drop out of the Gulf of Alaska, giving the western U. S. above average precipitation.”

Snowbird’s full parking lot is testimony to the attraction of this season’s late snow.

“I have skied for 72 years, and I’ve never skied snow like this in June,” said Eric Jucker, 75, a Swiss citizen who travels back and forth from Laguna Beach, Calif., to Salt Lake City.

Martin Martinov, a Bulgarian biophysicist living in Park City, Utah, got off the tram Friday and said, “I’ve never seen snow like this that you didn’t have to hike to get to at this time of year.”

The record conditions are even attracting out-of-towners. Bradley Rieders of Woodbury, N.Y., traveled to Snowbird with his sons, 23 and 26.

“We came out here to ski and golf on the same day,” Rieders said. “We flew all the way out here just for that. The weather is beautiful, the skiing is fantastic; it’s paradise, just unbelievable.”

Snowbird has its large tram and two lifts operating, offering access to every run on the mountain. By extending the closing date to July 4, it will be open 202 days this season, a record by one day.

“There are places on the mountain that will probably retain snow all summer long,” said Emily Moench, the resort’s communications manager.

The fact that summer is still a long way off for Utah’s Wasatch Mountains works out well for the United States freestyle team, which is training at Snowbird. Scott Rawles, the moguls head coach, said the team was saving money by not having to travel to South America. Winter in the Southern Hemisphere doesn’t usually begin until August, and the only available snow in June and July is on glaciers crowded with the national teams of other countries.

“That is huge for us,” he said.

But just as the snow has hampered Chauner’s mountain bike series, it has even had an adverse effect on the overall operations at Snowbird, which likes to present itself as a four-season destination. The resort would normally be starting summer activities by now.

“Aside from the fact that the weather is cold and wet, the Alpine Slide track is buried under many feet of snow,” Moench said, referring to a popular summer attraction.

Jeff Robins, chief executive of the Utah Sports Commission, which works to attract major sporting events to the state, said the unusual weather had been particularly disruptive in the north.

“We’re seeing the golf season starting later this year,” he said, “and the weather has created issues for the spring sports that are typically played in high school and college — from tennis to track and field, soccer, baseball, softball, the weather has created challenges for competitions typically held in spring. It’s not just snow in the mountains, but rain that is affecting recreational activities like fishing, kayaking, camping, mountain biking and hiking.”

While the delay for northern Utah’s summer activities will have an economic impact on the state, it may be the least problematic of the overall weather effects.

“The snowpack we have right now is 525 percent of normal,” said Brian McInerney, the hydrologist for the National Weather Service in Utah. “The lower level snowpack from 7,500 to 6,000 feet is already gone, but the mid-elevation snow from about 7,500 to 9,000 feet is still there.”

He added: “Our soils were already saturated starting in March due to a heavy rainfall in early spring. Now, if you try to ride or hike on these soils, they will still be wet, still be saturated. If you use the trails at all, especially for mountain biking, it’s going to screw them up.”

The most serious consequence of the huge snowpack in the Wasatch Mountains may

be lurking well below the summits, especially if the weather changes rapidly to the typically hot northern Utah temperatures of late June and July.

“Once it starts going, the inertia of melting snowpack goes pretty fast,” McInerney said.

The speed of the melt has state officials concerned about flooding. Some rivers have already breached their banks and inundated homes and hundreds of acres of farmland. And though snow-riders are still loving the snow, it remains a threat, a vast rush of water just waiting to pour down on the valleys below.

Title: Summer snow falls on summit of Snowdon

TheUnhivedMind - June 13, 2011 02:03 AM (GMT)

Summer snow falls on summit of Snowdon

This was the scene on top of Snowdon at lunchtime on Friday

10 June 2011 Last updated at 15:39
http://www.bbc.co.uk/news/uk-wales-north-west-wales-13731216

The summit of Snowdon under a white blanket of snow: it's a picture postcard cliche.

But if you thought this photograph was taken in the dark days of winter then think again.

The wintry scene, at the Snowdon Mountain Railway's terminus near Hafod Eryri, was photographed at 1300 BST on Friday - in the middle of June, days before the start of Wimbledon and just over a week before the summer solstice.

Around the UK this week counties have been declaring drought conditions after one of warmest and driest springs in memory. Parts of Wales, too, have been experiencing very dry weather.

No wonder, then, that there was an element of surprise among those working and walking at the top of Wales' highest mountain.

"It started hailing around lunchtime, then it snowed for about an hour," said Jonathan Tyler, manager of Snowdon Mountain Railway's visitor centre at the summit of the mountain.

"It wasn't cold, but people were arriving at the summit looking quite bemused. It was summer at the bottom of the mountain and winter at the top."

Given the vagaries of the Welsh weather and Snowdon's 1085m (3560ft) altitude, experts say such climatic contrasts are to be expected from time to time.

"It's not common but it's not unheard of," said BBC Wales weather presenter Behnaz Akhgar.

"We are going through a little bit of a cold spell at the moment, with temperatures of 12-13C when the average temperature for this time of year is 18-19C.

"It looks like heavy showers on top of the mountain dragged down colder air and into that came sleet, hail and, yes, even snow."

Ms Akhgar warned hillwalkers in north Wales to check weather forecasts before setting out.

http://theextinctionprotocol.wordpress.com...ion-of-namibia/

June 10, 2011 – NAMIBIA – Reports and photographs of the snowfall circulated rapidly and widely across the Internet and inboxes bulged with rare images depicting snow in areas usually associated with heat and dust, not biting cold and white blankets of snow. John Rabie from Namibgrens Guest Farm close to the Spreetshoogte Pass where the majority of snow and rain fell, described the scenes of low clouds, mist and snow on Tuesday. It was ice cold, especially as the wind was blowing," he said. The snow fell during the day, from around eleven in the morning until the afternoon. He said the minimum temperature on Tuesday was minus two degrees Celsius, while the day's maximum temperature did not go above five degrees. Although the temperatures had not improved by yesterday, the absence of wind took away the worst bite of the cold, he said. "We lost one lamb," he said. He attributed the low number of stock losses to the fact that the wind had died down from Tuesday to Wednesday. According to the Namibia Weather Network website, Tuesday's cold was one for the record books. The website reported that Windhoek had its lowest average day temperature in at least ten years on Tuesday. –Namibian

"Parts of the south-west Africa nation of Namibia usually associated with heat and dust have been blanketed in snow." –Irish Weather O

Hawaii’s Mauna Kea summit blanketed with 3 inches of snow

Posted on June 7, 2011 by The Extinction Protocol
http://theextinctionprotocol.wordpress.com...inches-of-snow/

June 7, 2011 – HAWAII – Snow on the summit of Mauna Kea: it’s not exactly a rare sight during a Hawaiian winter. But how about in June? With just a few days removed from the official start of summer, the summit of the Big Island’s biggest mountain was covered by white after a passing thunderstorm dropped inches of ice at the 13,000 foot level. Noteworthy weather for Waimea resident Pam Akao, her daughter and her friends. “It was hailing in Waimea!” said Pam. “I don’t know if it has to do with the world climate change, or what.” The Mauna Kea Access Road was closed for a period this weekend, but by Sunday afternoon, the summit was open to the public once more. Employees on the roofs of the summit observatories worked to clear as much snow from the telescopes as possible before nightfall. The roads were in good condition, and although the mountain was quiet for a snow day, there were still some brave groups who ventured up. –Big Island News

Heavy snows spoil weekend holiday plans in West

By STEVEN K. PAULSON
May 27 2011
http://hosted.ap.org/dynamic/stories/U/US_...-05-27-04-51-12

DENVER (AP) -- Ski resorts are bustling with activity. A key highway into Yellowstone is closed because parts of the road have seen more than 25 feet of snow. And campgrounds are feverishly removing snow from campsites to clear the way for visitors.

Welcome to Memorial Day weekend in much of the West.

The traditional kickoff of the summer season will have a decidedly wintry feel in the Rocky Mountains, as well as California's Sierra Nevada, because of a lingering record snowfall.

Epic snowpack in parts of Colorado, Utah, Wyoming, Montana, Idaho, Oregon and California is forcing many tourists to abandon the annual rites of launching their summer holidays with a camping trip. Others plan to take advantage of prolonged skiing and snowshoeing this strange spring.

In Denver, Brooke Schmidgall had her sights set on high-country camping this weekend as she shopped for gear at a sporting goods store.

"I'll bring my snowshoes," she said. "We have a big family tent. It will be nice and warm."

Rocky Mountain National Park's popular Trail Ridge Road is closed because of 17-foot snow drifts. Normally, holiday motorists can cruise at altitudes surpassing 11,000 feet but not this year.

Janelle Smith, spokeswoman for the U.S. Forest Service's Rocky Mountain region, recommended that campers consider heading to lower elevations - like Arizona or New Mexico. Campers in Idaho were being warned to check first before heading to camping areas - or risk being turned back by lingering drifts or muddy, impassable roads.

In Oregon, some resorts were still trying to dig out cabins - let alone campgrounds - from snowpack.

Yellowstone National Park has just one campground open. "We're telling people to be prepared for snow," said park spokesman Al Nash

In other parts of Wyoming, officials have extended winter closures of wildlife management areas to campers. The reason: To protect wildlife from humans because animals are still searching for food at lower elevations.

The Bridger-Teton National Forest Avalanche Center is fully staffed to warn outdoors enthusiasts.

"May snow depths are deeper than anything we have seen in the last 45 years," said avalanche center spokesman Bob Comey.

In California, a historic Sierra Nevada snowpack is making Yosemite National Park's springtime cascading waterfalls especially beautiful - and dangerous, with several accidental drownings already of people who failed to keep away from thundering waterfalls and swollen creeks and rivers.

But snow has kept rangers from installing a cable railing that helps hikers maintain their footing at Yosemite's iconic Half Dome. Anyone holding one of the allocated permits to climb will be out of luck this weekend.

"That was the caveat when people signed up - you may be out of luck depending on the snowmelt," park spokesman Scott Gediman said.

Park officials instituted the permit system last year to limit traffic to 400 people a day. Best guess is that the Half Dome route could be open by June 5, Gediman said.

Farther north, some popular campgrounds in Tahoe National Forest aren't expected to open for several weeks.

"We're still selling backpacks, because people are still geared up for the season," said Jeff Dostie, a clerk at Alpenglow Sports in Tahoe City, Calif. "But they're buying for the future, they're not buying for today."

While the snow is bad for some campers, it's great for skiers in Colorado and elsewhere. Aspen is reopening 136 acres of trails for skiing this weekend, and

Arapahoe Basin has extended its closing dates beyond June 5.

"We're getting amazing ski traffic for this time of year because of this snowpack," Dostie said of the conditions in the Lake Tahoe region along the California-Nevada border.

But for Idaho's Lookout Ski and Recreation Area, the recent flurries must seem like a lost opportunity. The resort near the Montana line has been closed since April.

"Insane weather! Snowing like crazy here," Lookout's Twitter feed said Thursday afternoon.

View Full Version: America’s next disaster: Multiple floods in

Title: America’s next disaster: Multiple floods in
Description: *Western states as monster snowpacks melt*

TheUnhivedMind - May 24, 2011 11:41 PM (GMT)

America’s next disaster: Multiple floods in Western states as monster snowpacks melt

By Daily Mail Reporter
Last updated at 9:32 AM on 23rd May 2011
http://www.dailymail.co.uk/news/article-13...packs-melt.html

It's been one long series of natural disasters this year - and now it looks like another is on the way.

The focus may soon be shifting from the epic flooding in the Mississippi Valley to Westwern states where enormous winter snows have piled up on mountain ranges.

More than 90 sites from Montana to New Mexico and California to Colorado have record snowpack totals on the ground for late May.

Unbelievable snow: It's late May and a vehicle faces 23 feet of snow at Rock Cut on Trail Ridge Road in Rocky Mountain National Park in Colorado

This has been caused by a winter marked by blizzard and an unusually cold and wet spring.

Now there is a very real fear of localised flooding at those sites as the snowpacks melt under hotter, sunnier conditions in June.

A sudden thaw could mean millions of gallons of water rushing through river channels and narrow canyons.

Bob Struble, the director of emergency management for Routt County in north central Colorado, said: 'This could be a year to remember.

'All we can do is watch and wait.'

Early warning signs: After heaving rainfalls, Montana was hit by floods this weekend and is braced for more to come

At risk in Routt County is Steamboat Springs, the county's largest town.

It sits about 30 miles from the headwaters of the Yampa River, a major tributary of the Colorado River that has 17ft of snow or more in parts of its watershed.

The last time the west was hit by serious flooding casued by mega-thaws was 1983.

Since then, however, several wide open areas that were hit have now been developed into towns.

In contrast to the floods on the Mississippi River, which is centred on one mighty waterway, the Western story is fragmented, with anxiety dispersed across dozens of large and small waterways that could surge individually or collectively, the New York Times reports.

In California, officials staged three days of flood training last week, running disaster scenarios filling sandbags and tying down tarp.

It shouldn't be like this: Ellen Sowers wades through flood water along the South Fork of the Ogden River, east of Huntsville, Utah

The state’s aging levee system has long been a source of concern, with fears of large-scale failures that could leave Sacramento, the state capital, vulnerable to a Hurricane Katrina-scale flood.

The worries are heightened this year by the deep snows in the Sierra Nevada, where some ski spots around Lake Tahoe saw more than 60ft this season.

At Flaming Gorge Reservoir on the Green River in Utah, federal managers have begun spilling water downstream in readiness for the rising waters.

In the Wasatch Mountains outside Salt Lake City, where the Alta Ski Resort still has about 200 inches of snow, cool temperatures have kept snowpacks from crossing what hydrologists call the isothermal barrier — 32 degrees Fahrenheit throughout the snowmass — which allows gradual melting from the bottom.

Last week alone there was three feet of snow.

In sparsely-populated Wyoming, emergency officials are worried about tiny communities that in many cases are far from help if rivers surge.

Almost every county is in a potential snow-melt flood zone, and relatively few residents have flood insurance.

Scary stuff: National Water and Climate Centre map showing the areas across the West that have seen record snow fall this year

In Colorado's Routt County, the terrain itself has changed, with thousands of acres of dead pine trees on high mountain slopes.

The trees were killed by an infestation of beetles in recent years and no longer hold the soil as they once did, raising erosion concerns.

From Sacramento to Baggs in Wyoming, a town of about 600 people on the Little

Snake River, 150 miles west of Cheyenne, looking upslope at the end of May and seeing lots of white is not the norm.

Floods kill more Americans than lightning, tornados or hurricanes in an average year, according to federal figures.

Flash floods, usually associated with summer downpours, like the one that killed more than 140 people in Big Thompson Canyon in Colorado in 1976, can come as if from nowhere.

Arthur Hinojosa, the chief of the Hydrology and Flood Operations Office with the California Department of Water Resources, said: 'It just takes one really sunny hot spell to get things running.

'And that’s where our concern lies.'

In Montana, the fear of flooding became a reality on Saturday when washed out roads in Billings caused the cancellation of scores of high school graduations and several fishermen by swelling rivers, meteorologists with the National Weather Service said.

Much of the eastern two-thirds of the state is dealing with flood warnings or actual flooding as a slow-moving storm dumped rain across the region for several days, in some areas as much as six inches since Thursday.

The stormy weather began to hit the region as the state braces for more possible flooding after harsh winter and late spring snow storms deepened mountain snowpack to levels nearly double their average levels.

The state has received about three times more rain than normal so far this year.

VILLAGE SNOWED UNDER IN THE HEATWAVE

Thursday April 28 2011 by Daily Express Reporter
http://express.co.uk/posts/view/243381/Vil...in-the-heatwave

IT'S snow joke ... as the rest of Britain basked in sunshine, villagers in Leicestershire shivered in a freak blizzard.

A huge hailstorm dumped three inches of snow and ice on Birstall – while a mile away temperatures hit 81F (27C). Sian Colver, 28, photographed the storm on Saturday which battered the village with ice balls the size of large marbles, stripping paint off windows.

Met Office forecaster Andy Bodenham said such unusual storms happened when large hailstones formed in freezing conditions at 30,000ft. "The big difference in temperatures between high up and lower down causes thunderstorms that can turn into hail showers and cause damage," he said.

Temperatures Lowest For Time Of Year Since 1940s

April 20, 2011 7:11 AM
http://chicago.cbslocal.com/2011/04/20/tem...ar-since-1940s/

Cold, pouring rain had people running downtown Tuesday night. (Credit: CBS)
Share this:

CHICAGO (CBS) – Not only has Chicago dealt with chilly rain, hail and even snow this week, but temperatures Tuesday were at their lowest for this late spring date since the 1940s.

CBS 2 Meteorologist Megan Glaros says the high Wednesday is expected only to reach 46 degrees with a peek or two of sunshine, but the chilly conditions will make it feel like winter never ended. As of 6:45 a.m., the temperature in Chicago was just 34 degrees.

Glaros says if there were precipitation Tuesday morning, some snow would likely be mixed in. Fortunately, the storm systems have moved east and conditions were just cold and overcast.

On Tuesday, the high topped out at 38 degrees in the city.

In the early evening hours, just walking a few blocks along the streets of Chicago felt like going out to sea in an open boat during a rainstorm in northern Canada. Anyone walking against the wind was blasted continuously in the face with cold droplets of rain, and given the strength of the winds, an umbrella was as good as useless.

And that was before the severe storms even hit. Lightning bolts and thunder claps soon appeared, and hail of up to 1 inch in diameter was spotted in some areas, according to the National Weather Service.

More than an inch and a half of rain fell in less than half an hour Tuesday evening, forcing the cancellation of more than 450 flights at O'Hare and Midway international airports, and leaving people sleeping on terminal floors.

A flood watch remains in effect for the Fox River in Lake County and Kenosha County, Wis., while a flood advisory is in effect for the Fox River in Kane and Kendall counties.

The weather Tuesday continued a miserable trend that has been going on all week. On Monday morning, O'Hare saw an accumulation of 0.6 inches of snow, enough to set a record for this date. It swept out an earlier record of 0.4 inches, set in 1910.

The snow is over for now, but Glaros says frost may be seen Wednesday night, and temperatures will not return to the normal range until Sunday.

Calif. drought officially ends after snowy winter

By DON THOMPSON
http://www.thenewstribune.com/2011/03/30/v...-good-news.html

A drought that loomed over some of California's most fertile farmland officially ended Wednesday after a winter of relentless mountain storms that piled snow up to three stories high and could keep some ski resorts open until the Fourth of July.

More than 61 feet of snow has fallen in the Sierra Nevada high country so far this season, second only to 1950-51, when 65 feet fell, according to records kept by the California Department of Transportation. And more snow is possible in April, raising the prospect of an all-time record.

When it melts, the snow will bring relief to hundreds of communities and many farms that provide fruits and vegetables to the nation.

Gov. Jerry Brown on Wednesday repealed a statewide drought declaration made in 2008 by then-Gov. Arnold Schwarzenegger, who called for a state of emergency in February 2009 after three years of low water levels.

Brown acted after state officials reported the water content in the Sierra snowpack at 165 percent of normal for this time of year. That is one of the wettest winters since 1970, according to the state Department of Water Resources.

It trails only 1983, when the water content in the snowpack was 227 percent of normal, and 1995, which was 182 percent of the average for the end of March.

The wet winter means state and federal water agencies will be able to provide more water to urban and agricultural areas as the snowmelt fills reservoirs this summer.

The Sierra snowpack is crucial for California's water supply. As it melts, it feeds a vast system of lakes and aqueducts that move water from the north through the agriculturally rich Central Valley and eventually to Southern California, where most of the state's residents live.

Dry winters the past three years meant water managers could deliver only between 35 percent and 50 percent of the amount requested by cities and farms. That, combined with federally mandated pumping restrictions to protect a threatened fish, forced growers to leave thousands of acres unplanted and to lay off thousands of farmworkers.

Some cities imposed conservation measures that included restrictions on watering lawns.

Now the snow has piled as high as the power lines in some places and has been so deep throughout most of the 400-mile mountain range that it caused roofs to collapse. Some ski resorts had to close temporarily when they received more snow than they could handle.

Chris Rivest's father sent him from San Francisco to the family vacation cabin near the Sierra Nevada crest with a seemingly simple chore - clear it and the driveway of snow.

When Rivest arrived earlier this week at the A-frame near Soda Springs, about 90 miles northeast of Sacramento, the snow was at least 10 feet high on the deck.

"My dad wants me to clear the deck," the ponytailed 21-year-old said Monday, as he labored to clean up the driveway with a snow blower. "How do I even begin to do that? Where would I put the snow? This is absurd."

Seasonal snow accumulation records already have been set at some ski resorts, including Squaw Valley USA near the north shore of Lake Tahoe, Heavenly Mountain Resort on the lake's south side and Mammoth Mountain, the sprawling Eastern Sierra resort that attracts Southern California skiers and snowboarders.

At Squaw Valley, home of the 1960 Winter Olympics, ski patrol guides had to create tunnels just to reach their warming huts, and avalanches broke out windows at two lift stations, said Wes Schimmelpfenning, a 68-year-old patrolman who has worked there for 48 years.

Nearly 59 feet of snow has fallen there so far this winter, beating the old record by 29 inches.

Squaw is extending its season through Memorial Day, while Mammoth, with a peak elevation exceeding 11,000 feet, might remain open through Independence Day.

"I'm out plowing driveways, and we can't even find the houses," said Norm Sayler, who used to run Donner Ski Ranch along Interstate 80 and now operates a snow-plowing business near Donner Summit. "I've been up here since 1954, and personally this has been the toughest winter I've ever had here."

Authorities are warning mountain homeowners to beware of failing roofs and vents and flues that have become blocked by snow.

The snow caused roofs to partially collapse last weekend at a bowling alley, a logging business and a hardware store in the Sierra foothills town of Pollock Pines, about 60 miles east of Sacramento.

"I better not hear Sacramento talking about drought for a while," said Max Ramsey, 38, who on Monday was chipping snow and ice off the roof of a building that houses the Soda Springs General Store, post office and a vacation rental property business. "You get 60 feet of snow, it does a lot of damage."

Building owner Tony Paduano said his wife heard "a large cracking noise" on Sunday as one of the roof's support beams gave way.

The California winter started off intense late in 2010, dried out in January, then came roaring back with a series of heavy storms in February and March.

The storms dumped so much snow at the University of California Central Sierra Snow Lab near Soda Springs that the 15-foot-tall measuring stake was buried.

Researcher Randall Osterhuber had to extend the stake another 6 feet to keep up with the more than 18 feet of snow on the ground, the fourth-deepest total since record-keeping began there in 1946. More than 47 feet of snow has fallen there this season.

Old railroad records dating to 1879 put the deepest accumulation near Donner Summit at 66 feet in 1938. The most snow on the ground at any one time was 31 feet, in both 1880 and 1890.

Residents near Soda Springs said they had been without electricity or phone service intermittently over the past 10 days after storms toppled power and phone lines.

The snow rose above the third-story windows at the house 18-year-old Luis Rico is sharing with five other employees of the nearby Royal Gorge cross-country skiing resort, which closed all last week because of the storms.

The friends occupied their time by building a 15-foot-tall igloo with blocks of snow they cut with a chain saw. One morning, they woke up to find the doorway completely buried and had to tunnel their way out.

"We pretty much had to swim to get out of there," he said.

Description: *Northeast*

TheUnhivedMind - March 30, 2011 10:55 PM (GMT)

Wintry Storm Aims April Fool’s Day Punch at U.S. Northeast

By Brian K. Sullivan - Mar 30, 2011
http://www.bloomberg.com/news/2011-03-30/w...w-possible.html

A winter storm watch has been issued for eastern New York, parts of northern New Jersey and most of New England, where as much as 12 inches of snow may fall by week’s end, according to the National Weather Service.

The system will be the second to move through the area this week, said Lauren Nash, a weather service meteorologist in Upton, New York. The first will arrive tonight and may bring light snow to areas north of New York City, she said.

“It is pretty much going to be on and off starting tonight through Friday night,” Nash said. “There is still uncertainty where the snow-rain line is going to set up, so there is still a possibility that the city could see some flurries or light snow.”

Parts of 11 counties around New York City are covered by the watch and may receive 5 to 10 inches (13 to 25 centimeters) of snow, including New York’s Westchester and Orange; Connecticut’s Fairfield and New Haven; and New Jersey’s Passaic, Bergen and Essex, according to the weather service.

“The best chance for snow in the city will be Friday when the low pulls away and it will wrap the cold air in,” said Rob Carolan, a meteorologist with Hometown Forecast Services in Nashua, New Hampshire.
NYC Accumulation

Carolan said the snow probably won’t accumulate on New York City’s streets and won’t amount to more than an inch.

The storm watch also extends north to the Canadian border and includes parts of Vermont, New Hampshire, Maine and Massachusetts. Areas of western and central Massachusetts, as well as northern Connecticut and southern New Hampshire, may receive as much as 12 inches of snow.

Carolan said he expects the heaviest snow to fall in an area from north of Poughkeepsie, New York, across northwestern Connecticut and western Massachusetts into Vermont, Maine and New Hampshire.

“Heavy snow could lead to travel issues for the Friday morning commute as untreated surfaces will be slippery with poor visibility possible at times,” the weather service said. “The snow could also be wet and heavy, presenting problems for tree branches and power lines.”

Fourteen years ago, another March 31-April 1 storm left 25.4 inches of snow in Boston and 33 inches in neighboring Worcester, according to the weather service.

Since December, 61.9 inches of snow has fallen in Central Park, the third-snowiest season on record, according to the weather service. The top snow season was 1995-96, when 75.6 inches fell in Central Park.

Boston has had 79.5 inches of snow, according to the weather service.

Next week, another large storm may pass through the area, threatening rain on Boston for the Red Sox home opener at Fenway Park against the New York Yankees on April 8, Carolan said.

Alexandra - March 31, 2011 03:48 PM (GMT)

Yesterday I thought it was raining, and when I went outside to wait for my son's bus, I was a bit surprised to see snow.

He doesn't mind. He loves the snow!

I have seen snow as late as April 30 here, several years back. I remember this because we were headed along Route 83, a two-lane road, one night, and suddenly conditions got really bad.

Title: Wintry Storm Brings Snow, Flight Disruptions to
Description: *Northern U.S.*

TheUnhivedMind - March 23, 2011 02:38 PM (GMT)

Wintry Storm Brings Snow, Flight Disruptions to Northern U.S.

By Brian K. Sullivan - Mar 23, 2011 11:44 AM GMT+0000
http://www.bloomberg.com/news/2011-03-23/w...s-north-1-.html

Hundreds of flights were canceled today from Chicago to New York as a wintry storm dropped snow across the northern U.S. from Montana to the Atlantic.

Snowflakes coated trees in the New York City area, leaving pavements wet for the morning commute. The snow was forecast to change to rain by mid-morning, according to the National Weather Service.

“We’re not expecting a whole lot of accumulation for the city, under an inch,” said Joe Pollina, a weather service meteorologist in Upton, New York. The rain is expected to change back to snow and sleet overnight.

More than 480 flights were canceled as of 7:30 a.m. Eastern time, most out of airports in Detroit, Chicago, Newark, New Jersey, and New York, according to the FlightAware tracking service. “Severe travel disruptions” were possible through the Plains and the Upper Midwest, where heavy snow combined with winds to reduce visibility and cover roads, according to AccuWeather Inc.

As the storm moves east, as much as a foot (30 centimeters) of snow may fall in the Poconos and Catskills, with 3 inches to 6 inches possible for southern New York State and northern Pennsylvania, AccuWeather said. Parts of New Jersey were expected to get 1 to 3 inches of snow and sleet before the system moves into southern New England, the private forecaster said.

View Full Version: Scotland hit by fresh snow fall

Title: Scotland hit by fresh snow fall

TheUnhivedMind - March 12, 2011 03:13 PM (GMT)

Scotland hit by fresh snow fall

Forecasters said there could be as much as 4in (10cm) of snow

12 March 2011 Last updated at 10:26
http://www.bbc.co.uk/news/uk-scotland-12717576

Heavy snow has covered the central belt and southern Scotland as Arctic conditions returned to much of the country.

The Met Office has issued severe weather warnings, with up to 12in (30cm) of snow possible in many areas.

The freezing conditions have caused disruption on the M8 in West Lothian, with roads in Stirling also affected.

Transport Scotland said it had "robust" supplies of salt and winter vehicles on standby.

Low lying areas in central Scotland, including Glasgow and Edinburgh have experienced between 1-2ins (2-5cm) of snow, with up to 4ins (10cm) on higher ground.

On the M8 at Whitburn in West Lothian, heavy snow and ice led to four lorries becoming stuck, causing disruption.

In Fife, a lane of the snow-covered M90 was shut after a car accident. However, Fife Constabulary said it had now been cleared.
Salt supplies

In rural Stirling, Central Scotland Police urged motorists to undertake only essential travel after the snow caused problems on the A81 and A811.

The Met office said the snow was expected to move north to parts of the Highlands and Grampian.

It has also warned of the potential for blizzard conditions and significant drifting on mountain routes.

Between 4-6ins (10-15cm) of snow is being forecast for northern parts, with up to 6-10ins (15-25cm) potentially falling in the Highlands.

A spokeswoman for Transport Scotland said: "Transport Scotland and our trunk road operating companies are closely monitoring the weather forecasts and are operating at a heightened level of vigilance and preparedness for the next couple of days to ensure everything is done to keep our transport networks moving and Scotland open for business.

"Supplies of salt are robust, with over 260,000 tonnes, with a further 120,500 tonnes on order across Scotland."

View Full Version: HEAVY SNOW HALTS TURKEY AND GREECE

Title: HEAVY SNOW HALTS TURKEY AND GREECE

TheUnhivedMind - March 11, 2011 04:44 PM (GMT)

Heavy snowfall halts daily life in Turkey and Greece

Friday, 11th March 2011
http://www.timesofmalta.com/articles/view/...rkey-and-greece

A cold wave that hit Turkey and Greece this week has brought heavy snowfalls that paralysed traffic and shut schools in both capitals and disrupted road and air travel in other cities.

Ankara was buried in 50 centimetres of snow which fell for a third day yesterday, snarling traffic despite a major clearance operation. Anthens was also covered in snow on Wednesday.

Schools were closed and residents had difficulty making the journey to work with road and rail links between both capitals and several nearby towns cut off.

The snowfall in Ankara was the heaviest for 10 years, meteorologists said, quoted by TV channels. In at least five more cities, schools were closed due to heavy snowfalls.

Some flights were delayed but none were cancelled at Ankara Esenboga Airport, officials told Anatolia news agency, although a number of flights from Istanbul to other domestic cities and abroad were cancelled.

Major roads in downtown Istanbul remained open, although some side-streets on the Asian side of the city were closed down due to snow and high winds forced the cancellation of some ferry services. City officials said about 3,000 employees worked non-stop to keep the traffic flowing in Istanbul, with a population of more than 12 million people. Roads to hundreds of villages around Turkey were also blocked due to snow.

Two fishermen have been missing since Tuesday due to storms on Lake Manyas in

northwestern Turkey, an official from Balikesir province told to news channel NTV. Izmir and Antalya, two major cities of Turkey, known for their warm climate, are also affected by snowfalls.

Title: ANOTHER WINTRY BLAST IS SET TO PUT SPRING ON ICE

TheUnhivedMind - March 7, 2011 10:05 PM (GMT)

ANOTHER WINTRY BLAST IS SET TO PUT SPRING ON ICE

Monday March 7 2011 by Michael Pickard
http://www.express.co.uk/posts/view/233023...t-spring-on-ice

BRITAIN is bracing itself for the return of snow and Arctic temperatures this week.

Snow is expected to fall across Scotland and Northern Ireland late tomorrow or early Wednesday. By the next day it will reach northern England and the Midlands.

Forecasters have warned that eastern England could also wake up to fresh snow by Thursday, with communities across the country seeing some falls by the weekend.

Winds from the Arctic are also likely to send nighttime temperatures plummeting to minus 5C in the South and minus 10C in the North.

Jonathan Powell, senior weather forecaster for Positive Weather Solutions, said: “After a lean showing from winter following December, the season hits back hard this week with snow, ice and bitterly cold temperatures.

“Scotland and northern England will once again be struck hardest, with significant disruption possible later in the week.

The season hits back hard this week with snow, ice and bitterly cold temperatures.

Jonathan Powel

“Spring is definitely on the ropes this week, as an Arctic blast drives temperatures right

down."

Though temperatures have been rising since last month, this latest icy snap is set to see the return of conditions last seen in December – officially the coldest month for more than 300 years.

The average temperature of minus 1C was the lowest recorded since 1683-84. It was also the coldest winter overall for almost 50 years – only outdone by 1962-63 when there were 71 consecutive days of snow and an average temperature of minus 0.33C.

In December, airline passengers were left stranded and there were a record number of motorway breakdowns. Met Office forecaster Dan Grey said there would be a clear "North-South split" in this week's weather. SEARCH UK NEWS for:

He said: "Scotland, northwest England and Northern Ireland will be wetter, particularly on Monday and Tuesday with some quite heavy rain in parts. As we go into Wednesday we'll see some sleet and snow showers across Northern Ireland and Scotland. This will be mostly in hilly areas but there's a chance this could hit lower level areas too. Temperatures will remain freezing at around minus one and minus two degrees. It will also feel quite noticeably windier than it has done recently.

"We could also see gales in exposed areas the further north you go.

"For the rest of the week temperatures will be a little above average in the South.

"But it looks like the North will remain cold, so you should still wrap up warm."

Description: *dolphins, say scientists*

TheUnhivedMind - March 3, 2011 09:36 PM (GMT)

Cold water flowing into Gulf may have killed baby dolphins, say scientists

Published: Thursday, March 03, 2011
http://blog.al.com/live/2011/03/cold_water...killed_dol.html

MOBILE, Ala. -- Cold water may have killed the dolphins washing up in Mississippi and Alabama, scientists with the Dauphin Island Sea Lab said Wednesday.

They point to an apparent correlation between large pulses of chilly water that flowed into Mobile Bay during January and February and the subsequent discovery of dozens of stillborn dolphin calves in area waters.

Data on water temperature and river flows show periods in each month when bay waters dipped into the 40s for days at a time. Shortly after bay temperatures dropped precipitously, dead stillborn dolphins began washing ashore in Alabama.

The Sea Lab scientists also speculated that most of the dead animals found in Mississippi may have actually died in Alabama waters.

“The timing for everything works out pretty well. We had the one significant snowfall event in the middle of January. After that, the timing is right in terms of the snow melting and arriving in Mobile Bay as a freshet, this pulse of cold, fresh water that arrives and then dissipates,” said Monty Graham, a marine biologist with the Sea Lab.

'They don't stay around in cold water'

So far this year, 46 dolphins, mostly calves, have been found in Mississippi and Alabama, That represents a sharp rise from the January and February average reported by federal officials of about three dolphin deaths in all of Alabama, Mississippi

and Louisiana.

More than 30 dolphins, mostly adults, have been found in Louisiana. An additional five calves were reported there on Wednesday.

Moby Solangi, director of the Institute for Marine Mammal Studies in Gulfport, discounted the idea that cold water played a role in the deaths.

“These animals have the ability to move away from cold. They don’t stay around in cold water,” Solangi said Wednesday. “We don’t want to speculate on what happened to the dolphins. We want empirical data and right now we don’t have any. If it is cold temperature, we’ll find out. But based on what we’ve seen so far, it could be anything.”

Graham agreed that it was too early to rule out other possible factors, such as the presence of oil in the Gulf ecosystem and foodchain, and the role of viruses and bacteria.

Runoff from winter weather

With the snow line just north of Mobile Bay, the entire coastal area was subjected to either snow or cold rain in early January. More importantly, most of Alabama, Georgia, Mississippi and Tennessee were covered in snow. A substantial portion of runoff, including melted snow, from all of those states ultimately ends up in Mobile Bay.

The water temperature data and river gauges show the first freshet of cold water entering the bay on Jan. 12 and continued for about four days. Temperatures in the bay during that event dropped to 41 degrees at Dauphin Island, Graham said. The first two stillborn dolphin carcasses were recovered in Alabama on Jan. 15 and 17, according to the mammal institute’s records.

Taking into account the time it would take for snow to melt as far north as Tennessee and then travel down the rivers to the bay, a second pulse from the same snowfall appears to have entered the bay a few weeks later, during the first week of February.

At that point, the rivers were carrying as much water as they typically carry during spring floods. Water temperatures dropped 14 degrees overnight, from 59 degrees to 45 degrees, Graham said. And again, a new batch of dolphin began washing ashore within days.

“For these animals, that second freshet was the sucker punch. You can see from the temperature and salinity signature that it blasted through the bay from the top to the bottom with that cold water,” Graham said. “The temps dropped so fast and the river water was moving so fast, these animals wouldn’t have had a chance to swim out of the way. They were swimming in really cold water within 24 hours. That’s just a real shock to the system.”

A shock to pregnant dolphins?

The question that remains, said Ruth Carmichael, another Sea Lab researcher, is whether that kind of shock is enough to cause dolphins to abort. She called the apparent correlation between the timing of the dolphin deaths and the arrival of the cold water, “incredibly compelling.”

“There isn’t even a lot of info in the literature about these acute, sudden potential stress events. There is even less about calves and the potential for spontaneous abortions,” Carmichael said. “We can’t find anything in the scientific literature that addresses that.”

While the newspaper has been unable to find formal records on a similar spate of dolphin deaths in Alabama in January of 1990, articles in the Press-Register document 14 animals washing ashore, many of them stillborn calves. At the time, Sea Lab scientists suggested that extreme cold weather killed the animals.

Carmichael also speculated that the timing of the cold water may have been important because the dolphins were late in their pregnancies, about one to two months from giving birth. She said that might render them more vulnerable to temperature shocks.

Graham said that if cold water was to blame for the dolphin deaths it suggests two things: One, the end of the die off is likely at hand, and two, most of the animals found in Mississippi may have actually died in Alabama waters.

“If the calves died in Alabama and were floating, they would have been pushed offshore by that same freshet of cold water and wouldn’t have come back to shore until the freshet dissipated,” Graham said. “That is really interesting given the way the Mississippi animals showed up later. This sounds like a mortality event that may have happened in Alabama and the bodies are now washing up to the west in Mississippi and Louisiana.”

View Full Version: NASA To Hold Briefing Today On Missing Sunspots

Title: NASA To Hold Briefing Today On Missing Sunspots

TheUnhivedMind - March 2, 2011 11:02 PM (GMT)

NASA To Hold Briefing Today On Missing Sunspots

March 2, 2011 2:19 PM GMT
http://uk.ibtimes.com/articles/117844/2011...mum-maximum.htm

NASA said it has rescheduled a media teleconference to Wednesday 2 pm EST to discuss the first computer model that explains the recent period of decreased solar activity during the sun's 11-year cycle.

The recent solar minimum, a period characterized by a lower frequency of sunspots and solar storms, ended in 2008 and was the deepest one observed in almost 100 years. Solar minimums and maximums are the two extremes of the sun's 11-year activity cycle.

While sunspots were first observed by Chinese astronomers in 800 B.C., systematic observations of sunspots through the telescope started around 1600. In 1843, a German astronomer Samuel Schawbe first discovered that the number of sunspots wax and wane in a cyclic fashion with an 11-year periodicity. This is called the sunspot cycle or the solar cycle.

The solar cycle (Solar Magnetic Activity Cycle) is a periodic change in the amount of irradiation from the sun that is experienced on Earth. It has a period of about 10.7 years, and is one component of solar variation, the other being aperiodic fluctuations.

Solar minimum is the period of least solar activity in the solar cycle of the sun. During this time, sunspot and solar flare activity diminishes, and often does not occur for days at a time. It is a safer time to travel through space, but a less interesting time to watch polar skies.

At a maximum, the sun is peppered with sunspots, solar flares erupt, and the sun hurls billion-ton clouds of electrified gas into space. It's a good time for sky watchers who

enjoy auroras, but not so good for astronauts who have to be wary of radiation storms. Power outages, satellite malfunction and communication disruptions, and GPS receiver malfunctions are just a few of the things that can happen during a solar maximum.

NASA scientists noted during 2008-2009 that the Sun was undergoing a "deep solar minimum," stating: "There were no sunspots observed on 266 of [2008's] 366 days (73 percent). As of September 14, 2009 there were no sunspots on 206 of the year's 257 days (80 percent),"

NASA's teleconference would focus on the first computer model that explains the recent period of decreased solar activity during the sun's 11-year cycle.

The teleconference panelists are:

-- Richard Fisher, director, Heliophysics Division, Science Mission Directorate, NASA Headquarters, Washington

-- Dibyendu Nandi, assistant professor, Indian Institute of Science Education and Research, Kolkata, India

-- Andres Munoz-Jaramillo, visiting research fellow, Harvard-Smithsonian Center for Astrophysics, Cambridge, Mass.

-- Delores Knipp, visiting scientist, University of Colorado at Boulder

To participate in the teleconference, reporters must contact Trent Perrotto at 202-358-0321 or trent.j.perrotto@nasa.gov by 10 am EST on March 2 for dial-in instructions. Requests must include media affiliation and telephone number.

The teleconference was rescheduled from March 3, due to a possibility that NASA would be focusing on the Glory spacecraft launch, which is currently scheduled for March 4 at 5:09 am EST. Technical issues with ground support equipment for the Taurus XL launch vehicle led to the scrub of the original Feb. 23 launch attempt. However, those issues have been resolved, said NASA earlier.

TheUnhivedMind - March 2, 2011 11:03 PM (GMT)

I told you that this 11 year cycle is nonsense. Remember that Dalton minimums last usually around 30 or more years and some minimums have been up to 70 years. So tell me how we can have this pathetic 11 year cycle? This current Ice-Age will last around half a decade it seems in truth.

Droughty Beijing embraces largest snowfall this winter

English.news.cn 2011-02-26
http://news.xinhuanet.com/english2010/chin.../c_13751283.htm

BEIJING, Feb. 26 (Xinhua) -- Moderate snow fell in Beijing Saturday morning, bringing some relief to the droughty Chinese capital in the past winter.

The snow, with an average precipitation of 2.7 mm in the entire region of the municipality and 1.9 mm in the downtown area, began at around 2 a.m Saturday. Snowfall would go on and off over the weekend, resulting in the longest snowy weather of this winter in Beijing, a spokesman with the city's weather bureau said Saturday.

Precipitation in some suburban areas reached 10.2 mm, the heaviest the city had seen so far this winter, he added.

The highest temperature in daytime would be pulled down eight degrees Celsius to reach two or three degrees Celsius, and the lowest temperature would drop to four degrees below zero during the weekend, said the spokesman.

This is the third snow Beijing has embraced this year, with the first one falling on Feb. 9, the latest first snow for the city in 60 years.

The moderate precipitation would help alleviate drought in Beijing, as the city had not seen any precipitation for 108 days before the first snow two weeks ago, said Guo Jinlan, chief weatherman of the bureau.

Snowfall together with strong winds also helped dissipate the haze that had shrouded the city for four days and greatly improved air quality, according to the municipal bureau

of environmental protection.

Heavy fog had enveloped Beijing earlier this week. With the visibility of around one kilometer, the city's air pollution had been measured as the most hazardous level this year.

Nearly 400 city workers and more than 200 slowplows were dispatched Saturday to clear snow from the streets to keep the traffic flowing, said an official with the Beijing Environment Sanitation Engineering Group.

Vegetable prices rose by 1.71 percent from Friday at suburban Beijing's Xinfadi market -- north China's largest agricultural produce distribution center, as snow had caused delivering delays but the market's analyst said the price increase was still within "normal" range.

Besides Beijing, snow and rain also fell in most parts of the nearby Hebei Province, Inner Mongolia Autonomous Region and Shanxi Province, which have also been plagued by drought in the past months, according to the provincial and regional weather bureaus.

In Shanxi, snow has blanketed 107 of the province's 109 counties and cities, forcing road department to close or traffic-control several expressways.Editor: Wang Guanqun

View Full Version: SAN FRANCISCO HAS A RARE 'SNOW' EVENT

Title: SAN FRANCISCO HAS A RARE 'SNOW' EVENT

TheUnhivedMind - February 27, 2011 01:23 AM (GMT)

San Francisco 'snow' not enough to count

But rare weather event sparks buzz around the Bay Area

26 Feb 2011
http://www.msnbc.msn.com/id/41793089/ns/weather/

SAN FRANCISCO — Snow fell overnight in the highest reaches of San Francisco, but the Bay area dodged the heavier flurries forecasters had been expecting, the weather service said on Saturday.

No snow was observed in downtown San Francisco and AccuWeather.com meteorologist Dave Samuhel said the dusting would not count toward official records that show the last measurable snowfall in the area 35 years ago.

Northern California did experience record low temperatures overnight in several cities.

San Francisco got down to 37 degrees, which tied the previous cold weather record for this day set in 1962, said Chris Stumpf, meteorologist with the National Weather Service.

San Jose tied a record low of 33 degrees set way back in 1897, and Oakland got down to 34 degrees, breaking a record set in 1987.

"It was definitely cold enough, but it didn't have the precipitation that we needed to get any of the snow showers that we were hoping for," Stumpf said.

"It looks like it's clearing out right now, and we'll start to warm up as we go through the week," he said.

Earlier, the possibility of such a rare weather event sparked buzz around the city.

One blogger posted a pretend ski map, noting possible beginner, intermediate and expert runs in the city's hilly Bernal Heights neighborhood. A newly created website — isitsnowinginsfyet.com — also offered a simple answer for anyone who was wondering.

The San Francisco Chronicle posted old photos of snow from 1882, 1951, 1964 and other rare instances of city snowfall — including one photo from the 1976 storm that shows gleeful schoolkids throwing snowballs.

The Twin Peaks area of San Francisco, where elevations are about 900 feet above sea level, received a dusting of snow, and there were also reports of light snow in Los Gatos, a town near San Jose, and the Santa Cruz Mountains, Stumpf said.

In southern California, two inches of snow fell along the Grapevine section of the Golden State Freeway north of Los Angeles, but the passage remained open to traffic, said Ryan Kittell, a meteorologist with the National Weather Service.

Meteorologists had been forecasting that snow could fall as low as 1,000 feet above sea level and dust the Hollywood sign on Mount Lee above Los Angeles, which would have been a pristine sight with the Academy Awards happening on Sunday.

Snow did not reach as low at the Hollywood Sign, but it did dust the cities of Palmdale and Lancaster north of Los Angeles, before quickly melting, Kittell said.

Up to 3 inches of rain fell in parts of the mountains and foothills of Los Angeles County overnight and small hail hit valley areas on Saturday morning, but the rain is expected to clear out in time for the Academy Awards ceremony on Sunday.

This week's storm has already dumped more than 2 feet of snow in the Sierra Nevada, and forecasters said more than 3 feet could fall in the highest elevations by the end of the weekend.

View Full Version: The latest winter storm thread

Title: The latest winter storm thread
Description: *Northeast again*

Alexandra - February 24, 2011 11:19 PM (GMT)

http://www.weather.com/outlook/weather-new...east_2011-02-23

Don't Park Your Car Under a Tree on Friday
by Chris Dolce & Tim Ballisty, Meteorologists
Share390

Updated: February 24, 2011 5:20 pm ETNortheast, get ready for some powerful winds on Friday. If the forecast verifies, we are talking about wind speeds topping out at 60 or even 70 mph.

The severe weather threat, including tornadoes, located in the mid South on Thursday will not just be a problem for that part of the United States. The nasty storm system will rev its engine by Friday morning and make a push into the Northeast bringing heavy rain, some snow but most problematic and dangerous, destructive winds.

Strong Wind Threat

Strong wind potential in Northeast. (Image credit: wright-weather.com)

Before your head spins looking at the image above, let me explain what it means. That graphic is a computer model forecast of winds just above the the surface on Friday morning.

The darker red and purple color (Mid-Atlantic to southeastern New England) indicates where very strong winds aloft (about a mile up) will move through ahead of the main cold front.

Why are these important? Sometimes these winds can be transferred down to the surface of the earth by thunderstorms or even simply bands of rain, resulting in very strong wind gusts sometimes with little or no thunder.

Maps: Current Northeast winds speeds and airport delays | High wind alerts (dark purple color)

The best chance of this happening would be from the Mid-Atlantic to perhaps as far north as Long Island and southern New England during mid-to-late morning hours of Friday into the early afternoon.

We're talking very powerful winds. Winds that will take down tree limbs, entire trees and power lines.

Do you park your car underneath a tree? You might want to reconsider. We could very well be seeing images of tree trunks on top of flattened cars by tomorrow afternoon. Don't be one of those fallen tree victims! Be careful and be aware of your surroundings when traveling outside.

High Wind Warning: Philadelphia | Allentown, PA | Reading, PA | Dover, DE | Wilmington, DE | Atlantic City, NJ

Even after the winds in front of the cold front make an exit, gusty northwest winds will develop behind the front by the afternoon. Much like the rain, wind could also cause travel problems at airports in the region.

Heavy Rain Threat

Northeast 48-hour rain and snow forecast. Enlarge

Lighter rain will first move into the Mid-Atlantic by Thursday afternoon and evening.

By Friday morning, heavy rain is likely up and down portions of the I-95 corridor just in time to make a mess of your morning commute. Airport delays are also likely to be numerous in the region.

How much rain are we talking here? The darkest green shading on the forecast map above indicates the potential for 1 to 2 inches.

Throw the rain on top of the existing snow pack and there may be some issues with localized flooding. This will particularly be the case in urban and poor drainage areas. Flood watches have been issued across a large portion of the region from Boston to

New York City, Philadelphia and Pittsburgh.

And we have a winter storm warning, supposed to see up to a foot of snow (and possibly the second snow day this week) :

http://www.weather.com/weather/alerts/loca...e=KCLE&etn=0005

Local Weather Alert
Winter Storm Warning for Wooster, Ohio
From 9:00 PM EST, Thu., Feb 24, 2011 until 4:00 PM EST, Fri., Feb 25, 2011

Issued by The National Weather Service
Cleveland, OH
Thu, Feb 24, 2011, 12:00 AM EST
... WINTER STORM WARNING IN EFFECT FROM 9 PM THIS EVENING TO 4 PM EST FRIDAY...

THE NATIONAL WEATHER SERVICE IN CLEVELAND HAS ISSUED A WINTER STORM WARNING FOR HEAVY SNOW... WHICH IS IN EFFECT FROM 9 PM THIS EVENING TO 4 PM EST FRIDAY.

STRONG LOW PRESSURE WILL TRACK NEAR A PATH FROM CINCINNATI TO YOUNGSTOWN TONIGHT INTO FRIDAY MORNING. SNOW WILL DEVELOP NEAR MIDNIGHT AND COULD MIX WITH SOME SLEET OR LIGHT FREEZING RAIN INITIALLY. THE HEAVIEST SNOW SHOULD OCCUR BETWEEN 5 AM AND 10 AM WHEN SNOWFALL RATES COULD REACH 2 INCHES PER HOUR.

SNOWFALL AMOUNTS BY FRIDAY AFTERNOON OF 6 TO 9 INCHES WILL BE POSSIBLE. A FEW LOCATIONS MAY SEE AMOUNTS APPROACHING A FOOT. WINDS WILL ALSO INCREASE BY FRIDAY MORNING TO AT LEAST 15 TO 25 MPH WITH GUSTS UP TO 35 MPH. THIS WILL CAUSE BLOWING AND DRIFTING WELL INTO THE AFTERNOON.

PRECAUTIONARY/PREPAREDNESS ACTIONS...

A WINTER STORM WARNING IS ISSUED WHEN SEVERE WINTER WEATHER IS EXPECTED. HEAVY SNOW WILL CAUSE HAZARDOUS DRIVING CONDITIONS. IF YOU WILL BE TRAVELING IN THE WARNING AREA YOU SHOULD CHOOSE AN ALTERNATE ROUTE IF POSSIBLE... OR YOU SHOULD USE EXTREME CAUTION IF TRAVEL IS UNAVOIDABLE.

TheUnhivedMind - February 22, 2011 01:57 AM (GMT)

Blizzard slams northern Midwest states

Severe storm dumps up to 15 inches of snow, causes white-out condition

2/20/2011 7:55:49 PM ET
http://www.msnbc.msn.com/id/41696492/ns/us_news/

MINNEAPOLIS — A severe winter storm was driving across the upper Midwest on Sunday, dumping up to 15 inches of snow and causing white-out conditions in spots from the Dakotas through Minnesota and into Wisconsin.

State officials warned against travel in most of South Dakota where roads were not already closed, most southern Minnesota roads were slick and snow-covered with limited driver visibility and airlines canceled hundreds of flights.

The National Weather Service said travel will be very difficult at times due to ice and snow in southern Wisconsin, where a mass protest against changes to collective bargaining laws was expected to continue at the state capital in Madison.

Forecasters expect up to four inches of snow in southern Wisconsin with some sleet and freezing rain leading to ice accumulations in some areas.

The storm was expected to dump up to 15 inches of snow in Minnesota from Sunday to midday on Monday and nearly a foot of snow across central to northeast Wisconsin, the National Weather Service said. Earlier forecasts had aimed for snow accumulations of up to 18 inches in parts of Minnesota.

The National Weather Service on Sunday afternoon forecast 10 to 14 inches of snow for the Twin Cities overall by the time the storm ends on Monday, said Tony Zaleski, a meteorologist with the National Weather Service in Minnesota.

"The biggest snow amounts have been basically across south central Minnesota," Zaleski said.

Blizzard conditions were developing west and south of Minneapolis where up to 8 inches of snow were reported in New Ulm and Lester Prairie, the National Weather Service said.

South suburbs to Minneapolis and St. Paul had already reported snow falls of 5 to 7 inches on Sunday afternoon, Zaleski said.

"There is a lot of blowing snow out there, it's real tough to measure when you have the snow blowing at 20 to 30 miles per hour," Zaleski said.

Most flights were canceled out of Minneapolis-St. Paul International Airport on Sunday from the storm that brought high winds that reduced operations, airport spokeswoman Melissa Scovronski said.

Delta Air Lines canceled hundreds of flights at the airport Sunday and expects more flight cuts on Monday across its route system, particularly in the midwest and northeast United States, spokesman Anthony Black said.

Heavy snows in December and at other points already had pushed snowfall totals to more than 61 inches in the Twin Cities before the latest storm, making it the fifth snowiest on record, according to National Weather Service statistics.

A 10-inch snowfall would make it the second snowiest winter behind only 1981-82 when 76.9 inches of snow were recorded.

Blizzard conditions crossed much of South Dakota with more than a foot of snow and wind gusts of up to 40 miles per hour in a band from Pierre to Watertown, forecasters said.

South Dakota closed Interstate 29 from Sioux Falls north to the North Dakota border on the eastern side of the state and closed a 150 mile stretch of Interstate 90 from Wall to Chamberlain on the south central part of the state.

Alexandra - February 22, 2011 03:55 PM (GMT)

Here in Ohio, my son just had another snow day.

Here we'd been enjoying above-freezing temperatures, and yesterday I went out on an errand and was pretty much caught off-guard by bad road conditions, come to find out we were under a winter storm warning!

(Hooray for anti-lock brakes.)

Red Ice Radio - Robert Felix - The Coming Ice Age

14 February 2011

http://www.youtube.com/watch?v=Sx7dcoe_Mck...yer_profilepage

[dohtml]<object style="height: 390px; width: 640px"><param name="movie" value="http://www.youtube.com/v/Sx7dcoe_Mck?version=3"><param name="allowFullScreen" value="true"><param name="allowScriptAccess" value="always"><embed src="http://www.youtube.com/v/Sx7dcoe_Mck?version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></object>[/dohtml]

Could the next ice age begin any day? If so, what is the evidence for it? We talk with author Robert Felix about the coming ice age. Robert Felix, a former architect, became interested in the ice-age cycle back in 1991. He spent the next eight and a half years, full-time, researching and writing about the coming ice age. Robert's book is called, "Not by Fire but by Ice". Robert Felix argues convincingly that, rather than runaway heating due to humans' burning fossil fuels, the world is much more likely to face rapid onset of the next ice age in the near future. His latest book, "Magnetic Reversal and Evolutionary Leaps" is something we focus on in the second hour for our members. Both his books connect in an interesting way. Robert suggests that we are in for some big changes. The question is how soon can we expect the ice age to being? Stay with us as we explore the coming ice age, magnetic reversal and evolutionary leaps. Topics Discussed: ice ages, the Milankovitch Cycle, global warming and extreme cold, Blake magnetic reversal, orbital stretch, Maunder minimum, sun activity, the jet stream, Pierce Corbin, Mt. St. Helens, CO2, food crisis, underwater volcanoes, Yellowstone, super volcano, processional cycle, Arctic Ocean, subtropical Greenland, Climate Research Unit, Don Easterbrook, glaciers growing not melting, Gulf current stopped, precipitation

during winter, the medieval warm period, volcanic ash and more.

Description: *blanket of snow... and theres yet more.*

TheUnhivedMind - February 19, 2011 06:13 PM (GMT)

No sign of spring yet: England shivers under fresh blanket of snow... and there's yet ANOTHER fall expected on Monday

By Daily Mail Reporter
Last updated at 4:52 PM on 19th February 2011
http://www.dailymail.co.uk/news/article-13...rn-England.html

You may have thought spring is just around the corner.

But snow in the the north of England today provided a reminder that there are still a few weeks of winter misery to be endured before milder temperatures arrive.

Up to four inches of snow fell across Derbyshire, Yorkshire, Durham last night, with residents waking to treacherous roads and freezing temperatures.

And there is more snow forecast for the north west of England and the Midlands on Monday morning.

But the rest of the country is set to escape the snow, with generally grey and damp weather.

Met Office forecaster Dan Gray said cold temperatures turned rain to snow in higher areas of the north of England.

'It started last night as rain and turned to snow from about 2am onwards, when it really started coming down,' he said.

Among the areas hardest hit was Sheffield, where four inches of snow fell in higher areas and two inches in lower areas of the city.

Four inches of snow fell in Copley, County Durham and three inches in Tidewell, Derbyshire, while northern areas stretching to the Scottish borders were also hit with snow.

There were numerous car accidents as drivers were caught out by slippery roads this morning.

However temperatures began to rise again in the North during the day, meaning the snow is not expected to remain on the ground for long.

Forecasters also said that Britons can remain hopeful, with wintry weather only expected to last a couple of days.

'This is much more transient event,' said Mr Gray, ' we can expect no where near the snow falls of last December.'

The country came to a standstill last year when it was hit by the coldest December in 100 years, with temperatures as low as -18C.

Mr Gray added: 'Winter hasn't finished yet, there will be a bit more snow over the next few days but after Tuesday we will start to see milder temperatures as weather front moves in from the Atlantic. That will bring some quite stormy weather with strong winds and rain.'

February has been mild compared with the previous months, and Mr Gray said that average temperatures had been a 'pleasant' two to three degrees above average.

Southern England was grey and damp today with rain spreading eastwards throughout the day and temperatures of around 7C.

Sunday is expected to be drier but still cloudy, with more mild temperatures and light rain in eastern areas before unsettled weather arrives at the beginning of the week.

Title: Seven injured after record snowfall causes South
Description: *Korean market to collape*

TheUnhivedMind - February 17, 2011 02:07 AM (GMT)

Seven injured after record snowfall causes South Korean market to collapse

Seven people were injured when an awning at a South Korean market collapsed under the weight of record snowfall.

11:35AM GMT 16 Feb 2011
http://www.telegraph.co.uk/topics/weather/...o-collapse.html

Nine people were pulled from under the wreckage, with seven treated in hospital, a spokesman for the fire and rescue service in the northeastern coastal city of Samcheok said.

A search is continuing for people possibly still buried under snow, he said.

The accident happened at a traditional market in the city, which experienced 70 inches of snow over four days ending Monday.

Other parts of South Korea's Gangwon province have also been hit by the heaviest snowfalls since records began a century ago.

Homes in remote villages have been cut off, farms damaged, hundreds of schools temporarily closed and flights cancelled. Nearly 10,000 soldiers have been mobilised to clear roads.

Provincial officials quoted by Yonhap put the cost of property damage at about 4.8 billion won (£2.7 million) as of Tuesday.

Heavy snow also battered the southeastern industrial city of Pohang and nearby towns.

The government is expected to designate Gangwon a "special disaster zone" next

week, a move that would ease administrative and financial support for recovery efforts, presidential officials said.

View Full Version: Midwest's deep freeze likely to turn into wide

Title: Midwest's deep freeze likely to turn into wide
Description: *floods*

TheUnhivedMind - February 16, 2011 03:21 AM (GMT)

Midwest's deep freeze likely to turn into wide floods

Thick ice could block some rivers, backing up water to make matters even worse

2/14/2011 10:49:41 AM ET
http://www.msnbc.msn.com/id/41579327/ns/weather/

MINNEAPOLIS — With the upper Midwest warming up from a deep freeze and one of the snowiest winters in decades, state officials from Nebraska to North Dakota are thinking of spring time — and flooding.

Along ice-choked Midwest waterways, officials hope the deep snowpack will melt gradually enough for the runoff to be absorbed by rivers and remain within the protective dikes and levee systems that could be overwhelmed by a rapid thaw.

"We are obviously hoping for the best, but planning for the worst at this point," said Cecily Fong, spokeswoman for the North Dakota Department of Emergency Services.

In Nebraska, officials ruled out for now spreading coal ash or using dynamite to break up thick slabs of ice on the Platte River for a second consecutive year after a survey Monday found water moving at key points.

"The channels that we want open are flowing," Nebraska Emergency Management Agency spokeswoman Jodie Fawl said, adding that officials would monitor the river closely for refreezing, ice jams and fast melting.

It would be the second straight year, and only the fifth winter in three decades, that Nebraska resorted to using coal dust on the river, said Al Berndt, assistant director for the Nebraska Emergency Management Agency. The ice was 17 inches thick last year.

Story: Send, view images of the wicked winter of 2011

Planning meetings started in January across North Dakota, and Governor Jack Dalrymple issued a statewide disaster declaration on Friday to lay the groundwork for seeking federal aid should severe flooding strike.

Across the border to the east, Minnesota Gov. Mark Dayton and U.S. Sen. Al Franken met with residents and emergency officials in Moorhead and Crookston on Friday to discuss plans for combating flooding in those regions.

City leaders in Fargo, North Dakota, are seeking volunteers to fill more than 3 million sandbags starting on Monday to hold back floodwaters from the Red River, which crested at nearly 41 feet in March 2009.

Temperatures rose above freezing on Sunday across the Upper Midwest, and some runoff may begin to be seen in rivers. But colder temperatures were expected to return within a week, according to the National Weather Service.

The shift of melting snow toward the rivers is likely to be "quite a lengthy process," though the threat of ice jams is high at several locations, the weather service said.

The National Weather Service is expected to release an updated regional flood forecast on February 17.

In West Fargo, a diversion project and vigilant clearing of ice jams has stemmed the Sheyenne River from flooding the city in recent years as it flows toward the Red River.

"We are pretty much fairly well protected," West Fargo Mayor Richard Mattern said. "We made 10,000 sandbags last year, I think Fargo made millions. We will just have to see how the melt goes, and Fargo is the same way."

Title: South Korea chaos after 'heaviest' snowfall

TheUnhivedMind - February 15, 2011 03:56 AM (GMT)

South Korea chaos after 'heaviest' snowfall

14 February 2011 Last updated at 09:22
http://www.bbc.co.uk/news/world-asia-pacific-12445509

Soldiers have been deployed to help people stranded in the snow

The heaviest snowfall in more than a century on South Korea's east coast is causing widespread chaos.

Hundreds of houses have collapsed under the weight of the snow. One newspaper described it as a snow bomb.

The South Korean government has deployed 12,000 soldiers to rescue stranded residents.

The worst weather has been in Gangwon province. Weather experts say there will be more snowfall in the area in the coming hours.

"I am 83 years old. It's the heaviest snow in my life. I am really grateful for the soldiers' help," said Park Chae-ran.

The BBC's Nick Ravenscroft in Seoul says that although winters are colder than anywhere else at its latitude, with frequent frost and snow, this year has been different.

January was the coldest since the 1960s.

In Gangwon on the eastern coast, one city recorded 80cm (2.6 feet) of snow in a single day - the heaviest fall in 24 hours since records began there back in 1911.

The cost of the damage is expected to run into several million dollars.

Hundreds of motorists are stranded in deep drifts.

Four primary schools in Donga and Samcheok of Gangwon Province, about 240 km (149 miles) east of Seoul, have been closed.

The Han River in the capital, Seoul, iced over for the first time in years - but the latest snowfalls have left the capital unaffected so far.

Description: *18-Foot Waves Into Downtown Chicago Toni*

TheUnhivedMind - February 15, 2011 03:55 AM (GMT)

The Snowpocalypse Tsunami? Blizzard Could Send 18-Foot Waves Into Downtown Chicago Tonight

By: Nick Carbone
http://newsfeed.time.com/2011/02/01/the-sn.../#ixzz1Cn3hSVN2

Tonight's massive impending snowfall is no surprise - it's been forecast for the past week. But as the storm swirls closer to Chicago, the headlines just keep getting worse.

The crushing clipper is expected to sweep through the Chicago area beginning 3 p.m. Tuesday and will linger until Wednesday afternoon. It's been called a blizzard of “epic” proportions, a “potentially life-threatening” system featuring thundersnow, multiple feet of accumulation, and gale-force winds. And now, tack on the potential for waves cresting over the shores of Lake Michigan, threatening homes and roads.

(More on TIME.com: See photos of snowstorms hitting the east coast – again.)

The National Weather Service has issued a “Lakeshore Flood Warning”, stating that “strong winds will likely result in waves building to 14 to 18 feet,” which could cause flooding on Chicago's streets. One of the city's main downtown arteries, Lake Shore Drive, runs – you guessed it – right along the lakeshore and could face a washout of water and ice.

Add that to 60 mph winds, lightning, and a predicted accumulation of 2 to 3 inches per hour, according to meteorologist Richard Castro, and it's no surprise, then, that the NWS is deeming the storm “dangerous, multifaceted and life-threatening.” Illinois Governor Pat Quinn issued a statewide disaster declaration Monday so cities and towns could prepare for the impending mess of at least a foot of snow across the Chicagoland area, with as much as 18 inches expected along the lakefront.

(More on TIME.com: See video of Obama's Chicago roots.)

Chicagoans are accustomed to disappointment in the weather department, with panic over dangerous storms often giving way to tame systems. It could be that fabled lake effect or just overhype – but the Chicago Tribune casts off the naysayers this time, saying the impending blizzard (yes, it's already being called a blizzard) “appears anything but gentle.”

And New Yorkers, who've faced nearly 5 feet of snow this winter, can commiserate – until the same system rolls eastward for a messy Wednesday morning in the Big Apple. (via Chicago Sun-Times)

‘BEAST FROM THE EAST’ ROARS IN WITH MORE SNOW

In coming days, the “beast from the East” could bring chaos similar to the pre-Christmas whiteout

Saturday February 12,2011
By Nathan Rao
http://www.express.co.uk/posts/view/228591...-with-more-snow

WINTER is set to roar back to Britain with a vengeance this week as a Russian weather front threatens another big freeze.

And there will be no let-up until well into March, say weather experts.

In coming days, the “beast from the East” could bring snow chaos similar to the pre-Christmas whiteout.

Scotland and the North will be worst hit, with up to two inches of snow and temperatures as low as -10C. The South will not escape the icy blasts, with temperatures sinking to -5C.

Jonathan Powell, of Positive Weather Solutions, said: “Nowhere is safe, although the North is really in the line of fire.

“A harsh slice of winter is on the way which will parallel early Christmas. Freezing temperatures will kick in from Monday, putting spring on ice. These conditions are going to hang around until the second week in March.”

Netweather’s Ian Michaelwaite said a front was heading to the UK from Russia and

Scandinavia, bringing “strong winds, snow, and some very cold weather”.

In coming days, the “beast from the East” could bring chaos similar to the pre-Christmas whiteout

Councils say they have enough grit to cope, and a Transport Department spokesman said: “Salt deliveries have continued to arrive in the last month and we are in a much better position than at this time last year.”

During December’s big freeze, ice on runways caused planes to be grounded.

A BAA spokesman yesterday said: “We’ve a revised snow plan at Heathrow that includes additional resources, and we’ll be closely monitoring weather forecasts.”

UK WEATHER: GLOW AND BEHOLD, IT'S LIKE SPRING!

The bright sunshine gave way to the glorious sunset over Sennen Cove, in Cornwall

Wednesday February 9,2011
By Nathan Rao
http://express.co.uk/posts/view/227974/UK-...-s-like-spring-

A GLOWING red sunset over Britain's coastline, after a day of warmth and gentle breeze, gives us all hope that our worst winter for 100 years has finally lost its grip.

And in other comforting signs, two mad March hares square up for a boxing match a full month ahead of schedule, while a pet terrier stands in a field bursting with snowdrops yesterday.

The bright sunshine gave way to the glorious sunset over Sennen Cove, in Cornwall.

Normally, due to the effects of the Gulf Stream, winters in Cornwall are among the warmest in the UK, but this year the county has suffered along with the rest of us. Until now, that is. The rare shot of the hares was captured by keen photographer Ron McCombe, 56, near his home in the Scottish Borders.

As for the excited terrier, it romped in a carpet of snowdrops at Welford Park, near Newbury, Berks, which is renowned for its annual displays of the spring flower.

Owner James Puxley said: "We get people who come just to see the snowdrops – and they are often amazed."

Title: Cold weather sees insurance claims double to £1.4b

TheUnhivedMind - February 9, 2011 06:52 PM (GMT)

Cold weather sees insurance claims double to £1.4bn

More than 250,000 vehicles were damaged due to the snow and ice on the roads

9 February 2011 Last updated at 02:51
http://www.bbc.co.uk/news/business-12400659

The freezing weather in December resulted in £1.4bn of insurance claims on property and vehicles in the UK, figures have shown.

This is more than twice the £650m claimed due to the cold snap the previous year, the Association of British Insurers (ABI) said.

The snap was more severe, longer and affected more of the country.

Burst pipes caused the most problems, with more than 100,000 claims totalling £680m, the ABI said.

More than 250,000 vehicles were damaged as a result of the snow and ice on the roads, leading to £530m of claims.

The ABI said there was no evidence that premiums had gone up as a result of the cold weather.

Figures released last month showed that the cold weather was largely responsible for the contraction in the UK economy during the final three months of last year.

The economy shrank by 0.5%, but activity would have been "flattish" without the impact of the bad weather, the Office for National Statistics said.

UFOs fly out of giant haboob

08 Jul 2011
http://www.thesun.co.uk/sol/homepage/news/...ant-haboob.html

AMAZING new footage shows two disc-shaped objects flying through a massive dust cloud in Arizona.

The 100-mile-wide sandstorm - called a haboob - engulfed the small town of Mesa on July 6.

Airport authorities were forced to ground all flights out of Phoenix's Sky Harbour International Airport.

But one CNN News helicopter captured footage that appears to show two mysterious objects darting in and out of the dust cloud.

The video was streamed live on air and has been causing a storm of its own across the web ever since.

The glowing orbs fly just ahead of the storm, before one ascends to the top of the cloud wall.

Just before it moves out of the frame, the flying object appears to grow and change shape, with a ring of light appearing around it.

YouTube user QueenKaidrea believes the orbs cannot be planes since "planes don't hover, planes don't glow, planes have lights that blink and change colour".

Haboobs are common in desert regions throughout the world.

Caused by a downburst of wind that's pushed forward by a thunderstorm cell, they can kick up gusts of up to 70mph and stretch for up to 100 miles wide.

It's not the first time UFOs have been sighted during natural disasters.

Hovering objects and thousands of flashing lights were reported in Japan before, during and after the 2011 Tsunami.

Montauk Project: New Film Takes On Allegations Of Mind Control, Time Travel And Alien Encounters At Military Base

First Posted: 06/21/11 08:05 AM ET Updated: 06/21/11 11:36 AM ET
http://weirdnews.aol.com/2011/06/21/montau...59.html#s293831

In a year when a respected investigative journalist suggested that the Roswell UFO scare may have been the handiwork of Nazi war criminal Josef Mengele and Joseph Stalin, along comes another story involving space aliens and outrageous experimentation on a U.S. military base.

Montauk, N.Y. -- like Area 51, written about in Annie Jacobsen's new book -- has been the center of an otherworldly conspiracy theory for decades.

Believers say that people were kidnapped at a U.S. Air Force base and subjected to mind control and time travel experiments. And extraterrestrials somehow had a hand in it all.

It's been dubbed "The Montauk Project," and is the subject of an upcoming docu-drama, "Montauk Chronicles," executive produced, directed and written by independent filmmaker Christopher Garetano.

But nobody has been able to actually prove these allegations. And all that's left of the Montauk facility -- currently a state park -- are the above-ground remnants of the original Air Force base. According to a document issued by the Air Force Historical Studies office, the Montauk base, known as Camp Hero, was decommissioned in the early 1980s.

Montauk is a small seaside resort town on the tip of Long Island that draws vacationers to its shores every year. Camp Hero, located a short distance outside of Montauk, has roots as far back as the Revolutionary War, during which it was used to test military cannons. Later, during World War II, Camp Hero served as a coastal defense installation against any possible Nazi intrusions into America.

"Montauk Chronicles" follows the story of three men, Alfred Bielek, Stewart Swerdlow and Preston Nichols, who claim that Camp Hero ended up as an underground site for scientific atrocities.

Bielek, a retired electrical engineer, maintains he was part of the mysterious Philadelphia Experiment, where in 1943, the U.S. Navy allegedly tried to make a small destroyer undetectable to radar. The test ended in disastrous results, including the ship disappearing from the Philadelphia Navy yard and -- purportedly -- traveling through time.

According to Bielek's story, he was transported ahead in time from Philadelphia, and extraterrestrials were responsible for the technology used in the Philadelphia Experiment. He also maintains he was recruited in 1970 to work on mind control and time travel projects at the Montauk facility.

Swerdlow's story involves being kidnapped as a teenager from his Long Island, N.Y., home, taken to the Montauk base, and subjected to a variety of experiments.

"Beatings, a lot of torture, electrical shock, burials, near-drownings," Swerdlow said. "They'd bring you to the point of death, and then they would save you, and the person doing this would be your rescuer or god, and would say, 'I'm the one that saved you and remember that.' And that became your handler -- your programmer."

Swerdlow recalls being part of some horrific experiments while at the Montauk facility.

"The walls were very damp, oozing water, so it appeared to be deep underground or even underwater. I was always on this cold, hard table. Sometimes there'd be other people around, either my age or older, and electrodes were put into me and injections."

All three men claim to have seen extraterrestrials while at the underground Camp Hero facility.

"Well, there were quite a number of aliens at Montauk," said Bielek. "Some were there on a semi-permanent basis. A lot of them were just visitors that came in and looked at what they wanted to see and went back home.

"There were little grays there, which I suspected were degenerated humans from out of the future. Large gray aliens (which are a different species) were also at Montauk, and they were highly intelligent."

Nichols, like Bielek, was an electrical engineer, who says he worked with Bielek in the mind control and psychic aspects of the Montauk Project.

"There were definitely alien beings at Montauk," Nichols said. "We had the little grays and the larger grays as well as a variety of reptilian beings. The large grays didn't want anything to do with me because they couldn't reach me telepathically. When I entered a room they would leave.

"They were the strangest thing that I ever saw. At that point, I was beginning to doubt my own sanity."

And Swerdlow also saw an alien presence at Montauk. "Most of the time my interaction was with human beings, but I did come into close contact with alien beings.

"I did see, occasionally, intelligent reptilian humanoid beings as well as gray aliens who were once human beings but were physically altered as a result of degeneration and radiation toxins in their system. Most of them communicated with mental telepathy."

Garetano shot much of his upcoming film at the actual site of Camp Hero.

"When you walk through the area now, you see this giant, imposing radar tower that still stands," Garetano told AOL Weird News. "The park currently has strange regulations: You're not supposed to use any radio equipment there and you are cautioned about unexploded ordnance.

"While filming my movie here, I couldn't understand why people are allowed to walk around a park where there are still unexploded devices or why radio equipment isn't allowed if the radar tower is now defunct and the entire base is completely non-operational."

That question may be answered by a brochure issued in 2001 for visitors to Camp Hero which includes a section called "Unexploded Ordnance (UXO) Warnings":
Please follow the following steps if you think you have come across Unexploded Ordnance:

Never transmit radio frequencies (walkie talkies, citizen's band radio) near UXO.

Never attempt to touch, move or disturb UXO.

Avoid any area where UXO is located.

Garetano thinks it's "strange that they don't want you to use radio devices that may set off unexploded bombs, yet they allow the public to walk around a potentially high danger area!"

In addition to the giant abandoned radar tower at the Camp Hero site, there are also huge doors, or bunkers, cemented and sealed into the side of several hills in the forest area.

Also, strewn throughout the wooded park are numerous things that appear to be above-ground manhole covers.

"These are entrances that obviously go down into something," Garetano said. "There are claims from people that these are entrances to underground tunnel systems that ran beneath the military base that allegedly would take you to the true entrance of the facility."

Among the bizarre things claimed by the individuals who say they took part in the Montauk events was a device they called the Montauk Chair. Allegedly, a powerful psychic sat in the chair and was able to materialize objects out of thin air -- manifesting them into physical reality.

After spending countless hours with the men who are the subjects of his film, Garetano says he didn't always believe their stories.

"At first I didn't. These men have not benefited financially -- they didn't gain anything from this. And they've endured ridicule as they maintain their story," Garetano said.

To be sure, this story is filled with allegations, suppositions, unsupported claims and far-out "Stargate 1"-type movie and television science fiction. It certainly describes any typical urban legend.

The Montauk Project shows no signs of going away anytime soon.

The (very) secret history of Area 51

Just how covert is the infamous US air base? New files show that even Presidents don't always 'need to know' its activities

By Mark Piesing
Tuesday, 5 July 2011
http://www.independent.co.uk/news/world/am...51-2306942.html

No one on the ground or in Pakistan's air defence spotted Area 51's latest toy as it kept watch on Osama bin Laden's compound in Abbottabad, Pakistan, on the night of the US raid that killed the Taliban leader.

Rather than one of the UFOs that the wilder fringes of the internet believe the military has stashed away at America's top-secret military site in Nevada, this "toy" was actually the latest Star Wars-type drone, or unmanned aerial vehicle (UAV), developed at the base whose existence Uncle Sam only barely admits.

Named the "Beast of Kandahar" after it was snapped at Kandahar air base in Afghanistan back in 2009, this stealthy grey batwing-shaped long-distance reconnaissance drone, officially known as the RQ-170 Sentinel, was a throwback to Area 51's golden age before the advent of the spy satellite put the spy plane out of business.

While for the post-X-Files generation Area 51 will always be associated with conspiracy theories from aliens to time machines, for journalists such as Annie Jacobsen its purpose was – and, indeed, is – to develop and test the latest kit from the military industrial complex that helps to maintain America's superpower status.

"Area 51 was the single most important Cold War facility as it was set up to push science faster and further than the Soviet Union," says Jacobsen, author of Area 51: An Uncensored History. "On one side of the road the Nevada test site was preparing for the Third World War, and on the Area 51 side they were trying to prevent it by developing air-surveillance technology.

"Today, it is doing the same job competing with whoever America sees as its enemy, whether North Korea, Iran or China."

Yet for Jacobsen one of the strangest things about Area 51 is that even in the age of WikiLeaks and Google Earth, she has "not seen anything ever leak out of Area 51", almost as if "the base is in a permanent state of lockdown".

Sitting on the edge of a dried-up lake bed cradled by mountains, only 90 miles or so from the fantasy world of downtown Las Vegas, it is perhaps not surprising that it is hard to separate the myth from the fact of Area 51, or Groom Lake, as old-timers have traditionally called it. Even "Area 51" sounds like an exercise in branding, as do its other names of Dreamland, Paradise Ranch or Homey Airport. And there is something sinisterly not-quite-real about the "use of deadly force authorised" signs that stand guard on the base's perimeter. Which can be found just inside the 4,687 square miles of the Nevada Test and Training Range and right next to the 1,350 square miles of the Nevada Test Site, where hundreds of nuclear weapons were exploded above and below ground until the test ban treaties of 1963 and 1996.

However, recent declassified documents have helped to shed light on the facts behind the myths of Area 51, from the U-2 spy plane missions that helped to unlock the secrets of the Soviet Union in the 1950s to the groundbreaking stealthy A12 that was obsolete before it even first served its country, and the record-breakingly fast recon plane the SR-71 Blackbird, which helped to spot North Vietnamese missile bases in the late 1960s and 1970s; and from the beginnings of stealth technology to the development of the F-117 stealth fighter itself, which was one of the few allied aircraft able to penetrate the air defences around downtown Baghdad and then bomb accurately. Also brought to light was the test flying of "acquired" Soviet MIG fighters in mock combat situations, which led to the founding of the Top Gun pilot programme made famous by the 1980s film of the same name.

The isolation of the base may be one good reason why the Beast of Kandahar was discovered on the opposite side of the world and not in Nevada. Along with the ability to time testing activities for when spy satellites have

already passed the base it also allows for the capacity to "go underground" to avoid prying eyes. Yet for Annie Jacobsen it is the "need to know" principles of the special-access "black" programmes that run out of the base that account for the cloak of

secrecy that has been maintained even in the age satellite photography. These principles were developed from the "mother of all black projects", the Manhattan Project, which saw the creation of the world's first nuclear bomb during the Second World War.

And sometimes, like in a blockbuster movie, even the President doesn't need to know.

According to Jacobsen, during the 1994 enquiry into allegations of human radiation experiments during the Cold War, "certain records involving programmes at Area 51 were kept from President Clinton because he didn't have a need to know".

For ex-Area 51 radar man Thornton D Barnes, founder of the Area 51 veterans' association Roadrunners Internationale, the need to know meant that "everything was compartmentalised", with only a small number of highly screened workers allowed to remain permanently on the base. Everyone else had to fly in from Vegas to "prevent fresh faces showing up in the local communities and drawing attention to something that might be going on".

"Venturing into an area or showing an interest in something while lacking a need to know instantly banned an individual from the Area and the programme."

And that wasn't all.

"We were often away from our families Monday through Thursday and we couldn't tell them where we were or what we did.

"Even now we have retired, we don't ask each other questions about what we did unless we know that it has been declassified."

According to Bill Sweetman, editor-in-chief of defence technology for Aviation Week, simply "pulling out the plug" and "supergluing USB ports" has also helped to keep these black programmes disconnected from our interconnected world.

"Along with the traditional black techniques of the need to know and using a small number of slightly frightened people, these programmes have either now been disconnected from the internet or have never been connected to it in the first place, and the resulting 'air gap system' has prevented them from being compromised by Chinese hackers, like so many other programmes have been."

So successful are the secrecy techniques that it's clear that we are going to see more – not fewer – of these black programmes.

However, Sweetman believes that – along with strict secrecy – "black propaganda" helps to keep Area 51's secrets.

"There were certainly deliberate disinformation campaigns to generate a lot of noise about UFOs back in the 1950s and 1960s to cover secret flights of planes like the U-2, and then again in the late 1970s and early 1980s to link Area 51 to UFOs through 'fake' documents and eyewitness accounts of alien technology – and even alien bodies."

The goal, he believes, was originally to mask the rebuilding of the base and then to stop people "asking why is there this huge secret and expensive military base in the middle of the desert".

Annie Jacobsen has real fears about the "lack of respect for the constitution" that this level of secrecy can entail. The construction in 2007 of a new hangar twice the size of any other at Area 51 and another large hangar in 2010 meant that something was going on – but the public doesn't have a need to know.

It is possible to look at the Beast of Kandahar for clues as to what the new project might be, or even at the stealthy Special Forces Black Hawk helicopters that were also revealed or even compromised by the Bin Laden raid. The size of the hangars suggests that it could be early prototypes of the $4bn next-generation American bomber programme that are already being put through their paces down on Groom Lake.

Whatever it is, the Beast of Kandahar is only the shape of things to come.

'Area 51: An Uncensored History' by Annie Jacobson is published by Orion (£20)

A British Area 51?

If there is a British Area 51 then it is Area 51, says Nick Cook, former aviation correspondent of and now aerospace consultant for Jane's Defence Weekly and author of The Hunt for Zero Point. "Britain is just too small to have such a secret flight testing facility", he argues. "Boscombe Down is the closest thing we have to it, but the A303 runs right alongside so when a highly top secret US spy plane – that still hasn't been identified – crashed in 1994 it quickly made national headlines."

As a result he believes Britain has cultivated a special relationship with the Americans in stealth technology. In the late eighties it became public knowledge the "RAF had an exchange programme with Area 51 that involved a small number of RAF pilots training on the F117 Stealth fighter. Then in the Nineties there were rumours of a joint US and UK stealth programme out at Groom Lake". While those stories have trailed away Bill Sweetman believes that this special relationship has carried as he has only recently heard fresh rumours of a "black exchange programme" for RAF pilots out at Area 51.

TheUnhivedMind - July 6, 2011 03:22 AM (GMT)

Will We Really Find Alien Life Within 20 Years?

By Natalie Wolchover, Life's Little Mysteries Staff Writer
5th July, 2011
http://articlechase.com/Will-We-Really-Fin...n-20-Years-.php

At a June 27 press conference, Russian astronomer Andrei Finkelstein said that extraterrestrials definitely exist, and that we're likely to find them within two decades.

"The genesis of life is as inevitable as the formation of atoms," said Finkelstein, the director of the Russian Academy of Sciences' Applied Astronomy Institute in St. Petersburg. He was speaking at the opening of an international symposium on the search for extraterrestrial civilizations that was being held at the institute.

"There are fundamental laws which apply to the entire universe," Finkelstein was quoted as saying by the Interfax news agency. Because those fundamental laws allowed intelligent life to develop on Earth, they ought to engender intelligent life elsewhere, too, he reasoned.

Finkelstein pointed out that in recent years, astronomers have found more than 1,000 exoplanets —planets orbiting stars other than our own — some of which lie within their stars' "habitable zones," or the regions in which the temperature is right for water to exist as a liquid. Finkelstein said there will be life on such planets if there is water.

Furthermore, he conjectures that the Search for Extraterrestrial Intelligence (SETI), a worldwide effort to detect radio and optical signals sent our way by extraterrestrials, will find examples of that life within two decades. (Some media sources have interpreted Finkelstein's words to mean that we will communicate back and forth with aliens within that time. Actually, he only said that we will detect their signals.) [10 Alien Encounters

Debunked]

An artist's impression of Gliese 581d, an exoplanet discovered by the Kepler spacecraft that is thought to be in its star's habitable zone, and a speculative moon.

For Finkelstein's striking prediction to come true, certain conditions must be met: There must be a planet with an alien civilization that is capable of transmitting high-power radio or optical signals our way. That civilization needs to exist within 20 light-years of Earth and have been broadcasting those signals starting today, or earlier, in order to reach Earth within 20 light-years of today. (Or, if the civilization is farther away, then it needs to have broadcast long enough ago that it could reach here within 20 years.)

Though detecting life elsewhere in the cosmos sounds difficult, as it turns out, several astronomers believe that Finkelstein's 20-year prediction is realistic. In fact, they have an equation that takes into account all the conditions that must be met in order to find life on other planets, and according to the equation, 20 years is a pretty good estimate for when we'll find it.
Seth Shostak, the senior astronomer at the SETI Institute in Mountain View, Calif., the most well-known SETI program, estimated that intelligent life would be found in 25 years in a paper he wrote five years ago. "Maybe Finkelstein read my paper," Shostak told Life's Little Mysteries, a sister site to SPACE. He agrees that we'll detect alien signals within two decades.

Shostak explained that the SETI Institute has aimed its radio telescopes at a few thousand star systems over the past 50 years. (They didn't detect any "deliberate signals" sent by aliens.)

Assuming that technology will continue to improve, he thinks we will be able to check out 1 million stars over the next two decades, and that one in that million will have a habitable planet that has intelligent life capable of transmitting signals that are strong enough for us to detect.

While other planets in that million may have had life that was broadcasting radio or optical waves sometime in the past (but which has since been wiped out by an asteroid or some other cataclysm), or will broadcast signals in the future, approximately one of them will be doing so at just the right moment for us to hear or see them.

Shostak's number, 1 in a million, follows from what is known as the Drake Equation. It is a formula created by Frank Drake (also of the SETI Institute) that takes various factors into account to determine the number of intelligent and signal-transmitting civilizations in our galaxy. Drake and Shostak both calculate that there are 10,000 such civilizations transmitting signals at any given moment. Because there are 100 billion stars in the galaxy, the math says 1 in 10 million stars will be sending radio signals our way.
"Because you can throw out a lot of stars," Shostak said, making smart choices about

which ones are likely to have life, we should be able to find someone or something by searching just 1 million stars.

"If we haven't succeeded once we've done 10 million or 100 million stars by around 2050, then we've grossly overestimated the strength of their transmitters, or some other factor," Shostak said. "One reason we could fail is that there's nobody out there, but I would consider that a last resort."

Candidate planets

SETI can narrow down its search by directing its attention to stars that astronomers discover to have planets in their habitable zones. So far, 1,235 exoplanets have been found by NASA's Kepler spacecraft, a probe that surveys regions of space, collecting data from stars and their planets which scientists then analyze

According to Bill Borucki, a planetary astronomer at NASA Ames Research Center and the principal investigator of the Kepler mission, about 50 of the exoplanets that have been found so far are in their stars' habitable zones, and five of those could be rocky rather than gaseous. ("To have life, you probably have to have a solid surface to walk on," Borucki said.)

By induction — what's true of a subset of stars is likely to be true of the rest — "there must be on the order of a billion planets in our galaxy in the habitable zones of their stars," Borucki said. When he and his team identify habitable planets, they tell SETI to point its radio telescopes their way.

Borucki isn't as bold when it comes to specifying when life will be found, but he is optimistic: "I think there's a good chance that there's life in our galaxy. With so many habitable planets, it's hard to imagine that there wouldn't be. And I think that at some point we'll probably discover it. I hope that SETI does that soon."

Even more likely than finding intelligent life far off in the galaxy, Borucki thinks we'll find much simpler, bacterial life much closer to home. "NASA has a number of missions to Mars, and there may be primitive life there. They're talking about missions to Enceladus [a moon of Saturn] and Europa [a moon of Jupiter], both of which probably have subsurface oceans," he said. "I think those are wonderful places to look. I think we might find life in our solar system first."
The Europa Jupiter System Mission (EJSM), a mission to Jupiter and its icy moon, is proposed for a launch in 2020.

Little green men?

Finklestein made one other suggestion — that intelligent alien life forms would be humanoid. He reasoned that, because the laws of nature led life on Earth to evolve in the way it did, alien life forms would develop similarly. Like humans, they probably have

two arms, two legs and a head, he said, adding that "they may have different color skin, but even we have that."

Are aliens really little green — or blue or red — men, as Hollywood and Finkelstein suggest? Shostak doesn't think so. "All you have to do is go down to the zoo and look around. There aren't too many critters there that look a lot like us," he said. "The fact that we have two arms and two legs is a consequence of our evolutionary past: We happened to evolve from a four-lobed fish. Among critters on Earth, the most popularnumber of appendages is six, not four; they're called bugs."
Intelligent aliens probably do have heads and appendages, though. "Having a head seems to be a good thing. Lots of organisms have heads and it seems to be a very efficient model. Having appendages is also important," Shostak said. "If they were dolphins then they wouldn't build radio transmitters."

UFO, 'Star Gate' or just a ballistic missile? Mysterious bubble-like light burst seen over Hawaii

Last updated at 11:40 AM on 30th June 2011
http://www.dailymail.co.uk/sciencetech/art...rs-puzzled.html

Footage of this incredible bubble-like burst of light in the night sky was captured by cameras at an astronomical observatory in Hawaii.

Sky watchers have been flooding internet forums with speculation about the burst, filmed by a webcam mounted on the Canada-France-Hawaii Telescope on Mauna Kea.

Captured in time-lapse footage, the glowing sphere takes several minutes to expand until it virtually fills the frame - then it vanishes as mysteriously as it appeared.

Inter-dimensional time portal: The burst was captured on time-lapse video by a webcam mounted on an astronomical observatory in Hawaii

Theories as the cause of the mysterious luminous sphere have ranged from the opening of an inter-dimensional portal to the future to a battle between two alien starships.

But the most likely explanation is that is shows a U.S. Minuteman III inter-continental ballistic missile (ICBM), ejecting fuel as it enters the upper reaches of the Earth's atmosphere.

The time-lapse footage shows the night horizon filled with stars, when suddenly an ethereal arc pops into view.

It rapidly expands, forming a circular shell which grows as it travels across the horizon, then fades as it fills the view.

According to Discover Magazine's Bad Astronomy blog, the soap bubble-like characteristics of the light burst indicate that it has been caused by a 'sudden impulse of energy and rapid expansion of material'.

Citing online astronomy forums, Bad Astronomy reveals that a Minuteman III ICBM had been scheduled to launch from Vandenburg Air Force Base, California, three minutes before the burst was observed, at about 3:35am Hawaii time.

The stars of the Cassiopeia constellation are visible in the horizon behind the burst, indicating that the webcam was pointed north-east - towards the base and the missile's probable flight path.

Growing and moving: This frame shows the burst as it begins in the corner of the horizon seen north-east from Mauna Kea

Again citing internet forums, the blog speculates the burst could have caused by a charges in the missile's third stage detonating to kill its thrust as it arcs across the Earth.

At a pre-determined moment, ports in the side of this section of the missile are blown open by explosive charges, allowing remaining fuel to be dumped fast.

This rapid fuel dump cuts the missile's thrust at precisely the right time allowing the warhead to be targeted with devastating accuracy at the right spot back on the surface of the Earth.

As the missile is above most of the Earth's atmosphere at this point, when the fuel gas is suddenly ejected it blows away from the missile in a perfect sphere - which could explain the bubble-like characteristics of the light.

For this explanation, the timing seems to be right. However, it is only a theory and there has not yet been any official confirmation of the claims.

View Full Version: Alien Infiltration [Vd]

Title: Alien Infiltration [Vd]

TheUnhivedMind - June 30, 2011 06:20 PM (GMT)

Alien Infiltration

Jun 21st in Conspiracy & UFO Phenomenon by Nick Redfern
http://mysteriousuniverse.org/2011/06/alien-infiltration/

Robert Dean, a long-time figure within the field of research into all things flying and saucer-shaped, maintains that while working with the North Atlantic Treaty Organization (NATO) in the 1960s, he learned that NATO had conducted a secret study of the UFO issue. More controversially, Dean says that part of the study demonstrated that, at the time in question, NATO had come to the conclusion that we had four different civilizations – cultures, intelligences, if you will – that were present here on Earth and that were secretly visiting us and even interacting with us.

One of the most interesting conclusions of the report, and which struck a particularly strong chord with Dean, was that one of the groups – of the civilizations or cultures that were here on this planet – was identical with us; or rather, that we were identical with them. And that startling revelation, added Dean, made a vast and profound impression on the people involved in the investigations.

In 1994, Dean gave a lecture before an audience at the Civic Theater, Leeds, England, during which he elaborated upon his knowledge of the human-like aliens said to be present in our very own environment. Dean revealed that so similar to us was at least one race of extraterrestrial that “they could sit next to you in an airplane or in a restaurant in a coat and tie or a dress and you would never know. They could be sitting next to you in a theater like this.”

Most alarming of all, however, were the ramifications that all of the above reportedly caused amongst the highest echelons of NATO. “Back in 1964,” stated Dean, “this was a matter of great concern to the admirals and generals at SHAPE Headquarters in Paris. Some of the discussions which went on in the War Room were kind of frightening

and some of them were rather amusing. One officer said: ‘My God, man, do you realize that these [aliens] could be walking up and down the corridors of SHAPE Headquarters and we wouldn’t even know who the hell they were?’”

Robert Dean is not alone in making such amazing claims; and neither are they confined to the heart of NATO.

Now well into her eighties, Marion Shaw worked deep within the Pentagon during the 1950s as a secretary with a high-security clearance. While there, she rubbed shoulders with some profoundly significant and well-known figures in the military arena of the day. She also heard a tale or several eerily similar to those related by Robert Dean.

According to Shaw, she was allegedly involved in the preparation of several classified reports on “flying saucer stories,” one of which referred to deep concerns expressed by the military that very human-appearing aliens had infiltrated certain elements of the U.S. Government. No-one seemed quite sure why, however, since there was apparently no concerted effort on the part of the allegedly human-like extraterrestrials to subvert or jeopardize the orderly, day-to-day operations of the U.S. infrastructure. Rather, it seemed, the aliens were there merely to observe – albeit in an overwhelming clandestine fashion.

We would do well to remember that in a world where popular-culture, TV, movies and the Internet have led most people to perceive aliens as small, diminutive creatures with large heads, huge black eyes, and spindly bodies – however outlandish and outrageous it may seem – our presumed other-worldly visitors may actually look just like us.

Who knows? Maybe some of us are actually them…

And, if the stories are true, then perhaps such infiltration is not limited solely to the world of government. Maybe the field of Ufology has, itself – in a fashion utterly unknown to most of us – been infiltrated by human-appearing, cosmic characters, too. Now that would be a revelation!

[dohtml]<object width="640" height="390"><param name="movie" value="http://www.youtube.com/v/_ngvIP0Za9M&rel=0&hl=en_US&feature=player_embedded&version=3"></param><param name="allowFullScreen" value="true"></param><param name="allowScriptAccess" value="always"></param><embed src="http://www.youtube.com/v/_ngvIP0Za9M&rel=0&hl=en_US&feature=player_embedded&version=3" type="application/x-shockwave-flash" allowfullscreen="true" allowScriptAccess="always" width="640" height="390"></embed></object>[/dohtml]

TheUnhivedMind - June 30, 2011 06:35 PM (GMT)

Notice he said hundreds or thousands of years. Makes a change from hearing millions of years huh? Thats because Evolution is a fraud created by the Society of Jesus to help destroy and discourage use of the King James AV1611 Bible. The Judaic calendar is only 6000 years old and the same for the Anno Lucis Masonic calendar. The Bible tells you Earth is only 6000 years old.

The Worshipful Company of Information Technologists controlling the technology working with The Worshipful Company of International Fuellers controlling the Worldwide Military and working to The Iron Mountain Report to bring about World Government and replacing waring nations with a new form of war. People even in these levels are hoodwinked like the populace and many are hoodwinkers.

There were no guys above or below or on the Moon its a massive fraud. The Van Allen Belt just would not allow it back then. So you're meant to believe the astronauts were threaten about the UFOs but we have ISS and space based weapons labs manned daily up there. No the Astronauts were threatened never to reveal the fraud of never getting away near the Moon and this is why no one else has even gone to the Moon. Its one big psy-op

Huge UFO Near Nuclear Missiles Acknowledged By Technicians

Monday, 27 June 2011 17:19
http://niburunews.com/index.php?option=com...9:ufo&Itemid=28

The F.E. Warren Air Force Base in Cheyenne, WY, "temporarily lost the ability to communicate with 50 of its Minuteman III missiles" while a UFO was sighted during the incident, according to statements released June 23, 2011, by Robert Hastings.

Hastings stated that "the five Missile Alert Facilities responsible for launching those ICBMs—Alpha through Echo, comprising the 319th Missile Squadron—would have been unable to do so during the period of the disruption," according to his press release.

The October 23, 2010, story continued to unfold.

"This dramatic story was leaked to Mark Ambinder, a contributing editor at The Atlantic, which published it three days later. The U.S. Air Force then quickly acknowledged the problem, saying that a back-up launch system could have performed the task and claiming that the breakdown had lasted a mere 59 minutes.

"However, the latter statement was untrue, according to two missile technicians stationed at F.E. Warren, who say that the communications issue, while intermittent, actually persisted over several hours.

"Significantly, these same individuals report sightings by 'numerous teams' of an enormous, cigar-shaped craft that maneuvered high above the missile field on the day of the disruption. The huge UFO appeared similar to a World War I German Zeppelin but had no passenger gondola or advertising on its hull, as would a commercial blimp.

"The confidential Air Force sources also report that their squadron commander has warned witnesses not to talk to journalists or researchers about 'the things they may or may not have seen' in the sky and has threatened severe penalties for anyone violating security. Consequently, these persons must remain anonymous at this time.

"The disquieting information was provided to noted researcher and author Robert Hastings who, over the past seven months, has interviewed law enforcement and civilian eyewitnesses to ongoing UFO activity near F.E. Warren's ICBM sites between September 2010 and April 2011. Hastings has just published a detailed exposé on these developments titled, 'Huge UFO Sighted Near Nuclear Missiles During October 2010 Launch System Disruption, which may be read at this link.

"The October 23rd missile incident occurred less than a month after Hastings' September 27, 2010 UFO-Nukes Connection press conference at the National Press Club in Washington D.C., during which seven U.S. Air Force veterans discussed UFO incursions at nuclear weapons sites during the Cold War era. CNN streamed that event live; a full-length video is at this link.

"According to the veterans, including two retired colonels, the still-classified incidents involved the sudden appearance of a mysterious aerial craft that briefly hovered over ICBM sites and sometimes disrupted the missiles' guidance and control systems; during one December 1980 case, a disc-shaped UFO sent down laser-like beams into a nukes storage depot.

"The witnesses said that they felt compelled to speak out about the reality of UFO activity at nuclear weapons sites and urged the U.S. government to finally reveal the facts to the American people.

"Regarding the recent situation at F.E. Warren AFB, Hastings emphasizes, "My sources have not said that the UFO sighted during the October 23, 2010 missile-communications disruption actually caused it. And it must be noted that the Air Force's Global Strike Command has officially attributed the problem to an improperly-replaced circuit card in a weapons-system processor."

He adds, "Nevertheless, the intermittent presence of a huge, cigar-shaped aerial craft during the hours-long—not minutes-long—crisis was definitely noted and remarked upon by various technical teams working in the base's missile field."

Hastings concludes, "The UFO sightings near F.E. Warren's missile sites in recent months—by Air Force personnel and civilians—represent the latest chapter in the UFO-Nukes Connection saga. Its well-documented history, as revealed in declassified U.S. government files and military eyewitness testimony, extends back to December 1948. Countless official denials about the reality of the situation have been issued over the

years but, sooner or later, this amazing story will break wide open. What we need now is a courageous government whistleblower to come forward with the facts, and some daring journalists willing to treat the story seriously and write about it."

TheUnhivedMind - June 30, 2011 01:15 AM (GMT)

Top 10 UFO incidents in the UK

Former MoD UFO specialist Nick Pope reveals the UK's most bizarre alien encounters.
A Lancaster bomber with an object flying about it Photo: PA

7:00AM BST 29 Jun 2011
http://www.telegraph.co.uk/news/newstopics...-in-the-UK.html

1. In December 1980 a UFO landed in Rendlesham Forest in Suffolk and was witnessed by United States Air Force personnel at two nearby military bases. The craft had strange symbols on the side that looked a bit like Egyptian hieroglyphs. The following night the UFO returned and was seen by the Deputy Base Commander. Radiation levels at the landing site were unusually high.

2. Former Army officer Alfred Burtoo was fishing by the Basingstoke Canal in August 1983 when he encountered a landed UFO and little green men. The 73 year old said he was taken onboard the ship, but heard a voice say "You can go. You are too old and infirm for our purpose". He told his wife he'd seen a UFO but didn't mention being taken onboard, because he thought she'd tell him "No more fishing for you, old man".

3. In a sighting that took place over RAF Shawbury in March 1993, the Meteorological Officer witnessed a huge, triangular-shaped craft fly slowly over the base, firing a beam of light at the ground, while emitting a low frequency humming sound. From a slow speed, the UFO then accelerated away to the horizon many times faster than a military jet. The man had eight years experience serving in the RAF.

4. On the same night as the sighting at RAF Shawbury, a couple saw a UFO over a field, hundreds of miles away. When they investigated, the UFO had gone, but all the cows were standing silently in the middle of the field, facing each other in a perfect circle.

5. A man contacted the Ministry of Defence in 1985 claiming to have been in contact with aliens who wanted to establish diplomatic contact with the authorities. He wanted to arrange a meeting between the British Government and an entity called Algar. But his letter stated that Algar had been killed by other aliens and concluded by saying "and that, of course, was that".

6. In 1986 a commercial pilot said that a UFO had passed close to his aircraft. Trying to be rational about it, he speculated that it might have been space debris re-entering the Earth's atmosphere, a meteorite, or a missile, accidentally fired into his flightpath. He concluded by saying, with remarkable understatement, "If it's a missile, myself and my crew are not impressed".

7. In another near miss between a commercial aircraft and a UFO, from 1991, a UFO passed rapidly in front of the Al Italia jet, which had 57 passengers on board. The pilot shouted "look out, look out" as the UFO flashed past. Neither the MoD nor the Civil Aviation Authority ever found an explanation.

8. In 1984 two police officers in North London were called out as a result of a woman who had seen a UFO. When the police officers arrived they saw the UFO too, observed it through their binoculars and made a sketch in their police notebook.

9. Retired policeman Philip Spencer encountered an alien on Ilkley Moor, Yorkshire, in 1987 and claimed to have been abducted. He even has a blurred photograph which he claims is the alien.

10. In 1980 in Lancashire, police officer Alan Godfrey encountered a UFO the size of a bus, hovering five feet above the road. When he returned to base it was later than expected. Subsequently, under regression hypnosis, PC Godfrey recalled having been taken onboard the UFO.

Battle: Los Angeles will be available on Blu-ray (£24.99) and DVD (£19.99) on 11 July, courtesy of Sony Pictures Home Entertainment.

UFOlogy: the world's fastest-growing 'scientific' religion?

by Gary Bates and Lita Cosner
Published: 12 May 2011(GMT+10)
http://creation.com/ufology-scientific-religion

Many people wonder why we write about the UFO phenomenon. Isn't it just a 'side issue'? But in fact, it's so important to oppose this particular belief, because ET belief is quickly becoming the world's most scientifically acceptable false religion and a major stumbling block to Christianity. And although some of its adherents are serious followers, the reality is, that polls show that belief in UFOs is mainstream and held by the average 'Joe' in the street. For example, a CNN/Time Magazine poll in 1997, found, among other things that;

80% believe that the government is hiding the existence of extraterrestrial life forms

64% believe aliens have contacted humans

50% believe that aliens have abducted humans

93% have never been abducted

75% believe that a UFO crashed near Roswell

So, in one sense, the majority of the population believes that UFOs are real physical craft piloted by beings from other planets. Does that make them adherents in the religious sense? The purpose of this article is to sound a clarion call that such beliefs make people vulnerable to further and possibly deeper deception. This is why it is important to place all of our thinking on the Bible, and not be misled into thinking that because the universe is so big, that there must be extraterrestrial life on other planets. Our view that God did not create life on other planets has even made us relatively unpopular among Christian friends. However, as this issue affects the veracity of God's Word, and is indeed, a salvation issue, we have been careful; drawing a strong, exegetical and historical picture from the Bible. Many are worried that real ET visitations might falsify the Bible if we are wrong. While such motives might be sincere, we should not be concerned that the Bible should be falsified as to its truth claims—particularly if we are claiming it is the very Word of God.

Unlike Buddhism, Islam, etc, extraterrestrial belief has a veneer of scientific credibility. Arguably, the world's most famous scientist, physicist Stephen Hawking, has even stated that he believes aliens probably exist. And the world's most famous atheistic evolutionist, Richard Dawkins, as anti-theistic as he is, has no problem with aliens theoretically seeding life on earth, provided that somewhere down the chain of creators, there's a life form that arose via evolution. Antichristian scientist, and co-discoverer of the DNA molecule, Sir Francis Crick, similarly proposed that life came via panspermia (life seeded by aliens) as a possible explanation for the mind-boggling complexity of the coded information on DNA. As atheists, mainly due to their evolutionist beliefs, they claim there is no evidence for God. However, they have no problem resorting to 'unseen' aliens as our creators. Design, apparently is not the problem. It's God being the designer that they have a problem with.

When people see an Unidentified Flying Object in the skies or come into contact with beings who claim to be from 'a galaxy far, far away', it has added credibility in the minds of the experiencers because so many scientists believe in alien life. In addition, science fiction, which is massively influential, creates futuristic worlds where highly technologically advanced aliens can overcome the laws of physics to visit the earth from star systems billions of light years away perhaps. As such, the majority of people, including most Christians tend to gravitate towards the idea that they have just seen or experienced something otherworldly.

Seemingly more credibility was added when NASA launched an 'Astrobiology' program, dedicated to studying "the origin, evolution, distribution and destiny of life—wherever it

might exist", it gives added traction to the idea that there actually is life out there. Why would SETI (The Search for Extraterrestrial Intelligence Institute) be scanning the skies, using many millions of radio frequencies every second, for broadcasts from intelligent beings if they didn't believe they actually exist? New Scientist (NS) recently reported that Seth Shostak (Director of SETI) was confident that within 24 years we would detect an alien civilization. He said,

"There are maybe 1021 Earth-like planets out there … Believing there aren't ETs is believing in miracles.1"

NS said "He bet the audience that we'd find ET within our lifetime or else he'd buy us a cup of Starbucks."

As we wrote in Prepare Ye the Way—the aliens are coming, the ET religion is not only a subset of the origins issue, it provides a complete replacement theology for Christianity. The Raelians are only one example of a cult that has evolutionism and UFOlogy at its core. They believe that the Elohim were our extraterrestrial creators, but don't know where they came from. Were they likewise created, or did they evolve from mindless matter? And if they were created, who created their creators, and their creators' creators? Although they think they have solved the origin of life issue—even advocating intelligent design—each creator race only moves the question back one step, to a different planet and no ultimate answer.

Doctrine of UFOlogical religion

There is also a soteriological (doctrine of salvation) aspect to UFO religion. Our 'space brothers' are said to be older and more advanced both ethically and technologically. This is a bizarre claim given the brutal and sordid nature of some alleged abduction encounters. Often, 'New Age' religion is strongly intertwined with UFO beliefs. The ETs are going to save us from global warming, etc, and show us how to live in harmony with our planet. Earth as an organism figures in as well, a theme popularized by the film Avatar.

Part of 'salvation' in the ET religion often involves evolving to the level of our ET benefactors. Its origins are found in the satanic 'you will be like God' deception that emanates from the Garden of Eden. If the ET deception has the same source, we shouldn't be surprised at the parallels.

Sometimes ETs also act as judges. Raelianism claims that there is a panel of judges who will get to decide who gets to be cloned again to eternal life, and who doesn't. This is based on works, like all other false religions such as Islam, Mormonism, etc. But in the absence of an omniscient God, who decides what's good enough? And what authority do mere men have to decide whether someone is good enough—are they themselves 'good enough' and by whose standard? This problem is common with the

redemption aspect of most false religions.
There is also an eschatological aspect. In some beliefs, the ETs will come and take away all the people who refuse to let 'Mother Earth' evolve, either destroying them or taking them to someplace else. For instance, New Age, ET channeller, Barbara Marciniak writes in her book Bringers of the Dawn: Teachings from the Pleiadians:

"The people who leave the planet during the time of Earth changes do not fit in here any longer, and they are stopping the harmony of Earth. When the time comes that perhaps 20 million people leave the planet at one time there will be a tremendous shift in consciousness for those who are remaining."2

This is a not-so-subtle take on the Christian pre-millennial view, in which Christians are raptured, that is, taken away by Christ, before the time known as the Great Tribulation. There are also views that ET believers will be taken away by spaceships to a planet called Heaven, which in some iterations even features a golden city much like the New Jerusalem. Channeller Thelma Terrell, who also goes by the 'spiritual' name 'Tuella', writes:

"Our rescue ships will be able to come in close enough in the twinkling of an eye to set the lifting beams in operation in a moment. And over the globe where events warrant it, this will be the method of evacuation. Mankind will be lifted … by the beams from our smaller ships. …

" … Earth changes will be the primary factor in mass evacuation of the planet. There is method and great organization in a detailed plan already near completion for the purpose of removing souls from this planet, in the event of catastrophic events making a rescue necessary … . The Great Evacuation will come upon the world very suddenly. The flash of emergency events will be as a lightning that flashes in the sky. So suddenly and quick in its happening that it is over almost before you are aware of its presence … ."

This is strikingly similar to 1 Corinthians 15:51-52. However, we should not be surprised. The enemy has always been a counterfeiter and we are warned that he masquerades as an angel of light (2 Corinthians 11:14). In others, the aliens will herald in the apocalypse. Some types of ET belief have alien/human hybrids as an integral part of end-times scenarios.

Farrakhan's Nation of Islam's link to UFOs

In Alien Intrusion: UFOs and the Evolution Connection (p. 298) we revealed that the founder of the 'million man march' and current leader of the Nation of Islam (NOL) was a former UFO contactee. As a young man, Louis Farrakhan, claims he was taken aboard a UFO where he met Master Elijah Muhammed (the former leader, then deceased). This was kept under wraps for years, probably due to credibility problems

that such claims would have, but apparently not any more. Farrakhan and his followers apparently believe that Armageddon is coming and that the spaceships will return again someday. On reporting about a recent convention in Chicago where over 10,000 followers gathered, Fox News reported that belief in UFOs is:

" … one of the group's more misunderstood–and ridiculed–beliefs, something organizers took into account when planning the convention …. 'There's enough evidence that has been put before the world and public,' Ishmael Muhammad, the religion's national assistant minister, told The Associated Press. 'There have been enough accounts and sightings and enough movies (documentaries) made, I don't think you would find too many people that would call it crazy.'"3

Indeed, by embracing popular belief and incorporating it into their religion, NOL might increasingly be more attractive to many trying to fit UFOs and aliens into their religious worldview.

Sacraments and 'holy places'

Some people get so involved in the ET phenomenon that they actually start 'channeling' supposed 'space brothers'. Sometimes they claim that the aliens actually communicate through them. But how can a physical being be channeled? Some alien beings claim to have evolved beyond matter, to a spiritual existence. It seeks to provide an atheistic, evolutionary mechanism to justify that the aliens are, in fact, really spiritual beings, who can replace the ultimate spiritual being of man's construction—God!.

'True believers' point to crop circles as a major physical evidence of alien visitations. They claim that the designs are too complex to be man-made. Groups like Circlemakers amply disprove the claim that crop circles have to be created by beings with advanced technology (in fact, traditionally crop circles are easily made with planks and ropes). But this does not mean that even indisputably man-made circles aren't relevant to the UFO phenomenon. People involved in the construction of crop circles often report strange phenomena surrounding these sites:

"Our crop formations are intended to function as temporary sacred sites in this landscape. While constructing crop formations in the fields we have experienced a series of aerial anomalies including: small balls of light, columns of light, and blinding flashes. All apparently targeting us and our crop formations. We are unsurprised at the numerous visitors who have reported a diverse assortment of anomalies associated with our artworks. These have included physiological effects, such as headache and nausea. Healing effects such as one report of a cure for acute osteoporosis. Physical effects such as camera and other electronic equipment failure. We are certain that our artworks are subject of paranormal forces and act to catalyze other paranormal events." (emphasis added)4

Demonologists expect that when people dabble with the occult, even as a joke or a prank, evil spirits will usually jump at the opportunity to deceive and gain control over people. But Circlemakers may not be entirely innocent in this regard, as our book Alien Intrusion: UFOs and the Evolution Connection documents:

“A little-known fact about Circlemakers is that before they entered the lucrative commercial market, they called themselves Team Satan. This is a very bold name and might be suggestive of their intent. … Indeed satanic worship continues to be quite prolific in the world today, and many are drawn into it by its allure and mysticism. Have crop circles become modern shrines of occult worship? Most certainly, Team Satan is not ashamed to publicly draw attention to the ‘supernatural side’ of its work and, perhaps deliberately, draw more folk into the dark world of the occult using the curiosity factor” (p. 218).

What does the Bible say?

The Bible doesn’t specifically mention aliens or UFOs, and we shouldn’t expect it to. The Bible was written for all believers in all cultures, but it was written to specific people in specific cultures, so we should expect the text to conform to those cultures somewhat (though God’s word in every case also transcends that culture). Talk about little green men would be incomprehensible and nonsensical to the first-century Jew; it would be completely outside his worldview. But, although the Bible does not speak specifically about aliens, it is not silent about this issue.

First, the Bible is clear that God created. In fact, one of His core attributes is that He is the uncreated Creator. It is the vital difference between Him and the lifeless idols created by human hands (Isaiah 40–44). And His creation was anthropocentric, in that the goal of creation was to produce mankind in His image; to have eternal fellowship with Him and produce a bride for Christ. This goal was so important that even mankind’s sin didn’t cause Him to abandon us; instead the Second Person of the Trinity sacrificed Himself for us so that we could be brought back into a right relationship with Him.

Second, the Bible states that there are spiritual beings called angels, 1/3 of which rebelled against God. The leader of this rebellion is called Lucifer (literally meaning ‘being of light’) or Satan (‘accuser’). His primary trait is that he is a deceiver, and we can see this in that his first recorded act in Scripture is that he deceived Eve so that she sinned and persuaded Adam to rebel as well. His mission is to spite God, his creator, by taking down as many human beings as He can. Satan hates humans because we are made in the image of the Creator, who he hates, and because God loves us.

These angels can appear in a variety of forms; the ones who are obedient to God always appear as males, but not always like human males (see the angelic descriptions in Ezekiel and Revelation, for example). Many believe that at one point in time fallen

angels cohabited with human women, producing the Nephilim. But these angels are confined in a special prison awaiting judgment, so this cannot be repeated (2 Peter 2:4–5).

Signs and wonders

The Bible indicates that the last days will be characterized by an intensifying of supernatural 'signs and wonders' designed to deceive the world (Matthew 12; Mark 13). (Lest anyone think that we're advocating one eschatological view or another, the Bible seems to refer to the time where the Church exists on earth as the 'last days', which has lasted for nearly 2,000 years and counting, so we're using 'last days' in the biblical sense, not the sense of any particular eschatological view.) Revelation is even clearer, saying that the false prophet will do signs and wonders to draw people to the beast, also known as the antichrist (Revelation 19).

The devil is a counterfeiter, so we should not be surprised that just as Jesus' signs and wonders were designed to point people to Him and the truth of His teaching, the false signs and wonders also serve to deceive people into believing lies. When Paul refers to this in 1 Timothy 4, the context makes it clear that he is talking about a certain heresy making the rounds in the Asian churches, which seems to be a form of proto-Gnosticism. But 'doctrines taught by demons' also seems to apply especially well to the teachings, actually a whole alternate theology, taught by the alleged aliens.

A heads up

It is a mistake for Christians to be uninformed or to ignore the alien phenomenon. Belief in aliens is so prevalent that the church will be seen as irrelevant in this area if Christians can't address the 'reality' for the culture on this topic. Its 'scientific' bent has an allure not readily found in other false religions. We regularly dialogue with people who morph Jesus into an advanced extraterrestrial; who's advanced technological prowess gave him the ability to perform seeming miracles and even raise the dead. Such ideas are challenging traditional Christian belief. In most churches he visits, one of the authors [GB] regularly meets individuals who have seen something in the sky that they can't explain, or even had an encounter with a being that claimed to be from another planet. Often they have never spoken to their pastors or others in the church about it for fear of ridicule. As such things escalate due to the ongoing conditioning of the culture we should heed the warning of Jesus in Matthew 24:24-25:

"For false Christs and false prophets will appear and perform great signs and miracles to deceive even the elect—if that were possible."

NEXT PRIME AIRING
When Aliens Attack

SUNDAY MAY 22 8P

What if an extra-terrestrial force attacked Earth? What might that look like and how will the people of Earth respond? Consulting a cast of world-renowned scientists, survival experts and defense experts, this two-hour special, Alien Invasion explores this frightening scenario. Experts reveal what could motivate alien invaders to attack Earth, and speculate on how the attack might play out -- the strategy alien invaders might use and the most effective ways for humans to respond. Well turn to science and history to figure out what works. Well show how humanity can survive this ultimate test.

Cemetery of giant creatures found in Central Africa

24.06.2011
http://english.pravda.ru/science/mysteries...nts_cemetery-0/

A team of anthropologists found a mysterious burial in the jungle near the city of Kigali Rwanda (Central Africa). The remains belong to gigantic creatures that bear little resemblance to humans. Head of research group believes that they could be visitors from another planet who died as a result of a catastrophe.

According to the scientists, they were buried at least 500 years ago. At first, researchers thought that they came across the remains of ancient settlements, but no signs of human life have been found nearby.

The 40 communal graves had approximately 200 bodies in them, all perfectly preserved. The creatures were tall - approximately 7 feet. Their heads were disproportionately large and they had no mouth, nose or eyes.

The anthropologists believe that the creatures were members of an alien landing, possibly destroyed by some terrestrial virus to which they had no immunity. However, no traces of the landing of the spacecraft or its fragments were discovered.

Send to friend

This is not the first such finding. In the summer of 1937 a group of Chinese scientists led by Professor Chi Putei surveyed the caves of Mount Bayan-Kara-Ula. Inside they found skeletons with excessively large heads and puny bodies. Nearby there were 176 stone plates. In the center of each plate there was a hole from which a spiral groove spread out to the perimeter with some characters on it.

In addition, the cave walls were covered with pictures of the rising sun, moon and stars, with many painted dots or small items, slowly approaching the mountains and the earth's surface.

Experts in deciphering ancient written characters have been puzzled over the disclosure of the secret spirals from the cave Bayan-Kara-Ula for two decades. Finally, the professor of Beijing University Zum Umniu deciphered several inscriptions.

The grooved letters narrated that approximately 12 thousand years ago some flying objects crashed in these mountains. Chinese archaeologists found a mention of the peoples who lived in the mountainous caves of Bayan-Kara-Ula.

A corpse of another "alien" was found by Turkish cavers. A mummy of the ice age was resting in a sarcophagus made of crystalline material. The height of the humanoid male creature did not exceed 1 meter 20 centimeters, his skin was light green, and he had large transparent wings on his sides.

According to the researchers, in spite of the unusual appearance the creature looked more like a person rather than an animal. His nose, lips, ears, hands, feet, nails, were very similar to human. Only his eyes were very different, three times bigger than those of a human, and colorless, like reptile's eyes.

Not that long ago in one of the ancient Egyptian tombs a mummy of a man 2.5 meters tall was found. It had no nose or ears, and its mouth was very wide and had no tongue.

According to archaeologist Gaston de Villars, the age of the Mummy is approximately 4 thousand years. It was buried as an Egyptian nobleman - carefully mummified and surrounded by servants, food and art objects designed for the afterlife. However, as it was discovered, not all objects around the finding belong to the Egyptian or even Earth's culture. For example, among the finds was a round polished metal disk covered with strange characters, a costume made of metal with the remnants of something resembling plastic shoes, and many stone tablets filled with images of stars, planets and strange machines. The Shrine where a strange mummy was found also looks unusual. The burial was made of the material unknown in antiquity. The stone was

literally carved from the rock so that the walls were smooth, like polished marble. It looked as if it was cut by a laser. Incidentally, the stone's surface was fused. The tomb was decorated with a substance resembling lead.

However, the "alien" theory is not the only one. According to some researchers, the "giants" and "dwarfs" could be a mere side branch of humanity that once lived on Earth, but for some reason became extinct.

Alien encounters 'within twenty years'

A top Russian astronomer say he expects humans to encounter extraterrestrial civilisations within the next two decades

guardian.co.uk, Monday 27 June 2011 19.16 BST
http://www.guardian.co.uk/science/2011/jun...sian-astronomer

Russian scientists expect humanity to encounter alien civilisations within the next two decades, a top Russian astronomer said on Monday.

"The genesis of life is as inevitable as the formation of atoms ... Life exists on other planets and we will find it within 20 years," said Andrei Finkelstein, director of the Russian Academy of Sciences' Applied Astronomy Institute, according to the Interfax news agency.

Speaking at an international forum dedicated to the search for extraterrestrial life, Finkelstein said 10% of the known planets circling suns in the galaxy resemble Earth.

If water can be found there, then so can life, he said, adding that aliens would most likely resemble humans with two arms, two legs and a head.

"They may have different colour skin, but even we have that," he said.

Finkelstein's institute runs a programme launched in the 1960s at the height of the cold war space race to watch for and beam out radio signals to outer space.

"The whole time we have been searching for extraterrestrial civilisations, we have mainly been waiting for messages from space and not the other way," he said.

In March a Nasa scientist caused controversy after claiming to have found tiny fossils of

alien bugs inside meteorites that landed on Earth.

Richard Hoover, an astrobiologist at the US space agency's Marshall space flight centre in Alabama, said filaments and other structures in rare meteorites appear to be microscopic fossils of extraterrestrial beings that resemble algae known as cyanobacteria.

Writing in the Journal of Cosmology, Hoover claimed that the lack of nitrogen in the samples, which is essential for life on Earth, indicated they are "the remains of extraterrestrial life forms that grew on the parent bodies of the meteorites when liquid water was present, long before the meteorites entered the Earth's atmosphere."

Are aliens getting less camera shy? UFO's filmed above BBC building in London

Last updated at 10:46 PM on 26th June 2011
http://www.dailymail.co.uk/news/article-20...ing-London.html

If UFO's are real and trying to get our attention perhaps they are getting a little more savvy about the way we humans work.

A new video has emerged purporting to show 'a mothership and its fleet' zipping around in the clouds above a BBC building in West London.

Perhaps the group of intergalactic travellers was hoping for some coverage from Auntie. See the video below...

UFOs? In the video, three fast-moving white dots streak across the London skyline

Crowd puller: By the time the cameraman arrives on the scene there are already three other people observing the 'phenomenon'

Instead they were caught on camera by a passer-by, and at least one other person who can be seen filming or taking pictures on his camera phone while the video is filmed.

In the video, the cameraman runs towards the corner of Bolsover Street and Clipstone Street where two other men are already standing, gazing skywards, one of whom is

using a mobile phone camera.

As the camera is pointed upwards, over the BBC's Yalding House, three white dots flash across the sky at great speed in a triangle formation, they are very quickly followed by two similar sized white dots.

As the camera pans down again, two people on the opposite side of the road can also been seen watching events unfold above them.

Mothership: After the five white dots are seen whizzing around, one larger brighter disc-shaped white object movers around slowly in the sky

Then one larger, bright and more slow moving disc-shaped white object appears, circles around briefly and zips off.

By this time a crowd of five people have gathered on the street corner to observe. A Scottish man's voice is heard off camera saying the word 'UFO'.

Shortly after another Scottish man's voice is heard saying: 'Are you getting that up there? I couldn't see before because the sun as flashing by.'

Far be it from us to suggest that the video is a hoax, but were people so minded then that part of London is home to a great many production houses offering both the expertise and facilities to mock up a convincing video.

Another similar video posted by alymc01 appears to have been filmed from the office of The Mill, a company which creates visual effects for the film industry.

But as the person who circulated the footage wrote in order to circumvent the cynical naysayers: 'If you believe it's easy photoshopped why don't you make a video & show us all.'

Close-up encounters: The three white dots that appear at the beginning of the video

The video was originally uploaded to YouTube by 31-year-old user alymc01, but it has been more widely circulated by a user called EllasVirgo, who on his YouTube profile describes himself as a farmer from Australia.

Virgo's YouTube channel is filled with space, asteroid and UFO-related snippets, including videos with titles such as 'More proof Nasa is lying'.

In the brief text accompanying the video Virgo wrote: 'UFOs Over London BBC Radio 1 Building.

'Right - took over a week to get it....but finally managed to get these critters on camera on a clear day, and even get a close-up

'It seems to be attracting quite a crowd now when they appear

'Can anyone explain what on earth these lights are please?'

The video was uploaded on June 26 and, given that Virgo says it took more than a week to source, and that he states in the description that it was shot on a Friday in June, the film was made on either June 3, 10 or 17.

Robert Hastings: Unidentified Aerial Object Sighted During October 2010 Nuclear Missile Incident
3

http://www.prnewswire.com/news-releases/ro...-124199869.html

TAOS, N.M., June 20, 2011 /PRNewswire-USNewswire/ -- On October 23, 2010, F.E. Warren Air Force Base in Cheyenne, Wyoming temporarily lost the ability to communicate with 50 of its Minuteman III missiles. The five Missile Alert Facilities responsible for launching those ICBMs—Alpha through Echo, comprising the 319th Strategic Missile Squadron—would have been unable to do so during the period of the disruption.

This dramatic story was leaked to Mark Ambinder, a contributing editor at The Atlantic, which published it three days later. The U.S. Air Force then quickly acknowledged the problem, saying that a back-up launch system could have performed the task and claiming that the breakdown had lasted a mere 59 minutes.

However, the latter statement was untrue, according to two missile technicians stationed at F.E. Warren, who say that the communications issue, while intermittent, actually persisted over several hours.

Significantly, these same individuals report sightings by "numerous teams" of an enormous, cigar-shaped craft that maneuvered high above the missile field on the day of the disruption. The huge UFO appeared similar to a World War I German Zeppelin but had no passenger gondola or advertising on its hull, as would a commercial blimp.

The confidential Air Force sources also report that their squadron commander has warned witnesses not to talk to journalists or researchers about "the things they may or may not have seen" in the sky and has threatened severe penalties for anyone violating security. Consequently, these persons must remain anonymous at this time.

The disquieting information was provided to noted researcher and author Robert Hastings who, over the past seven months, has interviewed law enforcement and civilian eyewitnesses to ongoing UFO activity near F.E. Warren's ICBM sites between September 2010 and April 2011. Hastings has just published a detailed exposé on these developments titled, "Huge UFO Sighted Near Nuclear Missiles During October 2010 Launch System Disruption," which may be read at:

http://www.theufochronicles.com/2011/06/hu...issiles_19.html

(The article can also be located at The UFO Chronicles homepage by placing its title in the Google "Site Search" box.)

The October 23rd missile incident occurred less than a month after Hastings' September 27, 2010 UFO-Nukes Connection press conference at the National Press Club in Washington D.C., during which seven U.S. Air Force veterans discussed UFO incursions at nuclear weapons sites during the Cold War era. CNN streamed that event live; a full-length video is at:

http://www.youtube.com/watch?v=3jUU4Z8QdHI

According to the veterans, including two retired colonels, the still-classified incidents involved the sudden appearance of a mysterious aerial craft that briefly hovered over ICBM sites and sometimes disrupted the missiles' guidance and control systems; during one December 1980 case, a disc-shaped UFO sent down laser-like beams into a nukes storage depot.

The witnesses said that they felt compelled to speak out about the reality of UFO activity at nuclear weapons sites and urged the U.S. government to finally reveal the facts to the American people.

Regarding the recent situation at F.E. Warren AFB, Hastings emphasizes, "My sources have not said that the UFO sighted during the October 23, 2010 missile-communications disruption actually caused it. And it must be noted that the Air Force's Global Strike Command has officially attributed the problem to an improperly-replaced circuit card in a weapons-system processor."

He adds, "Nevertheless, the intermittent presence of a huge, cigar-shaped aerial craft during the hours-long—not minutes-long—crisis was definitely noted and remarked upon by various technical teams working in the base's missile field."

Hastings concludes, "The UFO sightings near F.E. Warren's missile sites in recent months—by Air Force personnel and civilians—represent the latest chapter in the UFO-Nukes Connection saga. Its well-documented history, as revealed in declassified U.S. government files and military eyewitness testimony, extends back to December 1948. Countless official denials about the reality of the situation have been issued over the years but, sooner or later, this amazing story will break wide open. What we need now is a courageous government whistleblower to come forward with the facts, and some daring journalists willing to treat the story seriously and write about it."

100% Proof The Military Has Alien TR-3B Craft to Travel Into Space.

19/06/2011 05:45:04
http://beforeitsnews.com/story/729/253/100...nto_Space..html

A witness in Paris observed a triangular object, lit with a white light at each corner and a red one in the center, passing silently overhead. Shortly thereafter a second triangle appeared, this one brightly lit, and remained visible for a few seconds.

A National Institute of Discovery Science assessment published in 2004 stated that "the United States is currently experiencing a wave of Flying Triangle sightings that may have intensified in the 1990s, especially towards the latter part of the 1990s. The wave continues. The Flying Triangles are being openly deployed over and near population centers, including in the vicinity of major Interstate Highways."

While it went on to say that "neither the agenda nor the origin of the Flying Triangles are currently known," it also pointed out that the eyewitness observations were consistent with the routine and open deployment of an "unacknowledged advanced" aircraft by the Department of Defense--or the open deployment of something not under the control of the US government. It concluded that "in the post 9/11 era...it is certainly conceivable that deployment of low altitude surveillance platforms is routine and open."

The triangles have been observed by witnesses worldwide since the 1950s, which mitigates against their being secret US aircraft. In his article for UFOevidence.org, investigator and scholar Richard Dolan describes a typical early black triangle case: "On a clear fall night in Hastings, Minnesota, multiple witnesses saw a triangular craft approach from the east at a high rate of speed. When it was nearly overhead at about 5,000 feet, it "stopped dead in its tracks. The object had a reddish orange light at each

of its corners; these lights sometimes turned greenish. It sat motionless and silent for half a minute, then made a slow 180 degree turn, "leaving a vapor trail." It then sat motionless for a few seconds before it took off at an amazing speed. It stopped dead at a point about 15 miles away from them. It then lifted straight up "at incredible speed" and was gone.

TheUnhivedMind - June 20, 2011 02:56 AM (GMT)

Area 51: the plane truth

Many strange experiments have taken place at the ultra-secret base. But not on aliens. As former workers fight for their lives, we ask: what happened there?

By Angus Batey
1:00PM BST 18 Jun 2011
http://www.telegraph.co.uk/science/8579490...lane-truth.html

As my car pulls up at the end of the small cul-de-sac in north-west Las Vegas, Fred Dunham is waiting for me. A balding, heavily overweight 56 year-old with a hangdog expression and a bushy moustache, he is wearing a loose-fitting T-shirt and knee-length towelling shorts, and smiles as he steps forward to greet me.

His bonhomie comes as a bit of a surprise. When we had arranged to meet, Dunham had sounded edgy and nervous, insisting I bring my passport so he knows I am who I've claimed to be. He doesn't take chances. After fighting the United States government for the best part of two decades, and running up against a series of shadowy private companies and secretive governmental agencies, he's convinced someone wants him to shut up, permanently.

After we've discussed his case and he's leading me back to the car, I ask Dunham what he would have done had I turned out to be someone with darker motives. "Oh, I was prepared," he says, before reaching his left hand into the pocket of his shorts and showing me a palm-sized silver handgun. Half an hour later he sends an email, apologising. "I did not intend to scare you," he writes. "But better you be scared than me dead."

On the face of it, Dunham's case is a thorny but unremarkable claim for compensation. He has a chronic respiratory disease which he believes he contracted while working as

a security guard in the Eighties. What makes his case different is the identity of his former employer. For Dunham did not work for a conventional firm at a run-of-the-mill site. He worked at Area 51.

From engrossing television hokum such as The X-Files to blockbuster films like Independence Day; from conspiracy tracts about the New World Order to fevered discussions on UFO websites, no other military installation can match Area 51's pop-culture cachet. In the Nineties, Area 51 became the world's most bizarre tourist attraction as people from around the world flocked to the base, on the southern shore of the dry Groom Lake in southern Nevada, hoping to catch a glimpse of something extraordinary.

There had been rumours of weird things in the skies above Groom for years, but they reached a peak after Bob Lazar, who claimed to be a former employee of Area 51, went on television in 1989 with what he said was evidence that the US Air Force was conducting tests on flying saucers which could be observed from public land nearby. His claims were soon discredited, but mystery still surrounds the airbase.

And the classified status of its activities, which has fuelled the extraterrestrial rumour mill for so many years, has also helped ensure the real-life nightmares visited on some of those who worked at Area 51 have remained as intangible as the fictions that surround the place.

What is definitely known about Area 51 is that it's used by the US government to develop and test experimental aircraft and weapons systems and that it's been doing this since flight-testing of the U-2 spy plane began there in 1955. Designed by Lockheed, on behalf of the CIA, the U-2 was a high-altitude, long-range aircraft capable of flying over enemy territory and taking pictures, unobserved.

The U-2 needed only a short runway and would climb steeply, so within a couple of minutes of leaving the ground it was all but invisible to the naked eye. But so unusual a craft would have attracted unwanted attention had it been tested at Lockheed's Californian plant, or at the nearby Edwards Air Force Base, home of the US Air Force's Flight Test Center. So Lockheed commissioned the pilot Tony LeVier to find an alternative venue. He chose Groom.

The lake bed sits in a bowl, surrounded by mountains; aside from a couple of remote ranches and an abandoned mine, there was – and still is – no one to speak of for miles in any direction. Better still, the site is bordered to the west by the Nevada test site – a vast tract of desert sequestered by the Department of Energy, used for testing nuclear weapons in the Fifties and Sixties, and very much off-limits to the public. Area 51 was the perfect place to develop and test the "black projects" – military aircraft so vital to America's national security that even most members of the government had no "need to know" that they even existed.

The U-2 remains in service, though its cover was blown somewhat spectacularly when one flown by Francis Gary Powers was shot down over the USSR in 1960. After that, the CIA returned to Lockheed with a new brief, and the company came up with the A-12, capable of flying at three times the speed of sound on the edge of space. (During development of the A-12, US intelligence provided engineers with a schedule of when Soviet spy satellites would be over the base and crews ensured planes were hidden in hangars at the relevant times. Engineers also constructed fake planes out of cardboard to create confusion.)

The A-12 remained a US state secret until the Eighties and its two-seat variant, the SR-71, still holds a number of records for speed and altitude, including a 1974 flight between New York and London timed at one hour and 54 minutes.

And then, in 1977, the first test flights took place of Lockheed's prototype of the F-117A Nighthawk or "stealth fighter". Until it was revealed to the media via a single grainy photograph in 1988, the sci-fi looking stealth fighter was perhaps America's most closely guarded secret. Later stealth aircraft, including the B-2 bomber and the F-22 fighter, also flew test missions at Groom.

Dunham, who is now 60, was recruited to work at Area 51 in 1980, just as the stealth fighter programme was getting under way. (Dunham himself won't directly name his former place of work; part of the contract of employment he signed swore him to a lifelong oath of silence. Instead, he refers to it as "up there", "that place" or, more often than not, "the area".)

A security guard at a Las Vegas casino, he was approached by a former colleague who told him about this great job out in the desert, with double the money and a lot less stress than frogmarching drunks out of bars. All he would have to do was sit in a small guard hut, either at one of the many checkpoints at the heart of the base or on the two dirt roads that cross its perimeter, and make sure that whoever came through had the relevant pass. He'd be paid $17 an hour.

By now, Groom was a significantly-sized airbase, with numerous permanent buildings staffed by employees of the US Air Force, the CIA and a raft of defence contractors. Occasionally there'd be an accident, and security would have to rush to the aid of a downed pilot. High spirits – especially after long, late-night sessions in Sam's Place, the on-site watering hole – might occasionally call for a security presence to calm people down. Once or twice Dunham and his colleagues had to escort uncleared personnel off the site when a test flight was rescheduled. And every week, Dunham and his colleagues had to supervise the burn…

West of the base's main living quarters, on a piece of ground slightly above the lake bed, a waste dump had been constructed. Vehicles with California license plates would

head up to the dump to unload cargoes of waste too secret to dispose of normally.

Some of the trucks bore the markings of NDB – a company of which no records appear to exist; rumour on the base had it that it was a front for some department of the government, the initials apparently standing for None of your Damn Business.

Sensitivities were running high. The odd, angular shape which gave the stealth fighter its near-invisibility to radar had, ironically, been arrived at after Lockheed staff got the idea from reading some technical papers by Soviet scientists – but the Russians hadn't understood the potential of the research, and it was vital to keep the secret from them. At an early stage of the project, Lockheed had produced a small number of coffee mugs carrying a drawing of the nose of the aircraft poking out of a cartoon cloud, which it gave to staff – but even these were classified and had to be locked away at the end of the working day, or when anyone from outside the project team was in the building.

Among the most sensitive of the secrets was the coating that was applied to the aircraft. The exact make-up of this radar-absorbent paint has still not been made public, even though the aircraft has been retired from active service, and pieces of one of them are on display in a museum in Serbia, where it was shot down in 1999. What is known is that it was considered toxic enough that safety instructions drawn up for first-responders – firemen and other emergency services who may have to attend a crash site – called for breathing apparatus to be used if an F-117A caught fire.

While a lot of waste material put into the pits was generated on-site, there were also the contents of those trucks that hauled up every week from California. Inside the locked and sealed containers there might be classified paperwork, sometimes shredded – and often there'd be 55-gallon chemical drums, containing remnants of the secret stealth paint. Every time a new part of the aircraft's skin had to be manufactured, the coating would be applied, and if a whole barrel wasn't used quickly, the rest of it was rendered useless and had to be disposed of.

By the time Dunham was supervising weekly trench burns, in the early and mid-Eighties, Area 51 was home to a selection of major aerospace companies, each with their own secret "black" projects: the security teams would be on hand while each company loaded their materials into the pit, to ensure nobody was sneaking a look at a rival's classified waste products. By about 3pm on a Wednesday, the pit would be full, and the base security staff would supervise as a tanker from the on-site fuel depot squirted gallons of diesel into the pit. Then someone from the base's fire department came up and threw a flare into the trench to start that week's incineration of top-secret waste.

The burn, which lasted 24 hours, took place at least weekly; twice a week, Dunham says, for three years in the mid-Eighties. It was during this period that he first noticed something was wrong.

“I never smoked in my life, but I started coughing a lot,” he recalls. “It’s what they call a bronchial spastic cough – where you cough so much your vision would collapse. One time – my wife laughs at this – but I was sitting on the toilet at home and started coughing; I opened my eyes after having passed out, and all I could see was white. I’d fallen headfirst into the bathtub.”

In 1987, when things got so bad he daren’t drive, he went to his doctor. The diagnosis was pneumonia – coupled with the shocking news that his lungs looked like those of an 80 year-old who’d smoked 40 cigarettes a day for life. Afraid of the consequences both for his job and of breaching the contract he’d had to sign swearing him to secrecy, Dunham said “no” when his doctor asked if he’d been exposed to any toxic fumes.

He returned to work after two weeks, but the coughing continued. One day shortly after – a Saturday – he was posted at Area 51’s northern entrance when a crippling attack left him unable to breathe. He was assessed by the base medic but it wasn’t until after he was taken home on the Monday morning and saw his own doctor that he found out he’d coughed so hard he’d separated the floating ribs from his rib cage. Three days later he was told that the base medic’s assessment of his condition on the Saturday had deemed him no longer physically capable of doing his job, and his security clearance to access the base had been revoked. He was out of work. And so began a nightmare which Dunham has yet to wake up from.

Dunham had long-term disability cover, but that money ran out after two years. He found other bits-and-pieces jobs, but, a previously healthy man, he grew worried by his failure to recover. He was frequently short of breath; walking up a flight of stairs would leave him exhausted.

He still hadn’t connected his ongoing health problems with the coughing fit that forced him out of his desert security job: it was hearing about former colleagues that sparked his concern.

“I knew this guy named Robert Frost,” he recalls. “Frostie used to buy me drinks at the bar. He was a hell of a drinker. Nevertheless, he came down with a very strange disease, and he died.”

Dunham began asking around. “Guys I worked with would tell me, ‘Oh, did you know what’s-his-name?’ Yes. ‘Oh, he’s dead.’ ‘Did you know this other guy?’ Yes. ‘He’s dead.’ Or, ‘He’s had a stroke – he’s almost dead.’” Altogether, it was rumoured that more than 20 people had been affected.

Dunham connected the dots between his health, his dead friends and the weekly burn, and set out to see if he could get some compensation for what he and his doctor now believed was a work-related illness.

A series of claims and counter-claims between various private and government entities ensued, during which paperwork was repeatedly lost and even destroyed deliberately. Dunham would soon learn that the black-projects culture of state secrecy didn't sit at all comfortably with America's open system of government: when you fall victim to workplace illness at a place officialdom prefers to pretend doesn't exist, your first problem is finding out who to make a claim against.

There may be few people who understand that better than Jonathan Turley. The George Washington University Law School professor and specialist in public-interest law brought a case against the United States Air Force and the US's governmental watchdog for environmental law, the Environmental Protection Agency, in 1994 on behalf of five unnamed workers at Area 51 who had fallen ill, and the widows of two more who had died. The latter included Helen Frost, the widow of Dunham's friend, Robert, though neither Dunham nor Turley will say whether Dunham was one of the five "John Doe" plaintiffs.

The case sought to obtain compensation for the sick and bereaved, as well as to allow them access to information about the materials they had been exposed to, to aid their ongoing treatments.

"The burning of hazardous waste in an open pit has long been a crime in the United States," Turley explains. "It has to be burned in a facility that is usually five to six stories high, and costs hundreds of millions of dollars to build and operate. The burning of these types of waste in an open trench is virtually prehistoric from an environmental law standpoint. The government did it at Area 51 because they believed that Area 51 was a legal nonentity.

"[The base] lived in flagrant violation of a dozen different laws. What was troubling is that we had evidence that military officials were fully aware that what they were doing was criminal. This issue had been raised with officials at the base, and they simply dismissed those objections, because they believed they were immune from any federal law."

And in an environment effectively exempt from legal scrutiny and oversight, who knows how many other people's lives might have been put at risk?

Over the course of two tortuous cases, Turley first had to prove that Area 51 existed and by what name it was officially known, before he could establish which entities were in ultimate charge of what went on there.

After months without making headway, he eventually introduced into evidence a manual for Area 51 security staff which detailed security procedures. It was unclear whether this was a current document or not, but it contained details that would allow an outsider to

decode radio communications between base guards, and the fact that Turley had a copy of it caused a sensation.

“The government went absolutely berserk,” says Turley, “and classified the contents of my office. For four years nobody could enter my office, even to clean it – in the end it was literally dismantled; I think I had organisms living in there that science had never seen – and when I refused to turn over my files they asked the judge to put me in jail.”

Nevertheless, when the dust settled, Turley went on to score an important victory; the court agreed that environmental laws applied to Area 51. But the ruling made little difference after the then President, Bill Clinton, signed a document exempting base staff from having to testify about activities on the base.

“The tragedy is that these workers did prevail in establishing new law that will protect other workers,” says Turley. “But no one protected them, and the courts did not give them information that would help them deal with their illnesses.”

Any hope Dunham had of finding information his employers may have been keeping about his case was dashed last year, when he came across a report published in 2007 by the Department of Energy’s (DOE) Office of Audit Services, which pointed out that Bechtel, who took over running the test site in 1996, “destroyed supporting documentation from employee concern investigations” in apparent violation of federal law. No action was taken against Bechtel because the contract it had with the government permitted the destruction.

“There continues to be this use of national security laws and bureaucratic means to avoid any consideration of the case,” says Turley. “These men are dying off, and that clearly is part of the objective of the government. Every year, more of these individuals die, and with them die their cases.”

The irony is that while Dunham’s battle with state secrecy shows no sign of reaching a resolution, the fog of mystery that surrounds Area 51 is slowly lifting. Both people and planes are emerging from the shadows.

In fact, the secrets of the stealth fighter may have been in the hands of China, America’s highest-spending military rival, since 1999 when an F-117A was lost in Serbia. Reports at the time said Chinese agents had been spotted scouring the Serbian countryside for pieces of the plane. (China is currently test-flying its first stealth aircraft, the J-20.)

Meanwhile, following the almost complete declassification of the U-2 and A-12 programmes, the Roadrunners, a veterans’ association for people who worked at Area 51 on those two projects, have held their first public meetings. The airmen, radar specialists, technicians and other staff can finally tell the world – not to mention their

wives and families – about their Cold War missions, creating aircraft so advanced many people still believe they were built by aliens, not mortal men.

But for Dunham, the pride he used to feel as a result of his work guarding one of America's most prized military secrets has all but disappeared.

"I wish I'd never worked up there," he says. "My doctor told me this has cut 20 years off my life. We could have been participating in genocide, for all anybody knew. But when it came down to it, we were the ones being exterminated."

Title: There's probably no one out there, at least not
Description: *right now*

TheUnhivedMind - June 20, 2011 02:20 AM (GMT)

Hellooooo ... ?

There's probably no one out there, at least not right now

by AMY KINGSLEY
Last updated on Thursday, June 16, 2011 at 12:10 am
http://lasvegascitylife.com/articles/2011/...iq_45081274.txt

Astronomers who ponder the possibility of extraterrestrial life don't spend much time thinking about Area 51. They don't wonder about alien cadavers stacked like popsicles in a military freezer, or flying saucer parts lying around some underground hangar.

Their search for extraterrestrial life is more like a math problem. They have this equation -- the Drake equation -- to determine the likelihood that life exists on other planets. It's like a run-on algebra problem crossed with a riddle, with variables that include a 14 billion-year-old universe and some 100 billion stars, each of which could be the center of its own little galaxy.

With that many solar systems and that much space, there probably are, or were, other forms of intelligent life. But they probably lived so long ago, or so far away, that they might as well not exist. When you break it down that way, it doesn't seem very likely that we've had visitors from other planets.

But that doesn't mean people aren't looking -- and not just the folks who troll the fence at Area 51. The SETI Institute in California scans the cosmos for radio signals and other signs of life. NASA launched a satellite in 2009, called Kepler, specifically to find other Earth-like planets. It hasn't found one yet, but UNLV astronomy professor Ken Nagamine thinks it will soon.

"Most of the planets that have been found are more like Jupiter -- gas giants," he said. "It hasn't detected any Earth-like systems. But I think it will in the next five to 10 years."

Just because there are other Earth-like planets doesn't mean there is also intelligent life. Other planets may have supported life in the past or will in the future, but the odds that two are doing it at the same time are about the same as the chance you will run into Britney Spears at a casino tonight.

"You have to factor in the probability that she'll be at the casino with the probability that you'll be at the casino at the same time," said astronomy professor George Rhee.

When you're at the casino at the same time as Britney, you don't need to worry about the laws of physics. At least not consciously. But two planets with intelligent life could be separated by so much space that communication and travel between them is essentially impossible. The closest star to the sun is already more than four light years away, which means it would take more than four years to travel back and forth if we had a vehicle that moved at the speed of light.

"Unless the extraterrestrial is able to manipulate space-time is some very profound ways, it would be very difficult," Nagamine said. "And if we're just relying on classical technology, we have nothing that goes anywhere near the speed of light."

But take heart, space lover. Just because we don't have flying saucers whizzing around the sky doesn't mean that nothing is happening in the great beyond. In the past 20 years, astronomers have probed the universe like alien abductors, uncovering new planets and new energy at a pace that would have been inconceivable just 25 years ago.

"When I began teaching at UNLV in 1993, there were nine planets known in the universe," Rhee said. "By 2010, there were 500 known planets, and earlier this year, 1,200 had been discovered."

Astronomers now know what the universe is made of -- mostly dark matter and dark energy, with a dash of regular matter, just to keep it interesting.

"I consider UFO's science fiction," Rhee said. "And what we are finding out right now is far more amazing than any science fiction."

View Full Version: Australia’s UFO files mysteriously disappear

Title: Australia’s UFO files mysteriously disappear
Description: *[ALL PART THE PSY-OP ON YOUR MIND]*

TheUnhivedMind - June 7, 2011 10:40 PM (GMT)

Australia’s UFO files mysteriously disappear

In what sounds like a plot from a science fiction film, it seems that the bulk of the Australian government’s X-Files have mysteriously disappeared.

By Bonnie Malkin
12:32PM BST 07 Jun 2011
http://www.telegraph.co.uk/science/space/8...-disappear.html

The department of defence has been unable to find a host of records relating to UFO sightings that were collected over several decades.

The disappearance of the documents came to light when the military received a freedom of information (FOI) request from the Sydney Morning Herald Newspaper asking for any documents that mentioned sightings of UFOs or “extraterrestrial organisms” in Australia.

The request came after the British government released a dossier of thousands of documents relating to unidentified flying objects.

However, after two months of searching the relevant archives, the department said that the documents could not be found.

A spokesman said it was likely that some of the files had been destroyed.

“Our office examined past FOI requests which related to UFOs and discovered that many of the files had been destroyed, as is normal administrative procedure,” it said in a statement.

In fact, just one file from the entire cache could be located. That related to "UFOs/ Strange Occurrences and Phenomena in Woomera", a military weapons testing range in the outback.

The lone file detailed a sketchy series of sightings from around the country and overseas, including people living in towns near Woomera, in South Australia.

Australia's military decided to stop taking UFO sighting reports in late 2000, asking members of the public to report incidents to police instead.

UFO experts in Australia believe that the military knowingly shredded the documents.

Bill Chalker, author of The Oz Files, said that in 2003 eight years-worth of documents relating to UFO sightings were destroyed — not to cover up a shocking discovery of alien life, but as part of department "housekeeping".

"But it does seem strange that Australia would be destroying these files while England and America was putting theirs online and making them public," he said.

Doug Moffatt, spokesman for UFO Research New South Wales, said questions needed to be asked.

"It would be interesting to know if they have throw anything else out. If not, it starts looking dodgy."

Is this a squadron of UFOs flying over California?

By David Gardner
Last updated at 10:41 AM on 31st May 2011
http://www.dailymail.co.uk/news/article-13...California.html

The Internet is abuzz over an alleged UFO sighting in the night sky over Oakland, California.

Three fast-moving dots of light can be seen travelling close together in a video posted on YouTube by a KevinMC360.

The 'UFO squadron' shows the three lights in a triangular pattern spotted on May 26.

Cynics claim the cameraman has merely captured a flock of birds, but Kevin insists the sighting was genuine.

In the film, he follows a plane as a point of reference.

'For all you bird lovers out there you can call them geese, if you like, but I will only laugh at you,' he said.

The UFO video has already attracted more than 2,500 viewings.

He posted it a year after claiming to have filmed 'a group of spacecraft' over Oakland.

'I got them. There was a squadron of spacecraft,' he claimed in the video, which shows five lights in a V-formation.

That video has been viewed more than 23,780 times.

TheUnhivedMind - May 25, 2011 06:31 PM (GMT)

National UFO Reporting CenterSighting Report
Occurred : 4/14/2011 03:08 (Entered as : 04/14/11 03:08)
Reported: 4/18/2011 1:56:34 AM 01:56
Posted: 5/2/2011
Location: Falls Church, VA
Shape: Light
Duration:<15 seconds
Object chased by military jets
http://www.nuforc.org/webreports/080/S80922.html

Late last night (on or about 3:08 a.m., 04/14/11) I stepped outside for a smoke. All of a sudden I heard an increasing in volume thunderous roar, approaching from the north-west. This made me look up. It sounded like military jet with the pilots really pushing the pedal to the metal. I did not see the jets, but it sounded like the ones I saw flying over Andrews Airforce base in Maryland. Commercial jets do not sound anything like that and fly much higher. (I see a lot of them, since I live about 15 minutes away from Dulles International Airport). These jets seemed to be flying pretty low and I have never seen or heard them flying over at this time of night - never. I looked up to see what is making all that noise, but did not see the jets.

However, panning the skies from west to south, I saw what looked like a very bright large star, crossing the sky from west to south in the south-western quadrant of the sky. It had the same bluish-white tint to it that the stars do. The line of sight was at about 30 degrees angle to the ground. I could not judge the distance and did not see any shape that might have been associated with the object, but it crossed the sky in under 10 seconds and disappeared behind the trees I have to the south of my house. The strangest thing about the object was that it was blinking in a very peculiar manner. Commercial jets have red and green light, blinking continuously without interruption.

This thing was bluish-white, would blink 3 times within approximately 1 second, then would stop blinking all together for a second, then blink 3 times within approximately 1 second again, then stop blinking for a second, etc., during the whole 10 seconds or so it took it to cross the visible to me sout! h west quadrant of the sky. These was no noise at all coming from the UFO directing - the roar I heard was rapidly approaching from the north - west. As I said before, the UFO disappeared behind the trees in about 10 seconds, but I kept hearing the roar for another 5 minutes or so. Sounded like the jets kept flying around. Then everything went silent.

Half an hour later the roar came back, but I was already in bed and did not run outside to see what was going on. It would not do any good anyhow, since the speed with which the object moves - it would have been gone by the time I got out.

After I got up and came to work, had to tell someone what I saw. I told the story to a security guard that I am friendly with and he said that he lives right near Andrews Airforce Base and he heard they scrambled jets several times last night, which, according to him, they never do at night. He thought someone might have flown into Washington DC no-fly zone or something. This confirms my suspicions that the roar I heard was military jets. The object could not have been a satellite. I have seen those and they do not blink, do not fly at 30 degrees angle above the horizon and do not get chased by the military jets because the jets cannot fly that high.

Subsequently I found out that there were two other reports filed by people from the same area filed with the MUFON CMS pretty much describing the same thing I saw.

View Full Version: Flying Orange Orbs Shoot Overhead Of Missouri

Title: Flying Orange Orbs Shoot Overhead Of Missouri
Description: *Drivers*

TheUnhivedMind - May 21, 2011 03:32 AM (GMT)

Flying Orange Orbs Shoot Overhead Of Missouri Drivers

Submitted by Roger Marsh on Tue, 05/17/2011 - 10:17
http://www.ufodigest.com/article/flying-or...issouri-drivers

Several Missouri witnesses traveling southbound on I-435 stopped to observe as many as 125 low-flying, orange objects that moved up from the tree line and traveled away at about the speed of a helicopter, according to May 16, 2011, testimony from the Mutual UFO Network (MUFON) witness reporting database.

All of the objects moved in from the north low on the horizon and then moved south - each object splitting into five smaller objects - before moving into cloud cover.

"As they spread and slowly began to disappear into the clouds above (low ceiling), a larger and brighter orange object at a faster speed, about 1-2 degrees above the horizon, behind the tree line, and then as it started to ascend, split into five smaller orange objects, again radical in flight, without formation, and slowly ascended into the cloud cover," the reporting witness stated. "This occurred about 20 times over a 25 minute span. They all came from the North (low on horizon) to South and then turning toward the East and then into cloud cover."

The event occurred over a 25-minute period and stopped after the largest object was seen - also splitting into five smaller objects.

"At one time, I observed over 15 in the sky at one time. At approximately 9:58 p.m., the largest ball at a faster speed flew, split into 5 smaller objects, they followed the same path as the previous objects, and then the event seemed to stop. There were other vehicles on the shoulder of the highway observing this event. I got one person's name

and phone, and the next day he related that he talked to another individual who also saw this phenomenon."

The witness also observed a "jerky motion" to the objects

"Once they all rose above the tree line, I would approximate their speed at approximately that of a helicopter. But the jerky motion didn't make sense, and the coloration from a side view made no sense, as the sun had been down for over an hour and the low altitude above the eastern horizon would pretty much rule out solar reflection. I would guess that over the period that I observed these objects, there were approximately 125 of them."

Also read: Large Unknown Craft Hovers Over Southampton Several Orbs Followed

No town name was mentioned in the MUFON report, which was filed on May 16, 2011. The event occurred on April 13, 2011.

Missouri MUFON reports that Chinese Lanterns have been ruled out in this case due to the observed speed of the objects. "A second witness is sending me photos from their cell phone," Assistant State Director Margie Kay stated. "A third witness cannot be reached but was at the scene. I am obtaining a photograph of the orange orbs from one witness." In addition to the above report, the following two cases occurred over the weekend in Missouri.

10:30 p.m., Saturday, May 14, 2011: Anonymous witness called me today: She saw a lighted craft just above the clouds on Saturday night at approximately 10:32 p.m. over Independence, MO, South of 39th Street and Lee's Summit Road headed in a NW-SE direction. It was not defined and difficult to see - only the large bright circular white light was clearly visible.

English Version (in 5 parts) of an Italian documentary describing the extraordinary Italian case of alien contact with a group of men. Part 3 contains an apparent real recording of a message of friendship given by them to us (see 6 : 11).

It had been kept secret for half a century, but only just recently came to light after the death of one the men involved (Bruno Sammaciccia had asked for it to be kept secret until after his death).

In Pescara, during the 50s to 70s, a group of extraterrestrials had contacted a number of unsuspecting people directly. This project was called 'Amicizia.' These men would be brought to their (etheric) 'bases' located on earth and apparently on board the UFOs.

The people involved were of high social and cultural status, among them was the notable Console Alberto Perego. This is a collection of testimonials from them, which also shows excellent quality footage and photography of the phenomena, as well as apparent 'messages' (of love and goodwill) given to us from these beings.

View Full Version: Searching for Aliens on Kepler's Planets

Title: Searching for Aliens on Kepler's Planets

TheUnhivedMind - May 21, 2011 03:00 AM (GMT)

Searching for Aliens on Kepler's Planets

by Staff Writers
Moffett Field CA (SPX) May 19, 2011
http://www.spacedaily.com/reports/Searchin...lanets_999.html

Now that NASA's Kepler space telescope has identified 1,235 possible planets around stars in our galaxy, astronomers at the University of California, Berkeley, are aiming a radio telescope at the most Earth-like of these worlds to see if they can detect signals from an advanced civilization.

The search began on Saturday, May 8, when the Robert C. Byrd Green Bank Telescope - the largest steerable radio telescope in the world - dedicated an hour to eight stars with possible planets. Once UC Berkeley astronomers acquire 24 hours of data on a total of 86 Earth-like planets, they'll initiate a coarse analysis and then, in about two months, ask an estimated 1 million SETI@home users to conduct a more detailed analysis on their home computers.

"It's not absolutely certain that all of these stars have habitable planetary systems, but they're very good places to look for ET," said UC Berkeley graduate student Andrew Siemion.

The Green Bank telescope will stare for about five minutes at stars in the Kepler survey that have a candidate planet in the star's habitable zone - that is, the planet has a surface temperature at which liquid water could be maintained.

"We've picked out the planets with nice temperatures - between zero and 100 degrees Celsius - because they are a lot more likely to harbor life," said physicist Dan Werthimer, chief scientist for SETI@home and a veteran SETI researcher.

Werthimer leads a 30-year-old SETI project on the world's largest radio telescope, the

Arecibo receiver in Puerto Rico, which feeds data to SETI@home for a detailed analysis that could only be done on the world's largest distributed computer.

He was involved in an early SETI project with the previous Green Bank telescope, which collapsed from structural failure in 1988, as well as with the Allen Telescope Array (ATA), which also conducted a broader search for intelligent signals from space run by the SETI Institute of Mountain View, Calif. The ATA went into hibernation mode last month after the SETI Institute and UC Berkeley ran out of money to operate it.

"With Arecibo, we focus on stars like our Sun, hoping that they have planets around them that emit intelligent signals," Werthimer said. "But we've never had a list of planets like this before."

The radio dish in rural West Virginia was needed for the new search because the Arecibo dish cannot view the area of the northern sky on which Kepler focuses. But the Green Bank telescope also offers advantages over Arecibo. UC Berkeley's SETI observations piggyback on other astronomical observations at Arecibo, and is limited in the wavelength range it can observe, which centers on the 21 centimeter (1420 MHz) line where hydrogen emits light. These wavelengths easily pass through the dust clouds that obscure much of the galaxy.

"Searching for ET around the 21 centimeter line works if civilizations are broadcasting intentionally, but what if planets are leaking signals like 'I Love Lucy'?" Werthimer said. "With a new data recorder on the Green Bank telescope, we can scan a 800 megahertz range of frequencies simultaneously, which is 300 times the range we can get at Arecibo."

Thus, one day on the Green Bank telescope provides as much data as one year's worth of observations at Arecibo: about 60 terabytes (60,000 gigabytes) in all, Siemion said. If they recorded a similar chunk of the radio spectrum from Arecibo, SETI@home would be overwhelmed with data, since the Arecibo sky survey observes nearly full time for years on end.

"It's also great that we will completely span the water hole, a canonical place to look for intentional signals from intelligent civilizations," Siemion said.

The water hole is a relatively quiet region of the radio spectrum in the universe and a range of wavelengths not significantly absorbed by material between the stars and galaxies.

The water hole is bounded on one end by the 21 cm emissions from neutral hydrogen and on the other by the 18 cm emissions from the hydroxyl ion (OH). Because life is presumed to require the existence of liquid water, and water is composed of hydrogen and hydroxyl, this range was dubbed the water hole and seen as a natural window in

which water-based life forms would signal their existence. That makes the water hole a favorite of SETI projects.

"This is an interesting place, perhaps a beacon frequency, to look for signals from extraterrestrial civilizations," Siemion added. The 86 stars were chosen from the 1,235 candidate planetary systems - called Kepler Objects of Interest, or KOIs - with the help of Kepler team member Geoffrey Marcy, professor of astronomy at UC Berkeley.

UC Berkeley's targets include the 54 KOIs identified by the Kepler team as being in the habitable temperature range and with sizes ranging from Earth-size to larger than Jupiter; 10 KOIs not on the Kepler team's habitable list but with orbits less than three times Earth's orbit and orbital periods greater than 50 days; and all systems with four or more possible planets.

After the Green Bank telescope has targeted each star, it will scan the entire Kepler field for signals from planets other than the 86 targets.

A coarse analysis of the data by Werthimer and his team will be followed by a more thorough analysis by SETI@home users, who will be able to see whether they are analyzing Green Bank data as opposed to Arecibo data. The complete analysis for intelligent signals could take a year, Werthimer said.

"If you extrapolate from the Kepler data, there could be 50 billion planets in the galaxy," he said. "It's really exciting to be able to look at this first batch of Earth-like planets."

View Full Version: Roswell 'was Soviet plot to create US panic'

Title: Roswell 'was Soviet plot to create US panic'

TheUnhivedMind - May 14, 2011 02:16 PM (GMT)

Roswell 'was Soviet plot to create US panic'

Devotees of science fiction have been convinced for decades that an alien spacecraft crashed in the desert of New Mexico – and that the American government covered up the recovery of extraterrestrial bodies.

By Thomas Harding 9:00PM BST 13 May 2011
http://www.telegraph.co.uk/news/newstopics...e-US-panic.html

The so-called Roswell Incident of 1947 spawned conspiracy theories by the score.

But now, sadly for UFO spotters, a new book offers an entirely man-made – and some would say even more bizarre – explanation, featuring two of the greatest villains of 20th century history: the Soviet dictator Josef Stalin and the infamous Nazi “Angel of Death” Dr Joseph Mengele.

During a powerful storm in July, 1947, an object crashed near a rancher’s home in Roswell, New Mexico.

Roswell army air base initially said that a “flying disc” had come down, but hours later, as government scientists arrived in the area, it was stated instead that a weather balloon had crashed.

The incident went largely unreported until books and documentaries in the 1970s made allegations of alien life forms.

Area 51, the new book by Annie Jacobsen, is based on interviews with scientists and engineers who worked in Area 51, the top secret test base in the Nevada desert.

It dismisses the alien story and puts forward the theory that Stalin was inspired by Orson Wells's famous radio adaptation of the HG Wells novel War of the Worlds, which provoked hysteria across America when broadcast in 1938. According to the book, the plot started after the Soviet Union seized from Germany at the end of the war the jet-propelled, single wing Horton Ho 229 – a fighter said to be the forerunner of the modern B2 stealth bomber.

This is where Mengele enters the story. The Nazi doctor, who experimented on prisoners in Auschwitz and fled to South America after the war, was supposedly enlisted to create a crew of "grotesque, child-size aviators" in return for a eugenics laboratory.

The book says that the plane was filled with "alien-like" children, aged 12 or 13, who Stalin wanted to land in America and cause hysteria similar to the 1938 broadcast. But, the plane, remotely piloted by another aircraft, crashed and the Americans hushed up the incident.

Jacobsen's source, a retired engineer from the former defence company EG&G, which handled the US government's most sensitive projects, said he was put on to the Roswell project in Area 51 in 1978.

Miss Jacobsen writes: "They found bodies alongside the crashed craft. These were not aliens. Nor were they consenting airmen. They were human guinea pigs. Unusually petite for pilots, they appeared to be children. Each was under five feet tall.

"They were grotesquely deformed, but each in the same manner as the others. They had unusually large heads and abnormally shaped oversize eyes."

Two were supposedly found "comatose but still alive".

The EG&G engineers were told "that seeing the bodies would be a shocking and disturbing experience".

Perhaps not surprisingly, a spokesman for the US Air Force said: "We have not yet read this book so we are not able to make a comment on it."

Ken Ardel - May 14, 2011 02:39 PM (GMT)

This story is even more ridiculous than the Operation Mogul excuse.

View Full Version: Astronomers start search for alien signals from 86

Title: Astronomers start search for alien signals from 86
Description: *planets*

TheUnhivedMind - May 14, 2011 01:40 PM (GMT)

Have you ever heard of these 86 different Earth like planets? They've only gabbled on about a couple of planets like this if I recall so where have the other 84 come from all of a sudden? Its just gabble to look good and exciting.

QUOTE

Astronomers start search for alien signals from 86 planets

By Agence France-Presse
Friday, May 13th, 2011
http://www.rawstory.com/rs/2011/05/13/astr...rom-86-planets/

WASHINGTON — A massive radio telescope in rural West Virginia has begun listening for signs of alien life on 86 possible Earth-like planets, US astronomers said Friday.

The giant dish began this week pointing toward each of the 86 planets -- culled from a list of 1,235 possible planets identified by NASA's Kepler space telescope -- and will gather 24 hours of data on each one.

"It's not absolutely certain that all of these stars have habitable planetary systems, but they're very good places to look for ET," said University of California, Berkeley, graduate student Andrew Siemion.

The mission is part of the SETI project, which stands for Search for Extra Terrestrial Intelligence, launched in the mid 1980s.

Last month the SETI Institute announced it was shuttering a major part of its efforts -- a 50 million dollar project with 42 telescope dishes known as the Alien Telescope Array (ATA) -- due to a budget shortfall.

Astronomers hope the Green Bank Telescope, a previous incarnation of which was felled in a windstorm in 1988, will provide targeted information about potential life-supporting planets, even if on a smaller scale.

"We've picked out the planets with nice temperatures -- between zero and 100 degrees Celsius -- because they are a lot more likely to harbor life," said physicist Dan Werthimer, a veteran SETI

researcher.

The project will likely take a year, and will be helped by a team of one million at-home astronomers, known as SETI@home users, who will help process the data on personal computers.

UFO battles captured on video? Not likely, expert says

Night-vision view shows weird moving objects ... which may be birds or bats

5/4/2011 11:35:27 PM ET
http://www.msnbc.msn.com/id/42908859/ns/te..._science-space/

A San Diego-based UFO researcher named Ed Grimsley captured what one writer called "multiple unidentified flying objects" that were "saucer-shaped [and] appeared to hover in the sky and change direction before moving out of sight." The video was taken April 30 with Grimsley's organization, Skywatch.

To the trained eye, however, this video appears to show something much more banal than a UFO battle.

According to his website, Grimsley "has been seeing battles between unknown aircraft in the night skies since he was a teenager," including two different types of spacecraft "shooting it out using what appear to be laser weapons." Furthermore, "he has seen hundreds of these objects recently and using his five military-grade night vision binoculars he has invited many people to come to his areas and view the objects in earth space shooting it out."

Grimsley believes that "alien or human-like beings may very well be getting ready to take control or evict us from plant Earth," and has made it his mission to "show people what is happening in earth space all the time. I want people to start looking through night vision binoculars and see the battles taking place between aircraft including saucer-shaped objects." [Could Extraterrestrials Really Invade Earth?]

So what about the strange UFO lights that Grimsley and his followers are seeing? Contrary to the account above, the UFOs in the video do not appear "saucer-shaped" at all, but rather look like simple points of light in the night sky.

Robert Sheaffer, a UFO investigator with the Committee for Skeptical Inquiry, told Life's Little Mysteries that Grimsley's videos show nothing extraordinary. In fact, the objects are most likely artifacts of the very tool that Grimsley uses to spot UFOs.

"Night-vision optics trade low resolution for high sensitivity, and bright objects spill out into a circle of light that in no way reflects their actual angular size. So what looks like a large object may well just be a point of light," Sheaffer said. "Many of the objects they're seeing are birds or bats, or faint satellites in earth orbit. There's nothing in the sky that a night vision device can see that a person can't see with 10 x 50 binoculars — and with much better detail. So their belief that they're seeing entire fleets of UFOs up in the sky simply means that they don't understand how these devices work, and what they're seeing."

Indeed, the low video quality virtually guarantees that a wide variety of normal things (including bugs, planes, helicopters, meteors and satellites) will appear as UFOs; some of the lights seen in the video are obviously dust and debris on the camera lens. If Grimsley is correct, and spaceships are really engaging in battles with lasers in the night sky above San Diego, it's odd that no astronomers or pilots have mentioned it.

Coincidentally, Grimsley makes money selling night vision goggles through which UFO buffs can view these exciting Star Wars-type space battles. He offers models ranging from $1,800 to $3,200; if this is a bit too pricey for you, he offers a DVD of the UFOs for $24.95 including shipping. You can join his Skywatch UFO vigils for $40 per person. Grimsley is raising money for his other pursuits, including developing a revolutionary vehicle engine that he claims will result in cars getting 100 miles per gallon ... of water.

Keith - May 4, 2011 03:45 PM (GMT)

That was decent I thought out of a lot of the videos. The alien looked solemn but easygoing at the same time

phillipJfry - May 4, 2011 09:02 PM (GMT)

That is one happy looking ebe

Keith - May 5, 2011 08:59 AM (GMT)

I don't watch lots of alien clips but I say this one may be real cuz for the first time I've noticed an alien wearing clothes lol. Why are they always naked?

Every year they get closer: UFO fan hails clearest video yet and says 'they know I'm filming them'

By Daily Mail Reporter
Last updated at 5:00 PM on 1st May 2011
http://www.dailymail.co.uk/news/article-13...lming-them.html

It seems to be world centre for UFO videos, but this the image is extraordinarily clear.

UFO enthusiast Michael Lee Hill, of Eastlake, has recorded many images of something mysterious over Lake Erie, Ohio.

He has just released new footage filmed along the lakefront that he says is his best so far.

Clear and not moving: The bright object filmed over Lake Erie in Ohio

Mr Hill said: 'It was probably one of the craziest nights of activity I've ever experienced.'

The images show several sets of coloured lights flashing over Lake Erie, while appearing to remain still.

Mr Hill said: 'I've been filming these for a long time and it's just grown to the point where they've let me know, they know I'm sittin' there filming them.

'You know, they come in - every year they've come in closer and closer.'

Bizarre claim: UFO enthusiast Michael Lee Hill believes the objects in his films are aware that he's filming them

Several people in the area believe the lake is a hotbed for extraterrestrial activity.

Ed Husa lives in Euclid and often walks his dog in a local park.

'I go outside and I look up in the sky and I see them all the time up there.

'Every so often you see strange lights blinking on and off.'

Fox 8 News revealed similar images of lights blinking over Lake Erie last year.

That led a team from the Cleveland Ufology Project to track the lights.

Hanging in there: The object shines brightly as it sits motionless above the lake

The organisation was founded back in 1952. Its members consider themselves experts and decided that the images were airplanes.

Hill disagreed with their assessment last year and now he says he's even more confident the aliens are among us.

'The fact that this remains in the screen and is not moving, I believe, negates any notion that it's an aircraft,' he said.

Previously, NASA, which has a research facility in Cleveland, has not commented on the sightings over Lake Erie. Officials at Hopkins International Airport said planes from the U.S. and Canada take-off frequently over the water.

TheUnhivedMind - April 24, 2011 03:41 AM (GMT)

The strange case of the Dyatlov Pass incident.

By Daniel La Ponsie, 21 April, 2011, No Comment
http://www.datelinezero.com/2011/04/21/the...-pass-incident/

Did UFOs Kill 9 College Students in 1959?

Decades before a group of campers fictitiously died in the film The Blair Witch Project, a group of college-aged campers were killed in the mountains of Soviet-era Russia under extremely suspicious circumstances. For real.

Now Hollywood Reporter is reporting that director Simon Fellows is planning to make a film of one of the creepiest mysteries of the 20th Century: the Dyatlov Pass incident.

This is one of the creepiest mysteries of the past 100 years, but also one of the least known; although this will probably change when the movie comes out. In my opinion, this is a mystery on the level of the Mary Celeste — that ship that was discovered with the entire crew missing.

The director is known in the UK for his film Malice in Wonderland. I'm looking forward to seeing it, and I'm also looking forward the inevitable books and documentaries that will follow.

The Dyatlov Pass incident happened in the northern Ural mountains in 1959. A group of 10 Russian hikers from Ural State Technical University were led by Igor Dyatlov. One of the members of the group became ill and wasn't able to join the expedition for the final leg of the journey. The final 9 went ahead. What happened to them might never be settled — and not for lack of evidence. In fact it's the evidence is what makes the case so compelling, and creepy.

The mountain's pass was, as you may have guessed already, was named after the group's leader following the incident. The mountain's name is Kholat Syakhl (••••• ••••); a Mansi name, meaning 'Mountain of the Dead.'

The group consisted of eight men and two women. Most were students or graduates of Ural Polytechnical Institute (••••••••• ••••••••••••••• ••••••••, •••), now Ural State Technical University. Here's the list of names, from the article at Wikipedia:
Igor Dyatlov (••••• ••••••), the group's leader
Zinaida Kolmogorova (••••••• •••••••••••)
Lyudmila Dubinina (••••••• ••••••••)
Alexander Kolevatov (••••••••• •••••••••)
Rustem Slobodin (•••••• ••••••••)
Yuri Krivonischenko (•••• ••••••••••••)
Yuri Doroshenko (•••• •••••••••)
Nicolai Thibeaux-Brignolle (••••••• ••••-••••••••)
Alexander Zolotarev (••••••••• •••••••••)
Yuri Yudin (•••• ••••)

What actually happened is unknown. In the last communication, with Yury Yudin who stayed behind due to illness, Igor Dyatlov said it was possible they would be running a few days behind schedule. But when the group failed to show up several days later, the families contacted the authorities.

Yuri Yudin

The institute sent out a search-and-rescue team of teachers and students. And then the police joined the search. And then the Soviet army dispatched their airplanes and helicopters. Eventually the bodies were found.

For whatever reason the group had set up camp out in the open, away from the woods. It would have made more sense to set up camp in the nearby woods, for better protection from the elements. Perhaps something was seen inside the woods that prompted them to stay away?

The tent was torn when it was found by the search team … torn open from within. All belongings and clothing was left behind. The bodies were found wearing only pajamas and undergarments. The corpses showed no signs of struggle.

Two victims had fractured skulls, two had broken ribs. As I said, no external signs of struggle. No external wounds at all. "It was equal to the effect of a car crash," said the doctor, Boris Vozrozhdenny, according to case documents.

One other thing: one of the victims was missing her tongue.

Not weird enough? How about this: Near the location of the bodies, broken branches were found scattered across the ground and the charred remains of a fire was found. Some of the victims' clothing contained "substantial levels" of radiation. At the funeral, many of the victims bodies had turned a strange orange color, and the hair had turned white.

Were they killed by a weapon blast of some kind?

Soviet investigators eventually concluded that "a compelling unknown force" had caused the deaths. The case was closed, and all documented evidence was locked away. Some of the evidence was never seen again.

According to the St. Petersburg Times, the chief investigator, Lev Ivanov, said in an interview in 1990 that he had been ordered by senior regional officials to close the case and classify the findings as secret. He said the officials had been worried by reports from multiple eyewitnesses, including the weather service and the military, that "bright flying spheres" had been spotted in the area in February and March 1959.

"I suspected at the time and am almost sure now that these bright flying spheres had a direct connection to the group's death," Ivanov told Leninsky Put, a small Kazakh newspaper. He retired in Kazakhstan and has since died.

The declassified files contain testimony from the leader of a group of adventurers who camped about 50 kilometers south of the skiers on the same night. He said his group saw strange orange spheres floating in the night sky in the direction of Kholat-Syakhl.

Ivanov speculated that one skier might have left the tent during the night, seen a sphere and woken up the others with his cries. Ivanov said the sphere might have exploded as they ran toward the forest, killing the four who had serious injuries and cracking Slobodin's skull.

Yudin said he also thought an explosion had killed his friends. He said the level of secrecy surrounding the incident suggests that the group might have inadvertently entered a secret military testing ground. He said the radiation on the clothes supported his theory.

Yudin also said the released documents contained no information about the condition of the skiers' internal organs. "I know for sure that there were special boxes with their organs sent for examination, " he said.

No traces of an explosion, however, have been found near Kholat-Syakhl. There are no records of any launches at the time. And it was thought that the charred remains of a fire was from a camp fire assembled by one of the victims in an attempt to keep warm.

Yury Kuntsevich is head of the Yekaterinburg-based Dyatlov Foundation, which is trying

to unravel the mystery. Kuntsevich said he had led a group to the area last year and found a “cemetery” of scrap metal that suggested the military had conducted experiments there at some time. “We can’t say what kind of military technology was tested, but the catastrophe of 1959 was man-made,” he told the St. Petersburg Times.

Therefor Kuntsevich agreed with Yuri’s weapon-test theory, saying another clue to the deaths was the fact that the faces of the first five bodies had been inexplicably tan. “I attended the funerals of the first five victims and remember that their faces look liked they had a deep brown tan,” he said.

In 1967, Sverdlovsk writer and journalist Yuri Yarovoi published the novel “Of the highest rank of complexity” which was inspired by this incident. According to the Wikipedia article, Yarovoi had been involved in the search for Dyatlov’s group and the inquest. He also acted as an official photographer for the search party, and the investigation. Therefor had insight into the events, and plenty of behind-the-scenes information.

Unfortunately, Yarovoi was ordered by the Soviet government to avoid revealing anything beyond the “official position.” The book romanticized the story, and had a ridiculously happy ending: only the group leader was found deceased, and everyone else lived happily ever after. Yarovoi’s colleagues say that he had two alternative versions of the novel, but both were censored.

Upon Yarovoi’s death in 1980, all his archives, including photos, diaries and manuscripts, have been “lost.”

It seems reasonable to conclude that the orange lights and all the other evidence, including the government cover-up, all point to a secret government weapons test. But what about the missing tongue? Incidentally, many cattle mutilations include the tongue being removed. Throw that into the mix, and what you get is likely the result of an extraterrestrial attack; don’t you think?

"From now on we know, that snowmen exist."

Other theories include an avalanche, attack by local indigenous people, and a Russian “snow man.” The attack by any human was ruled out right away. The avalanche theory was ruled out, as well.

A scrap of paper had been found nearby the camp sight with the following words scrawled on it: “From now on we know, that snowmen exist.”

However, this doesn’t seem like something a bigfoot would do. Unless, that is, the bigfoot was carrying a large weapon that leaves behind a lot of radiation. And had an interest in removing human organs. (Guess I’m really hung up on that missing tongue,

but it seems pretty damn significant.)

Was this the result of an “unknown compelling force” exhibited by the Soviet Union, or something from another world?

Does Our Brain Really Create Consciousness?

Copernicus challenged the dominant paradigm
that the sun revolves around the Earth. Wiki Image.

Peter Russell
Spirit of Now
Tuesday, June 28, 2011
http://www.activistpost.com/2011/06/does-o...lly-create.html

Western science has had remarkable success in explaining the functioning of the material world, but when it comes to the inner world of the mind, it has very little to say. And when it comes to consciousness itself, science falls curiously silent. There is nothing in physics, chemistry, biology, or any other science that can account for our having an interior world. In a strange way, scientists would be much happier if minds did not exist. Yet without minds there would be no science.

This ever-present paradox may be pushing Western science into what Thomas Kuhn called a paradigm shift–a fundamental change in worldview.

This process begins when the prevalent paradigm encounters an anomaly — an observation that the current worldview can't explain. As far as the today's scientific paradigm is concerned, consciousness is certainly one big anomaly. It is the most obvious fact of life: the fact that we are aware and experience an internal world of images, sensations, thoughts, and feelings. Yet there is nothing more difficult to explain. It is easier to explain how the universe evolved from the Big Bang to human beings than it is to explain why any of us should ever have a single inner experience. How does all that electro-chemical activity in the physical matter of the brain ever give rise to conscious experience? Why doesn't it all just go on in the dark?

The initial response to an anomaly is often simply to ignore it. This is indeed how the scientific world has responded to the anomaly of consciousness. And for seemingly sound reasons.

First, consciousness cannot be observed in the way that material objects can. It cannot be weighed, measured, or otherwise pinned down. Second, science has sought to arrive at universal objective truths that are independent of any particular observer's viewpoint or state of mind. To this end they have deliberately avoided subjective considerations. And third, there seemed no need to consider it; the functioning of the universe could be explained without having to explore the troublesome subject of consciousness.

However, developments in several fields are now showing that consciousness cannot be so easily sidelined. Quantum physics suggests that, at the atomic level, the act of observation affects the reality that is observed. In medicine, a person's state of mind can have significant effects on the body's ability to heal itself. And as neurophysiologists deepen their understanding of brain function questions about the nature of consciousness naturally raise their head.

When the anomaly can no longer be ignored, the common reaction is to attempt to explain it within the current paradigm. Some believe that a deeper understanding of brain chemistry will provide the answers; perhaps consciousness resides in the action of neuropeptides. Others look to quantum physics; the minute microtubules found inside nerve cells could create quantum effects that might somehow contribute to consciousness. Some explore computing theory and believe that consciousness emerges from the complexity of the brain's processing. Others find sources of hope in chaos theory.

Yet whatever ideas are put forward, one thorny question remains: How can something as immaterial as consciousness ever arise from something as unconscious as matter?

If the anomaly persists, despite all attempts to explain it, then maybe the fundamental assumptions of the prevailing worldview need to be questioned. This is what Copernicus did when confronted with the perplexing motion of the planets. He challenged the geocentric worldview, showing that if the sun, not the earth, was at the center, then the movements of the planets began to make sense. But people don't easily let go of cherished assumptions. Even when, 70 years later, the discoveries of Galileo and Kepler confirmed Copernicus's proposal, the establishment was loath to accept the new model. Only when Newton formulated his laws of motion, providing a mathematical explanation of the planets' paths, did the new paradigm start gaining wider acceptance.

The continued failure of our attempts to account for consciousness suggests that we too should question our basic assumptions. The current scientific worldview holds that the material world–the world of space, time and matter — is the primary reality. It is therefore assumed that the internal world of mind must somehow emerge from the world of matter. But if this assumption is getting us nowhere, perhaps we should consider alternatives.

One alternative that is gaining increasing attention is the view that the capacity for experience is not itself a product of the brain. This is not to say that the brain is not responsible for what we experience — there is ample evidence for a strong correlation between what goes on in the brain and what goes on in the mind — only that the brain is not responsible for experience itself. Instead, the capacity for consciousness is an inherent quality of life itself.

In this model, consciousness is like the light in a film projector. The film needs the light in order for an image to appear, but it does not create the light. In a similar way, the brain creates the images, thoughts, feelings and other experiences of which we are aware, but awareness itself is already present.

All that we have discovered about the correlations between the brain and experience still holds true. This is usually the case with a paradigm shift; the new includes the old. But it also resolves the anomaly that the old could not explain. In this case, we no longer need scratch our heads wondering how the brain generates the capacity for experience.

This proposal is so contrary to the current paradigm, that die-hard materialists easily ridicule and dismiss it. But we should not forget the bishops of Galileo's time who refused to look through his telescope because they knew his discovery was impossible.

A DIALOGUE BETWEEN JASON SILVA AND TECHNO-ECOLOGIC SCHOLAR RICHARD DOYLE

Richard Doyle also goes by mobius, an indicator of just how important interconnections are to him – and how transformative, bedeviling and hypnotic his ideas can be. As a professor of English and science, technology, and society at Pennsylvania State University, he has taught courses in the history and rhetoric of the emerging technosciences – sustainability, space colonization, biotechnology, nanotechnology, psychedelic science, information technologies, biometrics – and the cultural and literary contexts from which they sprout. An explorer of the exciting and confusing rhetorical membrane between humans and an informational universe, he argues that in co-evolution with technology, we find ourselves in an evolutionary ecology that is as vital as it is unexplored.

In Darwin's Pharmacy: Sex, Plants and the Evolution of The Noösphere, the transhumanist philosopher focuses on his favorite technology: the psychedelic, "ecodelic" plants and chemicals (read: drugs) that can help make us process more information and make us aware of the effect of language and music and nature on our consciousness, thereby offering us an awareness of our own ability to effect our own consciousness through our linguistic and creative choices. And that, from an evolutionary perspective, is simply sexy.

JASON: Your new book Darwin's Pharmacy talks about the relationship between psychedelic plants and the accelerating evolution of the "noosphere", which some

define as the knowledge substrate of reality, the invisible, informational dimension of collective intelligence and human knowledge. Is this more or less accurate?

RICH: The book features a set of nested claims about the evolution of mind, psychedelics (or, as I prefer and propose, "ecodelics"), and the evolution of the noosphere, but all of the claims can be understood via two claims:

(1) Ecodelics have been an integral part of the human toolkit, so suppressing them is like suppressing music, jokes or other aspects of our humanity. (Here I am following Samorini, Siegel, and others)

and

(2) As integral parts of the human toolkit, ecodelics are best modeled as part of sexual selection - the competition for mates and the leaving of progeny. A careful look at Charles Darwin's writings on sexual selection will show that sexual selection works through the management of attention - what we would now call "information technologies." Think birdsong, bioluminescence (the most widespread communication technology on the planet), poetry. The peacock is managing and focusing peahen attention with his feathers, so what we have called "mind" has been involved in evolution for a very long time. Mandrilles eat iboga before competing for mates.

I work with the notion of the noosphere drawn from V.I. Vernadsky, and propose that we define it as the collective effect of attention of ecosystems. Psychedelics seem to draw our attention to the whole. Ecodelics dwindle the broadcast of the ego – it is not very good at perceiving the whole, just as we can't, unlike a butterfly, taste with our feet. With the ego dwindled, we can become aware of the noosphere - the message of the whole. This has particular importance as we grapple with the effects of human consciousness and its externalization in technology on the biosphere.

JASON: The Jesuit Priest and scientist Pierre Teilhard de Chardin spoke of the Noosphere very early on. A profile in WIRED Magazine article said, "Teilhard imagined a stage of evolution characterized by a complex membrane of information enveloping the globe and fueled by human consciousness".. Teilhard saw the Net coming more than half a century before it arrived. He believed this vast thinking membrane would ultimately coalesce into "the living unity of a single tissue" containing our collective thoughts and experiences." Teilhard wrote, "The living world is constituted by consciousness clothed in flesh and bone." He argued that the primary vehicle for increasing complexity consciousness among living organisms was the nervous system. The informational wiring of a being, he argued - whether of neurons or electronics - gives birth to consciousness. As the diversification of nervous connections increases, evolution is led toward greater consciousness... thoughts?

RICH: Yes, he also called it this process of the evolution of consciousness “Omega

Point". The noosphere imagined here relied on a change in our relationship to consciousness as much to any technological change and was part of evolution's epic quest for self awareness. Here Teilhard is in accord with Julian Huxley (Aldous' brother, a biologist) and Carl Sagan when they observed that"we are a way for the cosmos to know itself." Sri Aurobindo's The Life Divine traces out this evolution of consciousness as well through the greek and Sanskrit traditions as well as Darwinism and (relatively) modern philosophy. All are describing evolution's slow and dynamic quest towards understanding itself.

JASON: Jacques Monod, the Parisian biologist who shared a Nobel Prize in 1965, proposed that "just as the biosphere stands above the world of nonliving matter, so an "abstract kingdom" rises above the biosphere. The denizens of this kingdom? Ideas... how do you respond to this notion?

RICH: Yes, the irony here is that in in his amazing book Chance and Necessity, Monod was part of the rather vicious attacks on Teilhard. Teilhard was attacked by both the Church and mainstream science. Was he on to something? Nobody was more mainstream than Karl Popper, the philosopher of science, and he also talked about the "Three Worlds" of "objects", "mental events" and the "products of the human mind", with the last, 'World Three', corresponding roughly to the noosphere. One significant difference between my use of this map and Popper and others is that I do not limit the effects of attention to human attention. Flowering plants, for example, work on this level of the biosphere that involves insect attention and perception.

JASON: This 'world of ideas' sounds a lot like the Noosphere.. are these two guys saying the same thing here?

RICH: As I mentioned above, I think there are important differences in our use of this map, but all of these authors are pointing to the need to model an aspect of our ecosystems that involves what the plant scientists now call "signaling and behavior" as well as the collective effects of that signaling and behavior. I find that the noosphere is a good metaphor and mneumonic device for doing that and helps us think on a more planetary and informational scale.

Precisely because the noosphere is about differentials of attention, it matters how we model it.

JASON: James Gleick, author of The Information has said that ideas influence evolution:"Ideas have retained some of the properties of organisms [...]Like them, they tend to perpetuate their structure and to breed; they too can fuse, recombine, segregate their content; indeed they too can evolve, and in this evolution selection must surely play an important role."

The American neurophysiologist Roger Sperry also arged that ideas are "just as real"

as the neurons they inhabit: Ideas cause ideas and help evolve new ideas. They interact with each other and neighboring brains, and thanks to global communication, in far distant, foreign brains... to produce in toto a burstwise advance in evolution that is far beyond anything to hit the evolutionary scene yet" What are your thoughts on this?

RICH: First, I like "idea sex" as a meme, and yet I think it is in some way redundant. I am working with Geoffrey Miller's hypothesis (which was also, implicitly, Charles Darwin's) that the human mind evolves as a courtship device. Thinking and story telling are like birdsong – they play a role in how we pair up. Darwin (as well as more contemporary researchers like Nottebohm) focused on the role of song in courtship and neurogenesis. Nottebohm observed juvenile finches singing their brains larger!

Gleick's treatment of the evolution of ideas is strikingly resonant with Plato's dramatization of the effect of writing to "get into the wrong hands" and drift. (See the Phaedrus). I honestly think we are still grappling with the fact that our minds are distributed across a network by technology, and have been in a feedback loop between our brains and technologies at least since the invention of writing. As each new "mutation" occurs in the history of evolution of information technology, the very character of our minds shifts. McCluhan's Understanding Media is instructive here as well (he parsed it as the Global Village), and of course McLuhan was the bard who advised Leary on "Tune in, Turn on, Drop Out" and very influential on Terence McKenna.

One difference between now and Plato's time is the infoquake through which we are all living. This radical increase in quantity no doubt has qualitative effects - it changes what it feels like to think and remember. Plato was working through the effect of one new information technology – writing – whereas today we “upgrade” every six months or so... Teilhard observes the correlative of this evolutionary increase in information - and the sudden thresholds it crosses - in the evolution of complexity and nervous systems. The noosphere is a way of helping us deal with this "phase transition" of consciousness that may well be akin to the phase transition between liquid water and water vapor - a change in degree that effects a change in kind.

Darwin’s Pharmacy suggests that ecodelics were precisely such a mutation in information technology that increased sexually selective fitness through the capacity to process greater amounts of information, and that they are "extraordinarily sensitive to initial rhetorical traditions." What this means is that because ecodelic experiences are so sensitive to the context in which we experience them, they can help make us aware of the effect of language and music etc on our consciousness, and thereby offer an awareness of our ability to effect our own consciousness through our linguistic and creative choices. This can be helpful when trying to browse the infoquake. Many other practices do so as well - meditation is the most well established practice for noticing the effects we can have on our own consciousness, and Sufi dervishes demonstrate this same outcome for dancing. I do the same on my bicycle, riding up a hill and chanting.

One problem I have with much of the discourse of "memes" is that it is often highly reductionistic - it often forgets that ideas have an ecology too, they must be "cultured." Here I would argue that drawing on Lawrence Lessig's work on the commons, the "brain" is a necessary but insufficient "spawning" ground for ideas that becomes actual. The commons is the spawning ground of ideas; brains are pretty obviously social as well as individual. Harvard biologist Richard Lewontin notes that there is no such thing as "self replicating" molecules, since they always require a context to be replicated. This problem goes back at last to computer scientist John Von Neumann's 1947 paper on Self reproducing automata.

I think Terence McKenna described the condition as "language is loose on planet three", and its modern version probably occurs first in the work of writer William S. Burroughs, whose notion of the "word virus" predates the "meme" by at least a decade. Then again this notion of "ideas are real" goes back to cosmologies that begin with the priority of consciousness over matter, as in "In the beginning was the word, and the word was god, and the word was with god." So even Burroughs could get a late pass for his idea.

JASON: Richard Dawkin's definition of a meme is quite powerful: “I think that a new kind of replicator has recently emerged on this very planet, [...] already achieving evolutionary change at a rate that leaves the old gene panting far behind.” [the replicator is] human culture; the vector of transmission is language, and the spawning ground is the brain."

This notion that the "the vector of transmission is language" is very compelling.. It seems to suggest that just as in biological evolution the vector of transmission has been the DNA molecule, in the noosphere, the next stage up, it is LANGUAGE that has become a major player in the transfer of information towards achieving evolutionary change.. Kind of affects how you think about the phrase “words have power”. This insight reminds me of a quote that describes, in words, the subjective ecstasy that a mind feels when upon having a transcendent realization that feels as if it advances evolution:

"A universe of possibilities,

Grey infused by color,

The invisible revealed,

The mundane blown away

by awe"

Is this what you mean by 'the ecstasy of language'?

RICH: Above, I noted that ecodelics can make us aware of the feedback loops between our creative choices – should I eat mushrooms in a box? - Should I eat them with a fox? - and our consciousness. In other words, they can make us aware of the tremendous freedom we have in creating our own experience. Leary called this “internal freedom.” Becoming aware of the practically infinite choices we have to compose our lives, including the words we use to map them, can be overwhelming – we feel in these instances the “vertigo of freedom.” What to do? In ecodelic experience we can perceive the power of our maps. That moment in which we can learn to abide the tremendous creative choice we have, and take responsibility for it, is what I mean by the “ecstasy of language.”

I would point out, though, that for those words you quote to do their work, they have to be read. The language does not do it "on its own" but as a result of the highly focused attention of readers. This may seem trivial but it is often left out, with some serious consequences. And “reading” can mean “follow up with interpretation”. I cracked up when I googled those lines above and found them in a corporate blog about TED, for example. Who knew that neo-romantic poetry was the emerging interface of the global corporate noosphere?

JASON: Is this Anthropoligist Henry Munn’s "language as an ecstatic activity signification" in action? Is ecstatic utterance the universe talking to itself by encoding and transmitting information? Are we the conduits for the songs of the universe?

RICH: This notion of "ecstatic signification" comes out of Munn's experiences with Mazatec curandera such as Maria Sabina in Oaxaco, Mexico. Maria Sabina is now recognized as a major poet. “Ecstasy” comes etymologically from the experience of “being beside ourselves.” The mathematician Brian Rotman has written extensively on this idea that we can experience “parallel” rather than “serial” reality. If we aren't the conduit for the songs of the universe, then who is? I would add, of course, that so too are the Blue Whales, and the cardinals, and the grasshoppers. Mice sing courtship songs too, and Siegel observed a muskrat in mourning who ate Hawaian Woodrose seeds as a part of it Those seeds have LSA in them, a potent ecodelic. I know why the grieving mouse sings!

JASON: How do psychedelics and marijuana or other natural ecstatic states expand our communion with the dimension of the noosphere? Are these drugs like "modems" that plug us in?

RICH: We really need much more research to answer this question, but I think a more useful metaphor than “modems that plug us in” would be “knobs that allow us to turn down the self and tune in the Self.” Great chemists such as Alexander Shulgin and David Nichols have explored the “structure/function” relationship of psychedelic compounds, and found that you can't reliably predict the effect of a compound from its

form. You have to test it. So in the book I take the perspective of “first person science” - seeking answers from my own subjective experience as well as the first person reports of others. The 2006 Johns Hopkins study on psilocybin (Psilocybin can occasion mystical-type experiences having substantial and sustained personal meaning and spiritual significance) shows pretty definitively that experiments from 1962 (The Good Friday Experiment) were correct to associate psychedelics with “mystic experience.” Within the vast history of mystical experience, a pattern seems to emerge: Perceiving and experiencing the immense power of processes external to our selves, we can experience what early researcher Walter Pahnke (among others) described as “ego death”:

“During the mystical experience when the experiencer has lost individuality and become part of a Reality Greater-than-self, paradoxically, something of the self remains to record the experience in memory. One of the greatest fears about human death is that personal individual existence and memory will be gone forever. Yet having passed through psychological ego death in the mystical experience, a person still preserves enough self-consciousness so that at least part of the individual memory is not lost. (Pahnke, p. 17) ”

If our experiences are highly tuneable by the language we use to describe them, we might rethink the phrase “ego death” as being rather easily misunderstood. I suppose that could be a virtue. Now what I call the “ecodelic experience” is less about “losing the self” than “tuning to the ecoysystem.” This is what Darwin was doing when, at the end of the Origin of Species, he “contemplated” the interconnection of all living things:

“It is interesting to contemplate an entangled bank, clothed with many plants of many kinds, with birds singing on the bushes, with various insects flitting about, and with worms crawling through the damp earth, and to reflect that these elaborately constructed forms, so different from each other, and dependent on each other in so complex a manner, have all been produced by laws acting around us”

How did Darwin perceive this interconnection? He didn't simply figure it out intellectually – he perceived it. And in order to perceive it, he had to experience something like the ecological contextualization of his own life. He perceived not only THAT he was interconnected with his ecosystem (itself veritably “made” of these interconnections”), but he perceived the SCALE of his being in relation to the scale of the ecosystem. Most of us feel this when we look up at a clear star filled sky at night if we are fortunate enough to find ourselves outside of the light pollution of urban areas.

The best model I know of for mapping that scalar difference between humans and their ecosystems happens to be the psychologist Roland Fischer's model of what he called the “hallucination/perception continuum.” Fischer, who studied the effect of psilocybin (a compound of found in “magic mushrooms” and the compound tested in the aforementioned Good Friday experiment), described a continuum between hallucination

and ordinary perception that is defined by the sensory/motor ratio – the ratio between the amount of sensory information we receive and our ability to act physically to respond to or verify it. When sensory input increases and there is no corresponding increasing in motor capacities, hallucination is the result. Note in this sense for Fischer the hallucination is a “real” perception of our breakdown in ordinary modeling tactics. This has interesting resonances with Kant's theory of the sublime, and in ego death we may see the experience of this mismatch between our sensory input and our ability to organize it. Maybe that is why reality seems to be asymptotically approaching a psychedelic world view – consciousness shifts in response to the vast increase of information, changing in kind on the same scale as the psychedelic “turn on.”

Needless to say, more research is needed.

JASON: Buckminster Fuller described humans as "pattern integrities", Ray Kurzweil says we are "patterns of information". James Gleick's new book, The Information, says that"information may be more primary than matter".. what do you make of this? And if we indeed are complex patterns, how can we hack the limitations of biology and entropy to preserve our pattern integrity indefinitely?

RICH: First: It is important to remember that the history of the concept and tools of“information” is full of blindspots – we seem to be constantly tempted to underestimate the complexity of any given system needed to make any bit of information meaningful or useful. Caitlin, Kolmogorov Stephan Wolfram and John Von Neumann each came independently to the conclusion that information is only meaningful when it is “run” - you can't predict the outcome of even many trivial programs without running the program. So to say that “information may be more primary than matter” we have to remember that “information” does not mean “free from constraints.” Thermodynamics – including entropy – remains. Molecular and informatic reductionism – the view that you can best understand the nature of a biological system by cutting it up into the most significant bits, e.g. DNA – is a powerful model that enables us to do things with biological systems that we never could before. Artist Eduardo Kac collaborated with a French scientist to make a bioluminescent bunny. That's new! But sometimes it is so powerful that we forget its limitations. The history of the human genome project illustrates this well. AND the human genome is incredibly interesting. It's just not the immortality hack many thought it would be.

In this sense biology is not a limitation to be “transcended” (Kurzweil), but a medium of exploration whose constraints are interesting and sublime. On this scale of ecosystems, “death” is not a “limitation” but an attribute of a highly dynamic interactive system. Death is an attribute of life. Viewing biology as a “limitation” may not be the best way to become healthy and thriving beings.

Now, that said, looking at our characteristics as “patterns of information” can be immensely powerful, and I work with it at the level of consciousness as well as life.

Thinking of ourselves as “dynamic patterns of multiply layered and interconnected self transforming information” is just as accurate of a description of human beings as “meaningless noisy monkeys who think they see god”, and is likely to have much better effects. A nice emphasis on this “pattern” rather than the bits that make it up can be found in Carl Sagan's “The beauty of a living thing is not the atoms that go into it, but the way those atoms are put together.”

JASON: Richard Dawkins declared in 1986 that "What lies at the heart of every living thing is not a fire, not warm breath, not a ‘spark of life.’ It is information, words, instructions, [...] If you want to understand life,” Dawkins wrote, “don’t think about vibrant, throbbing gels and oozes, think about information technology.” How would you explain the relationship between information technology and the reality of the physical world?

RICH: Again, information is indeed physical. We can treat a sequence of information as abstraction and take it out of its context – like a quotation or a jellyfish gene spliced into a rabbit to enable it to glow. We can compress information, dwindling the resources it takes to store or process it. But “Information, words, instructions” all require physical instantiation to even be “information, words, instructions.” Researcher Rolf Landauer showed back in the 1960s that even erasure is physical. So I actually think throbbing gels and oozes and slime mold and bacteria eating away at the garbage gyre are very important when we wish to “understand” life. I actually think Dawkins gets it wrong here – he is talking about “modeling” life, not “understanding” it. Erwin Schrodinger, the originator of the idea of the genetic code and therefore the beginning of the “informatic” tradition of biology that Dawkins speaks in here, knew this very well and insisted on the importance of first person experience for understanding.

So while I find these metaphors useful, that is exactly what they are: metaphors. There is a very long history to the attempt to model words and action together: Again, John 1:1 is closer to Dawkin's position here than he may be comfortable with: “In the Beginning was the word, and the word was god, and the word was with god” is a way of working with this capacity of language to bring phenomena into being. It is really only because we habitually think of language as “mere words” that we continually forget that they are a manifestation of a physical system and that they have very actual effects not limited to the physics of their utterance – the words “I love you” can have an effect much greater than the amount of energy necessary to utter them. Our experiences are highly tuneable by the language we use to describe them.

JASON: Talk about the mycelial archetype. Author Paul Stamet compares the pattern of the mushroom mycelium with the overlapping information-sharing systems that comprise the Internet, with the networked neurons in the brain, and with a computer model of dark matter in the universe. All share this densely intertwingled filamental structure.... what is the connection? what is the pattern that connects here?

RICH: First things first: Paul Stamets is a genius and we should listen to his world view carefully and learn from it. Along with Lynn Margulis and Dorion Sagan, whose work I borrow from extensively in Darwin's Pharmacy (as well as many others), Stamets is asking us to contemplate and act on the massive interconnection between all forms of life. This is a shift in worldview that is comparable to the Copernican shift from a geocentric cosmos – it is a shift toward interconnection and consciousness of interconnection. And I like how you weave in Gregory Bateson's phrase “the pattern that connects” here, because Bateson (whose father, William Bateson, was one of the founders of modern genetics) continuously pointed toward the need to develop ways of perceiving the whole. The “mycelial archetype”, as you call it, is a reliable and rather exciting way to recall the whole: What we call “mushrooms” are really the fruiting bodies of an extensive network of cross connection.

That fuzz growing in an open can of tomato paste in your fridge – mycelium. So even opening our refrigerator – should we be lucky enough to have one, with food in it - can remind us that what we take to be reality is is an actuality only appearance – a sliver, albeit a significant one for our world, of the whole. That fuzz can remind us that (1) appearance and reality or not the same thing at all and (2) beyond appearance there is a massive interconnection in unity. This can help remind us who and what we really are.

With the word 'archetype”, you of course invoke the psychologist Carl Jung who saw archetypes as templates for understanding, ways of organizing our story of the world. There are many archetypes – the Hero, the Mother, the Trickster, the sage. They are very powerful because they help stitch together what can seem to be a chaotic world – that is both their strength and their weakness. It is a weakness because most of the time we are operating within an archetype and we don't even know it, and we don't know therefore that we can change our archetype. By experimenting with a different archetype – imagining, for example, the world through the lens of a 2400 year old organism that is mostly invisible to a very short lived and recent species becoming aware of its creative responsibility in altering the planet – is incredibly powerful, and in Darwin's Pharmacy I am trying to offer a way to experiment with the idea of plant planet as well as “mycelium” archetype. One powerful aspect of the treating the mycelium as our archetype as humanity is that it is “distributed” - it does not operate via a center of control but through cross connection “distributed” over a space. Anything we can do to remember both our individuation and our interconnection is timely – we experience the world as individuals, and our task is to discover our nature within the larger scale reality of our dense ecological interconnection. In the book I point to the Upanishad's “Tat Tvam Asi” as a way of comprehending how we can both be totally individual and an aspect of the whole.

JASON: You've talked about the ecstasy of language and the role of rhetoric in shaping reality.. These notions echo some of Terence McKenna's ideas about language... He calls language an"ecstatic activity of signification"... and says that for the “inspired one, it is almost as if existence is uttering itself through him”... Can you expand on this? How

does language create reality??

RICH: It's incredibly fun and insightful to echo Terence McKenna. He's really in this shamanic bard tradition that goes all the back to Empedocles at least, and is distributed widely across the planet. He's got a bit of Whitman in him with his affirmation of the erotic aspects of enlightenment. He was Emerson speaking to a Lyceum crowd remixed through rave culture. Leary and McKenna were resonating with the irish bard archetype. And Terrence was echoing Henry Munn, who was echoing Maria Sabina, whose chants and poetics can make her seem like Echo herself – a mythological story teller and poet (literally “sound”) who so transfixes Hera (Zeus's wife) that Zeus can consort with nymphs. Everywhere we look there are allegories of sexual selection's role in the evolution of poetic & shamanic language!

And Terrence embodies the spirit of eloquence, helping translate our new technological realities (e.g. virtual reality, a fractal view of nature, radical ecology) and the states of mind that were likely to accompany them. Merlin Donald writes of the effects of “external symbolic storage” on human culture – as a onetime student of McLuhan's, Donald was following up on Plato's insights I mentioned above that writing changes how we think, and therefore, who we are. Human culture is going through a fantastic “reality crisis” wherein we discover the creative role we play in nature. Our role in global climate change – not to mention our role in dwindling biodiversity – is the “shadow” side of our increasing awareness that humans have a radical creative responsibility for their individual and collective lives. And our lives are inseparable from the ecosystems with which we are enmeshed. THAT is reality. To the extent that we can gather and focus our attention on retuning our relation towards ecosystems in crisis, language can indeed shape reality. We'll get the future we imagine, not necessarily the one we deserve.

JASON: Robert Anton Wilson spoke about "reality tunnels".... These 'constructs' can limit our perspectives and perception of reality, they can trap us, belittle us, enslave us, make us miserable or set us free... How can we hack our reality tunnel? Is it possible to use rhetoric and/or psychedelics to "reprogram" our reality tunnel?

RICH: We do nothing but program and reprogram our reality tunnels! Seriously, the Japanese reactor crisis follows on the BP oil spill as a reminder that we are deeply interconnected on the level of infrastructure – technology is now planetary in scale, so what happens here effects somebody, sometimes Everybody, there. These infrastructures – our food sheds, our energy grid, our global media - run on networks, protocols, global standards, agreements: language, software, images, databases and their mycelial networks. The historian Michel Foucault called these “discourses”, but we need to connect these discourses to the nonhuman networks with which they are enmeshed, and globalization has been in part about connecting discourses to each other across the planet. Ebola ends up in Virginia, Starbucks in Hong Kong. This has been true for a long time, of course – Mutual Assured Destruction was planetary in

scale and required a communication and control structure linking, for example, a Trident submarine under the arctic ice sheet – remember that? - to a putatively civilian political structure Eisenhower rightly warned us about: the military industrial complex. The moon missions illustrate this principle as well – we remember what was said as much as what else was done, and what was said, for a while, seem to induce a sense of truly radical and planetary possibility.

So if we think of words as a description of reality rather than part of the infrastructure of reality, we miss out on the way different linguistic patterns act as catalysts for different realities. I call these “rhetorical softwares”. In my first two books, before I really knew about Wilson's work or had worked through Korzybski with any intensity, I called these “rhetorical softwares.”

Now the first layer of our reality tunnel is our implicit sense of self – this is the only empirical reality any of us experiences – what we subjectively experience. RAW was a brilliant analyst of the ways experience is shaped by the language we use to describe it. One of my favorite examples from his work is his observation that in English, “reality” is a noun, so we start to treat it as a “thing”, when in fact reality, this cosmos, is also quite well mapped as an action – a dynamic unfolding for 13.7 billion years. That is a pretty big mismatch between language and reality, and can give us a sense that reality is inert, dead, lifeless, “concrete”, and thus not subject to change. By experimenting with what Wilson, following scientist John Lilly, called “metaprograms”, we can change the maps that shape the reality we inhabit. Ecodelics seem to help induce a map of self that includes rather than excludes the scale of our ecosystemic interconnection, Pahnke's Reality “Greater-than-self”. I should add that I am writing about this because this was something I consistently observed in m own experiences. When the book went to press, I learned that Arne Naess, the founder of Deep Ecology, was profoundly influenced by his experiences of LSD. Howard Odum, another ecologist, tried to help metaprogram us into a more dynamic and interconnected sense of ecology and thermodynamics with his language of “energese”.

TheUnhivedMind - June 28, 2011 06:53 PM (GMT)

JASON: The film Inception explored the notion that our inner world can be a vivid, experiential dimension, and that we can hack it, and change our reality... what do you make of this?

RICH: The whole contemplative tradition insists on this dynamic nature of consciousness. “Inner” and “outer” are models for aspects of reality – words that map the world only imperfectly. Our “inner world” - subjective experience – is all we ever experience, so if we change it obviously we will see a change in what we label “external” reality it is of course part of and not separable from. One of the maps we should experiment with, in my view, is this “inner” and “outer” one – this is why one of

my aliases is “mobius.” A mobius strip helps makes clear that “inside” and “outside” are... labels. As you run your finger along a mobius strip, the “inside” becomes “outside” and the “outside” becomes “inside.”.

JASON: Can we give put inceptions out into the world?

RICH: We do nothing but! And, it is crucial to add, so too does the rest of our ecosystem. Bacteria engage in quorum sensing, begin to glow, and induce other bacteria to glow – this puts their inceptions into the world. Thanks to the work of scientists like Anthony Trewavas, we know that plants engage in signaling behavior between and across species and even kingdoms: orchids “throw” images of female wasps into the world, attracting male wasps, root cells map the best path through the soil. The whole blooming confusion of life is signaling, mapping and informing itself into the world. The etymology of “inception” is “to begin, take in hand” - our models and maps are like imagined handholds on a dynamic reality.

JASON: What is the relationship between psychedelics and information technology? How are ipods, computers and the internet related to LSD?

RICH: This book is part of a trilogy on the history of information in the life sciences. So, first: psychedelics and biology. It turns out that molecular biology and psychedelics were important contexts for each other. I first started noticing this when I found that many people who had taken LSD were talking about their experiences in the language of molecular biology – accessing their DNA and so forth. When I learned that psychedelic experience was very sensitive to“set and setting” - the mindset and context of their use - I wanted to find out how this language of molecular biology was effecting people's experiences of the compounds. In other words, how did the language affect something supposedly caused by chemistry?

Tracking the language through thousands of pages, I found that both the discourse of psychedelics and molecular biology were part of the “informatic vision” that was restructuring the life sciences as well as the world, and found common patterns of language in the work of Timothy Leary (the Harvard psychologist) and Francis Crick (who won the Nobel prize with James Watson and Maurice Wilkins for determining the structure of DNA in 1954), so in 2002 I published an article describing the common “language of information” spoken by Leary and Crick. I had no idea that Crick had apparently been using LSD when he was figuring out the structure of DNA. Yes, that blew my mind when it came out in 2004. I feel like I read that between the lines of Crick's papers, which gave me confidence to write the rest of the book about the feedback between psychedelics and the world we inhabit.

The paper did hone in on the role that LSD played in the invention of PCR (polymerase chain reaction) – Kary Mullis, who won the Nobel prize for the invention of this method of making copies of a sequence of DNA, talked openly of the role that LSD played in the

process of invention. Chapter 4 of the book looks to use of LSD in “creative problem solving” studies of the 1960s. These studies – hard to imagine now, 39 years into the War on Drugs, but we can Change the Archetype - suggest that used with care, psychedelics can be part of effective training in remembering how to discern the difference between words and things, maps and territories. In short, this research suggested that psychedelics were useful for seeing the limitations of words as well as their power, perhaps occasioned by the experience of the linguistic feedback loops between language and psychedelic experiences that themselves could never be satisfactorily described in language. I argue that Mullis had a different conception of information than mainstream molecular biology – a pragmatic concept steeped in what you can do with words rather than in what they mean. Mullis seems to have thought of information as “algorithms” - recipes of code, while the mainsteam view was thinking of it as implicitly semantically, as “words with meaning.”

Ipods, Internet, etc: Well, in some cases there are direct connections. Perhaps Bill Joy said it best when he said that there was a reason that LSD and Unix were both from Berkeley. What the Doormouse Said by John Markoff came out after I wrote my first paper on Mullis and I was working on the book, and it was really confirmation of a lot of what I seeing indicated by my conceptual model of what is going on, which is as follows: Sexual selection is a good way to model the evolution of information technology. It yields bioluminescence – the most common communication strategy on the planet – chirping insects, singing birds, Peacocks fanning their feathers, singing whales, speaking humans, and humans with internet access. These are all techniques of information production, transformation or evaluation. I am persuaded by Geoffrey Miller's update of Charles Darwin's argument that language and mind are sexually selected traits , selected not simply for survival or even the representation of fitness, but for their sexiness. Leary: “Intelligence is the greatest aphrodisiac.” I offer the hypothesis that psychedelics enter the human toolkit as “eloquence adjuncts” - tools and techniques for increasing the efficacy of language to seemingly create reality – different patterns of language (and other attributes of set and setting) literally causes different experiences. The informatic revolution is about applying this ability to create reality with different “codes” to the machine interface. Perhaps this is one of the reason people like Mitch Kapor (a pioneer of computer spreadsheets), Stewart Brand (founder of a pre-internet computer commons known as the Well) and Bob Wallace (one of the original Microsoft seven and an early proponent of shareware), Mark Pesce were or are all psychonauts.

JASON: Cyborg Anthropologist Amber Case has written about Techno-social wormholes.. the instant compression of time and space created every time we make a telephone call... What do you make of this compression of time and space made possible by the engineering "magic" of technology?

RICH: It's funny the role that the telephone call plays as an example in the history of our attempts to model the effects of information technologies. William Gibson famously

defined cyberspace as the place where a telephone call takes place. (Gibson's coinage of the term “cyberspace” is a good example of an “inception”) Avital Ronell wrote about Nietzsche's telephone call to the beyond and interprets the history of philosophy according to a “telephonic logic”. When I was a child my father once threw our telephone into the atlantic ocean – that was what he made of the magic of that technology, at least in one moment of anger. This was back in the day when Bell owned your phone and there was some explaining to do. This magic of compression has other effects – my dad got phone calls all day at work, so when was at home he wanted to turn it off. The only way he knew to turn it off was to rip it out of the wall – there was no modular plug, just a wire into the wall - and throw it into the ocean.

So there is more than compression going on here: Deleuze and Guattari, along with the computer scientist Pierre Levy after them, call it “deterritorialization”. The differences between “here” and “there” are being constantly renegotiated as our technologies of interaction develop.Globalization is the collective effect of these deterritorializations and reterritorializations at any given moment.

And the wormhole example is instructive: the forces that enable such collapse of space and time as the possibility of time travel would likely tear us to smithereens. The tensions and torsions of this deterritorialization at part of what is at play in the Wikileaks revolutions, this compression of time and space offers promise for distributed governance as well as turbulence. Time travel through wormholes, by the way, is another example of an inception – Carl Sagan was looking for a reasonable way to transport his fictional aliens in Contact, called Cal Tech physicist Skip Thorne for help, and Thorne came up with the idea.

JASON: The film Vanilla Sky explored the notion of a scientifically-induced "lucid dream" where we can live forever and our world is built out of our memories and "sculpted moment to moment and lived with the romantic abandon of a summer day or the feeling of a great movie or a pop song you always loved". Can we sculpt 'real' reality as if it were a "lucid dream"?

RICH: Some traditions model reality as a lucid dream. The Diamond Sutra tells us that to be enlightened we must view reality as “a phantom, a dew drop, a bubble.” This does not mean, of course, that reality does not exist, only that appearance has no more persistence than a dream and that what we call “reality” is our map of reality. When we wake up, the dream that had been so compelling is seen to be what it was: a dream, nothing more or less. Dreams do not lack reality – they are real patterns of information. They just aren't what we usually think they are. Ditto for “ordinary” reality. Lucid dreaming has been practiced by multiple traditions for a long time – we can no doubt learn new ways of doing so. In the meantime, by recognizing and acting according to the practice of looking beyond appearances, we can find perhaps a smidgeon more creative freedom to manifest our intentions in reality.

JASON: Paola Antonelli, design curator of MoMa, has written about Existenz Maximum, the ability of portable music devices like the ipod to create"customized realities", imposing a soundtrack on the movie of our own life. This sounds empowering and godlike- can you expand on this notion? How is technology helping us design every aspect of both our external reality as well as our internal, psychological reality?

RICH: Well, the Upanishads and the Book of Luke both suggest that we “get our inner Creator on”, the former by suggesting that “Tat Tvam Asi” - there is an aspect of you that is connected to Everything, and the latter by recommending that we look not here or there for the Kingdom of God, but “within.” So if this sounds “god like”, it is part of a long and persistent tradition. I personally find the phrase “customized realities” redundant given the role of our always unique programs and metaprograms. So what we need to focus on his: to which aspect of ourselves do we wish to give this creative power? These customized realities could be enpowering and god like for corporations that own the material, or they could enpower our planetary aspect that unites all of us, and everything in between. It is, as always, the challenge of the magus and the artist to decide how we want to customize reality once we know that we can.

JASON: The Imaginary Foundation says that "to understand is to perceive patterns"... Some advocates of psychedelic therapy have said that certain chemicals heighten our perception of patterns..They help! us "see more". What exactly are they helping us understand?

RICH: Understanding! One of the interesting bits of knowledge that I found in my research was some evidence that psychonauts scored better on the Witkin Embedded Figure test, a putative measure of a human subject’s ability to “distinguish a simple geometrical figure embedded in a complex colored figure.” When we perceive the part within the whole, we can suddenly get context, understanding.

JASON SILVA: An article pointing to the use of psychedelics as catalysts for breakthrough innovation in silicon valley says that users ..."employ these cognitive catalysts, de-condition their thinking periodically and come up with the really big connectivity ideas arrived at wholly outside the linear steps of argument. These are the gestalt-perceiving, asterism-forming “aha’s!” that connect the dots and light up the sky with a new archetypal pattern."

This seems to echo what other intellectuals have been saying for ages. You referred toCannabis as "an assassin of referentiality, inducing a butterfly effect in thought. Cannabis induces a parataxis wherein sentences resonate together and summon coherence in the bardos between one statement and another."

Baudelaire also wrote about cannabis as inducing an artificial paradise of thought:

“...It sometimes happens that people completely unsuited for word-play will improvise

an endless string of puns and wholly improbable idea relationships fit to outdo the ablest masters of this preposterous craft. [...and eventually]... Every philosophical problem is resolved. Every contradiction is reconciled. Man has surpassed the gods."

Anthropologist Henry Munn wrote that:

"Intoxicated by the mushrooms, the fluency, the ease, the aptness of expression one becomes capable of are such that one is astounded by the words that issue forth... At times... the words leap to mind, one after another, of themselves without having to be searched for: a phenomenon similar to the automatic dictation of the surrealists except that here the flow of consciousness, rather than being disconnected, tends to be coherent: a rational enunciation of meanings. The spontaneity they liberate is not only perceptual, but linguistic, the spontaneity of speech, of fervent, lucid discourse, astonishing. [...] For the inspired one, it is as if existence were uttering itself through him [...]

Can you expand a bit on how certain ecodelics (as well as marijuana) can help us de-condition our thinking, have creative breakthroughs as well as intellectual catharsis? How is it that "intoxication" could, under certain conditions, actually improve our cognition and creativity and contribute to the collective intelligence of the species?

RICH: I would point, again, to Pahnke's description of ego death. This is by definition an experience when our maps of the world are humbled. In the breakdown of our ordinary worldview - such as when a (now formerly) secular being such as myself finds himself feeling unmistakably sacred - we get a glimpse of reality without our usual filters. It is just not possible to use the old maps, so we get even an involuntary glimpse of reality. This is very close to the Buddhist practice of exhausting linguistic reference through chanting or Koans - suddenly we see the world through something besides our verbal mind. Ramana Maharshi says that in the silence of the ego we perceive reality - reality IS the breakdown of the ego. Aldous Huxley, who was an extraordinarily adroit and eloquent writer with knowledge of increasingly rare breadth and depth, pointed to a quote by William Blake when trying to sum up his experience: the doors of perception were cleansed. This is a humble act, if you think about it: Huxley, faced with the beauty and grandeur of his mescaline experience, offers the equivalent of 'What he said!". Huxley also said that psychedelics offered a respite from "the throttling embrace of the self", suggesting that we see the world without the usual filters of our egoic self.

The breakdown of our worldview can be very distressing as well as liberating, of course, and this is why it is crucial now to think about the best conditions under which ecodelics (a category that includes cannabis) should be used by human beings. First of all, that context should not be criminalized - imagine the effect of that "programming". Now that medical marijuana is thankfully being legally dispensed in states across the US and around the world, we should remember how important the context of use is: patients should think about the best possible and most healthful contexts and programming for

the use of their medicine. And if you look carefully at the studies by pioneers such as Myron Stolaroff and Willis Harman that you reference, as I do in the book, you will see that great care was taken to compose the best contexts for their studies. Subjects, for example, were told not to think about personal problems but to focus on their work at hand, and, astonishingly enough, it seems to have worked. These are very sensitive technologies and we really need much more research to explore their best use. This means more than studying their chemical function - it means studying the complex experiences human beings have with them. Step one has to be accepting that ecodelics are and always have been an integral part of human culture for some subset of the population.

JASON: What do you make of the stoned-ape hypothesis, proposed by Terrence McKenna, that self-reflective consciousness was kick-started by psychedelic chemicals?

RICH: Well, I like it very much as a catalyst for discussing the the co-evolution of mind. It seems to really freak people out that something in our diet – rather than in, say, our DNA – kick started consciousness, so that helps highlight our attachment to this idea that we are somehow separate from the ecosystem out of which we have only very recently evolved. Of course it resonates with anybody who has ever had a psychedelic experience precisely because of the sensitivity to rhetorical conditions I discuss above: we can observe the creative role that language plays in our experience, triggering an “aha” moment about the power of language. And in this instance we find ourselves becoming examples of precisely stoned primates having insights. The hypothesis, like my own (the ecodelic hypothesis) has the strength of being (somewhat) verifiable through first person experience. One of the things I want to do is collect examples of people coming up with this theory independently. The Beat poet Michael Corso had a routine focusing on morning glory seeds triggering human consciousness in the 1970s, for example, although he may have been remixing McKenna.

And there has been very strong work on animal use of psychedelics by researchers such as Samorini and Siegel, so it isn't even controversial to suggest that ecodelic use is part of animal culture. Mandrilles have been observed using an ecodelic root, Iboga, in courtship. My argument is that the best model for ecodelic use in human culture is as “eloquence adjuncts” - they can have a very interesting and direct effect on our use of language, just as the bow and arrow has an effect on our ability to launch projectiles with precision and velocity. Think of how many of us use coffee spur the writing process. So Darwin's, Pharmacy suggests ecodelics kickstart eloquence – the capacity to 'speak out” and focus attention on the patterns within that speaking and generate new patterns. For a “symbolic species” that courts not only by butting heads (what Darwin called the “law of battle”) but through what Darwin called “charm” - birdsong, discourse, poetry – the use of ecodelics could very well be the difference between leaving progeny and not leaving progeny. Consciousness – the awareness of awareness – would be an emergent phenomenon that develops out of this intensive

competition for eloquence. Tweet that! Obviously this is just a schematic model, with much more in the book. More research is needed!

JASON: Kevin Kelly refers to technological evolution as following the momentum begun at the big bang- he has stated:

"...there is a continuum, a connection back all the way to the Big Bang with these self-organizing systems that make the galaxies, stars, and life, and now is producing technology in the same way. The energies flowing through these things are, interestingly, becoming more and more dense. If you take the amount of energy that flows through one gram per second in a galaxy, it is increased when it goes through a star, and it is actually increased in life...We don't realize this. We think of the sun as being a hugely immense amount of energy. Yet the amount of energy running through a sunflower per gram per second of the livelihood, is actually greater than in the sun. Actually, it's so dense that when it's multiplied out, the sunflower actually has a higher amount of energy flowing through it. "..Animals have even higher energy usage than the plant, and a jet engine has even higher than an animal. The most energy-dense thing that we know about in the entire universe is the computer chip in your computer. It is sending more energy per gram per second through that than anything we know. In fact, if it was to send it through any faster, it would melt or explode. It is so energy-dense that it is actually at the edge of explosion."... can you comment on the implications of what he's saying here?

RICH: I think maps of "continuity" are crucial and urgently needed. We can model the world as either "discrete" - made up of parts - or "continuous" - composing a whole - to powerful effect. Both are in this sense true. This is not "relativism" but a corollary of that creative freedom to choose our models that seems to be an attribute of consciousness. The mechanistic worldview extracts, separates and reconnects raw materials, labor and energy in ways that produce astonishing order as well as disorder (entropy). By mapping the world as discrete – such as the difference between one second and another – and uniform – to a clock, there is no difference between one second and another – we have transformed the planet. Consciousness informed by discrete maps of reality has been an actual geological force in a tiny sliver of time. In so doing, we have have transformed the biosphere. So you can see just how actual this relation between consciousness, its maps, and earthly reality is. This is why Vernadksy, a geophysicist, thought we needed a new term for the way consciousness functions as a geological force: noosphere.

These discrete maps of reality are so powerful that we forget that they are maps. Now if the world can be cut up into parts, it is only because it forms a unity. A Sufi author commented that the unity of the world was both the most obvious and obscure fact. It is obvious because our own lives and the world we inhabit can be seen to continue without any experienced interruption – neither the world nor our lives truly stops and starts. This unity can be obscure because in a literal sense we can't perceive it with our

senses – this unity can only be “perceived” by our minds. We are so effective as separate beings that we forget the whole for the part. The world is more than a collection of parts, and we can quote Carl Sagan: “The beauty of a living thing is not the atoms that go into it, but the way those atoms are put together.” Equally beautiful is what Sagan follows up with: “The cosmos is also within us. We are made of star stuff.” Perhaps this is why models such as Kelly's feel so powerful: reminding ourselves that there is a continuity between the Big Bang and ourselves means we are an aspect of something unfathomably grand, beautiful, complex and unbroken. This is perhaps the “grandeur” Darwin was discussing. And when we experience that grandeur it can help us think and act in aways appropriate to a geological force.

I am not sure about the claims for energy that Kelly is making – I would have to see the context and the source of his data – but I do know that when it comes to thermodynamics, what he is saying rings true. We are dissipative structures far from equilibrium, meaning that we fulfill the laws of thermodynamics. Even though biological systems such as ourselves are incredibly orderly – and we export that order through our maps onto and into the world – we also yield more entropy than our absence. Living systems, according to an emerging paradigm of Stanley Salthe, Rob Swenson, the aforementioned Margulis and Sagan, Eric Schneider, James J. kay and others, maximize entropy, and the universe is seeking to dissipate ever greater amounts of entropy. Order is a way to dissipate yet more energy. We're thermodynamic beings, so we are always on the prowl for new ways to dissipate energy as heat and create uncertainty (entropy), and consciousness helps us find ever new ways to do so. (In case you are wondering, Consciousness is the organized effort to model reality that yields ever increasing spirals of uncertainty in Deep Time. But you knew that.) It is perhaps in this sense that, again following Carl Sagan, “ We are a way for the cosmos to know itself.” That is pretty great map of continuity.

What I don't understand in Kelly's work, and I need to look at with more attention, is the discontinuity he posits between biology and technology. In my view our maps have made us think of technology as different in kind from biology, but the global mycelial web of fungi suggests otherwise, and our current view of technology seems to intensify this sense of separation even as we get interconnected through technology. I prefer Noosphere to what Kelly calls the Technium because it reminds us of the ways we are biologically interconnected with our technosocial realities. Noosphere sprouts from biosphere.

JASON: There is this notion of increasing complexity... Yet in a universe where entropy destroys almost everything, here we are, the cutting edge of evolution, taking the reigns and accelerating this emergent complexity.. Kurzweil says that this makes us "very important”: “...It turns out that we are central, after all. Our ability to create models--virtual realities--in our brains, combined with ou modest-looking thumbs, has been sufficient to usher in another form of evolution: technology. That development enabled the persistence of the accelerating pace that started with biological evolution. It will

continue until the entire universe is at our fingertips." What do you think?

RICH: Well, I think from my remarks already you can see that I agree with Kurzweil here and can only suggest that it is for this very reason that we must be very creative, careful and cunning with our models. Do we model the technologies that we are developing according to the effects they will have on the planetary whole? Only rarely, though this is what we are trying to do at the Penn State Center for Nanofutures, as are lots of people involved in Science, Technology and Society as well as engineering education. When we develop technologies - and that is the way psychedelics arrived in modern culture, as technologies - we must model their effects not only on the individuals who use them, but on the whole of our ecosystem and planetary society. If our technological models are based on the premise that this is a dead planet – and most of them very much are, one is called all kinds of names if you suggest otherwise - animist, vitalist, Gaian intelligence agent, names I wear with glee – then we will end up with a asymptotically dead planet. Consciousness will, of course, like the Terminator, "Be Back" should we perish, but let us hope that it learns to experiment better with its maps and learns to notice reality just a little bit more. I am actually an optimist on this front and think that a widespread "aha" moment is occurring where there is a collective recognition of the feedback loops that make up our technological & biological evolution.

Again, I don't know why Kurzweil seems to think that technological evolution is discontinuous with biological evolution – technology is nested within the network of "wetwares" that make it work, and our wetwares are increasingly interconnected with our technological infrastructure, as the meltdowns in Japan demonstrate along with the dependence of many of us – we who are more bacterial than human by dry weight - upon a network of pharmaceuticals and electricity for continued life. The E. coli outbreak in Europe is another case in point – our biological reality is linked with the technological reality of supply chain management. Technological evolution is biological evolution enabled by the maps of reality forged by consciousness.

JASON: Andrew Leonard beautiful puts it like this: "...Computers, like psychedelic drugs, are tools for mind expansion, for revelation and for personal discovery. And to anyone who has experienced a drug-induced epiphany, there may indeed be a cosmic hyperlink there: fire up your laptop, connect wirelessly to the Internet, and search for your dreams with Google: the power and the glory of the computing universe that exists now ... does pulsate with a destabilizing, revelatory psychic power." Can you comment on this?

RICH: Albert Hoffmann accidentally discovered the effects of LSD-25 in 1943 while preparing a batch of the compound at Sandoz Pharmaceuticals in Basel, Switzerland. His account of the experience fits squarely within the contemplative mystic tradition even while Hoffmann worked in a modern technological context. Part of the impact of LSD in particular on our cultures was no doubt due to the fact that it came out of modern chemistry and its technological methods and contexts. Erik Davis talks about

“techgnosis” - the continued effervescence of “magical” traditions through technology. Whereas technology for many promised the “disenchantment” of the world –the rationalization of this world of the contemplative spirit as everything became a Machine – here was mystical contemplative experience manifesting itself directly within what sociologist Max Weber called the “iron cage of modernity”, Gaia bubbling up through technological “Babylon.”

Now many contemplatives have sought to share their experiences through writing – pages and pages of it. As we interconnect through information technology, we perhaps have the opportunity to repeat this enchanted contemplative experience of radical interconnection on another scale, and through other means. Just say Yes to the Noosphere!

TheUnhivedMind - November 6, 2010 03:32 AM (GMT)

World’s Most Precise Clocks Could Reveal Universe Is a Hologram

By Dave Mosher October 28, 2010 | 7:11 pm | Categories: Physics
http://www.wired.com/wiredscience/2010/10/...rse-resolution/

Our existence could be coded in a finite bandwidth, like a live ultra-high-definition 3-D video. And the third dimension we know and love could be no more than a holographic projection of a 2-D surface.

A scientist’s $1 million experiment, now under construction in Illinois, will attempt to test these ideas by the end of next year using what will be two of the world’s most precise clocks.

Skeptics of a positive result abound, but their caution comes with good reason: The smallest pieces of space, time, mass and other properties of the universe, called Planck units, are so tiny that verifying them by experiment may be impossible. The Planck unit of length, for example, is 10 billion billion times smaller than the width of a proton.

Craig Hogan, a particle astrophysicist at Fermilab in Illinois, isn’t letting this seemingly insurmountable barrier stop him from trying.

Hogan is following through on a radical idea to confirm Planck units with two of the most precise clocks in the world. Deemed holometers, each L-shaped laser interferometer will have two perpendicular, 131-foot-long arms to scan for pixelation in the very fabric of space and time. If it’s there, two laser beams (split from a single source) that run through the arms won’t hit a detector at the same time.

“What we’re looking for is when the lasers lose step with each other. We’re trying to detect the smallest unit in the universe,” Hogan said. “This is really great fun, a sort of old-fashioned physics experiment where you don’t know what the result will be.”

The two holometers, now being built in an earth-covered tunnel on Fermilab’s prairie-covered campus, will initially be stacked almost on top of one another to listen for the same Planck-scale “noise.” Once the machine is calibrated and environmental interference is accounted for, Hogan says it should only take a matter of minutes to see if the devices simultaneously see it.

Should Hogan’s team detect something significant, they will then separate the machines and run the experiment all over again. If the noise they measure next isn’t correlated between the machines, it could be the calling card of a limit to space-time’s resolution.

Inspiration for the holometer came from such a noise picked up by an experiment called GEO600. Designed to detect gravity waves — ripples in space-time caused by things like colliding black holes — the machine is a laser interferometer like the holometer will be, yet has arms 15 times longer and a laser designed to detect lower frequencies (to be sensitive to gravity waves, if they exist).

Experimental physicist Hartmut Grote, of the Max Planck Institute in Germany, said he and his colleagues at GEO600 have been unable to pinpoint the source.

“In the past, [Hogan] became a little bit driven, even excited for some time, that this noise could be a result of the holographic principle,” Grote said.

The holographic principle, derived from weirdness theorized to occur at the boundaries of black holes, says reality could be a 3-D projection of a 2-D plane of information. It’s much the same way a hologram printed on a credit card creates the illusion of a 3-D object but, as Hogan explained, we can’t perceive the 2-D surface.

“We could be living inside that 3-D projection, with the truer vision of it as a 2-D sheet hidden by scale,” Hogan said.

Ultra-precise devices such as laser interferometers might be able to detect noisy fluctuations in the projection, which Grote says might “blow up” the pixelation to a larger, detectable size. Yet Grote

suggests Hogan's holometers, which are slated to be finished in a year, may be too late if progress with GEO600 continues on-schedule.

"We are not at the point where we can verify the noise we discovered is holographic, but we can falsify it as soon as our instrument is more sensitive than the limits of Hogan's theory," Grote said. "I'm confident we will reach that point over the next half of a year and find the source of the noise."

Hogan maintains his cheeriness for the endeavor, even if much of the physics community remains skeptical. But Grote says Hogan has good reason to be upbeat.

"I think it's a reasonable design to measure this effect, even though I think it's unlikely he's going to measure something," Grote said. "If anything happens, he'll put to rest another exotic theory about the universe."

If he does find a limit to the universe's resolution by exploiting the cosmos' possible holographic underpinnings, however, Grote said it will make waves.

"It would be a very strong impact to one of the most open questions in fundamental physics," he said. "It would be the first proof that space-time, the fabric of the universe, is quantized."

View Full Version: Is The Universe One Giant Hologram?

Title: Is The Universe One Giant Hologram?

TheUnhivedMind - October 31, 2010 01:33 AM (GMT)

Is The Universe One Giant Hologram?

Published on 10-27-2010 Email To Friend Print Version
http://www.csmonitor.com/Science/Cool-Astr...-could-find-out

During the hunt for the predicted ripples in space-time — known as gravitational waves — physicists stumbled across a rather puzzling phenomenon. Last year, I reported about the findings of scientists using the GEO600 experiment in Germany. Although the hi-tech piece of kit hadn't turned up evidence for the gravitational waves it was seeking, it did turn up a lot of noise.
Before we can understand what this "noise" is, we need to understand how equipment designed to look for the space-time ripples caused by collisions between black holes and supernova explosions.

Gravitational wave detectors are incredibly sensitive to the tiniest change in distance. For example, the GEO600 experiment can detect a fluctuation of an atomic radius over a distance from the Earth to the Sun. This is achieved by firing a laser down a 600 meter long tube where it is split, reflected and directed into an interferometer. The interferometer can detect the tiny phase shifts in the two beams of light predicted to occur should a gravitational wave pass through our local volume of space. This wave is theorized to slightly change the distance between physical objects. Should GEO600 detect a phase change, it could be indicative of a slight change in distance, thus the passage of a gravitational wave.

While looking out for a gravitational wave signal, scientists at GEO600 noticed something bizarre. There was inexplicable static in the results they were gathering. After canceling out all artificial sources of the noise, they called in the help of Fermilab's Craig Hogan to see if his expertise of the quantum world help shed light on this anomalous noise. His response was as baffling as it was mind-blowing. "It looks like GEO600 is being buffeted by the microscopic quantum convulsions of space-time,"

Hogan said.

Come again?

The signal being detected by GEO600 isn't a noise source that's been overlooked, Hogan believes GEO600 is seeing quantum fluctuations in the fabric of space-time itself. This is where things start to get a little freaky.

According to Einstein's view on the universe, space-time should be smooth and continuous. However, this view may need to be modified as space-time may be composed of quantum "points" if Hogan's theory is correct. At its finest scale, we should be able to probe down the "Planck length" which measures 10-35 meters. But the GEO600 experiment detected noise at scales of less than 10-15 meters.

As it turns out, Hogan thinks that noise at these scales are caused by a holographic projection from the horizon of our universe. A good analogy is to think about how an image becomes more and more blurry or pixelated the more you zoom in on it. The projection starts off at Planck scale lengths at the Universe's event horizon, but its projection becomes blurry in our local space-time. This hypothesis comes out of black hole research where the information that falls into a black hole is "encoded" in the black hole's event horizon. For the holographic universe to hold true, information must be encoded in the outermost reaches of the Universe and it is projected into our 3 dimensional world.

But how can this hypothesis be tested? We need to boost the resolution of a gravitational wave detector-type of kit. Enter the "Holometer."

Currently under construction in Fermilab, the Holometer (meaning holographic interferometer) will delve deep into this quantum realm at smaller scales than the GEO600 experiment. If Hogan's idea is correct, the Holometer should detect this quantum noise in the fabric of space-time, throwing our whole perception of the Universe into a spin.

View Full Version: Geocentricity

Title: Geocentricity

Remus - May 30, 2010 02:49 AM (GMT)

Hey guys

I'm new to these boards, but I've been an avid reader and follower for a couple of years now.

I have accrued some absolutely amazing and eye-opening information here, and I'm trying my best to spread the word to my friends and family about what is actually going on in the world (of which I feel is somewhat of a futile task in this g-d forsaken world), yet there is one thing that I am having great difficulty coming to terms with....and that is geocentricity.

I am struggling to understand the concept of this, so I would greatly appreciate some information or links to websites that will convince me. You are all extremely intelligent peope in my eyes, so there must be something to it that sways you in it's favour. I need to see this for myself, yet I have not yet found any decent enough information that will pull me towards the cause.

I look forward to your responses :)

Rob

Phazon - May 30, 2010 04:49 AM (GMT)

After stumbling onto this area myself, I'm now convinced it's the case.

Here are some helpful links.

Jaimes

Keith - June 1, 2010 02:42 AM (GMT)

i never fully graasped it either...can anyone break i down in layman's terms?

Krusty - June 1, 2010 03:03 AM (GMT)

As far as i can see it is the belief that the earth is the center of the universe. I am by no means a expert on the subject though.

Wolveshater - June 1, 2010 03:32 AM (GMT)

Here is more, http://www.geocentricity.com/ There are some good videos on this topic here in this web site, been awhile since I've seen them. This topic is like creation versus evolution, the opposite opinion of the earth being in the center of the universe and the sun going around us is the main stream teaching, kind of interesting is that opinion is also anti Biblical..Dig around the web site above and you'll find their Biblical claims..

Wolveshater - June 1, 2010 04:02 AM (GMT)

Keith - September 1, 2010 05:28 PM (GMT)

i was just listening to an eric jon phelps interview, and he said-- and i hope i get it right because this is one of those topics that i can't seem to focus/concentrate/grasp-- he said that the earth revolving around the sun and spinning on its axis is a lie, and what really happens is that the earth is at REST and the SUN moves around the earth. he also claimed that there were like 5 experiements in the late 18th or 19th century to prove it be the case. i always felt intuition wise that we were being lied to about space and things of the nature of space.

golden_oil - September 2, 2010 10:18 AM (GMT)

This subject was new to me until I read some links given here last year.

What convinced me more than anything is that there are many scriptures in the Bible which speak of the Sun rising and going down, i.e. the setting of the Sun.

There is also the miracle of the God's stopping the movement of the Sun for a day during the time of Joshua so he and his army would have extra long daylight hours to defeat their enemies.

b_basa - September 2, 2010 12:45 PM (GMT)

If I have told you earthly things, and ye believe not, how shall ye believe, if I tell you of heavenly things? John 3:12

Keith - September 7, 2010 11:40 AM (GMT)

anyone know where to point me where to look at those experiments of the late 18th century or was it 17th century that eric jon phelps mentioned in one of his radio shows... if anyone contacts eric just ask him for me and post it for all of us. also, and maybe more importantly does anyone know where it is written in the bible about geocentricity? as you are reading the bible and come across it, post the verse here please. thanks

http://www.bibliotecapleyades.net/esp_einstein.htm

> **QUOTE**
>
> Albert Einstein 1879 -1955, was a Judaist, worshiped and glorified by the Judaist owned American media, which covered up for his frauds and errors, he plagiarized the work of several notable scientists, in his 1905 papers on special relativity, and E = mc2.

His proponents have acted in a way that appears to corrupt the historical record, Time Magazine's "Person of the Century," wrote a long treatise on special relativity theory, it was actually called "On the Electrodynamics of Moving Bodies, without listing any references.

Many of the key ideas it presented were known to Lorentz, for example, the Lorentz transformation, and Poincaré before Einstein wrote the famous 1905 paper, as was typical of Einstein,

He did not discover theories, he merely commandeered them, he took an existing body of knowledge, picked and chose the ideas he liked, then wove them into a tale about his contribution to special relativity.

> **QUOTE**
>
> This was done with the full knowledge and consent of many of his peers, such as the editors at Annalen der Physik.

The most recognizable equation of all time is E = mc2, it is attributed by convention to be the sole province of Albert Einstein, however, the conversion of matter into energy and energy into matter, was known to Sir Isaac Newton, Gross bodies and light are convertible into one another...", 1704.

The equation can be attributed to S. Tolver Preston 1875, to Jules Henri Poincaré 1900, according to Brown, and to Olinto De Pretto 1904, before Einstein.

Since Einstein never correctly derived E = mc2, there appears nothing to connect the equation with anything original by Einstein his doctoral dissertation was also a fraud.

A 12 page marathon calculation in Einstein's doctoral dissertation, "A New Determination of the Molecular Size," was "a comedy of errors" based on "zany" physical assumptions, such as treating sugar molecules dissolved in water, as though they were tiny spheres sitting at rest instead of spinning like tops.

It is a total mystery why his thesis advisers overlooked this glaring mistake, Ohanian writes, they were quite ordinary, dull professors at what was then a dull, second rate university, even the dullest of dull physics professors should not have been this blind. Einstein's dissertation should have been rejected.. http://www.latimes.com/features/book...,2289223.story

Big Bang ..Big BS - Astronomical redshift is an artifact of distance!

> **QUOTE**
>
> The Big Bangers, Sagan, Hawking et al, are idiots and stretcher case retards whose impetus is the dumbing down of mankind, who remain the scientific equivalent of politicians and journalists, blind to hard evidence that 911 was an inside job!

Look at this image of the Virgo cluster of galaxies, for images of galaxies extending as far as the eye can see, some appear to exist in a swarm around the sub cluster at the

core, others are in streamers and wisps of galaxies extending outward, until their images are no more than pin points.

In the 1950's, when the spectra of deep field galaxies obtained by Edwin Hubble with the two hundred inch telescope on Mount Palomar, was subjected to scrutiny, it was found that the absorption lines of all the common elements were shifted toward the red end of the spectrum, this is called redshift, the furthest ones away, attested to by the small width of their image on the photographic plates, all had greater RS than their closer counterparts whose images subtended a greater angle.

When space based and adaptive optic instruments extended the visual limit even further, vastly more distant edge on spiral galaxies, recognized as a central bulge with two pointy bits extending about twice as far on the same axis, emerged in the same advanced stages of evolution as the MW. Here RS is approaching twelve, which puts the rate of recession well into the super luminal category, which means faster than the speed of light, yet they are goin' about their own business, the same as around here.

> **QUOTE**
>
> Expanding the images further for faint blobs of light, which are galaxies ever further away in every direction, and see them as neurons in the brain of God which is meant in no evangelical sense, it just seems the best way to describe it.

Redshift is an artifact of distance, the fact that M31, the relatively nearby Andromeda Galaxy has blue shift, is because it is gravitationally bound together with the other galaxies in the local group. M 31 and the Milky Way or home galaxy, will eventually expand to become elliptical galaxies, making a sub cluster typically seen in the middle of larger galaxy clusters, nearby NGC 5128, called Centarus A is presently undergoing that process.

Those who cackle on about the age of the universe expressed as a percentage of it's present age, say redshift indicates the universe is expanding after the explosion of a primal atom, that accordingly could only have been located right where good ol' Earth is today, the Big Bang hypothesis.

A class of object called a BL Lacerta object has no redshift, and remains a pinpoint of light on even the deepest fields, is thought to be a tunnel shot of the energy beam from the active nucleus of a quasar, modern binocular, space based and image stabilized telescopes, have identified a rim of matter surrounding some of the BL Lacerta points of light, which does exhibit redshift, supporting that hypothesis.

Thus viewing a distant galaxy, with a redshift of eight, between here and there is another galaxy with a RS of four, indicating it was speeding toward the more distant place, thus from the more distant galaxy, our galaxy the Milky Way would similarly have a RS of eight, so too would the intervening galaxy viewed from the more distant place have a RS of four, indicating it was speeding toward us at a pretty good clip.

user posted image

It can not be speeding in both directions at once can it now.. when confronted with that, the Big Bangers start on about balloons and expanding space, forget about balloons, Hubble was a dictator, and the only person other than him who was allowed to look thru the two hundred inch telescope, was a mule skinner named Milton Humason, Hubble and Milt cooked up the Expanding Universe theory between the two of them, which is just so much hot air.

Assume that most spiral galaxies that look the same are roughly the same size, as distance reduces the linear dimension constantly, so too does redshift increase in proportion, thus a spiral galaxy that is one degree across, will be twice as distant as another that is two degrees across, similarly one that is half of one degree wide will be twice as far as the first, and four times further than the other.

Blue shift is observable in the discs of rotating galaxies, thus the light from a distant galaxy will exhibit mean redshift in proportion to its linear distance, expanding the image further, as rotation brings parts toward us, they will be slightly blue shifted back toward

the norm, similarly as rotation takes objects away, their light will be shifted so slightly even further toward the red part of the spectrum.

> **QUOTE**
>
> The Hubble Space Telescope went into orbit with an incorrectly ground primary mirror, B's of D's were invested in building, storing and testing the HST prior to launch, and nobody had checked to see if the primary mirror was going to work.

Where did the money go, spammers will tell you about what a great asset, and what a grand piece of hardware it is, it is not it is a piece of junk. Who got the HST money, as well and the trillions missing from the Pentagon revealed September 10 2001.

>
> [<a href='http://antwrp.gsfc.nasa.gov/apod/ap091121.html' target='_blank'>http://antwrp.gsfc.nasa.gov/apod/ap091121.html](http://antwrp.gsfc.nasa.gov/apod/ap091121.html)
>
> Download NGC 253 a spiral galaxy in the constellation Sculptor, said to be between eight and thirteen million light years distant from APOD Astronomy Picture of the day.

Crop the image to 1359 x 1037 pixels centered on the brightest part of the galaxy, extending to the cluster of emission nebulae, the red bits in the disc, lower right and to similar emission nebulae upper left.

We want to find out more…

Pythagoras told us the square on the hypotenuse is the sum of the square of the other two sides, we want to know the measurement of the hypotenuse, which is the straight line opposite the right angle, here represented by the square corners provided courtesy of Microsoft Picture Manager.

1359 squared is 1846881, 1037 squared is 1075369, add the upper and lower and get 2922250, find the square root is 1709, thus the Galaxy subtends an angle of 1709 pixels, rounded out to 1700.

We want to know, because there are two more distant spiral galaxies located below right of center in the same shot, fortunately both are nearly upright, which makes it easier to guage their width, the lower and smaller of the two fits quite neatly in a square box 14 X 14 pixels, the larger is little longer than fourteen pixels call it 16, then for the sake of simplicity we add another pixel to get 17.

Dividing that by the angle of 1700 subtended by the much closer NGC 253, and find that the more distant galaxy is around one hundred times smaller, we are gonna say it

is similarly one hundred times more distant.

> **QUOTE**
>
> So far we are getting a handle on the scale of the universe, exactly the same principle applies locally.

Space based telescopes give one hundred and thirty degrees as the longitudinal dimension of the Milky Way, Sky Catalogue 2000.0 tells us NGC 253 is 25.1 arc minutes or .4163 of one degree long, we divide that by the one thirty degrees of the Milky Way, to get 310.78, which means NGC 253 is that many times further than the Milky Way galaxy.

Sagittarius A*

Radio data from Sagittarius A* recognized as the heart of the MW galaxy, has returned a distance of 24250 light years, NGC 253 is 310.78 times further away, multiply the distance to A* by 310.78, and get 7,536,415 LY as the distance to NGC 253!!

We got the figures by finding that NGC 253 is 1700 pixels across, the larger of the two more distant galaxies is one hundred times smaller at seventeen pixels, and one hundred times further away at 753,641,500 light years, multiply by 365.24 x 24 x60 x60 x 186,000 for miles!

The smaller of the two is somewhere around fourteen pixels across, however since it was less than that we do some more calculus, as each pixel is taken away, so does the distance increase, should it become eight and one half pixels, the distance would be 1578.83 million light years.

Since it was not that small, we will say half way between seventeen and eight and a half, so add four and a quarter pixels for an image half as wide again of twelve and

three quarter pixels, a fair total... then for a place that is similarly halfway between the upper and lower limits, go to a distance half way between at 1130.46 million light years.

> **QUOTE**
>
> FAQ's:**How can you say that all spiral galaxies are the same size??**
>
> **Reply:** The MW galaxy has the same overall profile as many similar disc galaxies, including NGC 253, ie an active center and emission nebulae spaced similar distances apart, less active and smaller galaxies have less active profiles, while spherical galaxies fall into a different category altogether, neither classes of object should be mistaken for anything else.
>
> In the case of the two smaller more distant galaxies in the above example, each pixel of image width reduction adds around 44.3, and 91 million light years in linear distances respectively, indeed there are other edge on spirals visible on the same plate, including one at upper left center, which does appear to have an image width of around eight and one half pixels.
>
> In this model it would be around 1,578.83 million light years distant, where each pixel in image width reduction adds 188.2 million ly, which is why we assume galaxies are at a given mean, using the best estimates of the MW, which say it is one hundred thousand light years across, as a yard stick.
>
> We would be speaking in terms of thousandths of a pixel in image width, were we to locate the true size of distant galaxies!!

There is a critter called a Dwarf Spiral that can trip you up, however all calculations should be accompanied by redshift data, which will expose any of those that are trying to sneak onto the main list,

Another is Malin 1 named after its discoverer David Malin, who similarly revolutionized astronomical photography in the 1970's and 80's, which does not fit into this scheme, however Malin 1 objects are very rare and seldom encountered, while redshift data

would instantly expose them for what they are.

This pic shows the relationships in the Milky Way family!

The MW is surrounded by star clouds, which formed in emission nebulae at the tidal boundary of the galaxy, the gravity source can not keep the disc stable outwardly for

ever, and bits will spin off and go their own way at that place, this is the physical force that makes all similar disc galaxies the same size give or take.

QUOTE

The arms in spiral galaxies are a density wave, down which Hole Matter travels from the center trailing expanding emission nebula in its wake, whence form globular clusters and stars, see file material and very rare photos.

Click to enlarge

Увеличить

Clusters of stars resembling bunches of grapes form, and as expansion continues the individual grapes become stars, see the Pleiades.

Click to enlarge

Увеличить

The Magellanic Clouds formed when a particularly virulent particles of Hole Matter arrived at the tidal boundary then drifted away into intergalactic space,

Click to enlarge

Увеличить

Maybe to keep expanding to form other major spirals which will keep expanding from infinity - like a Mandelbrot Set - to spawn similar galaxies!

How likely is it that globular clusters are juvenile galaxies?

Reply: Probably unlikely, in this model the compressed matter in the spiral arms expands in emission nebulae, to form stars and globular clusters that drift to stations above and below the disc, as the spiral evolves into an ellipse. The globular clusters form a placenta, that effectively shields the galaxy from radiation, and a buffer zone against collisions and impacts with other galaxies.

So galaxies calve?

Sure they do, look for rare shots of spidery looking juvenile galaxies drifting away from parent bodies!

The above pic is galaxy M31 the closest major galaxy in the constellation Andromeda, not counting Dwingeloo 1 a much closer galaxy that has been radio located directly opposite the nucleus of the MW, thus it remains invisible from Earth, the fuzzy blob below right center of M31 is satellite galaxy M 32, the large blob in the disc slightly below left center is M 110, both could be embryo galaxies that will expand as a child galaxies of M31!

Omega Centauri called NGC 5694 is an embryo galaxy of the Milky Way, it has no

active nucleus so it is unlikely to change, it could start spinning and flatten into a disc, then might drift away as a low surface brightness galaxy.

LSB galaxies are very numerous and collisions between them are frequent, they do not show up at all on most conventional photo's, their presence was only revealed after large numbers of blue arcs centered on super massive elliptical galaxies, turned up on deep field shots, so astronomers started looking for more and found millions, near and far.

During this collision phase if two colliding members are compatible, they combine then rapidly evolve into an active disc as the nascent black holes lurking at the heart of both respond, then reproduce.

What happens next?

The active nucleus of spiral galaxies like the MW and M31, expand and gather all the dust and debris in the galaxy then contract into a very dense center, the material goes into the torus, the donut of swirling dust and shattered stars that insulates the central surrounds of the black hole, or cluster of BH's at the center of the galaxy.

Centaurus A an exploding galaxy in that constellation, thought to be about twenty six million light years distant, appears to be presently undergoing that process.

Astrometry data is essential, so has it been hijacked by NASA and JPL, whose joint purpose has itself been hijacked by defense, which has been hijacked by hijackers who run government, who employ hijackers to hijack hard evidence and true science.

They try to sell their version back to the public in books and publications, with Saganesque data about cannibal galaxies, and wanna tell you, "…well there was this Big Bang," there was no BB, man is gonna plunge back into the age of ignorance, while it remains the province of the select few, with the right security clearance, to get an education.

> **QUOTE**
>
> Check the shot of Sagittraius A* above, there is a distance bar, but no image width scale without which it remains a pretty picture with absolutely no scientific value whatever!!

With good sky maps available, that have photographs and catalogs of deep fields, and astrometry, radio locating and red shift data, it does not take long to figure it all out, the data that is released is most often too raw, with dazzling columns of figures and seemingly contradictory terms, it is seldom in a form that can be used for home astrometry, the photographs and charts they reproduce never have grid markers, so scale always remains a mystery.

This thread commenced at NGC 253, and was intended to refute the claim that the universe is expanding after the explosion of a primal atom, evidenced by Redshift which Big Bangers say shows the velocity of physical recession, which true science recognizes as an artifact of distance.

Nowhere do distant galaxies show evidence that they are fall out from an explosion, there is no trail of smoking debris like there was at the WTC on 911, which was from a genuine big bang, nor do they appear to be doing anything except drifting about a bit, until they establish stable orbits with other members in their group.

Get off the bridge, and make it snappy! Giant shark's image is projected onto a screen of water in a stunning light display

By Daily Mail Reporter
Last updated at 10:56 PM on 19th March 2010
http://www.dailymail.co.uk/news/worldnews/...ht-display.html

It's the biggest shark you are ever likely to see, poised to take a monster-sized bite out of a bridge packed with commuters heading home. Fortunately for anyone taking a peep into the waters down below, it is just part of an astonishing light show.

With the backdrop of the illuminated Rainbow Bridge and Tokyo skyline, this image of a giant white shark was captured during the Odaiba water illumination show in Japan.

It was projected on to a huge water screen, 15 metres high 40 metres across, created by a fountain set along a beach at the Tokyo Bay area. The show is performed four times after sunset in the Japanese capital. Among the many images screened are frolicking dolphins, tropical fish, a whale and the famous maoi figures from Easter Island in the south-eastern Pacific Ocean.

A giant white shark, projected onto a screen of water from a fountain, appears to leap out and try to take a piece of Tokyo's Rainbow Bridge

Two dolphins play under the bridge's huge arch, the Tokyo skyline in the background

Now it's the turn of a massive whale to jump up out of Tokyo Bay for the Odaiba light show

An image of the famous moai figures on Easter Island in the southeastern Pacific Ocean lights up the night sky

The Rainbow Bridge is lit up by a rainbow of colours from tropical fish in the illuminations

View Full Version: The Oracle of the Tao - The single coin method!

Title: The Oracle of the Tao - The single coin method!

Martin Timothy - April 26, 2010 11:34 AM (GMT)

QUOTE

The image of galaxy M 51 surely resembles the swirl of the Tao, no less than the thistle bloom and the crop circle.

Radio astronomers have identified two black holes in a forty day orbit at the center of the Milky Way galaxy, in this highly charged environment the orbiting bodies must also resemble the swirl of the Tao, perhaps they have located the source.

The I Ching or the Oracle of the Tao can arrange the fall of a coin, and communicates to man at its discretion.. cast one coin only it should fall on a pliant surface to prevent bounce, heads means No tails means Yes.

Thereafter to obtain the Hexagram of the I Ching, throw again in six two throw sequences totaling twelve throws in all of a single coin.. the first throw determines the gender of the oracle, a double call makes a moving line.

> **QUOTE**
>
> Tails first starts a Yin line, it represents the light part of the Tao swirl that has one dark spot, it is masculine and positive.

T x H: then we chart a single straight unbroken line, it is an unmoving line that represents a firm single principle, it does not change thru fire wind and weather. ---

T x T: This is a moving firmly principled line that has grown war weary and lazy, or yet glutted with treasure and weighed down, or become over confident and rash,

Confucius the most quoted master called it, "the dangerous weakness occasioned by too much strength," thus we chart a firm line intercepted by a circle, like the Plimsoll Line on a ship. -o-

A changing masculine line will be feminine in its next incarnation when we chart a single broken line in its place, firmness and might has become far more acquiescent, a bully on the barracks room floor nursing busted up lips fulfills this oracle.

> **QUOTE**
>
> Heads first starts a Yang line, the power of Yang is the dark part of the Tao swirl that has a single spot of light material, it is feminine and negative.

H x T: This is the firm unmoving female principle represented by motherhood for instance, it is the female realm and like it or not, it does not change, here we chart the single broken line. - -

H x H: This moving line represents the corrupt female principle, as it appears when and where women adopt a mutually unsatisfactory role not by asserting femininity for instance, but by trying to be proxy men, here we chart the same broken line as before intercepted by a cross. –x-

The double call in Heads is a changing feminine line, which will be an unchanging masculine line in its next incarnation, in an evolving situ this overbearing and willful woman is put firmly in her place.

> **QUOTE**
>
> Obtain six lines by the above process build the hexagram from the bottom, thereafter consult published literature to obtain the correct interpretations for the four hundred and forty eight possible combinations.

This circle turned up in a wheat field in Wiltshire England July 7 2007.

View Full Version: VISION FOR A NEW CENTER IN NOTHING

Title: VISION FOR A NEW CENTER IN NOTHING

craig-oxley - August 16, 2009 01:46 PM (GMT)

VISION FOR A NEW CENTER IN NOTHING

Release Date 2009-08-14
http://www.nomorefakenews.com/archives/arc...ew.php?key=3611

AUGUST 14, 2009. My upcoming free telephone seminar, THE LIBERATING IMAGINATION, takes place on Wednesday, August 19. Sign up by clicking the link above, or at my site. Tell your friends.

I've had requests to reprint this article. Here it is.

When I first wrote this piece, I was imagining a physical location, a center for art and magic. Since then, I've come to realize that some of us are already in that place. It's wherever we are. Although one day I may come to house it on a piece of land, that doesn't really matter. A community of sorts is in the works. It entails no sacrifice in order to be "part of the group." In fact, it is founded on the idea that the individual is beyond the old model of a group. This community is "composed" of individuals, each of whom knows there are no limits to what he can invent--- and no compromise on that is possible.

There are some people who hear the word CREATE and wake up, as if a new flashing music has begun.

This lone word makes them see something majestic and untamed and astonishing.

They feel the sound of a Niagara approaching.

They suddenly know why they are alive.

It happened to me one day in 1949 when I was 11 years old. I was boarding a bus in

upstate New York for a full day's ride back down into New York City. I was sitting by the window as the bus pulled out of a parking lot, and I opened the first page of Ray Bradbury's Martian Chronicles, a perfect children's book.

The word CREATE wasn't on that first page, but I felt it. It sounded like a great bell in my ear, and I knew I was in a different world.

Eventually, many years later, I discovered that what people call The Spiritual is actually all wrapped up in the meaning of that word CREATE.

I discovered that people try to avoid it. Instead, they accept landscapes painted by a priesthood and call those landscapes Spiritual, and hope these puerile inventions will somehow take them to bliss and final enlightenment and heaven.

In other words, people want to gain the prize without ever having to create.

They want to exist inside a phony masterpiece designed by a class of authoritarians.

In a nutshell, that's the story of this planet, and it always was.

As you may know, I've been writing about the creative life for some time. For me, this life is a far cry from the pallid oatmeal of spiritual movements where the essence of things is "peace through avoidance"---an attempt to substitute one form of politeness for another, one form of sleep for another.

The Center is a place where people who have really lived with CREATIVE ACTION for a long time work. These people are artists and musicians and writers and dancers and inventors and other innovators who have shoved in all their chips on what it means to do what they do…

This Center is not a place for slogans and systems and intellectual finger food and the nasal discussion of the New. This is about EXPERIENCE. It's not weekend seminars delivered by people who drop a few tidbits about instant wealth or drop a few mantras like rose petals. And it's not about merely wowing audiences for an hour or two.

It's about experiencing the creative life by living it.

It's about diving in. It's about a kind of transformation that rips up programming and just gets down to the energy of the Fire.

When people strip away all the hogwash that has been passed off as spiritual or political enlightenment for centuries, that fire IS what they are left with. The creative fire IS the spiritual force. IS the real thing. Finally.

Most people don't want to travel to that grand arena because they know they're going to

have to destroy something to get there.

They have been trained like pets by some sector of this society to be good little girls and boys. They think all destruction is bad and all creation is done in pastels and rainbows.

TS Eliot said the world would end with a whimper. Well, if it keeps on going the way it's going now, it'll end with a rainbow devised by "a really nice person" with about two functioning brain cells.

The truth is, if people want to live the creative existence, they have to be willing to destroy----and the main thing that awaits their destruction, delivered with force, is their own illusions and their commitment to the World of Nice where doily power is the only power. Where that tired phrase, "the approval of others," is the guiding precept and the stick of fear.

There are all kinds of people around who SAY they want to create, but it turns out they want to play a little in the sandbox, and they tremble at the idea of using real power.

The Center isn't about little changes done in little penguin steps. It's about putting your arms and your mind and your whole juice around Deep, Big, and Wide Desire. It's about making that Desire come to life.

99% of the world has been trained like rats to adore systems. Give them a system and they're ready to cuddle up and take it all in. If they have questions, or if they want to argue, it's about how to tweak the system to make it a little better. And with every move they make, they put another blanket over the Fire Within.

So you can't really make THE CREATIVE into a debating society, because people will turn that into another system. You have to go for actual experience, and osmosis.

Let me give you a crazy metaphor here. A very crazy metaphor. Imagine you are suddenly a singer in the middle of a choir. That's your life. This choir has no sheet music and no plan. The choir just sings, all at once. There is no together and there is no leader and there is no imposed harmony. There is just the choir. Everyone sings. It makes no sense. But you do it anyway. It's chaos. It's titanic and bizarre. But eventually, out of the chaos emerges a wild beauty no one has ever heard before. It happens. And it makes the whole body and the whole mind and the whole consciousness go into a state of ecstasy.

That would be a creative experience. No one would be able to walk away from it and analyze it or label it. No one would be able to devalue it by comparing it to something else. No one would be able to debate the fine points, because there were no fine points.

Every person would feel the fire.

Well, take that as a metaphor for the Center.

Have you ever wondered why the people who are most embedded in the holiest of holy scriptures---the ones who have had those lessons shoved down their throats---go out and kill as many people as possible?

It's simple. What they've been taught is this: everything is created from above already; there is no more room; the individual creates nothing. Armed with that pungent piece of cultural brainwashing, raised in that kind of family, they are cornered rats, and they kill anything in sight.

Or if they can't kill, they go to sleep. They sleepwalk through life and say yes to everything. They promise everything and give nothing.

Maybe you once saw something truly free that didn't care about consequences, and it blew you away and turned on your soul's electricity for an hour.

Maybe you're sick and tired of bowing and scraping before a pedestal of nonsense.

I'm always amused when people discuss art as if it's some sort of perfumed and expensive turned-out fruitcake. As if art exists in a special drawing room where the initiated are permitted to make a few deft comments in a vacuum. As if art is a few dollars more for something that hangs on a wall.

Art is a word that should be oceanic. It should shake and blow apart the pillars of the smug boredom of the soul.

Art is about what the individual creates when he is on fire and doesn't care about concealing it. It's about what the individual invents when he has thrown off the false front that is slowly strangling him.

Art is about the end of mindless postponement. It's about what happens when you burn up the pretty and petty little obsessions. It's about emerging from the empty suit and empty machine of society that goes around and around and sucks away the vital bloodstream.

Art is about destroying the old order and the new order, with a glance.

It's about spearing the old apple on the point of a glittering sword and opening up the whole rotting crust that has attached itself to the tree of life.

It's about shrugging off the harmony of the living dead.

Remember this. Every time a human being has created a startling living dream and

made it more real than reality, the parasites have come along and tried to bury it with their particular twisted brand of praise or disdain. That is their method of devouring it and passing its contents along to their digestive systems.

They use praise or disdain to cover it with notions that eventually varnish the cathedrals of abject worship.

But to a creator, these little zombies mean nothing. Their approval means less than nothing.

The creator is on a different road. He has lightning in his hand, and all the gates are open.

Time and time again, it's driven home to me how addicted people are to the act of surrendering their own creative impulse, on behalf of some imagined super-thing-or-being who is really calling the shots. This addiction is powerful. Very powerful.

Not only is it powerful when you look at the conventional religions, it's strong when you look at the fringes, where everybody and his brother has some Entity with a name in his back pocket---the Entity who is "the ultimate source of everything good." People actively seek out such a belief and such an entity as if they're prospecting for gold in the mountains and they have a fever in their heads.

They invent the Entity and they want it to tell them what to do. It's that simple.

It's the ultimate appeal to authority. It's saying, "I can't stand on my own power. I have to get permission from The Big. Then and only then are things okay. Then and only then would my actions have the cosmic seal of approval. Otherwise, I'd be lost."

People have this crazy idea that they need to prop some Entity up on a pedestal; otherwise, what their lives are about is not spiritual. In fact, the opposite is true, as I've mentioned many times.

Chronically bored people, encased in concrete, look for reasons to stay where they are. They often drift into some kind of spiritual gimmick. Once they've arrived, they get assurances that illumination will come.

To get beyond that, a person has to decide, "I don't care." That's all. But his lack of caring isn't the passive tranqed out version. It's a very active I don't care. It's reckless. And then you find out you're sane, remarkably so. It's a funny moment. First you say, "I'm nuts," and then you say, "I'm sane." In that order.

Then you look around and see what you really want to do.

To see this from another angle: a dancer dances out all the moves he knows, and then

suddenly leaves those familiar moves behind. He spontaneously does something new. He feels that. He feels his whole bloodstream oxygenating. He's free for eight seconds, and those eight seconds of eternity are better than anything…

Now let me describe a deceptive version of this, on the other side of the coin. A person says, "Eight years ago, I was sitting in a train going to Baltimore, and suddenly an angel came to me. It was nothing I expected. The angel showed me, in a split second, how to paint. Painting was as foreign to me as the North Pole. But when I got home, I bought a large canvas and paints and brushes, and I did a landscape of Atlantis. I found I could render all the details of a great city. It was a miracle. I'll be showing the painting to you, and I'll be describing this miracle…"

Fine. But this person is really doing what? He's trying to get other people to become as entranced by this landscape as he is. He wants as many people as possible to bow down before this painting.

And guess what? It works. A lot of people are drawn in. They now have a second-hand experience.

Here's the catch, though: it doesn't really matter whether an angel visited the train traveler. What matters is, other people are abandoning their own creative impulse to "share" in this person's experience. That's the trick.

That's a good description of religion.

This kind of thing has happened over and over on planet Earth. Over and over. Very few people have said: "Wait. What I really want is to create on my own."

Most people prefer the second-hand version: the angel who came to someone else, the alien from space who came down and talked to someone else, the entity someone else is channeling…

But I can assure you, underneath this second-hand shell game, every person has a great desire to create on his/her own.

And finally---there are many teachings that aim toward the goal of setting people free from their own negative restraints and illusions. Some of these teachings can and do lead to breakthroughs. But in most cases, the students become addicted to the sensation of the breakthrough. They keep coming back, hoping to drink from the same cup again.

It's interesting, because in a very real way, the breakthrough is just the beginning. It's the zero point, from which a person could then create with power. But most of them don't. They just keep returning to the scene, hoping to find that open space of freedom again. They think that's what they really need. But that's skewed. What they really need

is to create.

ACTION.

People come to the brink, where, so to speak, they're ready to take the paintbrush in their hands and make a move---and then they stop. They look to that Entity in their back pockets, and they step back. They opt instead for a form of hypnosis. They say, "I'm waiting for orders. I'm looking for a sign. I'M LOOKING FOR A SIGN. I don't have any primary impulse of my own. I want the signal that it's okay to proceed. I'm just a channel for Otherness."

Baloney.

It's a form of self-induced brainwashing.

It's a way of ending up doing nothing. It's just one more way of rationalizing laziness and fear.

At the core of being, a person wants to be creative. To do that, he needs to actually CREATE. Take action.

We can break the hypnotic supposition that some system of harmony is our eternal guide. We can break out of the idea that all we are supposed to do is contribute another piece to a system of harmony that has already been laid down.

We can create something new and unprecedented and we can see it is magic.

View Full Version: THE FUTURE MYSTERY

Title: THE FUTURE MYSTERY

craig-oxley - July 25, 2009 01:47 PM (GMT)

THE FUTURE MYSTERY

http://www.nomorefakenews.com/index.php

JULY 23, 2009. The future is usually thought of as content. Will there be flying cars? Will we travel to distant galaxies? Will cities spread all over the planet and cover it? But future is really about this:

Is it possible that time will become A RADICALLY DIFFERENT KIND OF TIME?

Modern physics is addicted to the idea of “the Continuum.” Space and time fold over each other like a baking glob of cheese and dough, bubbling, popping, spitting, and curling. When you eat the cheese, you eat the dough. It’s the modern symbol of the ancient Labyrinth, the maze wherein everyone learns about being irretrievably lost.

To take a much fresher course, all you have to do is look at modern painting.

The “things” of modern painting, beginning with Kandinsky (1910), are not placed on the canvas in familiar patterns. Anything can be anywhere. There is no intrinsic imperative to put a chair next to a lamp. A vase of flowers does not have to sit on a table. It can float in the sky. And the color red does not have to sit near a yellow or a blue. It doesn’t have to be balanced off by another red on the other side of the canvas. Balance, symmetry, unity, harmony, faithful representations of the physical world---all this goes out the window.

Some people find that unacceptable. They reject it as nonsense. And it is, if there is a standard of comparison that insists on an old Classicism.

We like to suppose that, without a standard, there is no way to make judgments or perceive What Is.

But this is a faulty inference. A person can walk up to a Kandinsky or a Pollock or a De Kooning in a museum, look at it, and move into a state of engagement that has nothing to do with provincial logic.

However, that engagement won't take place unless the viewer uses his own imagination to intersect the imagination of the artist.

That's the key.

Art is imagination in action. And here is where time enters the scene. Art subverts ordinary reality. It offers it own versions. In doing so, it "broadcasts" into the future. It actually creates the future. It breaks apart the need to go on living inside the same old context. When Kandinsky made paintings in which line and shape and color floated "anywhere" in space, using his own preferences as his guide, he projected currents of energy ahead in time into a space in which THAT REALITY would be prominent.

Multiply that effect by thousands of artists in all fields, and you have a future in which freedom assumes titanic status.

Old worn compulsory connections are shattered.

Even the bedrock of emotions dissolves, and in its place are an unlimited number of feelings that range higher and deeper than the so-called human condition would seem to allow.

If you want a label for all this, you could call it Modern Alchemy, in which transmutation is extreme and finally achieves the aim of liberating consciousness and energy from their old clothes.

The admission ticket to the transmutation is: you're an artist. You live through and by your imagination.

All the prophecies about the end of time are really just stunted efforts to make sense of the future and what it holds. In a real sense, the end of time has already happened. What is taking its place is imagination. Period.

Changes will eventually occur in the very composition of matter. The atoms and protons and electrons and quarks will drop away from their present state. They will gradually cease being neutral objects that all exhibit the same properties. Instead, each particle of matter will become unique. Each will be "a work of art."

Actually, it is only our preoccupation with sterility which led us to view Universe as neutral particles of sameness. As imagination assumes its primary role, we will perceive matter and live with it in radically new ways.

THIS is the underlying message of Alchemy and Kabbalah and I Ching and Tarot and other such systems. Finally, their complexity is suggesting that WE are inventing these systems in order to approach the conclusion that we are imagining and re-imagining Universe.

The Labyrinth, the serpent biting its own tail, the Tree of Life, the admonition to be fruitful and multiply---these and other symbolic references all point to the same Idea---every individual invents art without end and thereby fashions new worlds and universes…

This is the unspoken core and implication of every spiritual teaching. The true prophet says: “I will feed you one deception after another, until you see you are Creator and you live by that star.”

The future is infinite diversity of creation rising from the ruins of an obsessed disintegrated rational structure.

The future, as I’m depicting it, destroys the harmonic brain pattern that underlies the Big Sleep. And make no mistake, there is a Big Sleep in the center of the brain and the mind. In that place, all innovation stops and all creation is rejected. In that passive center, the human being wants, forever, silence and Zero and something he thinks is Beauty.

A nostalgic kind of beauty that harkens back to “a golden age,” when perfection and balance and symmetry and unity and eternal laws reigned supreme. In other words, inside the Big Sleep there is a false memory of these utter delusions, arranged as an image, a painting that was so wonderful it induced a state of anesthesia. And people label that ENLIGHTENMENT.

Art exposes all that as a complete lie.

Art is the dynamo that shreds the Big Sleep and brings back life to the dead.

Anything less is hypnotism.

That wonderful narcotic painting in the center of the mind sets the conditions for all decisions about what is real and beautiful and desirable. Like a piece of ultimate philosophy, it guides behavior and PERCEPTION, and it induces a great wish for Silence. Vacuum. Like the vacuum of space. Like the emptiness inside the atom. Like the clinical emptiness that adores the perfect machine.

The Big Sleep is at the heart of the age of technology and all its false promises.

The legend of Lucifer and God, once you subtract the Roman Church’s sticky wings and claws and fangs and other Gothic iconography, is simply the story of rebellion, by

the artist, against the Big Sleep. That's ALL it amounts to. That's all it ever was.

The world is driving itself crazy with the greed for exploring and capturing and bottling What Is---and then, when the search proves to be vapid, a new greed arises. The flailing about for a method by which humans can surpass that dead-end search and attain a state of holy anesthesia.

Religion, in other words, is the fake cherry on the cake of a fake reality. The lunatic solution for a problem that was never there to begin with.

And now all this is being swept aside. The flood is in progress. The last hundred years of art are coming home to roost. The moronic notions of supreme unity and harmony are splitting at the foundations. They are being exposed as fraudulent. Every disastrous event we see in the world is a reflection of this fracture at the core.

The day of the Present has come to an end. The Future is riding across the plain toward us.

For those who will not intersect it with their own imaginations, it will look and feel like sheer chaos.

Androids who are desperate to be happy and will not create…they will dig down to become One with coma. They will persist in that state until they gather their forces and invent art, which is to say, time.

Art is not the weak sister of Culture. It is life. The ten thousand paintings on the walls of the Dun Huang caves in China have projected new time beyond the massive oppression of the present Chinese government's iron fist. That Dun Huang time will come. China as it is will sink into oblivion, an unsupportable myth.

Around the world, all efforts to cater to the wonderful painting in the middle of the Big Sleep will slip away. They will fail. Thereby, the monotonous and repeating rhythms of modern life will drop over a cliff and disappear. What Klee and Kandinsky and Picasso and Stravinsky and Bartok and Martha Graham and Gaudi and Orosco and William Carlos Williams and Hart Crane started will pulse into the foreground.

For those who want it, this new world will be indescribable joy.

And to match it, we will need a new kind of language that is built to immerse itself in the future. It will be poetic and it will, from every word, fly off in many directions, simultaneously. Nailing down a particular meaning and justifying its internal logic will become an obsolete need. We will live in the middle of the art we've created.

This is the unspoken and unconscious and unperceived goal of all spiritual teaching.

View Full Version: MORE NOTES ON IMAGINATION

Title: MORE NOTES ON IMAGINATION

craig-oxley - July 7, 2009 04:41 PM (GMT)

MORE NOTES ON IMAGINATION

http://www.nomorefakenews.com/index.php

JULY 7, 2009. My last free telephone seminar in this series, REALITY AS THEATER, takes place on July 15. Sign up and get your friends to come on board, too.

Imagination is not science. It doesn't proceed in an orderly fashion to conclusions. It doesn't ask for common sense. It doesn't require a formula to back it up.

Imagination is not ruled by a hierarchy. It doesn't ask to be correct. It doesn't seek approval.

It cuts across the grain of all prior assumptions. It eventually corrodes all old beliefs and systems.

Imagination isn't a tea party with manners. It isn't a servant to a higher cause.

Every society and civilization eventually discovers, to its dismay, that there are people in its midst who are creating beyond its accepted rhythms. These people, without even trying, are exposing the fraudulent myths and embedded stale harmonies of a dead culture.

In my book, The Secret Behind Secret Societies, I describe my encounter with an unconventional healer named Richard Jenkins. It took me many years to realize that Richard was not only unsystematic, he was constantly reinventing the way he worked. He was always operating from his own imagination. He was, in other words, improvising energy. It wasn't the same energy. It was hundreds and thousands of different and new energies.

When we discover a great work of art or a great invention, we are initially under its

spell. We are in a state of trance. We are transported, so to speak, to its unique world. But eventually we can wake up. We can learn from the experience. That means we can shift the emphasis from the imagination of the artist to our own. The sense of the inspiration can move from being passive to being dynamic. For a time, the work of art created us, but now we create.

The painter Arshile Gorky worked under the spell of Picasso. Gorky said: “I was WITH Picasso.” He meant he knew he was living in Picasso’s world. He was operating with full consciousness. Then Gorky had conversations with the surrealist Roberto Matta, and from those talks Gorky decided he could launch out into new territory. Original territory. He then began his greatest period.

That’s the way it is with creation and life. You move beyond your last innovation. You overthrow all the old idols.

It’s no accident that as the notion and practice of “programming” has become a universal concept---in reference to computers---the notion of individual freedom and the primacy of the individual has sunk to an all-time low---in favor of the group.

Imagination is not a herd concept. It is not something that is shared by all people, like an encyclopedia. Imagination is unique to each individual. You have yours. I have mine.

It’s an interesting fact that when imagination is (unconsciously) viewed as a mass shared reservoir, we get something close to organized religion. We get a blunting of imagination.

Two quotes from the great choreographer, Martha Graham:

“You are unique, and if that is not fulfilled, then something has been lost.”

“There is a vitality, a life-force, an energy, a quickening that is translated through you into action and because there is only one of you in all of time, this expression is unique. And if you block it, it will never exist through any other medium and be lost.”

I would amend the second quote. To assume the life-force is passively translated through you is to assume your imagination is somehow limited or channeled, whereas you are the one who is doing the creating, and in that act a spontaneity arises in which you and what you are creating spill over into the world without calculation.

People are desperate to believe that passivity will give them what they want. But what they want is something they must discover (and invent)---and then they need to create that as fact, in the world.

If you don’t care about your imagination and creative power, no one else will.

View Full Version: VISION FOR NEW CENTER IN NOTHING

Title: VISION FOR NEW CENTER IN NOTHING

craig-oxley - June 25, 2009 04:28 PM (GMT)

VISION FOR NEW CENTER IN NOTHING

When I first wrote this article, I was imagining a physical location, a center for art and magic. Since then, I've come to realize that some of us are already in that place. It's wherever we are. Although one day I may come to house it on a piece of land, that doesn't really matter. A community of sorts is in the works. It entails no sacrifice in order to be "part of the group." In fact, it is founded on the idea that the individual is beyond the old model of a group. This community is "composed" of individuals, each of whom knows there are no limits to what he can invent--- and no compromise on that is possible.

There are some people who hear the word CREATE and wake up, as if a new flashing music has begun.

This lone word makes them see something majestic and untamed and astonishing.

They feel the sound of a Niagara approaching.

They suddenly know why they are alive.

It happened to me one day in 1949 when I was 11 years old. I was boarding a bus in upstate New York for a full day's ride back down into New York City. I was sitting by the window as the bus pulled out of a parking lot, and I opened the first page of Ray Bradbury's Martian Chronicles, a perfect children's book.

The word CREATE wasn't on that first page, but I felt it. It sounded like a great bell in my ear, and I knew I was in a different world.

Eventually, many years later, I discovered that what people call The Spiritual is actually

all wrapped up in the meaning of that word CREATE.

I discovered that people try to avoid it. Instead, they accept landscapes painted by a priesthood and call those landscapes Spiritual, and hope these puerile inventions will somehow take them to bliss and final enlightenment and heaven.

In other words, people want to gain the prize without ever having to create.

They want to exist inside a phony masterpiece designed by a class of authoritarians.

In a nutshell, that's the story of this planet, and it always was.

As you may know, I've been writing about the creative life for some time. For me, this life is a far cry from the pallid oatmeal of spiritual movements where the essence of things is "peace through avoidance"---an attempt to substitute one form of politeness for another, one form of sleep for another.

The Center is a place where people who have really lived with CREATIVE ACTION for a long time work. These people are artists and musicians and writers and dancers and inventors and other innovators who have shoved in all their chips on what it means to do what they do…

This Center is not a place for slogans and systems and intellectual finger food and the nasal discussion of the New. This is about EXPERIENCE. It's not weekend seminars delivered by people who drop a few tidbits about instant wealth or drop a few mantras like rose petals. And it's not about merely wowing audiences for an hour or two.

It's about experiencing the creative life by living it.

It's about diving in. It's about a kind of transformation that rips up programming and just gets down to the energy of the Fire.

When people strip away all the hogwash that has been passed off as spiritual or political enlightenment for centuries, that fire IS what they are left with. The creative fire IS the spiritual force. IS the real thing. Finally.

Most people don't want to travel to that grand arena because they know they're going to have to destroy something to get there.

They have been trained like pets by some sector of this society to be good little girls and boys. They think all destruction is bad and all creation is done in pastels and rainbows.

TS Eliot said the world would end with a whimper. Well, if it keeps on going the way it's going now, it'll end with a rainbow devised by "a really nice person" with about two

functioning brain cells.

The truth is, if people want to live the creative existence, they have to be willing to destroy----and the main thing that awaits their destruction, delivered with force, is their own illusions and their commitment to the World of Nice where doily power is the only power. Where that tired phrase, “the approval of others,” is the guiding precept and the stick of fear.

There are all kinds of people around who SAY they want to create, but it turns out they want to play a little in the sandbox, and they tremble at the idea of using real power.

The Center isn’t about little changes done in little penguin steps. It’s about putting your arms and your mind and your whole juice around Deep, Big, and Wide Desire. It’s about making that Desire come to life.

99% of the world has been trained like rats to adore systems. Give them a system and they’re ready to cuddle up and take it all in. If they have questions, or if they want to argue, it’s about how to tweak the system to make it a little better. And with every move they make, they put another blanket over the Fire Within.

So you can’t really make THE CREATIVE into a debating society, because people will turn that into another system. You have to go for actual experience, and osmosis.

Let me give you a crazy metaphor here. A very crazy metaphor. Imagine you are suddenly a singer in the middle of a choir. That’s your life. This choir has no sheet music and no plan. The choir just sings, all at once. There is no together and there is no leader and there is no imposed harmony. There is just the choir. Everyone sings. It makes no sense. But you do it anyway. It’s chaos. It’s titanic and bizarre. But eventually, out of the chaos emerges a wild beauty no one has ever heard before. It happens. And it makes the whole body and the whole mind and the whole consciousness go into a state of ecstasy.

That would be a creative experience. No one would be able to walk away from it and analyze it or label it. No one would be able to devalue it by comparing it to something else. No one would be able to debate the fine points, because there were no fine points.

Every person would feel the fire.

Well, take that as a metaphor for the Center.

Have you ever wondered why the people who are most embedded in the holiest of holy scriptures---the ones who have had those lessons shoved down their throats---go out and kill as many people as possible?

It’s simple. What they’ve been taught is this: everything is created from above already;

there is no more room; the individual creates nothing. Armed with that pungent piece of cultural brainwashing, raised in that kind of family, they are cornered rats, and they kill anything in sight.

Or if they can't kill, they go to sleep. They sleepwalk through life and say yes to everything. They promise everything and give nothing.

Maybe you once saw something truly free that didn't care about consequences, and it blew you away and turned on your soul's electricity for an hour.

Maybe you're sick and tired of bowing and scraping before a pedestal of nonsense.

I'm always amused when people discuss art as if it's some sort of perfumed and expensive turned-out fruitcake. As if art exists in a special drawing room where the initiated are permitted to make a few deft comments in a vacuum. As if art is a few dollars more for something that hangs on a wall.

Art is a word that should be oceanic. It should shake and blow apart the pillars of the smug boredom of the soul.

Art is about what the individual creates when he is on fire and doesn't care about concealing it. It's about what the individual invents when he has thrown off the false front that is slowly strangling him.

Art is about the end of mindless postponement. It's about what happens when you burn up the pretty and petty little obsessions. It's about emerging from the empty suit and empty machine of society that goes around and around and sucks away the vital bloodstream.

Art is about destroying the old order and the new order, with a glance.

It's about spearing the old apple on the point of a glittering sword and opening up the whole rotting crust that has attached itself to the tree of life.

It's about shrugging off the harmony of the living dead.

Remember this. Every time a human being has created a startling living dream and made it more real than reality, the parasites have come along and tried to bury it with their particular twisted brand of praise or disdain. That is their method of devouring it and passing its contents along to their digestive systems.

They use praise or disdain to cover it with notions that eventually varnish the cathedrals of abject worship.

But to a creator, these little zombies mean nothing. Their approval means less than

nothing.

The creator is on a different road. He has lightning in his hand, and all the gates are open.

Time and time again, it's driven home to me how addicted people are to the act of surrendering their own creative impulse, on behalf of some imagined super-thing-or-being who is really calling the shots. This addiction is powerful. Very powerful.

Not only is it powerful when you look at the conventional religions, it's strong when you look at the fringes, where everybody and his brother has some Entity with a name in his back pocket---the Entity who is "the ultimate source of everything good." People actively seek out such a belief and such an entity as if they're prospecting for gold in the mountains and they have a fever in their heads.

They invent the Entity and they want it to tell them what to do. It's that simple.

It's the ultimate appeal to authority. It's saying, "I can't stand on my own power. I have to get permission from The Big. Then and only then are things okay. Then and only then would my actions have the cosmic seal of approval. Otherwise, I'd be lost."

People have this crazy idea that they need to prop some Entity up on a pedestal; otherwise, what their lives are about is not spiritual. In fact, the opposite is true, as I've mentioned many times.

Chronically bored people, encased in concrete, look for reasons to stay where they are. They often drift into some kind of spiritual gimmick. Once they've arrived, they get assurances that illumination will come.

To get beyond that, a person has to decide, "I don't care." That's all. But his lack of caring isn't the passive tranqed out version. It's a very active I don't care. It's reckless. And then you find out you're sane, remarkably so. It's a funny moment. First you say, "I'm nuts," and then you say, "I'm sane." In that order.

Then you look around and see what you really want to do.

To see this from another angle: a dancer dances out all the moves he knows, and then suddenly leaves those familiar moves behind. He spontaneously does something new. He feels that. He feels his whole bloodstream oxygenating. He's free for eight seconds, and those eight seconds of eternity are better than anything…

Now let me describe a deceptive version of this, on the other side of the coin. A person says, "Eight years ago, I was sitting in a train going to Baltimore, and suddenly an angel came to me. It was nothing I expected. The angel showed me, in a split second, how to paint. Painting was as foreign to me as the North Pole. But when I got home, I bought a

large canvas and paints and brushes, and I did a landscape of Atlantis. I found I could render all the details of a great city. It was a miracle. I'll be showing the painting to you, and I'll be describing this miracle…"

Fine. But this person is really doing what? He's trying to get other people to become as entranced by this landscape as he is. He wants as many people as possible to bow down before this painting.

And guess what? It works. A lot of people are drawn in. They now have a second-hand experience.

Here's the catch, though: it doesn't really matter whether an angel visited the train traveler. What matters is, other people are abandoning their own creative impulse to "share" in this person's experience. That's the trick.

That's a good description of religion.

This kind of thing has happened over and over on planet Earth. Over and over. Very few people have said: "Wait. What I really want is to create on my own."

Most people prefer the second-hand version: the angel who came to someone else, the alien from space who came down and talked to someone else, the entity someone else is channeling…

But I can assure you, underneath this second-hand shell game, every person has a great desire to create on his/her own.

And finally---there are many teachings that aim toward the goal of setting people free from their own negative restraints and illusions. Some of these teachings can and do lead to breakthroughs. But in most cases, the students become addicted to the sensation of the breakthrough. They keep coming back, hoping to drink from the same cup again.

It's interesting, because in a very real way, the breakthrough is just the beginning. It's the zero point, from which a person could then create with power. But most of them don't. They just keep returning to the scene, hoping to find that open space of freedom again. They think that's what they really need. But that's skewed. What they really need is to create.

ACTION.

People come to the brink, where, so to speak, they're ready to take the paintbrush in their hands and make a move---and then they stop. They look to that Entity in their back pockets, and they step back. They opt instead for a form of hypnosis. They say, "I'm waiting for orders. I'm looking for a sign. I'M LOOKING FOR A SIGN. I don't have any

primary impulse of my own. I want the signal that it's okay to proceed. I'm just a channel for Otherness."

Baloney.

It's a form of self-induced brainwashing.

It's a way of ending up doing nothing. It's just one more way of rationalizing laziness and fear.

At the core of being, a person wants to be creative. To do that, he needs to actually CREATE. Take action.

We can break the hypnotic supposition that some system of harmony is our eternal guide. We can break out of the idea that all we are supposed to do is contribute another piece to a system of harmony that has already been laid down.

We can create something new and unprecedented and we can see it is magic.

Title: THE CENTRAL THEME

craig-oxley - June 7, 2009 02:23 AM (GMT)

THE CENTRAL THEME

JUNE 8, 2009. People are addicted to the act of surrendering their own creativity, on behalf of some imagined super-thing-or-being who “is really calling the shots.” This addiction is powerful. Very powerful.

Not only is it powerful when you look at the conventional religions, it’s strong when you look at the fringes, where everybody and his brother has some Entity with a name in his back pocket---the Entity who is “the ultimate source of everything good.” People actively seek out such a belief and such an entity as if they’re prospecting for gold in the mountains and they have a fever in their heads.

They want the Entity to tell them what to do. It’s that simple. Even if the Entity (in imagination) tells them to be free and creative, it’s still the Entity who is making that judgment.

It’s the ultimate appeal to authority. It’s saying, “I can’t stand on my own power. I have to get permission from the bigger Entity. Then and only then are things okay. Then and only then would my actions have the cosmic seal of approval. Otherwise, I’d be lost.”

People have this crazy idea that they need to prop some Entity up on a pedestal; otherwise, what their lives are about is not spiritual. In fact, the opposite is true. When your own creative force comes to the fore, and when you are taking creative action with enough momentum and scope---when you are inventing what you truly desire---the Spiritual becomes obvious. It shows up.

But sacrificing yourself on an altar of confusion to a Big Ruler who will take all your troubles away and point you to some “amazing event” of His that is going to change things forever? This is a puerile cartoon and speaks of a need for brain nutrition.

On an individual level, boredom has pretty much the same effect as concrete does in the landscape: it covers more and more territory, and once you lay it down it doesn't usually come up. It stays there.

If you look closely, you can see that people are walking around with big signs on their necks: I'M BORED.

They pretend they're not. They'd rather say, "I have a cold." "I'm worried about Aunt Sally." "My shoes are tight." "An asteroid could hit Earth in the next three hundred years." "Maybe we'll all die of tweety-bird flu." "They should have found that guy guilty on Law and Order last night."

But they're bored silly. They're driving themselves cuckoo.

Artists, creative people of any kind, may be dissatisfied, but they're not bored. In a pinch, when they can't think of anything else to do, they can always apply a hammer and chisel to the mountain of bullshit that is society.

Chronically bored people, encased in concrete, look for reasons to stay where they are. They often drift into some kind of spiritual gimmick. Once they've arrived, they get assurances that illumination comes from Stillness. Great. They already know how to be still. Only now they can call it by some elevated name. "I'm meditating on the Oobladee…"

To get to the point of real creative force, a person has to decide, "I don't care." But his lack of caring isn't the passive tranqed out version. It's a very active I don't care. It's going a little nuts. And when you do, you find out you're sane, remarkably so. It's a funny moment. First you say, "I'm nuts," and then you say, "I'm sane." In that order.

Then you look around and see what you really want to do.

Some people who are locked up real tight believe they are responsible for everything happening in the world and they have to fix it. That's their secret version of sanity. And then when they decide they don't care, they go nuts and then they go sane in a much better way. And then they can do all sorts of things. If they want to, they can even do some fixing instead of just thinking about it.

Somewhere in all this, a new and vital and grounded recklessness comes to fruition. A person decides he wants to create. And at this new point, he can.

He can think in any way he wants to. He can be an artist of anything he wants to be an artist of.

Now, ordinarily, I would say that a Center dedicated to this proposition would fail

miserably. It would fail because it would try to mold people to a set of ideas. It would be just another type of fascism on parade. It would be another stupid and pretentious altruism. But the Center I have in mind would be about one thing only: inventing the idea of wild roads along which people can walk---and when they do, they come to their own creative force. Not somebody else's. Their own.

Something on those roads happens that is much more interesting and galvanizing than the laziness and the fear and the boredom. Plus this: nobody who helps build that road is beyond it, sitting up in a tower like a saint. Everybody needs such a road. It's built and experienced by everybody.

On these roads, people give up the ghost and then discover something far better. They start creating, and the experience is so bracing they take the present moment in their hands. This is what Zen is really about.

Most people prefer the second-hand version: the angel who came to someone else, the alien from space who came down and talked to someone else, the entity someone else is channeling…

But I can assure you, underneath this second-hand shell game, every person has a great desire to create on his/her own.

There are many teachings that aim toward the goal of setting people free from their own negative restraints and illusions. Some of these teachings can and do lead to breakthroughs. But in most cases, the students become addicted to the sensation of the breakthrough. They keep coming back, hoping to drink from the same cup again.

It's interesting, because in a very real way, the breakthrough is just the beginning. It's the zero point, from which a person could then create with power. But most of them don't. They just keep returning to the scene, hoping to find that open space of freedom again. They think that's what they really need. But that's skewed. What they really need is to create.

ACTION.

Frankly, I don't care what people believe. That's their own business. But it's annoying when people try to pass off their beliefs as a substitute for creating. And they do that. They come to the brink, where, so to speak, they're ready to take the paintbrush in their hands and make a move---and then they stop. They look to that Entity in their back pockets, and they step back. They opt instead for a form of hypnosis. They say, "I'm waiting for orders. I'm looking for a sign. I'M LOOKING FOR A SIGN. I don't have any primary impulse of my own. I want the signal that it's okay to proceed. I'm just a channel for Otherness."

Baloney.

At the core of being, a person wants to be creative. To do that, he needs to actually CREATE. Take action.

We can break the hypnotic supposition that some closed system of harmony is our eternal guide. We can break out of the idea that all we are supposed to do is contribute another piece to the system of harmony that has already been laid down.

If you do break out, THAT'S what "changes your life forever."

Eight years ago, while I was writing The Secret Behind Secret Societies, I revisited my research on the Tibetan path to enlightenment. I re-read the marvelous books on this subject by John Blofeld and Alexandra David-Neel.

I was particularly fascinated (and a little repelled) by the description of so-called deity visualization, in which the student is tasked with the arduous work of imagining, in great detail, a particular deity. For days and months and possibly years, the student creates this deity, until he can finally DO it. In all its dimensions.

At that point, the deity "comes alive" and appears to him. Becomes his advisor and guide. The student develops a growing attachment to the deity. That's when the teacher orders the student to get rid of it, which by all accounts, is far more difficult to do than the original creation.

The purpose of this exercise and others is the penetration into knowing that the universe is a product of mind.

I'm not a major fan of deity visualization. But there was a point in time when the Tibetan aspirants were a truly reckless breed. They weren't fooling around with cute little ideas. They weren't politically correct. They certainly weren't saying Don't Worry Be Happy. They were out on the edge, challenging the very laws of the universe, the illusions that hold things together. They were, in some cases, magicians of a high order.

Eight years ago, I spoke with a representative of a very well known Tibetan teaching center, off the record. I asked her about deity visualization, and whether they were teaching that. She went into a disappointing tap dance on the subject: their guru said people were not ready for it (postponement); the ego, if not tamed, could wreak havoc with the creative process (self-induced fear); people at this time were just supposed to work on getting rid of the ego (self-negation).

The tone of all this was weak. It was embarrassingly weak and nasal and a little snotty. It was pathetic. I knew that if I had to depend on this person to name the day when the creative fire could be unleashed, I would be looking a few hundred million years into the future.

She was, in effect, supporting a system of self-debasement. Just another form of brainwashing.

Some people will do anything to postpone the time of personal creation.

I'm not an advocate for the Tibetan system or any other system. I'm talking about liberation through imagination and creation. That's all.

Therefore, I have to go where the creators are. The artists.

Lawrence Durrell, the author of The Alexandria Quartet: "I imagine, therefore I belong and I am free."

William Blake: "Imagination is the real and eternal world of which this vegetable world is but a faint shadow." "Some see nature all ridicule and deformity…and some scarce see nature at all. But to the eyes of the man of imagination, nature is imagination itself."

It's time we gave our own creative core its due. It's time we stopped trying to avoid it by substituting notions which make us more passive.

Time and time again, people return to the spiritual quest, and when they do, they look for a Big Idea.

They go shopping in the metaphysical supermarket, and they come out of the express lane with a bag, and inside is the glowing Idea.

Sometimes, they buy the Idea because it belongs to the ancient past, when, of course, everyone was smarter.

In one way or another, the source of the Idea is painted as unimpeachable. Absolute. Completely trustable.

That's the main thing.

Here is the most interesting trick. Whatever the content of the Idea is, it will eventually result in the believer becoming passive. In the presence of the Idea and all it stands for, the person will go limp. He will do that.

Some part of him will go to sleep.

In fact, most people associate "the spiritual life" with going to sleep. They don't know that, but eventually that's the way it works out.

So you get a neat equation: rising in spiritual knowledge and insight=going to sleep.

People will never admit this. But this kind of sleep is what they are looking for. They're after a dependence on some Idea that puts them in a trance.

In many ways, this person may remain active, but in that very important place, he's asleep. And he likes it.

So if you begin to talk to this person about spiritual matters, you must talk in a way he understands as "trance" or "surrender" or "sleep." If you don't, he automatically rejects what you're saying. He knows it's wrong, because everything he relies on tells him his spiritual core is really in a trance state.

I hope you understand this, because it's very important. The entire history of most spiritual movements and systems and religions on this planet are all about this Sleep. This place in the center of consciousness where nothing is going on.

To look at it from the other side of the same coin, if you talk to people about CREATIVE ACTION and CREATIVE FIRE of the widest kind and claim that you're talking about Spirit, they draw a blank. They don't understand. They think you're way off base. For them, the life and essence of spirit couldn't be about their creative power. No. For them, the spiritual essence is about that particular S-spot in their minds where the reservation is permanently booked for Sleep, for the Idea, for the surrender to the Idea, for the trance.

You can pick up clues about the Big Sleep in what people say. "I'm trying to figure out what I'm supposed to do in my life." "I think the Universe wants me to do this."

Statements like these---if you had a special kind of radar tracking system---would lead you right back to that place where people are in the Big Sleep.

They don't know what THEY want to do in their lives. They don't want to start creating what they want. So instead, they rely on the Idea they bought in the supermarket. They're always on the phone with that Idea, they're listening, and they're waiting for the Idea to tell them what to do.

These people are curled around the Idea they bought. Since they're tuned into that exact central spot in their own minds where they're asleep, they tend to stay that way.

So the years roll by, and these people don't seem to launch into big-time action. They just keep stalling and stalling at the gate. They keep sifting through the messages they think they're getting from the other end of that phone line.

Why think small? Why invent small?

When one acts long enough, he realizes that the world could really be a stage, and the

sound and fury would, in fact, signify something vital and deep.

When one paints long enough, he realizes that this world and all the universe are but one painting out of an infinity of possible paintings.

When one writes long enough, he realizes that all histories and lives are but one story---and many other (better) stories could be told.

When one plays music long enough, he realizes that emotion can be lifted out of petty concerns into realms where feeling becomes vast triumph.

When one builds long enough, he realizes that the physical structure of civilization can be led out of mere functionality into dazzling new spaces.

This is where we could go. And the stars in space would pale by comparison.

craig-oxley - May 28, 2009 02:22 AM (GMT)

IMAGINATION WITHOUT GUILT

MAY 26, 2009. This is another backgrounder for my upcoming free telephone seminar, IMAGINATION: THE GRAND SOLUTION, on June 3. Just click on the link above to sign up, or click on the seminar banner at my site, www.nomorefakenews.com

Imagination transforms a life, but if people feel queasy about using imagination, they are stuck at the gate.

People pretend they don't know anything about imagination, about how "it operates" (as if it were a machine), about what it can do, about where it can go, about how it can take them into new territory. They feign ignorance.

Why?

To protect themselves from elevating to a new position, a new space, a new perspective, a new point of view.

"I want to stay the same, and I'll do anything to maintain that."

This is why people seem to get more hazy and less intelligent as they grow older. They're busy denying their own imagination. And in order to do that, they have to appear ignorant to themselves. It's a con game, and they are the perpetrators and the victims.

People want to stay the same, they want a certain level of defined comfort, and they also want to BELONG TO SOMETHING.

Belong to what? It could be a group, it could be a cause, it could be an ideal, it could be a "higher force," it could be a religion. They discover that in order to belong, they need

to sacrifice their imaginations, because these “belongings” require them to adopt a pose of relative ignorance. Imagination would shatter that.

“I want to belong to X. It’s my reason for being. It’s my hole card. Therefore, I’ll sit on my imagination, so it won’t take me out beyond this thing I want to attach myself to.”

And they’re right. If they began to use their imagination in a wide-ranging way, they would soon see that all these belongings are only a fraction of what life can be. They would see that as clearly as you can see a tree through a window.

So it’s a test of loyalty. Do you want to remain faithful to an ideal that is just a small piece of what you can be, or do you want to take the greater adventure?

Of course, it turns out that, if you take the road of imagination, you eventually discover a different kind of ideal, a living energy that you naturally transmit to others, in which case they come closer to WAKING UP.

The propaganda machines of society relentlessly turn out images and messages that ultimately say: YOU MUST BELONG TO THE GROUP. In one way or another, this is what the messages urge. If you want evidence of this, just watch a few thousand hours of television and notice how many products and programs are sold on the basis of FAMILY. Whether it’s a new set of windows or a candy bar or a toxic pharmaceutical or a cell phone, you won’t have to look far to see the connection drawn to family happiness. If you think these advertisers really care about family, you’re already in a swamp.

The formula is pretty simple. The group wants the status quo. Imagination transcends the status quo. Therefore, belong to the group and avoid the possibility of transformation.

This is, in fact, modern alchemy. With a reverse twist. It is engineered to put people into a position of less power, less consciousness. The history of advertising proves that. And it’s getting worse all the time. Advertising is a program founded on the ideal of Huxley’s Brave New World, where everyone is happy, happy, happy---and if they aren’t, they can (and must) take a drug that will restore their “equilibrium.”

No imagination required.

I hope you’ll be in the seminar. I have a lot more to say about all this. For now, I’ll leave you with an interesting fact:

Day after day after day, year after year, the media celebrate heroes in sports, those athletes who achieve great victories. They inevitably interview these stars and drag out of them the same old familiar stories. Have you EVER, even once, seen a great athlete who told an interviewer in no uncertain terms: “I got to where I am by denying the power

of the group, by denying the power of some kind of smiley-face society, by going beyond the propaganda that says we all have to BELONG."

Have you ever heard that kind of uncompromising statement?

I didn't think so.

Why not? Why doesn't that come up in interviews?

Because it's not part of the BELONGING PROGRAM, the program that society runs on to stay away from the transforming power of IMAGINATION.

Title: VISION FOR NEW CENTER IN NOTHING

craig-oxley - May 26, 2009 03:59 AM (GMT)

VISION FOR NEW CENTER IN NOTHING

http://www.nomorefakenews.com/index.php

When I first wrote this article, I was imagining a physical location, a center for art and magic. Since then, I've come to realize that some of us are already in that place. It's wherever we are. Although one day I may come to house it on a piece of land, that doesn't really matter. A community of sorts is in the works. It entails no sacrifice in order to be "part of the group." In fact, it is founded on the idea that the individual is beyond the old model of a group. This community is "composed" of individuals, each of whom knows there are no limits to what he can invent--- and no compromise on that is possible.

There are some people who hear the word CREATE and wake up, as if a new flashing music has begun.

This lone word makes them see something majestic and untamed and astonishing.

They feel the sound of a Niagara approaching.

They suddenly know why they are alive.

It happened to me one day in 1949 when I was 11 years old. I was boarding a bus in upstate New York for a full day's ride back down into New York City. I was sitting by the window as the bus pulled out of a parking lot, and I opened the first page of Ray Bradbury's Martian Chronicles, a perfect children's book.

The word CREATE wasn't on that first page, but I felt it. It sounded like a great bell in my ear, and I knew I was in a different world.

Eventually, many years later, I discovered that what people call The Spiritual is actually all wrapped up in the meaning of that word CREATE.

I discovered that people try to avoid it. Instead, they accept landscapes painted by a priesthood and call those landscapes Spiritual, and hope these puerile inventions will somehow take them to bliss and final enlightenment and heaven.

In other words, people want to gain the prize without ever having to create.

They want to exist inside a phony masterpiece designed by a class of authoritarians.

In a nutshell, that's the story of this planet, and it always was.

As you may know, I've been writing about the creative life for some time. For me, this life is a far cry from the pallid oatmeal of spiritual movements where the essence of things is "peace through avoidance"---an attempt to substitute one form of politeness for another, one form of sleep for another.

The Center is a place where people who have really lived with CREATIVE ACTION for a long time work. These people are artists and musicians and writers and dancers and inventors and other innovators who have shoved in all their chips on what it means to do what they do…

This Center is not a place for slogans and systems and intellectual finger food and the nasal discussion of the New. This is about EXPERIENCE. It's not weekend seminars delivered by people who drop a few tidbits about instant wealth or drop a few mantras like rose petals. And it's not about merely wowing audiences for an hour or two.

It's about experiencing the creative life by living it.

It's about diving in. It's about a kind of transformation that rips up programming and just gets down to the energy of the Fire.

When people strip away all the hogwash that has been passed off as spiritual or political enlightenment for centuries, that fire IS what they are left with. The creative fire IS the spiritual force. IS the real thing. Finally.

Most people don't want to travel to that grand arena because they know they're going to have to destroy something to get there.

They have been trained like pets by some sector of this society to be good little girls and boys. They think all destruction is bad and all creation is done in pastels and rainbows.

TS Eliot said the world would end with a whimper. Well, if it keeps on going the way it's

going now, it'll end with a rainbow devised by "a really nice person" with about two functioning brain cells.

The truth is, if people want to live the creative existence, they have to be willing to destroy----and the main thing that awaits their destruction, delivered with force, is their own illusions and their commitment to the World of Nice where doily power is the only power. Where that tired phrase, "the approval of others," is the guiding precept and the stick of fear.

There are all kinds of people around who SAY they want to create, but it turns out they want to play a little in the sandbox, and they tremble at the idea of using real power.

The Center isn't about little changes done in little penguin steps. It's about putting your arms and your mind and your whole juice around Deep, Big, and Wide Desire. It's about making that Desire come to life.

99% of the world has been trained like rats to adore systems. Give them a system and they're ready to cuddle up and take it all in. If they have questions, or if they want to argue, it's about how to tweak the system to make it a little better. And with every move they make, they put another blanket over the Fire Within.

So you can't really make THE CREATIVE into a debating society, because people will turn that into another system. You have to go for actual experience, and osmosis.

Let me give you a crazy metaphor here. A very crazy metaphor. Imagine you are suddenly a singer in the middle of a choir. That's your life. This choir has no sheet music and no plan. The choir just sings, all at once. There is no together and there is no leader and there is no imposed harmony. There is just the choir. Everyone sings. It makes no sense. But you do it anyway. It's chaos. It's titanic and bizarre. But eventually, out of the chaos emerges a wild beauty no one has ever heard before. It happens. And it makes the whole body and the whole mind and the whole consciousness go into a state of ecstasy.

That would be a creative experience. No one would be able to walk away from it and analyze it or label it. No one would be able to devalue it by comparing it to something else. No one would be able to debate the fine points, because there were no fine points.

Every person would feel the fire.

Well, take that as a metaphor for the Center.

Have you ever wondered why the people who are most embedded in the holiest of holy scriptures---the ones who have had those lessons shoved down their throats---go out and kill as many people as possible?

It's simple. What they've been taught is this: everything is created from above already; there is no more room; the individual creates nothing. Armed with that pungent piece of cultural brainwashing, raised in that kind of family, they are cornered rats, and they kill anything in sight.

Or if they can't kill, they go to sleep. They sleepwalk through life and say yes to everything. They promise everything and give nothing.

Maybe you once saw something truly free that didn't care about consequences, and it blew you away and turned on your soul's electricity for an hour.

Maybe you're sick and tired of bowing and scraping before a pedestal of nonsense.

I'm always amused when people discuss art as if it's some sort of perfumed and expensive turned-out fruitcake. As if art exists in a special drawing room where the initiated are permitted to make a few deft comments in a vacuum. As if art is a few dollars more for something that hangs on a wall.

Art is a word that should be oceanic. It should shake and blow apart the pillars of the smug boredom of the soul.

Art is about what the individual creates when he is on fire and doesn't care about concealing it. It's about what the individual invents when he has thrown off the false front that is slowly strangling him.

Art is about the end of mindless postponement. It's about what happens when you burn up the pretty and petty little obsessions. It's about emerging from the empty suit and empty machine of society that goes around and around and sucks away the vital bloodstream.

Art is about destroying the old order and the new order, with a glance.

It's about spearing the old apple on the point of a glittering sword and opening up the whole rotting crust that has attached itself to the tree of life.

It's about shrugging off the harmony of the living dead.

Remember this. Every time a human being has created a startling living dream and made it more real than reality, the parasites have come along and tried to bury it with their particular twisted brand of praise or disdain. That is their method of devouring it and passing its contents along to their digestive systems.

They use praise or disdain to cover it with notions that eventually varnish the cathedrals of abject worship.

But to a creator, these little zombies mean nothing. Their approval means less than nothing.

The creator is on a different road. He has lightning in his hand, and all the gates are open.

Time and time again, it's driven home to me how addicted people are to the act of surrendering their own creative impulse, on behalf of some imagined super-thing-or-being who is really calling the shots. This addiction is powerful. Very powerful.

Not only is it powerful when you look at the conventional religions, it's strong when you look at the fringes, where everybody and his brother has some Entity with a name in his back pocket---the Entity who is "the ultimate source of everything good." People actively seek out such a belief and such an entity as if they're prospecting for gold in the mountains and they have a fever in their heads.

They invent the Entity and they want it to tell them what to do. It's that simple.

It's the ultimate appeal to authority. It's saying, "I can't stand on my own power. I have to get permission from The Big. Then and only then are things okay. Then and only then would my actions have the cosmic seal of approval. Otherwise, I'd be lost."

People have this crazy idea that they need to prop some Entity up on a pedestal; otherwise, what their lives are about is not spiritual. In fact, the opposite is true, as I've mentioned many times.

Chronically bored people, encased in concrete, look for reasons to stay where they are. They often drift into some kind of spiritual gimmick. Once they've arrived, they get assurances that illumination will come.

To get beyond that, a person has to decide, "I don't care." That's all. But his lack of caring isn't the passive tranqed out version. It's a very active I don't care. It's reckless. And then you find out you're sane, remarkably so. It's a funny moment. First you say, "I'm nuts," and then you say, "I'm sane." In that order.

Then you look around and see what you really want to do.

To see this from another angle: a dancer dances out all the moves he knows, and then suddenly leaves those familiar moves behind. He spontaneously does something new. He feels that. He feels his whole bloodstream oxygenating. He's free for eight seconds, and those eight seconds of eternity are better than anything…

Now let me describe a deceptive version of this, on the other side of the coin. A person says, "Eight years ago, I was sitting in a train going to Baltimore, and suddenly an angel came to me. It was nothing I expected. The angel showed me, in a split second, how to

paint. Painting was as foreign to me as the North Pole. But when I got home, I bought a large canvas and paints and brushes, and I did a landscape of Atlantis. I found I could render all the details of a great city. It was a miracle. I'll be showing the painting to you, and I'll be describing this miracle…"

Fine. But this person is really doing what? He's trying to get other people to become as entranced by this landscape as he is. He wants as many people as possible to bow down before this painting.

And guess what? It works. A lot of people are drawn in. They now have a second-hand experience.

Here's the catch, though: it doesn't really matter whether an angel visited the train traveler. What matters is, other people are abandoning their own creative impulse to "share" in this person's experience. That's the trick.

That's a good description of religion.

This kind of thing has happened over and over on planet Earth. Over and over. Very few people have said: "Wait. What I really want is to create on my own."

Most people prefer the second-hand version: the angel who came to someone else, the alien from space who came down and talked to someone else, the entity someone else is channeling…

But I can assure you, underneath this second-hand shell game, every person has a great desire to create on his/her own.

And finally---there are many teachings that aim toward the goal of setting people free from their own negative restraints and illusions. Some of these teachings can and do lead to breakthroughs. But in most cases, the students become addicted to the sensation of the breakthrough. They keep coming back, hoping to drink from the same cup again.

It's interesting, because in a very real way, the breakthrough is just the beginning. It's the zero point, from which a person could then create with power. But most of them don't. They just keep returning to the scene, hoping to find that open space of freedom again. They think that's what they really need. But that's skewed. What they really need is to create.

ACTION.

People come to the brink, where, so to speak, they're ready to take the paintbrush in their hands and make a move---and then they stop. They look to that Entity in their back pockets, and they step back. They opt instead for a form of hypnosis. They say, "I'm

waiting for orders. I'm looking for a sign. I'M LOOKING FOR A SIGN. I don't have any primary impulse of my own. I want the signal that it's okay to proceed. I'm just a channel for Otherness."

Baloney.

It's a form of self-induced brainwashing.

It's a way of ending up doing nothing. It's just one more way of rationalizing laziness and fear.

At the core of being, a person wants to be creative. To do that, he needs to actually CREATE. Take action.

We can break the hypnotic supposition that some system of harmony is our eternal guide. We can break out of the idea that all we are supposed to do is contribute another piece to a system of harmony that has already been laid down.

We can create something new and unprecedented and we can see it is magic.

Title: STRAVINSKY, THE RITE OF SPRING, THE REVOLUTION,
Description: *AND THE MEANING OF IMAGINATION*

craig-oxley - April 19, 2009 05:18 PM (GMT)

STRAVINSKY, THE RITE OF SPRING, THE REVOLUTION, AND THE MEANING OF IMAGINATION

APRIL 19,2009. I've had numerous requests to reprint this one. In a relatively few words, it tells the story of imagination unleashed and what that revolution is all about, at its core.

On May 29, 1913, in the Theatre des Champs-Elysees in Paris, a riot broke out.

After the curtain went up on the premiere of The Rite of Spring, it took only a few minutes for the tumult to begin.

Boos, hisses, catcalls, people throwing objects at the stage... The roar of the crowd quickly became so loud, the dancers lost their cues.

The music was a whisper, a pounding scream, sheets of brass sound. Cliffs colliding and collapsing in the air.

The police arrived and shut the program down.

Stravinsky, at 28, had arrived on the world scene.

Forget that never again would he compose music so challenging, or that later in his life, after he had taken up a position as a champion of new classicism, he would conduct a recording of Rite that was modulated to a bare shadow of its former self.

The revolution had happened.

Much has been written about the premiere and Rite. A great deal of programmatic

explanation has been offered to "make sense" out of the piece of music: after all, it was a ballet with a plot, and the themes had to do with primitive ritual sacrifices in a fanciful pagan world.

This is called watering down the effect. It has been done by linking the music to a tale/ myth. The tale, when told is, of course, much more sober and distant.

You can also find scholarly work on the structure of the Rite, indicating a possible borrowed background of several Eastern European folk melodies.

I bring this up because such works are often diluted by referring the audience to "other examples" and periods of time and influences---to explain the incomprehensible.

But the fact is, to absorb a work of imagination, one has to use his own imagination.

Since this is considered unlikely, pundits earnestly help us with step-down contexts, so we can understand the work in pedestrian terms. In other words, so we can reduce it to nothing.

However, the music itself resists such translations. It immediately and finally presents itself as a universe apart from easy references and tie-ins and links.

So when you listen to Rite, you are, gratefully, alone with it. In this regard, I recommend one recording. The 1958 Leonard Bernstein-New York Philharmonic, available as Sony SMK 47629. It's the 1992 Bernstein Royal Edition. Le Sacre Du Printemps.

In 1912 and 1913, Stravinsky had composed Rite in a reckless frame of mind. This did not mean he abandoned all he knew; it meant he wanted to show everyone how dim the perception of music had become. "To hell with all of them."

He took the large orchestra and shredded the conventional relationships between its various sections. Instead, he made it an ocean in a storm. He crossed all lines.

He made something new, something no one could have predicted.

As you listen to it, you may find one part of your mind repeating, this is not music, this is not music. It doesn't matter. Just keep listening. Five times, 50 times, 100 times.

There are artists like Stravinsky, like the Spanish architect Gaudi, like Edgar Varese, like the often-reviled American writer Henry Miller, like Walt Whitman (grotesquely co-opted into a Norman Rockwell-like prefect), like the several great Mexican muralists---all of whom transmit an oceanic quality.

As in, The Flood.

There is a fear that, if such artists were unleashed to produce their work on a grand scale---and if the societal chains of perception were removed---they would take over the world.

This is the real reason there was a riot at the Theatre des Champs Elysees on May 29, 1913. Even though Stravinsky was presenting a universe of his own making, people instinctively felt the music could spill over into the streets of Paris...and after that, where would it go? What would stop it?

Their fear was justified.

When the artist creates a separate and new world, a crossover occurs.

A most natural crossover.

Our world, contrary to all consensus, is meant to be revolutionized by art, by imagination, right down to its core.

That this has not happened for the best is no sign that the process is irrelevant. It is only a testament to the collective resistance.

Who knows how many such revolutions have been shunted aside and rejected, in favor of the shapes and symmetries we now think of as central and eternal?

We are living in a default structure, the one that has been left over after all the prior revolutions have been put to sleep.

We peek between the ancient,fluted, classical columns (our reference point) to see what the future might hold. We speculate, for example, that information itself might be alive and might flow in from our own DNA to bring about a new cyber-brain step in evolution. Information? What further evidence do we need that our society is heading down a slope to the swamp?

If Rite of Spring and other works of that magnitude are information, a wooden duck on a doily is Shakespeare.

From the point of view of art, mere information is the wood scrapings and the stone chips Brancusi swept up in his studio and put out in the alley. Information is the dried flattened tubes of paint Matisse disposed of with the old newspapers. Information is the heap of wires Tesla tossed in the garbage.

Information is the neutral boil-down left over after the artist has made his mark.

Creation is not neutral.

It flows out into the atmosphere with all its subjective force.

That is what happened on May 29, 1913.

And that is what evoked the mass fear.

Title: MIND CONTROL AND MAGIC

craig-oxley - April 19, 2009 03:35 AM (GMT)

MIND CONTROL AND MAGIC

http://www.nomorefakenews.com/index.php

APRIL 18, 2009. The whole core of mind control has to do with reducing the efforts of a human being to a mechanical and rigid pattern.

This is what mind control is all about: stifling the power and spontaneity of the creative impulse.

When the creative impulse shrinks to that dimension, magic drains away.

This is hard for some people to understand. They are already in a state of mind control, and for them everything worthwhile is a fixed pattern. They live by patterns and systems.

Magic goes beyond any system.

That is the secret.

Early on in my experience as a painter, I learned about the business of selling art. The dealer, the agent, expects a painter to repeat, over and over again, a certain style. That makes the work visible and predictable to the buyer. That also makes the painter into a machine.

Painters, many of them, delude themselves into thinking they are "working on solving problems" by repeating a style again and again. Actually, they are becoming bored to death.

I recall, many years ago, having a conversation with a musician friend. He began spouting off about certain "ultimate" mathematical relationships of tones, and about

hidden geometric relationships in nature. He was applying all this very conscientiously to his compositions.

I said, "I wake up every day and paint what I want to that day."

"Well," he said,, suddenly shifting gears, "that's what art is all about. That's the ultimate."

The conversation ground to a halt right there.

When you devote yourself to a system and make it your king, and when you bow down to it and apply your creativity to satisfying the king, you wind up in a swamp, bored beyond belief. Magic is nowhere to be found.

But when you are projecting live energy and inventing with great freshness, the magic comes jumping out of the closet again.

Mind control gives you a king to worship. Magic, which liberates you from all that, brings excitement and ecstasy. It also brings the power to create what you desire and make it a fact in the world.

When you experience THAT, you know you are launched. You know you have transcended systems.

If you explore various organized religions and spiritual systems far enough, you find mind control. You find "a king" that wants your loyalty above and beyond what you want.

I don't care how attractive and beautiful the system appears, at first. Eventually, you find yourself in nowhere land. Whatever "answers" you have found, they all turn to dust. That's because answers aren't the point. Making live and electric magic through creation is the point.

Mastering a system isn't the same thing as creating.

Creating comes out of YOU. You invent new realities, and thereby gain freedom from consensus reality. That's exactly how you leave the very tiresome consensus reality behind.

You gain more and more confidence in your ability to surpass the average and normal stuff foolishly called Reality.

View Full Version: ANOTHER JACK TRUE INTERVIEW

Title: ANOTHER JACK TRUE INTERVIEW

craig-oxley - April 17, 2009 01:06 AM (GMT)

ANOTHER JACK TRUE INTERVIEW

INTERVIEW WITH A HYPNOTHERAPIST

APRIL 16, 2009. This piece is about the GRAND ILLUSION.

It has to do with the conviction that impending events are forming a pattern that has some climax, some revelation, some grand finale.

In the late 1990s, we saw this conviction at work in a huge way. Millions of people were swept up in the coming Y2K disaster. Radio shows spent hours on it. And Y2K wasn't the only element.

In general, many perceived that the turn of the century was a magnetic force, drawing to it all sorts of happenings that would crack the egg of normal reality. Once and for all.

Not because anyone here on Earth was DOING something, but because events were forming up by themselves, under the direction of unseen causes.

There was the specter of earth changes, earthquakes on a new scale, and a collapse of infrastructure. Radio hosts wove together every strange occurrence to create an expectation.

Of course, as we know, the end of every century has seen such machinations.

Here is a brief interview with the late Jack True, who was, in my opinion, the most innovative hypnotherapist on the planet. The approx date of this conversation was June 1991.

Q: What do you make of the constant idea that "there is something in the air, something afoot?"

A: It stimulates people, which isn't a bad thing. But it also gets people to think that every good or bad thing, on a grand scale, is a Force to which they should hitch their wagons. It's a human attempt to FIND ENERGY SOMEWHERE.

Q: Find energy?

A: Yes. People are walled off from the sense that they can create energy, so they look for big amounts of it wherever it might be, and then they try to swim with it.

Q: And when that doesn't lead anywhere?

A: Depression sets in.

Q: Well, on a political level, the same thing happens every four years.

A: I know. The same desire to be part of the big force that is sweeping the nation, to support one candidate, to catch the wave.

Q: So this is a habit.

A: Right.

Q: And what is the antidote to it?

A: At the risk of sounding trite, creating your own energy.

Q: And how does one do that?

A: That's like asking how you use your fingers to grip an object. If you've forgotten, you have to remember or re-learn the skill. This is the hardest thing for people to understand.

Q: Yet, in your work with patients, you have them do all sorts of techniques to re-learn that ability.

A: There is no contradiction there. Except, I'm not making myself the source of their ability. I'm trying to empower them so they act on their own.

Q: When you have people literally invent dreams---what is happening there?

A: Dreams are often happening on a somewhat larger scale than daily life. So when people invent their dreams consciously, they are creating larger energies. They get familiar with that.

Q: And after they do it, what happens when they go back to their lives, where those

energies don't usually play a part?

A: People feel a contradiction. I encourage that. It's the first step to making a change. Why would you change your life, unless you felt you had much more to give than your life was able to absorb?

Q: And this works out for your patients?

A: Not always, but sometimes. The analogy I would offer goes like this: you discover that you can sing. But you are working as an accountant. So do you change course, or do you fall back on the tried and true? No one can make that decision for you.

Q: How about this analogy? You find out you can make a cup slide off a table with your mind. Now you have to figure out a way to integrate that ability in your life.

A: Yes. That would be the same sort of thing.

Q: There is a reflex that makes people think every large accomplishment they achieve has a hidden cause, that it "comes from somewhere else." Not from them.

A: I could analyze that reflex for a long time. But to boil it down, I would say the individual Self, in this day and age, does not usually perceive its own size and scope. Therefore Self thinks things are coming from somewhere else, when they are actually coming from an uncharted or forgotten area of Self.

Q: That's an exciting idea.

A: It also happens to be a true idea. So then, should one simply wake up part way and accept these marvelous moments as "subconsciously derived," or should one also explore the forgotten areas of Self? I choose the latter road. I'm an advocate of individual power. I don't think one has to be afraid of it. I think one has to find out about it.

Q: And what about the people who use their power to do bad things?

A: That's just the way it is. Every power can be turned north or south. Which is the justification often used to try to limit the power of everyone----to put that power under a ceiling---a ceiling built by those few who think they know what's best.

Q: Reminds me of the "Hitler syndrome."

A: Yes. Unfettered power is equated with Hitler, as if we would all become Hitlers if we were left to our own devices. A lie. And in a way, Hitler was created as a prelude to all this NWO stuff, which is based on the idea that power is bad and must be reserved for the elite, who know how to handle it.

Q: The population is given these object lessons.

A: Yes. Every villain is portrayed as someone whose real crime was tapping into too much power---and therefore, we have to reduce everyone down to weakness. “For the good of all.”

Q: So these waves of feeling that “something incredible is in the air, something incredible is afoot”---

A: It is a way to make people feel their best bet to have power is to give it away to unseen forces and then to connect, as slaves, to those forces.

View Full Version: THE BASIS OF INDIVIDUAL FREEDOM

Title: THE BASIS OF INDIVIDUAL FREEDOM

craig-oxley - April 10, 2009 03:41 AM (GMT)

THE BASIS OF INDIVIDUAL FREEDOM

By Jon Rappoport
www.nomorefakenews.com

As the 19th century drew to a close, two large human forces were facing off in a clash of the titans.

On one side was Science, with its philosophic partner, materialism. Materialism had become a heady thing. It more or less proposed a world of particles driven this way and that, linked in chains of causation.

Everything was made out of particles. Horses and paintings and Mrs. Smith's doilies and the moon and the sun and trees and guns and newspapers and fish and girdles and dogs and water and fire and electricity and bodies and brains and thoughts and emotions.

Wherever it seemed that some aspect of existence might stake out a separate territory, advocates of materialism claimed that human beings were deluded.

Thoughts, for example, were actually electrical events taking place in the brain. These events ran on their own timetable in their own way. They were controlling gods to whom no appeal could be made. If a person believed otherwise, he was ignorant. And his belief was itself only a thought, and that thought was a current in his head, and the current was made up of particles.

Taken to its logical conclusion, materialism as a philosophic position can only infer that determinism is the capstone of life. In other words, there is no such thing as individual freedom. It is a myth, it is a fairy tale, it is a superstition. Freedom is an idea, and again, it is merely a current generated in the brain, and that current is composed of tiny particles.

On the other side of this war ranged the entire tradition birthed, most notably, in the founding documents of the American Republic

This tradition placed freedom at the head of the line of important values.

Based on choice and decision and alternatives, an individual could pursue life, liberty, and happiness.

If you believe, as you read these words and understand them, that you are more than a passive machine registering conditioned impressions, that you are alive and conscious, then there are certain implications you will find interesting, as we chase them down.

To whatever degree the world and universe are built up from particles that interact, freedom is outside that structure. No matter how much causation is inherent in this Particle Affair, the individual can stand outside that causation.

More than that, the individual, at the level of choice and decision and freedom, IS non-material.

Now we are across the river and into the trees.

We are not in the territory of religion or superstition or myth. We are somewhere else.

And now when we talk about power and imagination and creative force, we are not merely giving metaphorical labels to some accident of particle causation.

Now are on the threshold of real Fire.

This is where people who value and preach freedom, but adhere to “Science” as the totality of permitted philosophy, run head on into confusion. And from that confusion, they flee. They invent all sorts of reasons to avoid thinking this through. They want their cake (freedom) and they want to eat it, too (materialism), and they can’t.

In fact, if you examine various schools of Western philosophy that arose in the 20th century, you will find them to be avoidances of these very issues. Logical positivism, ordinary language philosophy, and their offshoots.

I offer this as a paradox:

A materialist philosopher in his study is writing a refutation of all non-materialistic formulations. He is citing particle physics. As he writes out his paragraphs, he is, however, only a machine. He is not exercising any sliver of freedom. He is only doing what his brain prompts him to do. He is under the delusion he is constructing thoughts. Actually, he is scribbling on the page. He may as well be asleep. He may as well be

dead. Actually, he is dead. He is a robot. We are all robots. We believe we understand each other, but we don't. The whole shooting match is a delusion, top to bottom. Therefore, the philosopher should stop writing. But he doesn't. He is in the grip of an illusion (built of sub-atomic particles in motion) that tells him he is making a case for materialism. But there is no case to be made for materialism. It just IS.

This is the logical conclusion of the materialist school of philosophy.

If you do not accept it, you believe in the individual as a free agent.

And if you admit that, you also believe that free choice and decision lie outside the arena of particle causation.

And therefore, power, imagination, creative force are all non-material.

How powerful is creative non-material force?

The answers to that question form the basis of my work over the last 39 years.

In short, the answer is: potentially infinite.

View Full Version: AN INTERVIEW WITH JACK TRUE

Title: AN INTERVIEW WITH JACK TRUE

craig-oxley - April 10, 2009 03:41 AM (GMT)

AN INTERVIEW WITH JACK TRUE

In the late 1980s, Jack True and I became friends and colleagues. He was a practicing hypnotherapist in Los Angeles. He is the most innovative researcher in that field I've ever come across. His brilliance was undeniable.

After he died in the 1990s, I began to put together my notes on our conversations, and I've released some of the transcripts.

Here is one interview we did, in early 1991.

Q: So reality is a movie?

A: Jon, reality is a bad movie. (laughs)

Q: How bad?

A: Under ordinary circumstances, it would close after two days.

Q: But how is it constructed?

A: It's the movie of the five senses plus pain and some pleasure. Well, that's a summary. There are other factors involved, too. But it's a good place to start.

Q: Spell it out.

A: As various people in India and other places knew, the body is just the "carrier." You live uncountable numbers of lives and you don't stop existing. You live some of those lives inhabiting bodies. The body fits right into the movie, because you perceive the movie---reality---through the body's senses----and if you ever get the feeling that objects are not ultimately real, you can run a car into a brick wall and feel the pain and get the broken bones. That's a good convincer.

Q: A convincer that the movie is real.

A: Yeah. Why have reality unless people believe it's real? But, you see, if you think you ARE PHYSICAL and NOTHING ELSE, then when you hit the wall and smash up the body, you say: I'M ALL SMASHED UP. And you leave it at that.

Q: Right.

A: That's what gives the 4-D movie its punch. That's what backs up the opinion that the movie is reality. It also tells you that any attempt to get outside the movie through mere physical force is going to fail. All you get from physical force is collisions. The collisions don't dispel the illusion. To break down an illusion, you have to operate from a different basis altogether. You have to get your lever, so to speak, from somewhere else.

Q: Like imagination.

A: Yes. Because imagination creates beyond the movie.

Q: Imagination creates new movies.

A: Right. And that's the POWER. If you create ENOUGH new movies, you get insight. You begin to see "reality" in a different light. You also tap into sources of energy. You learn that what you want, despite any delusions to the contrary, is not already inside the movie. WHAT YOU WANT IS WHAT YOU CREATE.

Q: You start to move outside the movie.

A: It's not just that you get what you want. It's that you realize you are creating what you want. You experience creating what you want. This opens a whole new door. A door into what you could call magic. You're experiencing creating what you want. That's very strong medicine.

Q: The movie---

A: The movie is a sort of consensus version---

Q: Of what everybody is supposed to want.

A: Yeah. Exactly. Heavy emphasis on the SUPPOSED TO. That's the mind control coming in. After enough experience living inside the movie, people (souls) feel that everything they want will be found, eventually, inside the movie. That's wrong, but it seems right.

Q: How do you apply all this in your [hypnotherapy] practice?

A: Well, to answer that would take me a few months. But here are a few things. My goal is to get the patient to CREATE. The light trance is not something I use much anymore. If the patient closes his eyes, that's enough. I set up scenes, you might call them, and I have the patient extend those scenes using his imagination.

Q: What does this do?

A: Gradually, it takes him right into creating beyond the movie. I set up scenes that don't belong in the movie. I put the patient into situations he won't encounter in the movie. The trick is in getting him to go along with this format. That's where my experience comes in. To nudge him along into creating, on a more far-out basis. But you see, HE WANTS TO DO IT. He really wants to get outside the movie. I know that. I've learned how to tap into that desire.

Q: Why do people have this desire?

A: Because that's who they ARE. And because they're hiding the fact that they're monumentally bored. Understand this. They're pretending they love the movie, but really, they've been through it so many times, they're bored. Exasperated.

Q: But you're not saying the physical world is bad.

A: The physical world is GREAT. It's where you put the result of what you're creating. You're creating INTO the physical world. That's actually what the physical world is for. It's a venue for that. It's not the only venue, but it's a great one.

Q: You're patients understand this?

A: Eventually. And when they do, the physical world becomes much more alive for them. It isn't just a repetition of what they already know. There's nothing mystical about any of this. The metaphysics of it aren't important. The CREATING part is VERY important.

Q: What you're doing has a stress-reduction component.

A: (laughs) You bet. In the guts of a person, all sorts of stress builds up because he isn't creating what he really wants. That's the rub. That's where pressure comes from. A person might think that going along with the herd is a way to minimize stress, but it's just the opposite…

View Full Version: EXPRESSION AND TIME

Title: EXPRESSION AND TIME

craig-oxley - December 3, 2008 02:31 AM (GMT)

EXPRESSION AND TIME

http://www.nomorefakenews.com/index.php

DECEMBER 2, 2008. Despite all the challenges leveled at Time by modern physics and science fiction, people encase themselves by believing that tick-tock serial time marches to its own tune and thereby attains a godlike position. Unassailable. Independent.

Then they naively believe that expression moves along the same tracks, and if they are going to participate, they must ride on the train.

However, expression, which is to say, art, isn't on the train.

This is an enormous fact.

Ordinary time is a long trough in which people assume treasures are hidden. A great deal of propaganda is floated to create that impression. The result, of course, is that people cling to the trough because they want the unspecified treasures. In the same way, onlookers are glued to the operator of a shell-game, because they believe there is a pea and it will be found under one of the shells. When people look at art, they search for the pea---which is the most comforting thing they are already familiar with. If they find it, they will put up with a lot of strangeness.

The theory of Relativity was a compromise. Ten people around a table looking at a turkey would see different angles and parts. Ten people situated in different locales throughout the universe would view a moving train with different experiences of time. But still, time was an It. It might become shorter or longer, it might be faster or slower, but it was still the granddaddy. The king. The central happening.

Through expression, which is to say, art, time vanishes. Another kind of time is being invented. Old tick-tock time becomes the voyage that wasn't taken, because another voyage was made instead. Tick-tock time is the cut-rate vacation with the cheap seats and the motel on a busy street and a short pool and a rusty metal umbrella over a wobbly table.

The viewpoint of time isn't important any longer. Who cares how you see the rusty umbrella versus how I see it?

When you are a child, you spend a few minutes lying under the dining room table in the dark on a Friday afternoon, and you hatch a million sparks. Compare that with ten years of sitting in church. Duration is meaningless. It's a prize given to the loser.

Populations teach themselves to worship those notions that rule out art and all it implies.

At the core of all archetypes is the destruction of old time.

If you go back and read between the lines of the ancient Greek myths, you find that the gods were able to manipulate human space and time. Therefore, they were on the outside looking in. Humans were encased. However, all these stories were arranged around the notion of dominance. Politics. Power over. Bosses. Slaves. In the transmission of history down to us, something was lost. Something else. A vision that went beyond fate and beyond who was in charge and who submitted. What is missing is: humans beyond time. Humans who escape from their own illusion. The Greeks alluded to this in certain stories. Prometheus. Hermes. The messenger. The go-between. Half-animal humans. In other words, the Greeks used the idea of hybrids to convey the image of worlds without old time. But scholars deem it unimportant and vague.

Utilitarian language that is hammered out as a treaty between humans and old time is merely one device. Expression, which is to say, art, is another trillion kinds of languages. Xenophobia, the fear of strangers, is also a fear of new languages, and the apprehension that, if one were able to speak and express himself fluently in a new tongue, one would experience a different relation to TIME.

View Full Version: HOW DO SHEEP EXPRESS SELF?

Title: HOW DO SHEEP EXPRESS SELF?

craig-oxley - November 28, 2008 06:04 AM (GMT)

HOW DO SHEEP EXPRESS SELF?

Release Date 2008-11-24
http://www.nomorefakenews.com/archives/arc...ew.php?key=3506

NOVEMBER 24, 2008. To sign up for my upcoming teleseminar, EXPRESSION OF SELF, on December 2, just click on the link above.

The group has always had goals that necessitate re-shaping the individual. This little trick may not be apparent at first, but it kicks in.

The individual, after all, is joining something he's told is bigger than he is. That should be a clue, don't you think?

"Bigger than myself? Hmm. Sounds exciting. It's different. I never thought of that before. Wonder how it works. Let me try it."

Then you have the group leader. He's automatically thinking about the whole, not the singular person. "What should I do that'll benefit everybody according to my definition of benefit?"

It usually turns out the leader is thinking about keeping his own job. That's priority one. If the people under him are becoming less smart, less independent, less stubborn, the leader's chances improve. Obviously. So he figures out ways to make that happen. It's a neat little system. Everything clicks into place.

I'm not saying all groups are bad and have no use in human society. I'm saying that, over time, the system takes hold. The pattern emerges. It's like a machine in many respects. Building a car means you're going to make sure the parts all cooperate. They interlink.

The leader of a group can judge how well the machine is working. IF HE SEES A NUMBER OF INDIVIDUALS WHO ARE RELENTLESS IN THEIR EXPRESSION OF SELF, HE'S IN TROUBLE. Wild cards. Jokers. Unpredictable. Who knows what's going to happen or where it will lead? The ties that bind could slip loose. The whole sense of mindlessness at a basic level could collapse.

He knows people have this desire to express themselves. He has to substitute something for that, something that will be appealing. "There is no way to salvation, except through me. You people want salvation, don't you? You want to arrive at the final destination, don't you? You want to stand at the pearly gates, don't you? Well, if you abandon me, you'll never make it." I've always liked the fact that the words salvation and slave echo each other, as if a quick sleight-of-hand trick turns one into the other.

When it comes to politics and media and corporations, the words are a little different. You hear a lot about THE TEAM and THE PEOPLE and THE COMMUNITY. Corporations and sports are close friends: "We're putting together a great team. No selfish individuals here. Everybody's pulling together."

Yeah? I've been in a few corporate offices, and I've never seen people pulling on anything.

Here's the litmus test. If these corporate honchos really wanted to help the group---the whole population of the planet, in fact---they could find ways to sell the essentials of survival to every human at very low cost. But that doesn't seem to be in their yearly prospectuses.

At the bottom of all this nonsense is fear. Fear that many individuals will wake up one day and say, "I'm going to go in for some serious expression of self. That's what I want."

The best way to head this off at the pass is to somehow make individuals completely blank on this score. "Express myself? I don't know what that means. I don't know what I'd do." Centuries of religion worked very well in that respect. When the Puritans came to America, to "escape religious persecution" in England, what did they do? They set up a pernicious theocracy in New England, in which self-expression would be equated with witchery and deviltry. Nice job. "We came to these shores for freedom, and we found it---in the form of a fascist religious community."

When that insanity was gradually done away with, what happened? People said, "I'm free. I'm free." Yes, but free to do what? Express what?

"I'm a car that escaped off the assembly line in Detroit and I'm cruising around the streets. It's great. I'm not a Ford or a Chevy or a Cadillac. Of course, I'm still a car. To fulfill my destiny, I have to do what a car would do. I have to figure that out."

Is that right? What if you were never a car? What if that was a grand illusion from the get-go?

View Full Version: BREAKING OUT OF FIXED ASSUMPTIONS

Title: BREAKING OUT OF FIXED ASSUMPTIONS

craig-oxley - November 28, 2008 06:03 AM (GMT)

BREAKING OUT OF FIXED ASSUMPTIONS

http://www.nomorefakenews.com/archives/arc...ew.php?key=3507

NOVEMBER 26, 2008. My tele-seminar, EXPRESSION OF SELF, is coming up on Dec.2. To sign up, just click on the link above.

Dissatisfaction has an upside. You eventually realize you were operating on a set of fixed assumptions, and the result of that is a gap. I'm talking about a falling short. You fall short of realizing or producing what those assumptions dictate. Now you're really in a muddle: the assumptions were stale to begin with, and what you produced didn't live up to those stale assumptions.

For example, a man wants to get a job in the computer field. He assumes that's what he's prepared for. He tries, and he gets turned down. He's very unhappy. Sounds simple, but it isn't, because he never really wanted a job in the computer field to begin with. So the fact is: he didn't get a job he never wanted in the first place.

To un-entangle this sort of thing, you need to become aware of the underlying assumptions, and you need to see those assumptions have worn out their welcome. You need new assumptions. You need a whole new way of looking at things. You need a wider vision.

Assumptions are, in general, ideas about your life, what it is, what it should be, what it means, where it should go. Assumptions are like pillars. You sink them deep into the ground, and from that point on, they become the foundation for everything that comes after that. They are the foundation for what you do.

So you can see that, if the pillars dictate a certain kind of structure that will be built on top, and if you don't really like those pillars to begin with, somewhere along the line

things are going to go wrong. Meaning, you're dissatisfied. You say, "The whole structure didn't live up to my expectations." But what you really mean is, "I never liked the assumptions the structure was built on."

This is worth understanding.

Now, how do you get a better set of pillars? Do you make small adjustments? No.

This is where imagination enters the scene and makes all the difference, because with imagination you can conceive of many, many different structures, in a way you never could before.

There is another thing. You learn, through imagination, that ONE structure was never really your goal. You always wanted many different structures, you always wanted a whole variety of outcomes for your life---not just one.

Now you begin to breathe freedom.

Now, self-expression takes on whole new meanings. The range is unlimited.

The march of civilization has always been heading in this direction: People can have a platform of survival, from which they can branch out and imagine and create and express a whole range of…enterprises, projects, futures, inventions, adventures.

We trap ourselves in unpleasant assumptions, so we can finally see we want more than just another similar set of pillars: we want freedom plus imagination, and all that that implies.

View Full Version: THE HIGHER ORDER

Title: THE HIGHER ORDER

craig-oxley - October 20, 2008 03:45 PM (GMT)

THE HIGHER ORDER

http://nomorefakenews.com/index.php

OCTOBER 20, 2008. My tele-seminar, OLD WORLD, NEW WORLD, NEW MIND, is coming up tomorrow night, Oct. 21. To sign up, just click on the link above. Or go to my site, www.nomorefakenews.com and click on the banner.

People confuse order and hierarchy with their own power. They tend to think their power derives from somehow fitting into the essential order of the universe.

The truth is, order is just a system no matter where it comes from or who built it. It might be a useful order. It might be an oppressive order. Some systems provide an opportunity for useful action. Other systems inhibit freedom.

The promise of a “higher order” is just that---a promise. It’s a familiar feature of the OLD WORLD. The Roman Church, for example, specialized in various choirs of angels and saints and a trinity, and priests who had to be consulted to reach God. People who scoff at this rather transparent con job often have their own order that they prefer. Some system that “sits behind events”---and they believe if they can hook themselves up to that order, all secrets will be revealed and all problems will be solved.

What actually happens is something different. The “order” eventually stultifies their own power. It drains and subverts their energy.

CREATING is just that. Creating. It doesn’t depend on a system. It doesn’t take its strength from some order. It doesn’t owe its allegiance to a hierarchy.

When people realize THAT, they’re in the NEW WORLD.

On a conscious or subconscious level, all cultures are built to emphasize some order

and some hierarchy. And eventually, people who live in a culture become enmeshed in that order. They praise it. They believe in it. They rely on it.

THEN they feel a diminishing of their own imagination and creative power.

Of course, this diminishing is an illusion, because imagination and creative force are never lessened. They are always on tap. A person simply has to turn the switch. The person changes direction and orientation.

At this point, some people launch. Others find themselves faced with a strange situation: their imagination feels dead and their problems feel alive. Their problems feel alive because they've been living in that space for a long time. Their imagination feels dead because it's unfamiliar territory. THEY'RE APPROACHING THEIR OWN CREATIVE URGE AS IF IT IS PART OF SOME SYSTEM.

THAT'S THE BIG ATTACHMENT. THAT'S THE BIG ADDICTION.

THAT'S THE BIG LIE.

It's like saying: "We can get this rocket off the ground, but we need to keep the rocket connected to the ground. The ground is what we know. So the rocket has to be attached to what we know."

And one other thing. Many people feel that if what they can create isn't immediately beautiful according to some established standard, it's useless. That's called giving up. That "standard" is just another way of remaining connected to the OLD WORLD.

A person takes a plane and then a car and then a bus to get to some part of a desert, where he stands before a few huge rock piles. He looks at these and marvels at how strange and amazing they are. He feels he had to do this to see this wild and bizarre THING. Whereas, he could have stayed at home and bought a few dollars worth of paper, paint, and brushes, and he could have painted his own amazing "rock pile." Out of his own spontaneous imagination. And then he could have a done a few hundred more paintings---and awakened to his own creative power…

NOW VERSUS FOREVER

http://www.nomorefakenews.com/archives/arc...ew.php?key=3495

October 17, 2008. This is another backgrounder for my October 21 teleseminar, OLD WORLD, NEW WORLD, NEW MIND. To sign up just click on the link above, or go to my site, www.nomorefakenews.com and click on the banner.

The space of the NEW WORLD is here. To move into it, a person needs to have some idea of FOREVER. It isn't just now, it isn't just today and next week and next year.

We are talking about the provincial and shrinking view of space and time, versus the expanded view.

Imagination and creative action automatically expand space and time. The "little things" fall away. But more than that, a person who launches himself into creating his deepest desires in the world, and making them into fact, gains a new perspective, a new mind.

Creating your deepest desire isn't done through a single project or action. You begin to feel: "I could do this forever. I want to do this forever." And then you transcend the usual limitations. Then you are
moving into your own immortality.

To put it another way, FOREVER is basically generated by you.

Religion calls this eternity, but religion spins a myth about how forever looks and what happens there and who is in charge and what rules you need to obey to get there.

Basically, religion is trying to co-opt your own notion of forever and make it into its own private property. That's very OLD WORLD.

In tough times, people tend to revert to those religious rules and assurances and fall into line with the Myth. You could, in fact, say that tough times are invented so large numbers of people will sink into the Myth and give their future over to it.

It's a perverse strategy. Fortunately, people don't have to fall for it.

"Selling blue sky" couldn't work unless people wanted their own blue sky in the first place. That's the thing. But that blue sky is your own invention. It's your creative urge and your imagination, put into action.

THIS IS THE NEW WORLD REVOLUTION.

THE WORLD IS WAITING FOR IMAGINATION TO REVOLUTIONIZE IT DOWN TO ITS CORE.

This is what gnaws at people. This is what makes them stay awake at night. The feeling that something tremendous is missing. And that something is their own imagination operating at full blast.

The world as it is, life as it is, the universe as it is, the future as it is, destiny as it is, reality as it is---all of these things are fabrications. They are fabrications that tend to obscure your own imagination.

Suppose someone said: "We heat taffy to a high temperature and then it loses its shape and starts to melt and flop all over the place, and this is reality, this is unchanging and eternal reality." You would say, "Wait a minute. Taffy in that condition is very, very pliable. In that state, it's not unchanging, it's the opposite. All sorts of things can be done to it."

Well, that's what reality as it is IS. It is infinitely pliable, and what makes it so is your imagination and creative force. And when you get a glimpse of that, you also glimpse now and tomorrow and next week and next year as very minor factors in an unlimited space(s) called forever.

Forever is your preserve. You not only are forever, you make (create) forever what you truly want it to be. THAT'S THE ONLY WAY FOREVER HAPPENS. THE ONLY WAY.

This isn't fairy tale, it's hard fact.

Title: BEYOND THE OLD WORLD OF MANIPULATION

craig-oxley - October 3, 2008 04:36 PM (GMT)

BEYOND THE OLD WORLD OF MANIPULATION

http://www.nomorefakenews.com/archives/arc...ew.php?key=3485

OCTOBER 3, 2008. Here is another backgrounder for my upcoming tele-seminar, OLD WORLD, NEW WORLD, NEW MIND, on October 21. To sign up, just click on the link above.

In the old-world concept of governing, the masses are considered to be nothing more than Pavlovian dogs who need to receive the proper stimulation. When the bell is rung, “the people respond.”

Elites consider this the proper way to do business.

In a ludicrous modern example, people volunteer to be their own bell-ringers. During political debates, a pollster will sit in a room with a bunch of voters. The voters watch the debate and press buttons to register approval or disapproval whenever a candidate says something that stimulates them: a word, a phrase, a few sentences.

I LIKE THIS.

I DON’T LIKE THAT.

The collective averages are tallied on a screen as a moving graph.

In other words, all the things that really matter about a candidate are reduced down to these puerile simplicities.

Why are masses of people looked at and manipulated in this way?

There are reasons, of course, but the bottom-line reason is that most people never CREATE WHAT THEY REALLY WANT IN LIFE. If they did, they'd be free from efforts to portray them as androids.

FREEDOM, which is the cornerstone of an individual life, becomes something faded and empty. In other words, freedom becomes an ideal rather than a launching pad for action. And this ideal, like religious banners, is twisted and held out for the masses as, for example, a reason to go to war, to vote, to favor one Party over another.

In old-world thinking, all positive ideas are turned into dog food for the masses, who drool when they hear the bell ring.

In old-world thinking, inspiring ideas are turned into distant tantalizing echoes by the people themselves, who then vaguely hope these echoes will be fleshed out and given back to them from Above.

In the new world, people find out what they truly want to create, at deeper and deeper levels, and they ACT ON THAT.

They live out WHAT IS FREEDOM IS FOR.

In the old world, acting out what freedom is for is considered a faux pas, a blunder, an instance of very bad taste. "You're supposed to keep 'pursuing the possibility of freedom.' You're not supposed to energize yourself with it and fly with it."

In the new world, people fly with it.

For the last few hundred thousand years, people have, in stops and starts, been liberating their own imaginations. They have been progressively unhooking their imaginations from rigid allegiance to myths and cosmologies that place them as ciphers and cogs at the service of Some Greater Thing.

Of course, most people don't know THAT history.

But that history has been all about the birth of a new world. And now it is here.

Title: SOLUTIONS FROM ABOVE

craig-oxley - October 2, 2008 06:32 PM (GMT)

SOLUTIONS FROM ABOVE

http://www.nomorefakenews.com/archives/arc...ew.php?key=3484

OCTOBER 2, 2008. Here is a backgrounder for my upcoming tele-seminar, OLD WORLD, NEW WORLD, NEW MIND, on Oct. 21. To sign up, just click on the link above.

Many people walk to the brink of a life-changing decision, where the question is: WHAT DO I WANT TO CREATE?

Then they wait and listen for an answer “from above.”

The clock ticks. They listen more carefully.

Silence.

So they say, “It’s not time yet. When it is time, I’ll get an answer.”

What exactly were they listening for? That depends on the beliefs of the person.

GOD WILL TELL ME.

THE UNIVERSE WILL TELL ME.

MY SUBCONSCIOUS WILL TELL ME.

WORLD EVENTS WILL INSTRUCT ME.

MY “TRIBE” WILL TELL ME.

I'LL RECEIVE A SIGN.

"THE SPIRIT IN CHARGE OF MAKING DECISIONS" WILL TELL ME.

This is a strange situation, because the question, again, was: WHAT DO I WANT TO CREATE?

That indicates the person is supposed to make up his own mind based on what he wants. But somehow the wires get crossed, and the person translates that stark question into something quite different----and THEN gets no answer.

This reminds me of people who are very passionate about the founding principles of the American Republic---freedom, liberty, the pursuit of happiness---but then they put those matters under the banner of some religion. They turn around and say, "I'm completely free to decide what to do with my life, but of course, I'm laying it all in God's hands."

The New Age version of this goes something like: "I can create any reality I want to, and this is tremendously liberating to know. Of course, the Source of my creativity is the UNIVERSE, and I listen for all the messages UNIVERSE is sending me, so I can figure out what to create. I'm a soldier awaiting my marching orders."

People may think of this approach as New Age, but it's really right in line with Old Planet. What does that mean? It means people are getting their most important directions "from above." When push comes to shove, they think of themselves as ground troops, rather than free individuals.

This is what got the planet into quite a mess in the first place. People came along and said, "We're the pros, the experts. We're here to tell you what's happening ABOVE US. We have the word. We have the message coming from Above, and we'll tell you what it is, so you'll know what to do. Meanwhile, give us your loyalty and all your money."

When we come into the last half of the 20th century, people start claiming they're free from all this, but they're now inventing some ultimate backup and security blanket and myth of their own that….does what? Gives them messages and clues and signs about what they're supposed to do.

How about this timely version? "We're the money pros. We know what caused this mess and we know how to get out of it. All you have to do is wait for us to give you the plan, and then you follow it."

People are amazing with this "STRATEGY FROM ABOVE" thing. They cling to it like people with lifeboats in a storm. Some people even think this way: "The current crisis will tell me what to do. It'll give me signs, and then I'll know what to create."

People step to the brink where the question is: WHAT DO I WANT TO CREATE? And

then they invoke some myth that'll allow them to postpone and postpone and postpone. And then in the middle of that postponement, they look around for help from their friends.

They also tend to go into a "self-sacrifice mode." They forget about "I" and "want" and "create." Instead, they try to dream up a way to abdicate from the question and the situation and the whole thing. They experience something they tell themselves is a flash of insight: now they'll abandon their individuality altogether and live a life of service to others. Nothing wrong with helping others, but when it's based on this kind of abdication, trouble will show up sooner or later, and they'll find themselves back at the brink with the same question they refused to answer earlier: WHAT DO I WANT TO CREATE?

View Full Version: FINANCIAL CRISIS, OLD WORLD

Title: FINANCIAL CRISIS, OLD WORLD

craig-oxley - October 1, 2008 05:42 PM (GMT)

FINANCIAL CRISIS, OLD WORLD

http://nomorefakenews.com/index.php

OCTOBER 1, 2008. As you can see, I have a new tele-seminar coming up this month. I put everything I can into these events. All of us, on some level, are thinking about the current financial crisis. In this seminar, I'll be taking the widest possible view on that---not to explain the details endlessly, but to discuss how the crisis is part of the old-world model….and what the new world can be. I hope you'll be there. Just click on the link above to sign up.

I've received several emails asking me to discuss the current financial crisis. My upcoming tele-seminar, OLD WORLD, NEW WORLD, NEW MIND, as I say, will look at things from a much larger perspective…but for now, here is what I think is important:

The moneymen of this planet, who invent money out of nothing and devise credit schemes and arrangements and invent "financial instruments" to sell and buy…these men are in a period of consolidation. That means they are shrinking the number of institutions that are in their game. So from their point of view, they are doing all right.

As far as mortgages go, banks and other lending institutions have, for various reasons, engaged in a game where mortgage loans (good, bad, and ugly debt) are considered "potential assets." In other words, bundles of these loans can be sold to bigger financial fish, who in turn can sell them again and so on and so forth----it's called musical chairs: when the music stops who is left without a seat? Who has to 'fess up and say, "We can't collect on these bad debts?"

Crazy, yes. But no surprise.

If you know how the commodities trading markets work, you know this sort of weirdness has been going on for a long time. People buy and sell future contracts of metals and

foods and so on without the slightest intent of ever taking delivery of the chickens or the orange juice or the silver. It's Vegas, pure and simple. Four hundred years ago or so, the Dutch invented this betting circus in Amsterdam for themselves.

The current bailouts we are seeing are the moneymen's self-invented insurance policies. Plain and simple.

How bad can this whole situation get? The question can be translated: how bad do the moneymen want it to get? How high do they want to push the price of oil? How long do they want to depress the housing-starts (construction industry) and allow those ripples to move out into the economy? I don't have a precise answer, but I do know this: powerful and influential mega-corporations that actually manufacture and sell things don't want the consumer base to tank badly. These corporations need people to buy their stuff. They are making their wishes known in important rooms and conversations.

I have written before about crises and individual opportunities---in a crisis, some people will take the chance to discover WHAT THEY TRULY WANT TO CREATE IN THE WORLD AND THEY WILL DO THAT.

It may seem counter-intuitive, but it is an answer, a powerful answer. I know of no more powerful answer.

This is no invitation to go off half-cocked and abandon every strategy to make money. It is a much greater answer than that. The road of discovering what you truly desire and creating that is all the magic you will ever need---if you keep doing it.

In times like these, weak responses are not a solution. Saying "I don't know what I want" and then not trying to find out---that won't cut it. That won't suffice. That won't do the job.

WHAT YOU TRULY DESIRE is not a matter for rational analysis. Rational analysis doesn't answer that question. It doesn't lead you to the diamond fields of your own psyche.

Thinking about fear and confusion and helplessness and limitation doesn't get you to discover what you truly desire. Our thoughts are supposed to serve us---not the other way around.

There are infinite worlds of excuses we can assemble to prove we can't create what we really want…but that doesn't help us.

In a profound sense, every crisis we face as individuals brings into the crucible where we can see greater truth. For example, many people keep repeating, "I don't know how to find out what I really want." They repeat this over and over, and they want an easy answer to descend from the sky. But in the crucible, they see their claim of not being

able to find out what they truly want is not a bottom line. It isn't going to get them a gold star on the blackboard. It isn't going to bail them out. It isn't going to suffice. It isn't going to work. The heat of the crucible pushes them closer to a real answer to: WHAT DO I WANT TO CREATE? It pushes them closer IF THEY WILL MAKE THEMSELVES ANSWER THE QUESTION.

If they don't, things will get worse.

I'm not saying we're in a contest here about who among us will survive better. I'm not saying you and you and you will win and you and you and you will lose. I'm not saying I have "all the answers" like some teacher standing up in front of a class with a book of rote facts. I'm ENGAGED in the very process I'm describing. I'm engaged up to my neck. I'm beyond engaged. I'm swimming in that water every day.

We're not in a competition with each other. Each one of us has the option to find out what we truly desire and to then create it in the world. When we do that, we find power. We find a kind of power that goes light years past the current crisis.

And it is this kind of power we need.

We KNOW THAT when we feel this power.

More later….

View Full Version: THE SECRET BEHIND THE SECRET

Title: THE SECRET BEHIND THE SECRET

craig-oxley - September 17, 2008 09:58 PM (GMT)

THE SECRET BEHIND THE SECRET

http://www.nomorefakenews.com/archives/arc...ew.php?key=3481

SEPTEMBER 8, 2008. This is the last backgrounder before my tele-seminar, MODERN ALCHEMY AND IMAGINATION, on Sept. 9. You can still sign up. Just click on the link above.

Usually, people employ their imaginations to decide the best way to fit into the world---and that's it. They don't suppose they can go any further.

In the world, you've got your problem solvers and your entrepreneurs and your conformists. Imagination usually is used to work one of those angles.

But of course, imagination is what can take you into far newer and more exciting waters.

These days, an extraordinary number of otherwise intelligent people connect that possibility to a notion about "universe." What do they mean by that word? It's hard to say. It's fairly vague. Universe. The sum total of the galaxies and stars and planets? The space in which these are contained? No, it seems to be more than that. For them, universe means some kind of guiding force that produces good outcomes. It's sort of an impersonal version of God.

And it "hovers" over and above imagination like a wand that "allows" imagination to operate in "positive" ways.

In other words (and this is really strange), imagination and creative power are free aspects of the free individual, but that freedom is shaped and funneled by "the great one," the universe. The universe is like a mommy or daddy who sanctions how and where imagination operates.

People need this concept as permission to create. And if things don't turn out well in some enterprise, the person can say, "It wasn't meant to be. The universe has something better in mind for me…"

Well, there is no permission. You TAKE your creative force and use it, express it.

The hook and the kicker in any spiritual scheme is the connection forged to some Ultimate Concept. "We are all created free and equal." Really? Created by whom? You mean we're completely liberated but we owe a debt to Big Daddy Universe?

That's a con, and it's floated, in one form or another, time and time again, like the old bait and switch. "You have this wonderful freedom to create anything you want to…but remember where it all comes from. That's who you owe the debt to. That's the force that guides you. And by the way, let me describe this force, so you'll understand what kind of creating He favors. Then you can fit in at the cosmic level…"

What looked like real freedom just became very, very conditional and now, once again, it's about fitting in.

Baloney.

Freedom is a lot more than that. A lot more.

The proof of the pudding, as they say, is in the eating. The proof of freedom is in the creating you launch from freedom.

If you need a definition for universe, YOU ARE UNIVERSE. Really, though, you're so much more than any universe.

Title: U.S GOVERNMENT STUDY LINKS MOUSE VIRUSES TO
Description: *CHRONIC FATIGUE SYNDROME*

craig-oxley - August 24, 2010 05:10 PM (GMT)

Chronic Fatigue Syndrome Linked to Mouse Viruses in U.S. Government Study

By Michelle Fay Cortez - Aug 24, 2010 5:01 AM GMT+0100
http://www.bloomberg.com/news/2010-08-23/c...ment-study.html

Fresh evidence linking chronic fatigue syndrome to a family of mouse viruses was reported in a U.S. government study that has spurred new debate over how to treat the disease.

Almost 90 percent of patients with chronic fatigue syndrome showed signs of infection with a group of mouse leukemia viruses in the study, raising more questions about the cause of the debilitating condition. The results suggest antiviral drugs, including Merck & Co.'s Isentress and Gilead Sciences Inc.'s Viread, should be tested for the condition, French researchers said in an accompanying editorial.

The study, published yesterday in the Proceedings of the National Academy of Sciences, bolsters findings from a year ago that linked the condition to a related infectious agent, called XMRV. The results, though, are contrary to a report by the U.S. Centers for Disease Control and Prevention last month that failed to find a viral link.

"There was a dramatic association with chronic fatigue syndrome, but that's all it is," said Harvey Alter, senior author and chief of clinical studies of the department of transfusion medicine at the National Institutes of Health. "We have to emphasize we have not proven causality."

Chronic fatigue syndrome affects more than 1 million Americans, mainly women, according to the Atlanta-based CDC. There is no cure, and no medicines are approved to treat it. Counseling, antidepressants, behavioral therapy and pain drugs are offered

to people with the condition, a CDC website says.

Mouse Virus

The viruses in today's study are called MLV for murine- related leukemia, a form of an infectious agent known to cause leukemia and other cancers in mice. Researchers at the NIH, the Food and Drug Administration and Harvard Medical School in Boston reported today they found them in blood samples that were taken from 32 of 37 patients with the syndrome about 15 years ago. A repeat test taken this year on 8 of the patients found a slightly mutated form of the virus in 7 of them.

The agents were also discovered in three of 44 samples from healthy blood donors.

The researchers said they didn't know how the people were infected. There is no evidence, though, that they were transmitted by transfusions or that they lead to other human diseases, said Celia Witten, director of the FDA's Office of Cellular, Tissue and Gene Therapies, who oversees the lab where the research was conducted.

Dilemma Over Results

The conflict in findings between the latest report and the previous CDC research creates a dilemma for researchers, said Alter, a senior author of the report. One explanation may be that chronic fatigue syndrome is caused by a virus in some and not in others, he said. It's also possible that people with the condition are more vulnerable to infections, the researchers said.

"That still has to be sorted out," Alter said in a conference call with reporters.

Additional work is under way to make sure investigators are using the same methods to check for the viruses, and to confirm the results in a wider and more varied group of patients, the researchers said.

It was the first time these specific viruses were found in people or in the blood supply, according to Witten. Another study of 1,000 blood donors is nearing completion to see if the virus or antibodies to it are in the blood supply, Alter said.

Testing Antiviral Drugs

While there isn't sufficient proof that the mouse viruses cause chronic fatigue syndrome, a study showing whether antiviral drugs are an effective treatment may help confirm the hypothesis, said the doctors led by Valerie Courgnaud, from the University of Montpellier in France, in the editorial.

The new virus and the XMRV virus implicated in the initial study last October are retroviruses, which insert themselves into the genome of the cells they infect in order to

multiply. The same approach is used by HIV, the virus that causes AIDS, leading some researchers to test drugs for that deadly disease against chronic fatigue.

Merck's Isentress fought XMRV more powerfully than 44 other anti-HIV compounds in laboratory tests, according to an April study from researchers at Emory University and the University of Utah.

There are no specific tools to pinpoint chronic fatigue syndrome, which is typically diagnosed after patients experience extreme fatigue for at least six months. The condition is marked by a relapse of symptoms after mental or physical exertion, sleep that doesn't refresh, and joint and muscle pain.

Previous Report

The link between chronic fatigue and the retroviruses was identified previously by a team led by Vincent Lombardi of the Whittemore Peterson Institute for Neuro-Immune Disease, in Reno, Nevada, and published in October in the journal Science.

Those researchers analyzed the genes in tissue samples collected from 101 patients with chronic fatigue, and found evidence of the mouse virus XMRV in 68 of those studied. The virus was also identified in some prostate-cancer patients.

"These results do raise as many questions as they answer," said Steve Monroe, director of the CDC's division of high-consequence pathogens and pathology, in a conference call. "The different findings from different labs show there are a lot of things about this virus we don't know."

The research was funded by the National Institute of Allergy and Infectious Diseases and the De Young Foundation.

craig-oxley - August 24, 2010 05:15 PM (GMT)

How many times in the past have I spoke about Mouse Mammory Viruses (MMVs) tied in with Breast Cancer? These are man-made viruses as its impossible to have animal viruses in humans without genetic manipulation. Don't believe any lies that claim otherwise. One herb I'll promote for fighting this would be Olive leaf which works well for Chronic fatigue patients both from a anti-virus and Thyroid point of view, I would usually add Withania to the formula. Although I do not believe in an hiv, and people must understand that AIDS is much different than hiv which is non-existent. A virus (protein solvent) can only exist when the body is filthy. I do believe Robert Strecker is correct on the manipulation of animal viruses for entry

into human beings. Below I provide a video which highlights how they do this:

[dohtml]<embed id=VideoPlayback src=http://video.google.com/googleplayer.swf?docid=6068096409136912010&hl=en&fs=true style=width:400px;height:326px allowFullScreen=true allowScriptAccess=always type=application/x-shockwave-flash> </embed>[/dohtml]

Study shows ME/CFS 'virus link' found in children

'Sometimes you just want to punch someone'

By Eleanor Bradford
BBC Scotland Health Correspondent
7 September 2010 Last updated at 08:07
http://www.bbc.co.uk/news/uk-scotland-tays...entral-11204884

A study on children has found further evidence that ME, or Chronic Fatigue Syndrome, could be caused by a virus.

Scientists at the University of Dundee study found abnormalities in the white blood cells of children with ME/CFS, suggesting they had been fighting off infection.

ME (Myalgic Encephalomyelitis), also known as Chronic Fatigue Syndrome (CFS), causes debilitating tiredness.

About 150,000 people in the UK have ME/CFS, 15,000 of whom are children.

The condition is characterised by physical and mental exhaustion following normal activities. Symptoms can include muscle pain, sore throat, tender lymph nodes, multi-joint pain and headaches.

In the study, funded by ME Research UK and The Young ME Sufferers (Tymes) Trust, 25 children aged between seven and 14 with ME/CFS were assessed, along with 23 children of a similar age in a control group.

The report, published in the Archives of Paediatrics and Adolescent Medicine, said abnormalities were found in the blood of all the children with ME/CFS.

The results were similar to those previously identified in adults with the condition.

Samples taken from youngsters with ME/CFS contained higher than normal levels of

free radicals - molecules that can damage cells, tissues and organs.
Virus debate

A much greater number of neutrophils, the most common type of white blood cells, were also found to be at the end of their lifecycle.

The report said the high turnover of neutrophils indicated the body's need to fight infection.

There is a continuing debate among scientists over whether ME/CFS is caused by a virus.

Several studies in adults have found evidence of a virus in people with the condition, but so far research has not proved conclusive.

Some doctors have said that the idea that different types of chronic fatigue are all caused by a single virus is not plausible.

Professor Jill Belch, an expert in vascular medicine at Ninewells hospital in Dundee who led the latest research project, said: "What we've found are blood changes that suggest chronic inflammation.

"This is important because it's showing an abnormality that we might be able to devise a treatment for, but it's also important because some people do suggest that ME is a disease of the mind and here we are showing that it is a disease of the body."

Dr Neil Abbot, of ME Research UK, said it was " fascinating to discover evidence of a persistent or reactivating viral infection".

"Although the cause of ME is unknown, more than half of all patients say their illness started with an infection," he said.

"The study undoubtedly adds greater scientific weight to the existence of a condition which, sadly, many still fail to acknowledge in spite of its severity."

According to Tymes Trust, children with ME can be treated with "scepticism" by the healthcare system.
'School refuser'

Jozef Mackie, 14, from Fortrose, near Inverness, was a sporty child who loved skiing, until the symptoms of ME began when he was nine years old.

His mother, Donna, said: "He was the boy whose battery wasn't working very well. He had to take more and more time off school.

"The other children were able to run around and do things after school and Joseph had to come home and lie on the settee."

For two years Jozef was labelled a "school refuser" and told it was "all in his head".

He was finally diagnosed with ME when he was 11.

"I haven't been treated very well," said Jozef. "I haven't been believed. They just think I'm putting it on.

"It's sore to get in and out of the car and I can't walk long distances."

Jane Colby, from Tymes Trust, added: "The medical profession must now take the consequences of ME in children seriously, and research into prevention and treatment must be given a high priority."

Original Title
My View of the Bigger Picture
The Significance of Dr. Tedd Koren's Courtroom Defeat of Quackbuster Steven Barrett

On October 13, 2005, notorious self-proclaimed consumer medical advocate, Stephen Barrett's defamation lawsuit against Dr. Tedd Koren was thrown out of court after a grueling three and a half day trial. To the unknowing observer, this may seem insignificant, but in no uncertain terms, it was a big victory for the battle of freedom and rights of all individuals to select the health care of their choice.

The American Medical Association has a long standing history of trying to monopolize health care in the United States by eliminating competition. In Wilk v. AMA a Federal court ruled that the AMA and other individuals and organizations had conspired to contain and eliminate the practice of chiropractic. The court found that the AMA and it's officials instituted a boycott of chiropractors and made it unethical for a medical doctor to associate with chiropractors.

This boycott disallowing a medical doctor to associate with a chiropractor was only one part of a seeming comprehensive multi-phase strategy to eliminate chiropractic. The AMA also, and sometimes subtly, made attempts to undermine chiropractic educational institutions, conceal evidence of the usefulness of chiropractic care, undercut insurance programs for patients of chiropractors, subvert government inquiries into the efficacy of chiropractic, engage in a massive disinformation campaign to discredit and destabilize the chiropractic profession, and engage in numerous other activities to maintain a monopoly over health care in this country.

It has been reported that the AMA's Committee on Quackery was the group purportedly assigned with the task of eliminating chiropractic.

A sub-group of the Committee on Quackery called the Coordinating Conference on Health Information (CCHI) was also set up to perform covert activities and operated in total secrecy. According to Joseph Lisa in his book, "The Assault on Medical Freedom," in 1974, the CCHI and its activities were turned over to regional councils against health fraud. According to Lisa, Stephen Barrett, MD, a psychiatrist in Allentown

Pennsylvania was the leader of one of the affiliate groups called the Lehigh Valley Council Against Health Fraud. Notice the intentional transition from the word quackery to describe non-conventional health care, to the words health fraud. In 1977, the Allentown group merged with the California Committee Against Health Fraud to form the National Council Against Health Fraud (NCAHF) which is still in existence today and is still an advocate against chiropractic.

Stephen Barrett is now delicensed (he voluntarily gave up his Pennsylvania medical license, the last of four medical licenses he once held, in the early 1990's) and the Vice President of the NCAHF. He also operates at least 20 websites affiliated with his main site, Quackwatch.com. The website and its affiliate web sites are seemingly designed to spread deceitful, untruthful and malicious propaganda about chiropractic and other non-conventional health practices; similar to the way the CCHI did under the auspices of the AMA. NCAHF is also involved in similar activities. In addition, Barrett and his groups also frequently consult for major media magazines, television, radio, governmental agencies such as the FBI, FTC and FDA and even the AMA.

One of Barrett's anti health-choice activities is to frequently file libel lawsuits against non-conventional health care practitioners, manufacturers and publishers. He testified in court to filing lawsuits against at least forty individuals.

One of these lawsuits was filed against well known chiropractor, Dr. Tedd Koren and his publishing company, Koren Publications in 2003. Perhaps it is no coincidence that Barrett admits that he is a consultant to the FTC who unsuccessfully tried to destroy Koren's publishing business in the 1990's using tactics intimately familiar to the CCHI and NCAHF. The FTC investigation was withdrawn after a full briefing of the facts to FTC officials by Dr. Koren's attorneys.

Realizing that the defamation lawsuit was just another of Barrett's continued, conspiratorial tactics to destroy chiropractic, Dr. Koren decided that this time things would be different. In order to officially link Barrett to the original conspiracy revealed in Wilk v. AMA, he and Foundation for Health Choice cofounder and attorney Jim Turner, would have to get Barrett to court instead of settling like so many of his predecessors did. Jim Turner joined forces with health freedom trial attorney Carlos F. Negrete of San Juan Capistrano, California and attorney Christopher Reid of Allentown, Pennsylvania who all decided to take this precedent setting case to trial. This way, they could challenge Barrett and put his activities to the test before a jury of his own peers in his home town. The Barrett v. Koren trial took place between October 10th and October 13th 2005, and the case was thrown out by the judge before it went to the jury because Barrett had not provided sufficient evidence to prove his case. Barrett did, however, provide plenty of sufficient evidence to show that he was linked to the continued conspiracy against chiropractic.

The Foundation for Health Choice now has a comprehensive multi-phase strategy to continue to investigate and uncover activities and organizations created to undermine chiropractic educational institutions, conceal evidence of the usefulness of chiropractic care, undercut insurance programs for patients of chiropractors, subvert government inquiries into the efficacy of chiropractic, engage in a massive disinformation campaign to discredit and destabilize the chiropractic profession, and engage in numerous other activities to maintain a monopoly over health care in this country.

With your help we can stop the activity of these divisive and propagandist organizations once and for all. We ask that you consider supporting this effort to protect your freedom of health choice. Fifty dollars a month, from 1500 individuals, will fund the strategy to end the anti-chiropractic campaign of Barrett and his cronies. You can find out more at http://www.foundationforhealthchoice.com

The Comeuppance of Stephen Barrett and Quackwatch.com

By Tim Bolen <jurimed2@yahoo.com>
http://educate-yourself.org/cn/bolenquackb...ys21oct05.shtml
Posted Oct. 21, 2005

http://www.bolenreport.net/quackpot/quackpots/default_t.htm

Original Title
The Last Days of The Quackbusters

I've been following the activities of the "Quackbusters" for about five years, ever since the name Stephen Barrett (quackwatch.com) came up, as a player, against a client of mine in California. I asked the question "why would this group be using a doctor from Pennsylvania, as their witness, when there are 300,000 health professionals in this State?"

Thus began my education. Now I'm going to educate YOU...

The "quackbuster" operation is a conspiracy. It is a propaganda enterprise, one part crackpot, two parts evil. It's sole purpose is to discredit, and suppress, in an "anything goes" attack mode, what is wrongfully named "Alternative Medicine." It has declared war on reality. The conspirators are acting in the interests of, and are being paid, directly and indirectly, by the "conventional" medical-industrial complex.

Millions of health freedom fighters, and members of the public, worldwide, know what I know. Public outrage and reaction is growing. After 25 years of unopposed success, the "Quackbusters" are now in real trouble... "The end" for them, has begun. They, themselves are being hunted.

The "Quackbuster Conspiracy" is in a desperate place now. They know they've lost the war, and are going to pay a terrible price for their actions. The fear is in their eyes...

Crackpots?
Yes. When the self-named "Quackbusters" stumbled around to find a derisive name to call their victims, they picked the word "Quack," without ever bothering to discover it's origins. Its original meaning, from Europe, comes from the term "quacksalver" which was used to describe Dentists who were dumb enough to use mercury (a poison) as fillings for teeth. Look at propagandist, and "Quackbuster" king-pin, Stephen Barrett's website (quackwatch.com), and you'll find that HE IS IN FAVOR of mercury (amalgam) tooth fillings.

Barrett, his cronies, and minions, are not known to do intelligent research.

Evil?
Yes. The "Quackbuster Conspiracy" was started shortly after the American Medical Association (AMA) lost the court battle to the Chiropractors in a case begun in Federal court in 1976. The Federal judge ordered the AMA's covert operation shut down - and leave the Chiropractors alone. The AMA files, library, etc., ended up in Stephen Barrett's 1,800 square foot basement in Allentown, PA. Barrett, and his minions, had the common sense to stay away from criticizing Chiropractors for quite some time. Barrett has since abandoned that common sense.

Federal judges have a way of enforcing their decisions using shackles, Federal Marshals, the federal prison facilities, asset seizure, etc... Even Barrett, in all his incredible arrogance, isn't dumb enough to match wills with a Federal Judge. I think the Chiropractic Association should consider re-opening the Wilks case in front of that same Federal Judge - and point right at Barrett, and his cronies.

In that early, educational case for me in California, Stephen Barrett and two slime-ball investigators from the California Medical Board, had convinced members of the Laguna Beach Police Department that a nutritionist using ozone therapy was "a sex criminal preying on women." Flak-jacketed thugs screwed a gun into Salvatore D'Onofrio's ear, forced him to lie on the ground, and thus began a brutal, anything goes, persecution.

D'Onofrio's attorney was a hiking partner of mine, and told me the story on a ridgeline, seven miles up from a trailhead. I laugh now when I remember my naive response "This can't be happening in America."

Sal D'Onofrio, through his attorney, hired us, at day 43 in solitary confinement in the Orange County Jail. He was in "solitary" because that's what they do with sex criminals. He was in jail because the judge had set bail at $500,000, an amount his supporters couldn't raise. Barrett's minions were ruining D'Onofrio's life in the press.

We organized a bail hearing for day 48 of incarceration, put 62 of D'Onofrio's supporters in the courtroom, LA network television in the jury box, got the front page of the LA Times, etc., etc., etc., - and the judge let D'Onofrio out on his own recognizance. Seven weeks later the prosecutor dropped the charges.

Who are these people that would, so casually, inflict that kind of nightmare on an innocent man?

James Carter, MD's authoritative book "Racketeering In Medicine," published by Hampton Roads, carefully explains the "Quackbuster Conspiracy."

Alternative Medicine?
"Alternative Medicine" is defined as any protocol, action, or therapy that isn't "drugs, radiation, or surgery oriented."

Wrongfully named? Yes. So-called "alternative medicine" is actually the health choice of planet earth. It is a combination of every good health idea invented by mankind, in every country and culture on this planet. There is nothing "alternative" about it. Labeling planet earth's health choice as "alternative" is, and was, a propaganda device.

North Americans have overwhelmingly (by their purchases) made "Alternative Medicine" the "health choice of the people" - for the best of reasons: it works better than allopathic, it "removes the cause" rather than "treating the symptoms," it is cost effective, it makes people feel better and think clearer, and it doesn't have all those horrible effects, and side effects, of invasive surgery or prescription drugs.

More than half of the US health dollar in 1999 was spent on "Alternative Medicine" and it was all out-of-pocket. Conventional medicine is being paid for, and is surviving, only because insurance and Medicare pay for it - the public won't spend an out-of-pocket nickel on it.

Alternative Medicine philosophies fit the "American (I'll make my own decisions)" way of thinking. Allopathic Medicine philosophies fit the "Germanic (follow my orders)" way. "Alternative Medicine" is for people who think for themselves - Americans.

The door to real "alternatives" is barely open. The future of medicine is right in front of us - it isn't in pharmaceuticals - it is in nutrition, body cleansing, prevention, oxygen therapies and energy medicine - all of which are constantly targeted by the sleaziest of the "Quackbuster" soldiers.

The "Quackbuster" Stronghold
The Federation of State Medical Boards (FSMB), is a vital Medical Doctor (MD) control point. It is the trade organization of all 50 State's Medical Boards. The FSMB is the organization that writes the policy manuals, and provides training for, Medical Board investigators and prosecutors all over the United States. The

FSMB is the "Quackbuster" police agency.

The "Quackbusters" use the FSMB to persecute two groups (1) "Alternative Practitioners" within the MD ranks (they treat them like traitors), and (2) non-licensed alternative health professionals (they charge them with "practicing medicine without a license").

The "Quackbusters" through the FSMB, have been able to change the focus of prosecutions against "bad doctors." They define "bad doctors" as those that use alternative modalities - and maximum penalties are exacted. We have seen in California, that real "bad doctors," those that kill their patients, actually get off with a slap-on-the-hand by using the defense "but I prescribed a lot of drugs." State medical Boards are not serving the needs of "we the people," they are serving the needs of the "Quackbusters," and their paymasters.

Medical Board prosecutions are funded by the States - Barrett, and his slime artists, don't have to spend a dime... I couldn't even count the number of "alternative medicine" practitioners currently under persecution from mis-informed Medical Board investigators and prosecutors. The damage done to Americans from this attack is incalculable...

Barrett's Dubious Claims About What "Health Fraud" Really Is
The US government has indicated that "Health Fraud" is a major problem in the United States Health Care system. Statistics show that "conventional medicine" rips off the American public significantly each year in bogus billings, false claims, unnecessary procedures and tests, etc...

Attorney General Janet Reno has a special nationwide "Health Fraud Prosecution Unit" to deal with this massive problem. The prosecutions are against mega-greedy hospitals, HMOs, ambulance companies, nursing facilities, etc. - all "Conventional" medical units - not "Alternative."

But, if you peruse Stephen Barrett's (don't call him doctor, he's not licensed) website, you get the impression that "allopaths" are to be classified somewhere next to archangels - and "alternatives" are snake-oil salesmen, akin to the devil's minions. Barrett clearly defines, in smirky arrogance, health fraud as "alternative medicine."

Huh?

Doesn't Barrett read national statistics on health fraud? Of course he does - he just ignores them. And "Barrett's parrots" at the FSMB mimic their supreme commander's every word in their policy statements. Anyone can read FSMB policy statements, in their entirety, on the web. Just go to www.fsmb.org and start reading. They, like Barrett, define "health fraud" as "alternative medicine," and fail to even mention the real national "health fraud" statistics.

Why the Fear in Their Eyes?
Three Reasons: Exposure, ridicule, and public rage.

(1). EXPOSURE - Health Freedom Fighters, tired of the persecutions, and outnumbering the "Quackbusters" 100,000 to 1, are now watching Barrett and his soldiers carefully. They've decided to put a stop to Barrett and company. Lists are being made of who the "Quackbuster Conspirators" are, what their function is, where they fit into the conspiracy, who they work for, who their associates are, where they live, and what their probable motives are. Their daily activities, as "Quackbusters," are being monitored, and documented.

Health leaders consider Barrett, and company, to be running a subversive organization working against the interests of America.

(2). RIDICULE - Examination of Barrett's operation proves that the "Quackbusters" are a paper tiger. They

are a construction with a 25 year old modus operandi. Their membership is small, they have an even smaller core group, the industry is turning its back on their extremism, and their leadership "public presence" is laughable. Their support network could best be described as "pea-brained."

Their "annual meeting" for the conspiracy was held in a Super 8 motel in Missouri - 25 stalwarts attended from, at least, six different plotter groups. Not very impressive.

"Bizarre" Stephen Barrett, his cronies and minions, even labeled two time Nobel Prize Winner Linus Pauling as a "Quack." The American public, in a consumer-driven movement, is rejecting, with laughter and ridicule, Barrett and company's ludicrous assertions - hence the term "Quackpot" is now used, commonly, to describe the self-named "Quackbusters."

(3). PUBLIC RAGE - The American public is just now realizing two things (a) that a good many of those "alternative" things being blocked, and suppressed, have been around for a long while - but not available to them because of the conspiracy, and (B) that the system to find and put new things in place is corrupt - and works against Americans. Every "cure" since polio has been suppressed, and the proponents of those cures, reviled by the "Quackbuster Conspirators."

Statistics show that every one of those "cures" worked to some extent...

Barrett, his cronies, minions, and henchmen, have every reason to fear public rage. Russian leader Nikita Khrushchev said it best. He said, "We would never invade America. For every American has a gun..."

"You mean my mother didn't have to die that horribly, or even die at all?" is a question more, and more Americans are asking...

Tim Bolen

craig-oxley - September 13, 2008 04:58 PM (GMT)

Court Orders Quackbusters Barrett and Polevoy to Post $433,715.93 Bond...

Opinion by Consumer Advocate Tim Bolen
Thursday, May 2nd, 2007
http://www.bolenreport.net/feature_article..._article060.htm

The "quackbuster" organization is learning a very HARD lesson about the reality of the US legal system. And, I'm very pleased.

They're learning, in the most humiliating, and financially devastating way, that US Courts don't want the system abused to harass those that the "quackbusters" don't like.

In the Barrett v. Clark case, today, an order was issued for Plaintiffs Terry Polevoy MD, and Stephen Barrett MD, to come up with a grand total of $433,715.93 in bonds - $264,311.68 for Polevoy alone, and $169,404.25 from Barret and Polevoy - within thirty days. Barrett runs the questionable website "quackwatch.com." Polevoy is kind of the Canadian low-budget copy of Barrett, with garish colors.

There are three important parts to what happened:

(1) This is not the kind of bond where some two-bit crook runs down to a bondsman and plops down ten percent of the bond, and gets someone to put up the rest of the money with his Mom's house as collateral. This is a "full bond" where Barrett and Polevoy will have to walk into the courtroom with cash, CDs, stock certificates, Trust Deeds, etc. I don't see either Polevoy or Barrett doing this. Barrett hasn't actually worked

as an MD since 1993, and Polevoy runs a "pimple clinic" in a small town in Canada.

(2) The motion for this ruling was "not contested." Yup, that's right - "not contested." Now, I don't know for sure, but I'd guess that the attorney in this matter for Barrett and Polevoy, one Christopher Grell, probably, at this point, has had about all he can take from those two, since, I'd guess, this case has just about cost him his career, his net worth, his office, his reputation, etc. - and he has to know that Barrett is trying to make his own deal without Grell. And, by now, he has to have figured out that Polevoy is at the bottom of the fish tank. morally and ethically.

(3) The Plaintiffs, unless the judgment specifically notes otherwise (and it doesn't) are jointly, and severally liable for the costs. Which means that, for instance, if Polevoy could manage to avoid his portion of the debt (being in Canada), Barrett and Grell would have to cough up his share of the money. And I'd bet that Polevoy will try and do just that.

The "quackbusters" have been trying, desperately, to raise money for the court actions they're involved in - both for offense and defense - and they don't seem to be doing well. One of their supporters, a magician who calls himself "The Amazing Randi," has vowed to raise money for them - but doesn't seem to be successful. In short, the "quackbusters'" pleas for money are falling on deaf ears.

Below is the Order from the Court - in it's entirety. Go ahead and laugh when you read it.

The Motion for order req. plaint. to file an undertaking to secure cost was set for hearing on 05/02/2007 at 09:00 AM in Department 31 before the Honorable Winifred Y. Smith. The Tentative Ruling was published and has not been contested.

IT IS HEREBY ORDERED THAT:

The tentative ruling is affirmed as follows: The Motion of Defendant and Judgment Creditor Ilena Rosenthal ("Defendant") for Order Requiring Plaintiffs to File an Undertaking to Secure an Award of Costs and Attorneys' Fees Which May Be Awarded is GRANTED IN PART.

As to Plaintiffs Terry Polevoy, M.D. and Stephen J. Barrett, M.D., the motion is granted. Plaintiffs do not dispute that they reside out of state. (See Code Civ. Proc., § 1030(b).) There is a "reasonable possibility" that Defendant will obtain judgment for attorney's fees and costs expended since October 5, 2001 in connection with Defendant's special motion to strike under Code of Civil Procedure section 425.16. (Id.)

The amount of the undertaking is $264,311.68 ($263,211.68 + $1,100) as to Plaintiff Polevoy, and $169,404.25 ($168,304.25 + $1,100) as to Plaintiffs Polevoy and Barrett. Defendant relies on Code of Civil Procedure section 917.1 for the proposition that the undertaking shall be increased, but that statute applies only to undertakings filed in connection with appeals.

The Court denies Defendant's request for an order requiring plaintiff Christopher Grell to post a bond pursuant to the Court's inherent powers, Code of Civil Procedure section 187, or Code of Civil Procedure section 391.1.

Defendant shall file and serve notice of entry of the Order on Plaintiffs within 10 days of receipt of the Court's Order. Plaintiffs Polevoy and Barrett shall file the undertaking no later than 30 days after service of the Court's order. (See Code Civ. Proc., § 1030(d).)

Frankly, the "quackbusters" are going to pay through the nose for this FAKE attack, abusing the US Court System. They were warned, early on, but in their sheer arrogance, and disdain for the forces of good, they

elected to persist, apparently trying to grind down the Defendants with sheer nastiness, and oppressive behavior.

So why is this happening, and what does it mean?

In essence, and this may be an over-simplification, but... The threesome described above sued a bunch of people in Oakland, California, including me, Tim Bolen, in a case that, so poorly written, is hard to understand. The theory of the case, after you wend your way through the rhetoric, seemed to be that world-renowned author/scientist Hilda Regehr Clark PhD hired me, Tim Bolen, to "defame" the threesome in some strange, poorly explained, way. Allegedly, other people "Conspired to defame" these three, blah, blah, blah... Why? Click here for more info.

One of those people who allegedly "Conspired to defame" was Ilena Rosenthal, the head of the anti-silicone-breast-implant "Humantics Foundation." Ilena decided to take them on and hired the attorney, Mark Goldowitz, who originally wrote California's anti-SLAPP law (explained below) to get her out of the case, correctly. When the Judge agreed to the anti-SLAPP Motion filed, and awarded over $33,000 in attorney fees, the threesome filed an Appeal. The Appeal went all the way to the California Supreme Court where the threesome got legally horsewhipped.

Now, simply said, the threesome owes Ilena Rosenthal all of her attorney fees for the Superior Court action, the Appeal and the California Supreme Court action. And, now, that's a big pile of cash they owe her - and, of course, she wants it.

So, what is now happening is that "the threesome" will probably try to Appeal the judgment for attorney fees, hoping to try to drag the case out for three more years. Ilena's legal team asked the Court to force them to put up a bond to continue the legal fight, as the costs will continue to increase, and it is likely that one or more will file bankruptcy over this. The Court agreed. If the threesome wants to continue they're going to have to put up hard assets, right here, and right now.

California takes a dim view of SLAPP violators...

California's anti-SLAPP law, designed for just this sort of situation, worked just like it was designed. The anti-SLAPP legislation, whose full title is "anti Strategic Lawsuit Against Public Participation," was designed to stop Plaintiffs from filing scurrilous lawsuits against Defendants just to shut them up on a public issue, by overpowering them with litigation they cannot afford. The law provides for the Defendants, by allowing them to collect their attorney fees from the Plaintiff almost immediately upon winning a Motion to Dismiss. Barrett, Polevoy, and Grell lost their attempt to crush Defendant Rosenthal - and now they don't, or can't, pay her attorney fees as the law requires. The trio were able to forestall that original payment only because they appealed the original Judge's decision to the California Appeals Court, then to the California Supreme Court - where they were soundly, and publicly, horse-whipped.

You can read about what actually happened by clicking on the story - "Quackbusters CRUSHED by California Supreme Court..."

Rosenthal, and her attorney team, are pressing, every moment for collection - as well they should.

The case has become very personal - with Polevoy, apparently trying to frighten, and harass, Rosenthal into giving up. Polevoy, who is known to "stalk" his victims, has apparently hired private detectives to find Rosenthal's living quarters, and her business interests - and then tells Rosenthal what he now knows about her. Polevoy used this same scare tactic to destroy the radio career of Canadian radio personality Christine McFee. Polevoy, according to Rosenthal, adopted the internet identity "Vera Teasdale," and others, to harass Rosenthal - bashing her on chat rooms, etc. pretending to be a woman.

All of which just makes Rosenthal, and her legal team, even more eager to collect their money.

So, what about this "stalking" thing Polevoy does?

How do you deal with a "stalker," like Polevoy? It depends on your personality. I, personally, have legally, and publicly, notified Polevoy that his attentions in this matter are not wanted, and I've notified law enforcement of my concerns. So, if he shows up, following me, or any family member of mine around, I have every right, under California Penal Code Section (CPC) 837, to perform what is called a "Citizen's Arrest." CPC 837 reads:

837. A private person may arrest another: 1. For a public offense committed or attempted in his presence. 2. When the person arrested has committed a felony, although not in his presence. 3. When a felony has been in fact committed, and he has reasonable cause for believing the person arrested to have committed it.

California Penal Code Section 839, 844, and 845 say:

839. Any person making an arrest may orally summon as many persons as he deems necessary to aid him therein.

844. To make an arrest, a private person, if the offense is a felony, and in all cases a peace officer, may break open the door or window of the house in which the person to be arrested is, or in which they have reasonable grounds for believing the person to be,after having demanded admittance and explained the purpose for which admittance is desired.

845. Any person who has lawfully entered a house for the purpose of making an arrest, may break open the door or window thereof if detained therein, when necessary for the purpose of liberating himself, and an officer may do the same, when necessary for the purpose of liberating a person who, acting in his aid, lawfully entered for the purpose of making an arrest, and is detained therein.

So what does all this "Citizen's Arrest" law mean? It means that if I catch Polevoy stalking me, or any of my family, I keep a ball bat (Louisville Slugger) handy, and I'll use as much force, to restrain him, or contain him, for arrest, as I, as a reasonable man, feel is necessary, at the time.

Stay tuned...

Did Barrett ever attack the SMOM's Medical Mafia "Drug, Cut & Burn" Cartel? Then how could he go around calling himself a Quack buster? -Craig

Chiropractors Claim Court Victory Against Infamous 'Quackbuster'

http://digital50.com/news/items/PR/2007/06...uackbuster.html

SAN JUAN CAPISTRANO, Calif., June 14 PRNewswire-USNewswire — In a strongly worded opinion, the Appeals Court for the State of Pennsylvania ruled against Stephen Barrett, a long-time critic of chiropractic and alternative health care. In an action that chiropractors see as a major setback for their nemesis, the judge refused to overturn a 2005 decision against Barrett.

The earlier lawsuit was won by chiropractor Tedd Koren, DC, whose company markets chiropractic educational pamphlets that Barrett had harshly criticized.

In his newsletter, Dr. Koren referred to the self-proclaimed "Quackbuster" as a "Quackpot" and commented that Barrett was "de-licensed," and "in trouble." Barrett sued Koren for defamation and lost the case.

Barrett, who represents himself as an expert on health care quackery, has appeared as a medical expert in numerous court cases and claims the FDA, FTC and other governmental agencies have consulted him on health care issues. He is noted for his outspoken opposition to and criticism of non-medical health care approaches, most of which he labels "quackery." His targets have included chiropractic, homeopathy, naturopathy, and even two-time Nobel Prize winner Linus Pauling.

Heading the legal team for the original Koren case and appeal was Carlos Negrete, who serves as legal counsel for the World Chiropractic Alliance (WCA).

"This is a great victory for the chiropractic profession," Koren stated after the Pennsylvania Appellate Court decision was announced. "Once again, chiropractors across the country have been vindicated and exposed the specious and evil attacks by someone who has no knowledge or expertise in our field."

Negrete specializes in representing alternative health care providers who are targeted by advocates of the medical and pharmaceutical industries. His previous court victories have positioned him as the premier "health freedom" attorney in the US.

During heated and often dramatic courtroom proceedings, Negrete pointed out many of the questionable statements Barrett includes on his websites attacking chiropractic, as well as facts about Barrett's own credentials that shocked even his supporters. Under Negrete's intense cross-examination, Barrett admitted that he had not been a licensed physician for more than a decade and had failed the neurological exam, preventing him from being certified as a specialist. Negrete demonstrated that, despite his claims, Barrett had no real expertise in any medical field.

Barrett also admitted, under questioning, that he misrepresented himself as a licensed physician in a previous court case.

"These revelations cast serious doubts about Barrett's credibility and integrity and were major factors in the judge's decision," Negrete stated.

Calling the case a "landmark decision" for chiropractors and alternative care providers, Negrete noted that "Barrett has made a career out of attacking core chiropractic values, specifically subluxation, with no scientific basis for his contentions. This case clearly shows that his opinions about chiropractic or other health care options are irrelevant."

WCA President Terry A. Rondberg, DC, agreed with Negrete. "This is a turning point not only for Barrett, but for all unscientific and uninformed opponents who seek to impose the medical monopoly on the public. People around the world deserve freedom of choice in health care and need valid, unbiased and truthful information on all options available to them. Thanks in great part to the WCA legal counsel, Carlos Negrete, they now have a better chance of getting both."

The World Chiropractic Alliance — an international organization representing doctors of chiropractic — promotes traditional, drug-free and non-invasive chiropractic to correct vertebral subluxations. The WCA is an NGO (Non-Governmental Organization) associated with the United Nations Department of Public Information and publishes the peer-reviewed chiropractic research journal, Journal of Vertebral Subluxation Research. For more information, contact the WCA at 800-347-1011 or http://www.worldchiropracticalliance.org.

The Continuing Legacy of Lies Generated at Quackwatch by Stephen Barrett (April 5, 2010)

Subject: Dr. Robert C. Beck - Small cell lung cancer
From: Adam
Date: Sat, April 3, 2010
To: Ken Adachi

Mr. Adachi,

My dad is dying of Small cell lung cancer...and is undergoing chemo therapy..we have learned today that the cancer is now "advanced" having moved to the liver. I want to help...and have come across Dr. Beck's work. Can the items described by him help - cure my dad? There seems to be a lot of internet sites selling items described by Dr. Beck and am worried that they somehow migh be different to the original design. Can you suggest a reputable company from which I can buy all the items I need or alternatively information on how I can make these things? Please help....if you can.

We live in England.

Adam

Hi Adam,

[snip]

I have the instrucitons for making the electrifier posted on my web site:

http://educate-yourself.org/be/beckelectrifierinfo.shtml

http://educate-yourself.org/be/beckelectri...candparts.shtml

It's possible to stop cancer, even at a late stage, but you have to do many things at the same time and not depend on one or two therapies to do the trick for you. Chemo is only poisoning the body. It kills more than it cures. I wouldn't do it no matter what they told me.

I would get Hulda Clark's book, The Cure and Prevention of All Cancers and start reading the 21 day cure program immediately.

http://educate-yourself.org/cn/huldaclarkbooks.shtml

The Books of Dr. Hulda Clark

1. The Cure And Prevention of All Cancers (2007-Latest book, extremely important information***) $22.95

2. The Prevention of All Cancers (2004-Profound discoveries on how & why cancer grows) $21.95
3. The Cure for Advanced Cancers (1999-accelerated 21 day program for advanced cancers) $22.95
4. The Cure for All Cancers (1993-first book identified critical role of parasites & solvents in cancer) $19.95
5. The Cure for All Disease (1995) $21.95
6. The Cure for HIV/AIDS (1993) $19.95
7. The Syncrometer Lab Manual (2004) $19.95

Video on Syncrometer Basics (1996) with Carmen Myers & Dr. Hulda Clark from New Century Press

Syncrometer Basics DVD $19.95
http://newcenturypress.com/Merchant2/merch...ategory_Code=VA

Syncrometer Basics VHS Tape $19.95
http://newcenturypress.com/Merchant2/merch...ategory_Code=VA

You can get the books directly from the publisher in California, New Century Press:

New Century Press
1055 Bay Blvd., Ste. C
Chula Vista, CA 91911

Hi Ken,

I found this article on the web:

http://www.quackwatch.org/01QuackeryRelate...ncer/clark.html

It seems to discredit everything Dr. Clark suggests with specific cases (including court cases)...I understand that the lady died in 2009 of cancer?

Im confused

Adam

Hi Adam,

Do you know ANYTHING at all about Quackwatch and the guy who puts up that web site?

No?

But you're ready to accept his words, his assessments, and opinions as honest and true just because they are printed words on a computer screen?

Here's a few more links you might want to read over before accepting the info presented at Quackwatch.

Hulda Clark did not die of cancer. She died at age 83 from complications resulting from a long term spinal injury. Even if she did die of cancer, so what? Does that mean that all of her reserach on cancer is negated and meaningless?

Everyone is going to die of something Adam. The idea is to try and live a normal life span , such as 83, instead of dying from cancer at 53 because you believed in the lies of mainstream, orthodox medicine (oncologists), their mouthpieces in mainstream media, and pharmaceutical disinformaiton shills like Stephen Barrett.

Dr. Bob Beck titled one of his lectures "Take Back Your Power". You should view it. He was addressing people who easily give away their power to others who APPEAR to be authoritative and APPEAR to know what they're talking about, but actually are PROPAGANDISTS out to DECEIVE you in the interest of disuading your from trying NON-PHARMACEUTICAL therapies .

Take care and good luck, Ken

View Full Version: How I cured long term Chronic Eczema problems

Title: How I cured long term Chronic Eczema problems
Description: *(Before and After Pictures included)*

craig-oxley - September 13, 2008 04:53 PM (GMT)

MY LONG BATTLE WITH CHRONIC **ECZEMA** AND HOW I **CURED** THIS PROBLEM

By **Craig Oxley**
14 May 2006

Pictures Before and After at the end of this article

Feel free to follow the basic protocol for aiding this condition along with Psoriasis. To follow the strict water fasting protocol you must educate yourself on all the data available on the subject before attempting this. If you rush into fasting and your very toxic or simply don't understand it correctly, you could do yourself some very serious damage. Please take care and you should do just fine.

When I was a young child I suffered now and again from Eczema on different parts of the body each time. As I got older I never suffered from this condition again. I started to make the move from the Rockefella controlled Medical establishment indoctrination of death to the alternative health knowledge now widely available. I as with many others fell into the trap which is supplements and colloidal metals. When you first make the move to alternative its almost always going to be supplement based. The problem is that we're indoctrinated to taking a pill for this and for that. The supplement and general alternative crowd are no different. Its just another profit hungry industry mostly craving off symptoms and not the true causes. To be honest for the majority of people hoodwinked by the Rockefella system, its the only way you will transend into alternative health. Unfortunately people then tend to believe they know it all and never really progress further and learn the truth to real health and life.

I was taking many supplements and I was strict with my protocols making sure they were completed everyday. Whenever I came across another so-called amazing supplement, I would be purchasing it and taking many of them. One of the first products I used for my health was Colloidal Ionic Silver. Many people are being drawn to this metallic based product, especially with all the scare mongering of viruses etc. I'd read a lot of information on this product and felt it was perfectly safe. I would take anything up to a litre a day sometimes and once 2 litres. It was generally 300-500ml a day. I did this for a few years. I took other colloidal metals such as platinum & Gold.

Do not get me wrong, theres no denying the power of Colloidal Silver but theres alternatives which have been found better in many cases and certainly not as dangerous. These include Citricidal, Wild Oregano Oil etc. Many people take Colloidal Silver when they have a cold/flu symptom. I found it wasn't that great for this problem. I've found a good quality Echinecea will absolutely destroy Colloidal Silver if your ill in this way. The body isn't supposed to take in metallic metals, its made to take only plant converted metals and that is it. If you intake metals they will clog the system, destroy your friendly bacteria, give you mental problems and much more. We have to be very careful about taking all these supplements and initially feeling excellent and not seeing any illness for a while. Really whats happening is your totally damaging your body and over time serious disease will manifest and you will no longer feel well. Vitamin C, especially Ascorbic Acid is another one to watch out for as its highly acidic and will destroy you very quickly. Once you get on this product it fools you that your feeling well and full of energy. Once again you will over time destroy your body. Nothing thats made by man and not natural should enter the body.

After about 2 years of doing supplements and Silver daily I noticed I kept having a split inside my nostril which was at times very sore. It would scab and I would keep picking at it, making it much worse. It would go and then be back quickly.

The next thing I noticed was I kept getting what initally I thought was coldsores. I then thought I just had drying skin. The problem was at either end of my mouth where the lips join. This just like the nostril was constantly coming and going very regular. I received a Nikola Tesla *Violet Ray* system and began to regularly use this as instructed for general health. I used it on my eyes a lot as well as my head and legs. Now bare in mind that putting up to 30,000 volts of harmonic frequencies through the body isn't exactly natural either. These machines will quickly highlight any problems lingering within your body. The problem will arise to the surface and then its up to you to treat it. This is why I no longer advise people to rush into high powered frequency work if their not prepared for what may arise. Not long after using this the next and bigger problem arose with the eyes. My eyes would swell all around, become very sore and red. I would regularly have to burn them with the showerhead to get relief. This was again constantly and chronically always around and making me very depressed at times.

I found relief utilising Cayenne pepper and dabbing it on the area. I'd read that Vitamin C was helpful with Eczema and utilised this which helped quite a bit if I'm honest at the time. I'd learnt about the Hulda Clark liver flush and how this should help my condition. I proceeded to do 2 liver flushes in the span of 2 weeks as advised by an Ozone doctor. This miraculously stopped the eye problem completely which was very exciting indeed. I still had the nostril and lip problems continuing though.

One day I damaged my 3 fingers whilst in a temper. I fixed these fingers pretty quickly utilising the Violet Ray and some now dreaded supplements. All was fine and I continued with Vitamin C after reading all the data from Linus Pauling, Klenner and others. After a while I noticed one of my fingertips was very dry indeed and it was progressing each week. Then my worst nightmare started and that was very chronic Eczema on the exact 3 fingers I had damaged previously but thought were fixed. I tried everything you could imagine to help my hand but nothing was working. The hand got so bad at times it would drip like a tap with a faulty washer. I utilised a positive square wave frequency electronic output device to the area but this aided in allowing the Eczema to spread to the top of the hand also in a little patch. I regularly had to use kitchen roll tissue to stop the dripping. The hand would be red with gross yellow dead skin, swollen and split. The splits were terrible and so painful. The only way I ever got relief was again with a really hot water out of a showerhead. This went on for a very long time like almost 2 years until now. I tried everything including water/salt following Batmanghelidj and many others, but no luck.

I then came across Fasting as I started to move away from the supplement death health onto natural pure life HERBAL healing. I fasted 3 days and noticed all the inflammation and symptoms disappearing. This showed to me that someone I had read about could be correct on the source of my problem. Once I started eating again the symptoms came back. I did a few small fasts and of course the same would happen when I ate. I did a 5 day water fast and infact my hand got worse when I ate. I did an 8 day water fast but again the Eczema symptoms were still there. The nose problem had cleared up no problem but the lips and hand were still the same. Another symptom I did get which was cleared up quickly by the fasting was an arthritic type problem of the knee. Something in my gut feeling told me that Fasting was the key and I never forgot this.

I can also tell you that if you attempt to utilise blood electrification to Robert C Beck's specifications and protocols you will just help flare the situation up even more. I tried this route as part of many options I utilised in desperation.

I'd came across a person called **Edgar Cayce** a good time ago on my quest for health knowledge. I'd tried his wart removal protocol on my mothers very nasty and persistant wart. His wart method worked excellently and I kept my eyes on him. Infact I had read his Eczema protocol before but for some reason I just kept trying everything else. Eventually I attempted his protocol utilising **Slippery Elm**, Marshmellow as he directed although I added Pau D'Arco tea and a herbal de-parasite program based on the herbs which Hulda Clark promoted to tackle parasites. From Edgar Cayce I learnt that Eczema/Psoriasis and infact most problems arise from gut trouble and in this case Leaky gut. I followed his advise except I made Slippery Elm gruels rather than teas, making my protocol that much more powerful. Within days I saw a major difference. My hand was going back to normal like when I fasted except not quite as quick.

Suspecting supplement abuse along with overuse of metallic colloids as the cause, I still obviously weren't 100%. I proceeded to check out what can cause a leaky gut and found parasites amongst other things. This is why I employed a de-parasite program and kept a maintenance of this going. I had seriously helped my condition and stomach by doing this for some time. I would still get problems though if I didn't keep up with the Slippery Elm and I had certain foods especially fruit and more so fruit/veg juices which seemed to easily enter my bloodstream in large particles through the leaks in the gut walls. I believe my gut must have been in terrible condition. I then proceeded to find a quality local herbalist who I could utilise for quality tinctures etc and maybe increase the speed of healing. I also started a light jogging routine which aided my Liver nicely and helped. I got a tincture containing Thyme, Calendula and two Chinese liver boosting herbs. Eventually I found I could lower my amount of Slippery Elm and have less effects compared to previously. If I had juices

or similar though I would eventually get the problem back as usual. Again my mind and gut feeling kept telling me to Fast and I will be healed. I'd read about people finally ridding themselves of a disease whilst doing length fasts of 12-30 days. I just knew I had to do a long length Fast on water only in order to heal my gut once and for all. I embarked on this task recently and completed a lengthy water Fast. The result is that I'm **totally cured** of my chronic long term Eczema and feeling so amazingly new, fresh and wonderful like a new born baby. I cannot stress enough how important Fasting is for health if done correctly. Now remember on that Fasting is **FREE** and was given to us all by our creator as a way of healing us all and allowing long disease free lives. My hunch was correct after all and now I'm a very happy person indeed. I was very depressed at times over my problem especially with all the knowledge I had gained and yet for so long struggled with health and when I thought I should be one of the healthiest around. I know what made me ill and hurt my poor intestines and it was this *false science, chemical ridden alternative supplement based health rip off.* Believe me I've done almost all of what you can do in that area and defended it many times against Herbalists.

I now realise that the Herbalists were correct all along and only these people truely understand health, life and the human body. I've learnt that not only is the Rockfella controlled Medical industry an obvious scam, but even most of the alternative world. Again though due to the severe conditioning from a child of the Rockefella system, the supplement way next is really the only way for most people. Herbalism can turn almost everything the Rockefella cliques claim totally upside down. Its a shame that the alternative health arena has now become so money driven and chemical based just like the medical industry. Dr John Christopher the world's greatest publically known Herbalist was booed off stages at alternative conferences because he showed people how easy it was to create good health without paying for useless supplements and gadgets. Do you think Rockefella or supplement sellers want someone coming on and telling people they can cure themselves with a few days fasting on water or orange juicing? Of course not! True Herbalism is almost having to go underground as the FDA and others try to destroy the real information being presented to the public.

Leaky Gut

What happens is the intestine walls thin and large particles of food can then enter the bloodstream which wouldn't normally happen. This then puts a burden on the governor organ known as the Liver. The symptoms of Eczema, allergies etc is due to this very problem. So what do you need to do to correct this? The answer is simple, repair the leaky gut but in the mean time boost your liver function to cope with any large particles getting through still. In order to repair the gut you need to eat less which will obviously rest the intestines. You need to coat the intestines with a mucilage as a protectant from large particles of food getting through the walls but also a barrier to allow healing. The best mucilage protectant herb is SLIPPERY ELM without a shadow of doubt. You should get this in powder form to mix into gruels. Another excellent stomach healing herb and mucilage is Marshmellow root powder. You could add the Marshmellow to the Slippery Elm if you wish. This gruel should be made by adding tablespoons of the slippery elm to a small amount of water so that you have a watery but thick like porridge type result. You should take this 3 times a day and 30 minutes before food. You should cut out all nightshade foods such as white potatoes & Tomatos and certainly no peppers, spices etc. I found that Ginseng I had from Turkey wreeked havok with my Eczema also. You need to be very strict on what you eat. I found brown Rice worked well with Eczema. I would also advise you have a regular intake of fish namely Salmon because your after the Omega 3 oils which do help quite a bit in some cases of Eczema. If you can take 3 days out from eating foods and just start eating masses of Slipperly Elm gruel this will aid in healing your stomach dramatically with its deep coverage and penetration of the intestines. I would highly recommend you source quality Calendula and Thyme tinctures and take 5ml of each 3x a day also around 40 minutes before food. Keep this up for some time and start doing some form of exercise for 20 minutes to help detox the liver quicker. You should source liver boosting herb tinctures such as Milk Thistle, Liquorice root, Artichoke etc. Theres some excellent Chinese herbal tinctures which boost the liver well. Take 5ml these up to 3x a day or whatever your herbalist recommends. Keep this up for as long as it takes and occasionally lower your dosages and see how long before any symptoms arise again. This will allow you to see how well your doing in repairing the gut.

Theres other products which people utilise to help repair the gut such as amino acid L-Glutamine but I do not promote this from health food stores. Glutamine acts like MSG as in an excitotoxin and excites the neurons in the brain when it converts to Glutamic Acid. Leaky Gut can be a very dangerous condition and many believe the side-effects of L-Glutamine are worth it rather than the possible brain and other organ damage from the leaky gut if bad enough. You can utilise Glutamine in a perfect natural source via your own Urine. Glutamine lengthens intestinal villi and increase IgA secretion. You can also utilise Green Barley and Oat bran to supply N-Butyrate. People utilise pro-biotics to increase good intestinal flora, I only promote this via Unpasteurised Kombucha Tea or Kefir.

Water Fasting is very very powerful indeed and must be done properly otherwise you could get seriously sick or even die. I believe the quickest way to remove Eczema is Fasting but it will take a lengthy fast after a few smaller ones to do. I cured my Eczema completely by doing a 16 day pure water fast and nothing else. This is the equivalent of a minimum 48

day Orange juice fast. Infact in reality its far more than that as nothing compares to a water fast for health and dont believe it when juice fasters claim juicing is superior, IT ISN'T! You could of course Juice fast but juice will normally give you bad Eczema symptoms so you could be in agony with this problem for a while before the juice fast starts to work. Stick to water fasting if your serious about sorting your problem out and have gone into all the detail needed before practicing this free miracle health method.

Leaky Gut Syndrome

Basic repair and relief Protocol

** Hulda Clark Herbal Parasite protocol and maintenance*
(Wormwood, Green Black Walnut Hull, Cloves)
** No Spices, white Potatoes, Acids, Metals, Tomatos, Alcohol, Meat & Dairy*
** Unfortunately its wise to cut back on fruit intake till your cured.*

Breakfast:

Herbal tinctures such as Calendula and Liver boosters mixed and take 5ml
20 mins 500ml of Pau D' Arco tea (simmered for 10-20 minutes)
40-60 minutes later take Slippery Elm gruel
30 minutes later eat some food (still try whole foods more than juices/soups)

Lunch:

Herbal tinctures such as Calendula and Liver boosters mixed and take 5ml
20 mins 500ml of Pau D' Arco tea (simmered for 10-20 minutes)
40-60 minutes later take Slippery Elm gruel
30 minutes later eat some food (still try whole foods more than juices/soups)

Dinner:

Herbal tinctures such as Calendula and Liver boosters mixed and take 5ml
20 mins 500ml of Pau D' Arco tea (simmered for 10-20 minutes)
40-60 minutes later take Slippery Elm gruel
30 minutes later eat some food (still try whole foods more than juices/soups)

Eventually you can scale down the Pau D' Arco tea and Slippery Elm. You can trial this and gradually taper off and test if your gut is repairing by seeing how long it takes for your Eczema to flare etc. I also occasionally used Green Nettle Tea. I have also found that Dandelion tea/coffee/tincture helps Eczema.

Hardcore CURE protocol

This is the amazingly powerful healing treatment known as Fasting. Fasting means you go without food for a period of time and only live in this case on pure water and nothing else. I have explained how I kept having a gut feeling Fasting was the key to my chronic depressing Eczema problem. I just knew I couldn't do a really long water fast straight away. The first time I fasted I had breathing problems early on like the 2nd and 3rd days. I had similar again the next time. Eventually I could increase the length of Fast with less and less effects. My 16 day Fast cured me completely of my Eczema and this may be all the time most people need. I did an 8 day Fast once but it never stopped the Eczema so I presume thats the start time for the real intestinal healing to start. Water only Fasting can be very harsh and very dangerous, especially on Fasts of this sort of length. I do not promote it to people who are amateurs at true healing

knowledge. I do not advise anyone with any fears on this subject to Fast as you will simply worry yourself into possible complications or over stress yourself. You need to understand every single aspect of Fasting, from how to start it to obviously how to break it safely so that you do not Comatose yourself which ultimately leads to death pretty quickly. I suggest you study the following research on Fasting:

The Principles and Practice of Fasting by John L Fielder
Scientific Fasting by Linda B Hazzard
The Hygienic System by Herbert M Shelton (*Fasting and Sunbathing*)
Fasting, Hydropathy and Exercise by Bernarr Macfadden
Fasting and Eating for Health by Joel Fuhrman

Therapeutic Fasting

Holistic Fasting Health Retreat

What the legendary Edgar Cayce had to say on the subject

http://www.edgarcayce.org/health/database/...s/psoriasis.asp

The Edgar Cayce readings, while recognizing the wide variability associated with psoriasis, consistently maintain that this disease most often can be traced back to problems with eliminations. Many of the readings on psoriasis refer to "thinning" of the walls of the intestines, particularly in the area of the upper small intestine between the duodenum and the jejunum. According to the readings, substances can "leak" out of the intestine and be picked up by blood and lymph circulation.

The body has four primary routes of eliminating toxins from the body: the colon, kidneys, lungs, and skin. In psoriasis, the other eliminating routes are not able to completely eliminate the toxicity. Thus, the skin pathology associated with psoriasis represents the body's desperate attempt to cleanse itself.

Here is an exemplary excerpt from the Cayce readings on psoriasis, which describes the intestinal pathology and the treatments to heal it.

"Q. Please give me the cause and cure for the so-called psoriasis with which I am troubled.
"A. The cause is the thinning of the walls of the intestinal system, which allows the escaping of poisons - or the absorption of same by the muco-membranes which surround same, and becomes effective in the irritation through the lymph and emunctory reactions in the body.
"An effective cure for same is first being mindful of the diet, during the periods when these necessary elements would be given for creating those activities within the system to close such conditions:
"In the system we would use elm water and saffron water. These would be taken in the ordinary drinking water, during periods of one, two to three weeks at a time. All the drinking water, carrying, then, either a small quantity of elm or the Saffron. For this adds to the assimilating system those properties that become effective to the aiding of building within the system itself those conditions that will overcome such activities in the system.
"The diet during such periods should be more of vegetables than of meats or sweets, so that there are those reactions that make for better unification in the membranes' reaction within the body." (289-1)

EDGAR CAYCE=S THERAPEUTIC MODEL

Edgar Cayce's therapeutic approach to psoriasis is summarized in the following excerpt:

"The conditions that exist through the thinning of the walls of the intestines allow the poisons to find expressions in the lymph circulation; thus producing the irritation to and through the epidermis itself....
"Q. Is there an absolute cure for psoriasis?
"A. Most of this is found in diet. There is a cure. It requires patience, persistence - and right thinking also." (2455-2)

Consistent with the above quote, the treatment suggestions in the Cayce readings rely heavily on patient, persistent application of dietary recommendations and a positive, expectant mental attitude toward healing. The rationale of treatment is to decrease the amount of toxicity in the intestines, improve general eliminations, and heal the "thinned walls" of the intestines. Also, the cause of the thinned intestinal walls needs to be addressed.

Here is a basic treatment protocol for psoriasis:

INTERNAL CLEANSING: Hydrotherapy includes drinking six to eight glasses of pure water daily, enemas or colonic irrigations, and cleansing diet of fresh fruits and vegetables.

HEALING OF THE INTESTINES: Herbal teas were recommended in the readings to assist with healing the gut. Typically, the slippery elm bark tea is taken in the morning before breakfast and the American yellow saffron tea is used in the evening.

DIET AND NUTRITION: The Cayce diet for psoriasis is basically fresh fruits and vegetables. Certain foods (which tend to increase intestinal toxicity) must be eliminated from the diet. Taboo items include red meat, fried foods, carbonated and alcoholic beverages, and dairy products that are not low fat. Dr. John Pagano has also identified the nightshade group of vegetables (tomatoes, tobacco, eggplant, peppers, white potatoes, and paprika) as particularly harmful for persons with psoriasis.

SPINAL ADJUSTMENT: One of the primary causes of thinned intestinal walls identified by Edgar Cayce are problems with the spine. Pressures on certain spinal nerves (particularly the mid-dorsal area) can compromise the nerve energy to the intestinal tract. Osteopathic or chiropractic treatment can help correct the misalignment of spinal vertebrae and improve nerve functioning.

ATTITUDES AND EMOTIONS: The mental and emotional aspects of healing are very important. Particularly, an attitude of desiring and expecting to be healed is essential ("right thinking"). Positive mental attitude is necessary for following this healing regimen. Doubt (or lack of conviction) will make it almost impossible to stick with the dietary and cleansing treatments, which are a lifestyle adjustment for most individuals. A positive mental and emotional attitude and can be created and maintained by focusing on a high purpose (ideal) for being healed.

After

QUOTE

If you follow everything I speak of and other methods but just cannot cure the problem then you MUST address your SPINE with a CHIROPACTER. If this is the true source of the problem then no matter what you do such as fasting you'll end up back to square one. I know, I was there. Get the Virgin Coconut Oil down you daily also. -CRAIG OXLEY

craig-oxley - March 28, 2009 03:57 AM (GMT)

Could be of some use maybe -Craig

The Cure for Eczema

JAGANNATH DAS
INDIA

Mar 11, VRINDAVAN, INDIA (SUN) — Following my recent article, "Amazing Eczema Cure" -- [link to www.harekrsna.com] -- so far I have received about 50 emails from eczema sufferers requesting information on the cure. So, here's the method:

1. Put two handfuls (this quantity is enough to cover the entire body of an adult) of cheap white rice into the pot and dry-roast until black and sticking to the pot. Rice should be roasted on low flame, and it takes approximately 10-15 minutes. The process resembles very much that of making the halava, except that the rice is allowed to get burned at the end.

2. When rice starts sticking to the bottom and is completely black add approximately 2/3 to one cup of room temperature water and cook for approximately two minutes after the mixture reaches boiling point.

3. Now, the essential step. Take some cotton wool and dip it into the mixture as it is (no need to mush it, blend it, etc.), and immediately apply it on the affected areas of the skin. What I mean is that the cotton wool, once wet with the runny paste, should be dabbed gently onto the affected area. The mixture should be hot when applied and it may cause some temporary discomfort to the patient, but nothing compared to the discomfort that one has to endure on a daily basis in order to withstand the incessant itching, etc.

I believe that this is the very important step to follow because heat helps the paste to penetrate deeper into the skin as it helps the pores to open. Right after applying the runny paste it will start to dry and will become sticky to touch. Areas covered may feel a bit tight for some time. Never mind some rice grains sticking onto your skin, never mind the unsightly appearance for a while, because this stuff works.

I can only guess that it is because the charcoal-like burned rice (charcoal is known to be effective for treating severe poisoning because it binds poisons onto itself), coupled with the sticky starch in the rice and the hot temperature of the paste, has a binding effect on the accumulated toxins on the surface of the skin. It also acts as an instant antihistamine, thereby relieving one of itching immediately.

I remember that my son who was 1 year old at the time when we applied it. He never complained about it being too hot. His itching ceased immediately and severe eczema disappeared forever after a week. Poor boy suffered so much before that.

My son was only one year old when the condition appeared for the first time, and since then it never returned. He is now 9 years old.

It is recommended that you leave the paste on the skin for as long as possible, and preferably overnight. Depending on the severity of the condition I suggest that the paste be applied at least 2 times per day, and as many times as needed to get rid of the itching.

One last point. My personal beliefs and values don't allow for me to make money on other people's suffering, so I kindly ask of you to try and consider sharing this method with everyone FREE OF CHARGE. Had I charged you something for this information you would have probably been less likely to take advantage of it, because there would be some resistance and distrust created by my exploitative mentality.

This remedy has its origins in the Philippines, and has largely been forgotten by now. My Filipina wife remembered it only when all else failed to help our son. So once again I implore you all, if the remedy works for you or your dear one, share it with others as a God given gift and NEVER charge money for it. This is my humble request.

I believe that the medical establishment, much like our GBC, has largely lost good sense and its capacity to help others, due to the fact that they turned their God given ability and skill meant to help others into a business. There is nothing honorable in cashing in on another's misery.

If after trying this remedy you find yourself emotionally overwhelmed by its effectiveness (as we were) and you wish to reciprocate in some way, I would encourage you to pledge your support to the CareForCows.org project in Vrindavan, India. There are approximately 500 bulls and cows being stolen every day by the butchers from Braj and brought straight to slaughterhouses, where the cows are often milked right on the slaughterhouse floor for one last time before having their throats slit.

I also kindly request that you let me know if this method has worked for you so that I may pass your experiences onto others to encourage them to try it for themselves. My email is jagannath@careforcows.org, Tel + 91 976 0808 366.

I hope this meets you well.

your servant,

Jagannath das

NAKED PSYCHIATRY: DEPRESSION HYPOTHESIS COLLAPSES

http://www.nomorefakenews.com/archives/arc...ew.php?key=2892

NOVEMBER 19, 2005. Below you will find a release from the Alliance for Human Research Protection, an article from the Wall St. Journal, and an article from the New Scientist.

The message is clear. The so-called chemical-imbalance theory of depression is a hoax based on no evidence. It is based on ads paid for by drug companies.

We've all heard the litany: depression comes from lowered amounts of serotonin in the brain. The SSRI antidepressants like Zoloft, Paxil, and Prozac correct that deficit and, therefore, restore happiness and a positive outlook.

This is now called, at best, "a useful metaphor." A way of explaining depression to patients who want drugs or might want drugs.

Metaphors are wonderful, but not when asserting biological and chemical truths.

So of course now some scientists, watching their house of cards collapse, are offering a new idea. This one is based on a single study done on mice. In case you hadn't noticed, mice are not human. The new speculation: the SSRI drugs heal depression because they allow the growth of new neurons in the brain.

Another useful metaphor.

And it's not just that researchers and drug companies are attempting to describe why the drugs work so well. The drugs don't work well, and they carry great dangers---

described in these pages many times.

To put the cherry on the cake, the federal government and other "experts" are claiming that 20 percent of all Americans are suffering from depression in any given year. This is a cooked factoid, and it has nothing to do with accuracy. It's the easiest thing in the world to concoct estimates based on wide-net definitions of depression. In about five minutes, I could construct such a definition that would make everyone I know depressed.

I continue to be amazed (well, not so amazed anymore) by how many alternative journalists buy into the metaphors slung around by the psychiatric establishment. These reporters use the metaphors as platforms from which to engage of flights of fancy. "The brain really is the seat of all emotion, and it's only a matter of time before we map the brain and come up with a sophisticated recipe for happiness..."

At the heart of all psychiatric research is the desire to reduce human life to a set of biological and chemical descriptions. This project has failed many times and is doomed to fail in the future.

ALLIANCE FOR HUMAN RESEARCH PROTECTION (AHRP)
Promoting Openness, Full Disclosure, and Accountability
www.ahrp.org

FYI
One after another of psychiatry's theoretical constructs and therapeutic armamentarium have been knocked down and relegated to the dust-heap of pseudo-scientific history. None of psychiatry's claims have withstood the test of scientific scrutiny. The very core upon which psychiatry's practice guidelines are based--using drugs to restore a "chemical imbalance" in the brain-- has been shown to be nothing but unsubstantiated speculation.

Jeffrey Lacasse and Jonathan Leo, Ph.D., the authors of "Serotonin and depression: A disconnect between the advertisements and the scientific literature," published in PLoS Medicine, have delivered a decisive blow to psychiatry's unubstantiated claim about a "chemical imbalance" in the brain of people who suffer from depression --or other psychological / emotional ailments.

The article, by a professor of anatomy and a doctoral student, is receiving wide attention both in the general and medical news media--Nature, WebMD, Medscape, UPI, New Scientist, the Wall Street Journal.

When confronted with evidence refuting this mantra of biological psychiatry, Wayne Goodman, chair of the FDA's psychopharmacologic advisory committee admited in The New Scientist, that the "chemical imbalance" story is but a "useful metaphor."

WSJ health columnist, Sharon Begley, points out that "For many, SSRIs help little, if at all. To do better, we have to get the science right."

But instead of science, the public and health care professionals have been fed a bill of goods:

"Prozac, Zoloft, and Paxil ads and glowing accounts in the press have turned patients with depression into veritable pharmacologists, able to rattle off" the serotonin chemical imbalance script they have been fed by SSRI drug manufacturers and the psychiatric establishment. But Lacasse and Leo found that: "Not a single peer-reviewed article ... support[s] claims of serotonin deficiency in any mental disorder."

"Low serotonin levels no more cause depression than low aspirin levels cause headache."

Yet, not only company advertisements but leading psychiatrists have deluded the public for decades with such false claims:

To cite but two examples:
NYU Child Study Center website assures families:
"Our faculty and staff have special expertise in dealing with all aspects of Depressive Disorders." Then proceeds to state: "Depression is most likely due to an inherited predisposition to a chemical imbalance in the brain." See: http://aboutourkids.org/aboutour/disorders/depressive.html

Columbia University College of Physicians and Surgeons Kreichman PET Center lists two courses offered by John Mann, MD.
"4294 PET Mapping of Serotonin Transporters ...Find out if / what changes in brain chemistry can cause an episode of depression. Serotonin is an important chemical in the brain and deficiency of serotonin is thought to underlie major depression."

"3752 In Vivo PET Imaging of the Serotonin Transporter (SERT) and 5HTiA Receptor in Bipolar Disorder. Identify changes in brain chemistry that may cause an episode of depression and/or be associated with suicidal behaviors." For more information, please contact Dr. Mann at 212-543-5571.

In 1995, the American Foundation for Suicide Prevention Research Award went to Dr. Mann "for his breakthrough research on serotonin levels as a predictor of suicide risk. Dr. Mann's research has helped to uncover the chemical imbalances that occur in depressed patients, and his work on hormonal abnormalities in suicidal patients has fostered the development of tests that predict suicide risk. His studies of the different tests measuring perturbations in the brain's secretion of the hormone serotonin have contributed substantially to recent advances in the field."

Begley correctly observes that the false "chemical imbalance" premise is misdirecting patients away from potentially better therapeutic options: "The hegemony of the serotonin hypothesis may be keeping patients from a therapy that will help them more in the long term. The relapse rate for patients on pills is higher than for those getting cognitive-behavior psychotherapy."

Indeed, unsubstantiated pronouncements by psychiatry's leadership gave the mental health industry and its patient advocacy front groups pseudo-scientific arguments with which to equate mental illness to physical illnesses--such as diabetes (for which insulin is needed to balance blood-sugar level).

This patently false comparison gave the psychotropic drug lobby--which includes the National Institute of Mental Health and state mental health agencies--ammunition with which to lobby for drug budget parity. They lobbied for the latest, most expensive medicines to restore a "chemical imbalance" in mental disorders--a claim that Dr. Goodman acknowledges is nothing but "a useful metaphor."
That "useful metaphor" was used to deceive patients and the public and to divert health care funds from essential medicines to pay for drugs whose benefit is now largely in doubt, and whose severe adverse effects are undermining patients' physical and mental health.

Dr. Goodman admits that he has never revealed the truth to his patients-- "I can't get myself to say that."

The fact is the psychiatric establishment has been concealing the truth about the lack of scientific evidence behind all of its theoretical constructs and armamentarium.

THE WALL STREET JOURNAL
SCIENCE JOURNAL
By SHARON BEGLEY http://online.wsj.com/img/colhed_begley_sharon.jpg
Some Drugs Work To Treat Depression, But It Isn't Clear How
November 18, 2005; Page B1
Hardly any patients know how Lipitor lowers cholesterol, how Lotensin reduces blood pressure, or even how ibuprofen erases headaches. But when it comes to Prozac, Zoloft and Paxil, ads and glowing accounts in the press have turned patients with depression into veritable pharmacologists, able to rattle off how these "selective serotonin reuptake inhibitors" keep more of the brain chemical serotonin hanging around in synapses, correcting the neurochemical imbalance that causes depression.

There is only one problem. "Not a single peer-reviewed article ... support[s] claims of serotonin deficiency in any mental disorder," scientists write in the December issue of the journal PLoS Medicine.

Indeed, a steady drip of studies have challenged the "serotonin did it" hypothesis. A 2003 mouse experiment suggested that SSRIs work by inducing the birth and growth of new brain neurons, not by monkeying with serotonin. In March, a review of decades of research concluded that something other than "changes in chemical balance might underlie depression." And as Jeffrey Lacasse and Jonathan Leo write in PLoS Medicine, although ads for SSRIs say they correct a chemical imbalance, "there is no such thing as a scientifically correct 'balance' of serotonin."

How did so many smart people get it so wrong? Medicinal chemist Derek Lowe, who works in drug development for a pharmaceutical firm, offered an explanation in his "In the Pipeline" blog. "I worked on central nervous system drugs for eight years, and I can confidently state that we know just slightly more than jack" about how antidepressants work.

It is not for lack of trying. In 1965, psychiatrist Joseph Schildkraut of Harvard University suggested that a deficiency of a brain chemical causes depression. With the success of drugs that block the reuptake of these chemicals, that idea started to look pretty good.

Yet the evidence was always circumstantial. You can't measure serotonin in the brains of living human beings. The next best thing, measuring the compounds that serotonin breaks down to in cerebrospinal fluid, suggested that clinically depressed patients had less of it than healthy people did. But it was never clear whether depression caused those low levels, or vice versa. A 2002 review of these early experiments took them to task for such flaws.

There had always been data that don't fit the serotonin-imbalance theory. Depleting people's serotonin levels sometimes changed their mood for the worse and sometimes didn't. Sending serotonin levels through the roof didn't help depression, a study found as early as 1975.

There is little doubt that the SSRIs do what their name says, keeping more serotonin in the brain's synapses. But the fact "that SSRIs act on the serotonin system does not mean that clinical depression results from a shortage of serotonin," says Dr. Leo, professor of anatomy at Lake Erie College of Osteopathic Medicine, Bradenton, Fla. No more so, anyway, than the fact that steroid creams help rashes means that rashes are caused by a steroid shortage.

A clue to how SSRIs do work comes from how long they take to have any effect. They rarely make a dent in depression before three weeks, and sometimes take eight weeks

to kick in. But they affect serotonin levels right away. If depression doesn't lift despite that serotonin hit, the drugs must be doing something else; it's the something else that eases depression.

The best evidence so far is that the something else is neurogenesis -- the birth of new neurons. When scientists led by Rene Hen of Columbia University and Ronald Duman of Yale blocked neurogenesis in mice, SSRIs had no effect. When neurogenesis was unimpeded, SSRIs made the mice less anxious and depressed -- for rodents. As best scientists can tell, SSRIs first activate the serotonin system, which is somehow necessary for neurogenesis. That is what takes weeks.

Claiming that depression results from a brain-chemical imbalance, as ads do, is problematic on several fronts. Patients who believe this are more likely to demand a prescription. If you have a disease caused by too little insulin, you take insulin; if you have one caused by too little serotonin, you take serotonin boosters.

Most people treated for depression get pills rather than psychotherapy, and this week a study from Stanford University reported that drugs have been supplanting psychotherapy for depressed adolescents. Clinical guidelines call for using both, and for psychotherapy to be the first-line treatment for most kids.

Psychotherapy "can be as effective as medications" for major depression, concluded a study in April of 240 patients, in the Archives of General Psychiatry. Numerous other studies find the same.

The hegemony of the serotonin hypothesis may be keeping patients from a therapy that will help them more in the long term. The relapse rate for patients on pills is higher than for those getting cognitive-behavior psychotherapy.

Some 19 million people in the U.S. suffer from depression in any given year. For many, SSRIs help little, if at all. To do better, we have to get the science right.
Write to Sharon Begley at sciencejournal@wsj.com

NewScientist.com
Television adverts for antidepressants cause anxiety
ADVERTS that claim depression is caused by a chemical imbalance, and that antidepressants correct it, are false and should be banned, say two mental health specialists.

Popular antidepressants such as Prozac and Celexa block the uptake of the neurotransmitter serotonin and have been shown to be slightly better than placebo in treating depression. But low serotonin levels are no more the cause of depression than low aspirin levels are the cause of headaches, argue Jonathan Leo at Lake Erie College of Osteopathic Medicine in Bradenton, Florida, and Jeffrey Lacasse at Florida

State University in Tallahassee (Public Library of Science Medicine, DOI: 10.1371/journal.pmed.0020392).

"It has become an absolute mainstay of popular culture," says Leo. "But there's very little support for this. We really don't know what chemicals are involved."

Wayne Goodman, chair of the psychopharmacologic advisory committee of the US Food and Drug Administration admits they have a point. He calls the chemical imbalance story a "useful metaphor" but says it is never one he uses when talking to patients. "I can't get myself to say that."

The Irish Medicines Board, the equivalent of the FDA in Ireland, recently banned GlaxoSmithKline from making similar claims in information for patients. Leo and Lacasse want the FDA to follow suit.

end New Scientist article

JON RAPPOPORT www.nomorefakenews.com

theresa - October 10, 2008 07:33 PM (GMT)

Yeah, they once gave me 'Italian Table Salt' (lithium) for a depression - caused by the fact I wouldn't just 'get outta myself'. Funny how blood monitoring does nothing but monitor the levels, but never proves/solves the problem. The problem is the Vatican manufacturing PSYCHO-illogical science, 'false memory syndrome', 'everyone in the world suffers from a degree of insanity'.....just one big lie to play God.

It's why they use the term in medicine - *practicing*

Dare to be 'different'. Quit listening to everyone's blaming you for being (their) problem. Quit being your own problem. I found solace in the AV1611. Only healing by grace from the Great Physician.

Alexandra - October 10, 2008 08:13 PM (GMT)

My problem was aspartame, primarily. Now I won't touch the stuff with a ten-foot pole.

Keith - October 10, 2008 08:23 PM (GMT)

yeah... that's what my doctor swears by: that i have a chemical imbalance. it's what they are taught in medical school and they think medical school is perfect and that they have some special knowledge because they completed it. they just learn lies about key issues/problems and help perpetrate it and keep them going on until everyone believes the nonsense and swears by it too.

Alexandra - October 10, 2008 08:32 PM (GMT)

Well, Keith, garbage in, garbage out, in a nutshell.

theresa - October 21, 2008 06:12 AM (GMT)

They fawn all over you if you whine and complain. Coddling a weak mind does nothing but ***perpetuate*** the lie. When I discovered the truth, developed feelings, my doctor became a bully, verbally abusive and shaming.
I warned her. Following more of the same I reported her to the authorities and stated my case. They have no right to tell anyone how to live, what to believe, how to speak their beliefs or SYSTEM-atically thrust this bad science on anyone.

Needless to say, my doctor became whiney in private, blamed me for 'getting her in trouble.' I spoke up a second time....

Interesting she is a ***Catholic.*** :lol:

Avian Flu Fright Politically-Timed For Global 'Iatrogenocide'

A Public Health Warning and Political Essay by a Harvard-trained Author of Fifteen Books Including the American bestseller, Emerging Viruses: AIDS & Ebola-Nature, Accident or Intentional?

By Leonard G. Horowitz, DMD, MA, MPH
10-11-5

Abstract

If avian flu becomes more than a threatened pandemic, it will have done so by political and economic design. This thesis is supported by current massive media misrepresentations, profiteering on risky and valueless vaccines, gross neglect of data evidencing earlier similar man-made plaques including SARS, West Nile Virus, AIDS and more; continuance of genetic studies breeding more mutant flu viruses likely to outbreak, inside trading scandals involving pandemic savvy White House and drug industry officials, curious immunity of these pharmaceutical entities over the past century to law enforcement and mainstream media scrutiny, and published official depopulation objectives. With the revelations and assertions advanced herein, the public is forewarned against this physician assisted mass murder best termed "iatrogenocide.* This genocidal imposition is expected to serve mainly economic and political depopulation objectives.

Background

In April, 2003, a social experiment called SARS, said to have arrived from Asia, heavily struck Toronto. I was there throughout most of this Asian flu-foreshadowing fright. This bizarre new pneumonia-like illness was named Severe Acute Respiratory Syndrome. It was said to be the latest threat in an ongoing series of attacks on humanity by mysteriously mutating "supergerms."

A careful study of the scientific and medical-sociological correlates and antecedents of this "outbreak" revealed something amiss far more insidious than SARS. I critically considered Toronto's media reaction as any Harvard-trained public health expert in media persuasion behavioral science might. The scourge had all the earmarks of a novel social experiment conducted by white-collar bioterrorist.

It seemed clear to me that this unprecedented population manipulation effectively indoctrinated the mass mind in support of a grossly ineffective, albeit legislated, public health response in advance of the arrival of "the Big One." Throughout the "SARS Scam",(1) repeated references were made to biological agents that might facilitate decimation of approximately a third to half of the world's population. Having extensively reviewed political population control literature and contemporary objectives of leading global industrialists, I noted these predictions were in close keeping with current official population reduction objectives.(2)

Canada's response to SARS in 2003 was, for the first time in history, directed by the United Nations and World Health Organization (WHO). Having reviewed the intimate financial and administrative ties between these organizations, the Rockefeller family, Carnegie Foundation, and the world's leading drug makers, "the fox", in essence, reigned over Canada's "chickens".

The truth about plagues includes the fact that "no grand pandemic ever evolved divorced from major socio-political upheaval." SARS advanced a political agenda more than a public health emergency. If public health officials earnestly intended to prevent these new emerging diseases, or successfully treat them at their roots, I repeated, they would study their obvious origins from the merged military-medical-biotechnology arena. A basic course in medical sociology simply justifies this utilitarian counsel.

"Experts" had been predicting the arrival of a super-plague for decades. What was HIGHLY SUSPICIOUS about the mysterious and terrifying arrival of SARS, however, was its timing. It synchronously arrived with the global war on terrorism, and the Anglo-American war with Iraq. It seemed a convenient distraction from the fact that the earlier Bush administration had shipped Saddam Hussein most of his deadly biological weapons arsenal including anthrax and West Nile Virus. SARS was pathognomonic (i. e., symptomatic and characteristic) of what I had predicted and explained in the book, Death in the Air: Globalism, Terrorism and Toxic Warfare (Tetrahedron Publishing Group, 2001), a prophetically-titled text that predated the 9-11 attacks on America by several months, and provided a contextual analysis of certain globalists, links to recent

"outbreaks.

In essence, I provided insight into the broad application of a new form of institutionalized "bioterrorism" consistent with state sponsored biological warfare. Saddam Hussein was said to have exposed populations in his and adjacent lands with biological and chemical weapons of mass destruction. SARS and the current avian flu fright is sanctioned by military-medical-pharmaceutical-petrochemical industrialists likewise operating above the law in many documented instances. Having testified before the U.S. Congress, I personally experienced how premiere pharmaceutical industrialists direct our political-economic representatives in government. Emerging diseases complement the political "War on Terrorism," and our bioterror-influenced culture. This agenda serves two primary objectives: profitability and population-reduction.

Political Reality Versus Mass-Mediated Myths

The ever increasing madness around us is eerily consistent with globalist think tank recommendations for the current "conflicts short of war." Beginning in the late 1960s, "economic substitutes for standard militarization" were sought and found by leading global industrialists. New biological threats, the "war on terrorism, and increasing numbers of "natural disasters including space-based threats and superstorms were considered economically and politically expedient compared with the first and second world wars. These "conflicts short of war were decidedly more manageable and economically viable. For this reason, especially their profitability, they were leading options among Anglo-American policy makers.

Nelson Rockefeller's protégé, Henry Kissinger, for instance, as National Security Advisor (NSA) under Richard Nixon, oversaw foreign policy while considering Third World population reduction "necessities" for the U.S., Britain, Germany, and other allies. This Bush nominee to direct the 9-11 conspiracy investigation, a reputed war criminal, then selected the option to have the Central Intelligence Agency (CIA) develop biological weapons, according to the U.S. Congressional Record of 1975. Among these new man-made biological weapons were germs far deadlier than the avian flu.

For example, by 1968, when Kissinger requested and received updated intelligence on useful "synthetic biological agents" for germ warfare and population control, mutant recombinant flu viruses had just been engineered by Special Virus Cancer Program researchers O,Conner, Stewart, Kinard, Rauscher and others.(3) During this program, influenza and parainfluenza viruses were recombined with quick acting leukemia viruses (acute lymphocytic leukemia) to deliver weapons that potentially spread cancer, like the flu, by sneezing. These researchers also amassed avian cancer (sarcoma) viruses and inoculated them into humans and monkeys to determine their carcinogenicity. In related efforts, Raucher et al. used radiation to enhance avian virus's cancer-causing potential. These incredible scientific realities have been officially

censored and generally neglected by the media's mainstream.

Similarly, the Institute of Science in Society (IoSS) in London raised the genetic engineering question in the origin of SARS. "Could genetic engineering have contributed inadvertently to creating the SARS virus? they asked. "This point was not even considered by the expert coronavirologists called in to help handle the crisis, now being feted and woed by pharmaceutical companies eager to develop vaccines. Those living in glass houses should not throw stones. The above emphasis is added to show IoSS they had "not even considered intentional SARS deployment in their scientific, allegedly unbiased, purview.(4)

Conflicts short of war, like the "War on AIDS," "War on Drugs," "War on Terrorism," "War on Cancer," and now "War on the Avian Flu require sophisticated propaganda programs employing fear campaigns for social acceptance and popular support of legislated policies. These psychological operations (officially termed PSYOPS) for "command and control warfare (technically called C2W), experts advise, best support the emerging "Revolution in Military Affairs" (RMA). The RMAs capabilities include "a form of human slavery" in which the world's captive populations would not know they are enslaved.(2)

The RMA undoubtedly incorporates the use of debilitating biologicals and chemical agents most generously on behalf of drug and vaccine makers. A classic example is the toxic carcinogenic organophosphate pesticides deployed against human populations, said to target "mosquitoes, in the "War Against the West Nile Virus." Such "non-lethal warfare" agents, as these are militarily termed, are indeed deadly, but mortality results slowly from toxic exposures allowing more profits to be made by allied pharmaceutical and medical industrialists. Victims of the "non-lethal" exposures die slowly from chronic debilitating diseases. Expensive hospitals and long-term care facilities are virtual concentration camps. The ailments generated for "iatrogenocide include the plethora of autoimmune diseases and newer cancers virtually non-existent 50 years ago. This fact, alone, strongly suggests a genocidal socio-economic and political agenda.

Avian Flu for Profit

In response to SARS, senior fellow at the Hudson Institute in Washington, Michael Fumento, published an economic thesis in Toronto related to the one I advance here. The "Super-bug or Super Scare," he wrote was published in Canada's National Post. Canadians were warned to "quarantine themselves," wear masks, and in some cases stay home. The Ontario Health Minister declared a "health emergency," as the media dubbed the "mysterious killer" a "super-pneumonia". Recoiling from the hype, Fumento asked and answered a few "real questions" . . . How lethal, how transmissible, and how treatable is this strain? The answers, he concluded, "leave no grounds for excitement, much less panic". The same may be said for this new curse of avian flu.(1)

Lethal?

At this writing, the avian flu is said to have killed "about 65 people in Southeast Asia during the past two years! Little to no data is available on these individuals who most commonly had immune-compromising medical conditions. Further, all deaths were in Asian countries with questionable health services.

Conversely, other forms of flu kill more than 40,000 North Americans annually, generally the immune-compromised elderly.

Transmissibile?

According to USA Today (October 9, 2005), "European health officials are working to contain the [avian flu] virus, which so far has not infected anyone in the region. Although, allegedly "more than 140 million birds have died or been destroyed, . . . and financial losses to the poultry sector have topped $10 billion. This propaganda actually admits, "the current virus, known as H5N1, has not yet mutated to the point at which it can easily spread from person to person". In fact, it is likely to have never spread from person to person other than during laboratory handling!(5)

Treatability?

"The U.S. Senate has already approved a $3.9 billion package to buy vaccines and antiviral medications, and the Administration is also preparing a request for an additional $6 billion to $10 billion, according to a current BusinessWeek report.(6)

"Beam me up Scottie", there is no intelligent life on this planet. This largely explains why the public puts up with this deadly deception. Even USA Today bemons, "there is no human vaccine yet. So how come the U.S. Senate is rushing to spend all these billions for an avian flu vaccine?

I suppose we should overlook the fact that the current frightening strain of H5N1 avian flu virus has never readily jumped from human to human, and not commonly from birds to humans either. Thus, an effective vaccine can only be prepared by mutating this virus, thus creating what the world fears most. Let me explain. . . .

To make the human vaccine specific for the H5N1 mutant virus, you must start with the human virus which does not yet exist, except in perhaps military-biomedical-pharmaceutical laboratories. In fact, this is precisely what is being prepared based on news reports. To produce the human pathogen, the avian virus must be cultured for lengthy periods of time in human cell cultures, then injected into monkey and ultimately humans to see if these experimental subjects get the same feared flu. Thus, the flu virus the world currently fears most is either: 1) now being prepared in labs paid by industrialists with massive wealth-building incentives to "accidentally release the virus; or 2) has already been prepared in such labs to take advantage of this current fright and

future sales following the virus's release.

Remember, to be effective against a virus, a vaccine is said to require specificity. If authorities were to now have the main H5N1 avian flu strain feared to spread at some future date there's no assurance by the time they developed the vaccine the strain would remain sufficiently the same for the vaccine to be effective anyway due to expected viral mutations. Viral mutations over time is a function of the agent's newness. New man-made viruses, laboratory creations, like the ones currently being prepared for vaccine trials, are less stable not having evolved over the millennia. Thus, the entire vaccine effort is largely, if not entirely, a sham with ulterior motives.

Remember too, that a vaccine's reliability requires years, or at least months, of testing in the targeted population. Vaccine injury data must, or should, be meticulously collected over this period to assure the vaccine is not killing and maiming more persons than it is helping or saving. Can you seriously believe this assurance will be provided by government or pharmaceutical industry officials in this pandemic's wake? FEMA's failed Katrina response pails by comparison to this public health liability and vaccine-injury certainty.

I say "vaccine-injury certainty because of the extensive list of newly developed vaccinations, highly touted when brought to market, that caused horrific results. This list includes the first swine flu vaccine, polio vaccines, smallpox vaccine, anthrax vaccine, hepatitis B vaccine, and most recently Lyme disease vaccine that crippled approximately 750,000 people within months of its release and prior to its recall by the FDA.

Most people fail to realize all vaccines carry a list of ingredients that typically increase human disease and death (i.e., morbidity and mortality). These include toxic elements and chemicals such as mercury, aluminum, formaldehyde and formalin (used to preserve corpses), MSG, foreign genetic material, and risky proteins from various species of bacteria, viruses, and animals that have been scientifically associated with triggering autoimmune disorders and certain cancers. A growing body of scientific evidence strongly suggests vaccines are largely responsible for increasing cases of autism and other learning disabilities, chronic fatigue, fibromyalgia, Lupus, MS, ALS, rheumatoid arthritis, asthma, hay fever, allergies, chronic draining ear infections, type 1 autoimmune diabetes, and many, many more pandemics. These chronic ailments are said to require long-term medical care for the patients, management causing toxic side effects resulting in America's leading killer--iatrogenic disease. That is, vaccines and other pharmaceutical industry inventions are literally killing or disabling millions with little effort on the part of government officials and their drug industry cohorts to arrest this scourge.

For all we know, governments are ordering an avian flu vaccine that will precisely deliver this pandemic to the world to affect population control. Absurd thesis? Read on.

BusinessWeek expects avian flu vaccine stockpiling by government officials will help the Sanofi-Pasteur company on behalf of Sanofi-Aventis and Chiron. "Tamiflu, it reported is an antiviral manufactured by Roche, . . . considered effective against avian flu. . . . The U.S. owns enough for 4.3 million people, with more on order. BusinessWeek failed to report: 1) Tamiflu's safety and effectiveness has not been determined in people with other chronic medical conditions--a significant percentage of the U.S. population-- and common side effects of this drug include nausea, vomiting, diarrhea, bronchitis, stomach pain, dizziness, headaches, and much, much more; 2) Roche (Hoffman-LaRoche) was found guilty of price fixing the world's supply of vitamins in 1999 as part of the global petrochemical/pharmaceutical cartel evolved from Nazi-Germanys I.G. Farben organization;(2)(6) and 3) Sanofi-Aventis's corporate colleagues include Merck, a company that received a lion's share of the Nazi war chest at the end of WWII, whose earnings plunged after the withdrawal last year of its deadly Vioxx arthritis drug. According to recent news reports, Merck is partnering with Sanofi-Aventis to produce the world's first sexually-transmitted-cancer vaccine to be given to prepubescent boys and girls.(7) Merck is infamous for having developed the first hepatitis B vaccines that triggered the international AIDS pandemic according to published scientific research and stunning documents reprinted in this author's national bestselling book.(3)(8)

In the weeks and months following the 9-11 attacks on America, I traced the widely publicized anthrax mailings "mystery" to U.S. Central Intelligence Agency (CIA) commissioned biological weapons contractors with ties to Britain's MI6, Porton Down, and this same Anglo-American pharmaceutical cartel.(9) The anthrax mailings fanned fears of bioterrorism throughout America and economically served primarily vaccine and drug makers with administrative and financial links to these avian flu profiteers.(10)

People willingly relinquish their civil rights and personal freedoms in the wake of such engineered frights. The passage of the infamous "Homeland Security Act" in America, and its counterpart in Canada, are classic examples of this societal direction, forced legislation, and egregious manipulation.

Why Asia?

How convenient that Asia is said to be the origin, as with SARS, of this latest plague when Chinese-Anglo-American relations are strained to say the least.

In the days preceding the emergence of the first SARS cases, America raced to the Pacific Rim to impact escalating aggressions on the Korean peninsula. Communist China--a "most favored" trading partner with America--is politically allied with several American enemies, including those said to possess weapons of mass destruction, including Iraq. Coincidental? Not likely when viewing the larger political picture involving

the Ango-American oligarchy's RMA, its global enterprises, and instigated planet-wide "conflicts short of war."

Consider also the fact the media's mainstream has been heavily influenced, if not entirely controlled, by multi-national corporate sponsors protecting and advancing the interests of a relatively small number of global entities. Also recall that the focus of news providers, on any given day or hour, results from intelligence agency directives, according to reputable authorities including myriad retired news officials and intelligence officers. So ask and answer the following intelligent questions:

* Why have American military officials, beginning with Secretary of Defense William Cohen during the Clinton years, publicized America's greatest vulnerability lies in the realm of biological weapons wielded by terrorists? Is this not a form of treason against the United States to relay such sensitive intelligence to potential enemies through the mainstream press?

* Why does the mainstream media continue to foretell of the expected arrival of the "Big One"-an influenza virus that will produce a super-flu that will kill billions of people, like the "Spanish flu" did between 1918-19, while totally disregarding the individuals, organizations, and laboratories that have labored to produce these weapons of mass destruction? Even the devastating Spanish Flu virus has been, literally, unearthed for further study and, do you suppose, deployment?

* Why was the "Spanish flu" influenza virus called the "Spanish flu" when it originated, by historic accounts, in Tibet in 1917? It is said that Spanish newspapers were the only ones reporting on the great plague due to their neutrality over World War I politics. However, Spain was as dear to America then as Communist China is to the United States today. The "Spanish flu" was named such following two decades of disputes between America and Spain over colonization of the Caribbean Islands, Hawaii and the Philippines beginning with the Spanish American war that ended in the Philippines in 1902. In fact, the grand Spanish flu began in military camps. Does this history appear to be repeating?

*Doesn't it make sense that America is being manipulated, if not targeted, for the purpose of advancing globalistic agendas, central among them is population reduction?

The "Big One"

As mentioned above, during the 1960s and early 1970s, military biological weapons contractors with intimate ties to leading drug industrialists prepared mutants of influenza and para-influenza viruses recombined with acute lymphocytic leukemia viruses. In other words, they stockpiled a quick spreading cancer virus which may also be deployed.(3)

Alternatively, many infectious disease experts and government health officials oblivious to this scientific reality say this avian flu might be the 'Big One." Several days ago, the United Nations released a report that stated as many as 150 million people worldwide might die from this avian flu.

Emma Ross of the Associated Press reported on SARS as the World Health Organization (WHO) launched its "crisis plan to attack" the Severe Acute Respiratory Syndrome. WHO, as you may recall, is a U.N. sponsored organization that is rumored to have helped spread AIDS to Africa by way of contaminated hepatitis B and/or polio vaccinations. There is a reasonable amount of evidence to support this contention.(1)

More disconcerting, the U.N. is known to be heavily influenced by Rockefeller family members and their petrochemical-pharmaceutical interests. History shows Rockefeller fortunes built the U.N. building in New York City. During WWII, the Rockefeller family and their Standard Oil Company supported Hitler more than they did the allies according to court records. One federal judge ruled Rockefeller committed "treason" against the United States. Following WWII, according to attorney John Loftus-an official Nazi war crimes investigator-Nelson Rockefeller persuaded the U.N.'s South American voting block to favor Israel's creation only to assure secrecy regarding his support for the Nazis. Earlier that century, John D. Rockefeller joined Prescott Bush and the British Royal Family in sponsoring the eugenics initiatives that gave rise to Hitler's racial hygiene programs. During the same period the Rockefeller family virtually monopolized American medicine, American pharmaceutics, and the cancer and genetics industries. (2, 3)

Today, the Rockefeller family, its foundation, U.N. and WHO remain at the forefront of administering "population programs" designed to reduce world populations to more manageable levels. As per an advertisement in Foreign Affairs--a prestigious political periodical published by the David Rockefeller directed Council on Foreign Relations--the U.S. population is being targeted for a 50% reduction.(2)

"We've never faced anything on this scale with such a global reach, said Dr. David Heymann, of the WHO, not regarding the avian flu, but SARS.

"This is the first time that a global network of [Rockefeller-directed infectious disease surveillance, outposts and] laboratories are sharing information, samples, blood, pictures," added Dr. Klaus Stohr, a WHO virologist coordinating labs internationally. "Basically overnight, there are no secrets, there is no jealousy, there is no competition in the face of a global health emergency. This is a phenomenal network.(1)

* The term "iatrogenocide is derived from the combination of words "iatrogenesis, meaning physician induced illness, and "genocide, defined as the mass killing and/or enslaving of people for economics, politics, and/or ideology.

About the Author Leonard G. Horowitz, D.M.D., M.A., M.P.H., is an internationally known authority in the overlapping fields of public health, behavioral science, emerging diseases, and bioterrorism. He received his doctorate in medical dentistry from Tufts University School of Dental Medicine in 1977, was awarded a post-doctoral fellowship in behavioral science at University of Rochester, earned a Master of Public Health degree from Harvard University, and another Master of Arts degree in health education from Beacon College, all before joining the research faculty at Harvard. Dr. Horowitz is best known for his national bestselling book, Emerging Viruses: AIDS & Ebola - Nature, Accident or Intentional? (Tetrahedron Press, 1998; 1-888-508-4787) which recently resulted in the United States General Accounting Office investigating the man-made origin of AIDS theory.

(See: http://www.healingcelebrations.com/gao.htm)

Dr. Horowitz's work in the field of vaccination risk awareness has prompted at least three Third World nations to change their vaccination policies. His stunning testimony before the United States Congress' Government Reform Committee, literally brought the hearing to a halt. (See: healingcelebrations.com) Dr. Horowitz questioned government health officials regarding a Centers for Disease Control and Prevention (CDC) secreted report showing a definitive link between the mercury ingredient (i.e., Thimerosal), common to most vaccinations, and the skyrocketing rates of autism and behavioral disorders affecting our children and the future of our nation.

Incredibly, Dr. Horowitz alerted the FBI, in writing and in person, one week before the first anthrax mailing was announced in the press, that a "major anthrax fright" was in the process of unfolding that demanded the FBI's urgent attention. Needless to say they did not heed Dr. Horowitz's prophetic warning.

Moreover, three months before the September 11 attacks on the World Trade Center and Pentagon, Dr. Horowitz released his thirteenth book, prophetically titled Death in the Air: Globalism, Terrorism and Toxic Warfare. The book focuses on the West Nile Virus as an act of Bioterrorism, and considers what and who is really behind this and other recent outbreaks. Dr. Horowtiz argues that his disclosures expose the roots of global terrorism, along with the individuals and organizations at the heart of what he calls "the petrochemical-pharmaceutical cartel". He believes this "multi-national corporate beast" is in the process of committing global genocide, profiting from engineered frights, and at the same time, most efficiently culling targeted populations considered excessive.

As you may have heard, Senator Patrick Leahy (D-VT), Chairman of the Senate Judiciary Committee, called for an investigation into the links between recent West Nile Virus outbreaks and bioterrorism. Dr. Horowitz is among the leading pioneers of this theory.

Dr. Horowitz's most recent book is DNA: Pirates of the Sacred Spiral, a reference text on the electro-genetics of biology, disease therapy, and human spirituality. This work also details links between the anthrax mailings and human genome project heist, and leading intelligence agency, genetics industry, and pharmaceutical company officials.

For more information about Dr. Horowitz's books, videos, CDs and DVDs link to www.healthyworlddistributing.com and www.tetrahedron.org, or by calling 1-888-508-4787. His official website is www.drlenhorowitz.com.

Title: THE "NEW DISEASE" OP AND THE GULLIBLE

craig-oxley - September 13, 2008 05:03 PM (GMT)

THE "NEW DISEASE" OP AND THE GULLIBLE

http://www.nomorefakenews.com/archives/arc...ew.php?key=2863

OCTOBER 20, 2005. SARS. West Nile. Mad Cow. Avian Flu.

They roll off the tongue and they are pronounced with the kind of certainty you can only muster when you are dealing in fake science.

Over the past several years, I've written a number of pieces on these hyped fraud diseases, exposing them in detail.

Here, I only want to point out one thing. It's the solutions you need to look out for. The drugs and vaccines that are offered to cure the "killer germs."

Look out for the toxicity.

For example, the spraying of the poison called malathion, used to kill the mosquitos that are supposedly carrying the West Nile virus.

Tamiflu and other drugs that are given to treat avian flu. Other anti-virals prescribed to treat SARS.

And if they come down with a brand new vaccine for avian flu, watch out for that one, too. There is a very cute strategy by which---when previously vaccinated people get sick from the vaccine---the doctors forget all about that vaccine status and simply say the person came down with the disease (which the vaccine was supposed to prevent). It wasn't the vaccine. Heavens no.

The same principle applies to the whole list of fake mental disorders, for which virulently

toxic drugs are prescribed.

"Let's see. The student was having trouble studying for exams. He was drinking 27 cups of coffee a day and getting no sleep. He was feeling helpless and confused. So we gave him an anti-psychotic drug. He then had hallucinations and ran naked through campus and stole a car and drove it into a tree. You see, he was suffering from an incipient psychosis---that's why we gave him the drug---and that psychosis sprang into full bloom just after he started taking the drug. No connection. It was a coincidence."

"A healthy patient was diagnosed as HIV positive. He was given AZT. Two weeks later he couldn't get out of bed. His muscles were weak. He developed severe anemia. He showed a sudden drop in his T-cell count. It wasn't AZT. It was AIDS, suddenly surfacing..."

And so on and so forth.

Drug firms 'hype up diseases to boost sales'

By RICHARD SHEARS, Daily Mail
08:35am 11th April 2006
http://www.dailymail.co.uk/pages/live/arti...in_page_id=1774

Drug companies are inventing diseases to sell more of their products, it has been claimed. Scientists have accused major pharmaceutical firms of "medicalising" problems like high cholesterol or the symptoms of the menopause in a bid to increase profits.
Experts from around the world will meet in Australia today to discuss what they have labelled "disease-mongering".

The group, which includes experts from Britain, will gather in Newcastle, New South Wales, where researchers have been examining the issue. David Henry and Ray Moynihan, of Newcastle University, claim the industry is exaggerating conditions and turning them into something more serious.

Female sexual dysfunction, attention deficit hyperactivity disorder (ADHD) and "restless legs" syndrome have all been promoted by the pharmaceutical industry in the hope of selling more drugs, they say.

High cholesterol and osteoporosis-are being described as diseases in their own right, the researchers claim, turning healthy people into patients. In turn, this wastes precious resources and can cause medically-induced harm.

Drugs prescribed for 'shyness'

Even shyness is routinely presented as a "social anxiety disorder" resulting in the

person being prescribed anti-depressants.

In the case of male sexual disfunction, the researchers say, Viagra is promoted as not only a genuine treatment for erectile dysfunction but also a lifestyle improver. The two men make their claims in the Public Library of Science Medicine journal.

They accuse drug companies of funding disease-awareness campaigns through the media that are more about selling drugs than helping or educating the public.

"Like the marketing strategies that drive it, disease-mongering poses a global challenge to those interested in public health, demanding in turn a global response," they say.

Mr Moynihan and Mr Henry say that, in their view, disease mongering is the selling of sickness that widens the boundaries of illness and grows markets for those who sell and deliver treatments.

"It is exemplified most explicitly by many pharmaceutical industryfunded disease-awareness campaigns, more often designed to sell drugs than to illuminate or to inform or educate about the prevention of illness or the maintenance of health," they add. Conference organisers say they will try to draw a line between "market-driven exercises and legitimate disease-awareness programmes". 'Miracle solutions'

Drugs companies hit back last night. GlaxoSmithKline said: "We pride ourselves in providing miracle solutions to the health care needs of people every day.

"We utterly refute any suggestion that we would in any way hype or overplay the very real needs of patients that are treated all over the world.

"One of the exciting things about medical science is that we are finding new solutions to ailments or problems people have, and this is something good we can offer." Pfizer, which makes Viagra, said: "We would refute accusations that the pharmaceutical industry is medicalising society. Treatments that can make serious and potentially life-threatening conditions better should surely be welcomed.

"Pfizer would only promote prescription medicines to health care professionals, and only in line with what licensing bodies have outlined, for them to use their clinical judgment."

Title: Modern Health Care System is the Leading Cause of
Description: *Death*

craig-oxley - September 13, 2008 05:00 PM (GMT)

Modern Health Care System is the Leading Cause of Death

By Gary Null PhD, Carolyn Dean MD ND, Martin Feldman MD, Debora Rasio MD, Dorothy Smith PhD

A definitive review and close reading of medical peer-review journals, and government health statistics shows that American medicine frequently causes more harm than good. The number of people having in-hospital, adverse drug reactions (ADR) to prescribed medicine is 2.2 million. 1 Dr. Richard Besser, of the CDC, in 1995, said the number of unnecessary antibiotics prescribed annually for viral infections was 20 million. Dr. Besser, in 2003, now refers to tens of millions of unnecessary antibiotics. 2, 2a

The number of unnecessary medical and surgical procedures performed annually is 7.5 million. 3 The number of people exposed to unnecessary hospitalization annually is 8.9 million. 4 The total number of iatrogenic [induced inadvertently by a physician or surgeon or by medical treatment or diagnostic procedures] deaths shown in the following table is 783,936.

It is evident that the American medical system is the leading cause of death and injury in the United States. The 2001 heart disease annual death rate is 699,697; the annual cancer death rate, 553,251. 5

TABLES AND FIGURES (see Section on Statistical Tables and Figures, below, for exposition)

ANNUAL PHYSICAL AND ECONOMIC COST OF MEDICAL INTERVENTION

Condition Deaths Cost Author
Adverse Drug Reactions 106,000 $12 billion Lazarou1 Suh49
Medical error 98,000 $2 billion IOM6
Bedsores 115,000 $55 billion Xakellis7 Barczak8
Infection 88,000 $5 billion Weinstein9 MMWR10
Malnutrition 108,800 -------- Nurses Coalition11
Outpatients 199,000 $77 billion Starfield12 Weingart112
Unnecessary Procedures 37,136 $122 billion HCUP3,13
Surgery-Related 32,000 $9 billion AHRQ85
TOTAL
783,936 $282 billion

We could have an even higher death rate by using Dr. Lucien Leape's 1997 medical and drug error rate of 3 million. 14 Multiplied by the fatality rate of 14 percent (that Leape used in 1994 16 we arrive at an annual death rate of 420,000 for drug errors and medical errors combined. If we put this number in place of Lazorou's 106,000 drug errors and the Institute of Medicine's (IOM) 98,000 medical errors, we could add another 216,000 deaths making a total of 999,936 deaths annually.

Condition Deaths Cost Author
ADR/med error 420,000 $200 billion Leape 199714
TOTAL
999,936

ANNUAL UNNECESSARY MEDICAL EVENTS STATISTICS

Unnecessary Events People Affected Iatrogenic Events
Hospitalization 8.9 million4 1.78 million16
Procedures 7.5 million3 1.3 million40
TOTAL
16.4 million 3.08 million

The enumerating of unnecessary medical events is very important in our analysis. Any medical procedure that is invasive and not necessary must be considered as part of the larger iatrogenic picture. Unfortunately, cause and effect go unmonitored. The figures on unnecessary events represent people ("patients") who are thrust into a dangerous health care system. They are helpless victims. Each one of these 16.4 million lives is being affected in a way that could have a fatal consequence. Simply entering a hospital could result in the following (out of 16. 4 million people):

2.1 percent chance of a serious adverse drug reaction (186,000) 1

5 percent to 6 percent chance of acquiring a nosocomial [hospital] infection (489,500) 9

4 percent to 36 percent chance of having an iatrogenic injury in hospital (medical error and adverse drug reactions) (1.78 million) 16

17 percent chance of a procedure error (1.3 million) 40

All the statistics above represent a one-year time span. Imagine the numbers over a 10-year period. Working with the most conservative figures from our statistics we project the following 10-year death rates.

TEN-YEAR DEATH RATES FOR MEDICAL INTERVENTION

Condition 10-Year Deaths Author
Adverse Drug Reaction 1.06 million (1)
Medical error 0.98 million (6)
Bedsores 1.15 million (7,8)
Nosocomial Infection 0.88 million (9,10)
Malnutrition 1.09 million (11)
Outpatients 1.99 million (12, 112)
Unnecessary Procedures 371,360 (3,13)
Surgery-related 320,000 (85)
TOTAL
7,841,360 (7.8 million)

Our projected statistic of 7.8 million iatrogenic deaths is more than all the casualties from wars that America has fought in its entire history.

Our projected figures for unnecessary medical events occurring over a 10-year period are also dramatic.

TEN-YEAR STATISTICS FOR UNNECESSARY INTERVENTION

Unnecessary Events 10-year Number Iatrogenic Events
Hospitalization 89 million4 17 million
Procedures 75 million3 15 million
TOTAL
164 million

These projected figures show that a total of 164 million people, approximately 56 percent of the population of the United States, have been treated unnecessarily by the medical industry--in other words, nearly 50,000 people per day.

Introduction

Never before have the complete statistics on the multiple causes of iatrogenesis been combined in one paper. Medical science amasses tens of thousands of papers

annually--each one a tiny fragment of the whole picture.

To look at only one piece and try to understand the benefits and risks is to stand one inch away from an elephant and describe everything about it.

You have to pull back to reveal the complete picture, such as we have done here. Each specialty, each division of medicine, keeps their own records and data on morbidity and mortality like pieces of a puzzle. But the numbers and statistics were always hiding in plain sight. We have now completed the painstaking work of reviewing thousands and thousands of studies. Finally putting the puzzle together we came up with some disturbing answers.

Is American Medicine Working?

At 14 percent of the Gross National Product, health care spending reached $1.6 trillion in 2003.15 Considering this enormous expenditure, we should have the best medicine in the world. We should be reversing disease, preventing disease, and doing minimal harm. However, careful and objective review shows the opposite. Because of the extraordinary narrow context of medical technology through which contemporary medicine examines the human condition, we are completely missing the full picture.

Medicine is not taking into consideration the following monumentally important aspects of a healthy human organism:

(a) Stress and how it adversely affects the immune system and life processes

(B) Insufficient exercise

© Excessive caloric intake

(d) Highly processed and denatured foods grown in denatured and chemically damaged soil

(e) Exposure to tens of thousands of environmental toxins.

Instead of minimizing these disease-causing factors, we actually cause more illness through medical technology, diagnostic testing, overuse of medical and surgical procedures, and overuse of pharmaceutical drugs. The huge disservice of this therapeutic strategy is the result of little effort or money being appropriated for preventing disease.

Under-reporting of Iatrogenic Events

As few as 5 percent and only up to 20 percent of iatrogenic acts are ever reported.16,24,25,33,34 This implies that if medical errors were completely and

accurately reported, we would have a much higher annual iatrogenic death rate than 783,936. Dr. Leape, in 1994, said his figure of 180,000 medical mistakes annually was equivalent to three jumbo-jet crashes every two days.16 Our report shows that six jumbo jets are falling out of the sky each and every day.

Correcting a Compromised System

What we must deduce from this report is that medicine is in need of complete and total reform: from the curriculum in medical schools to protecting patients from excessive medical intervention. It is quite obvious that we can't change anything if we are not honest about what needs to be changed. This report simply shows the degree to which change is required.

We are fully aware that what stands in the way of change are powerful pharmaceutical companies, medical technology companies, and special interest groups with enormous vested interests in the business of medicine. They fund medical research, support medical schools and hospitals, and advertise in medical journals. With deep pockets they entice scientists and academics to support their efforts. Such funding can sway the balance of opinion from professional caution to uncritical acceptance of a new therapy or drug.

You only have to look at the number of invested people on hospital, medical, and government health advisory boards to see conflict of interest. The public is mostly unaware of these interlocking interests. For example, a 2003 study found that nearly half of medical school faculty, who serve on Institutional Review Boards (IRB) to advise on clinical trial research, also serve as consultants to the pharmaceutical industry. 17 The authors were concerned that such representation could cause potential conflicts of interest.

A news release by Dr. Erik Campbell, the lead author, said,

"Our previous research with faculty has shown us that ties to industry can affect scientific behavior, leading to such things as trade secrecy and delays in publishing research. It's possible that similar relationships with companies could affect IRB members' activities and attitudes."18

Medical Ethics and Conflict of Interest in Scientific Medicine

Jonathan Quick, director of Essential Drugs and Medicines Policy for the World Health Organization (WHO) wrote in a recent WHO Bulletin:

"If clinical trials become a commercial venture in which self-interest overrules public interest and desire overrules science, then the social contract which allows research on human subjects in return for medical advances is broken."19

Former editor of the New England Journal of Medicine (NEJM), Dr. Marcia Angell, struggled to bring the attention of the world to the problem of commercializing scientific research in her outgoing editorial titled "Is Academic Medicine for Sale?"20 Angell called for stronger restrictions on pharmaceutical stock ownership and other financial incentives for researchers. She said that growing conflicts of interest are tainting science.

She warned that, "When the boundaries between industry and academic medicine become as blurred as they are now, the business goals of industry influence the mission of medical schools in multiple ways." She did not discount the benefits of research but said a Faustian bargain now existed between medical schools and the pharmaceutical industry.

Angell left the NEMJ in June 2000. Two years later, in June 2002, the NEJM announced that it would now accept biased journalists (those who accept money from drug companies) because it is too difficult to find ones who have no ties. Another former editor of the journal, Dr. Jerome Kassirer, said that was just not the case, that there are plenty of researchers who don't work for drug companies.21 The ABC report said that one measurable tie between pharmaceutical companies and doctors amounts to over $2 billion a year spent for over 314,000 events that doctors attend.

The ABC report also noted that a survey of clinical trials revealed that when a drug company funds a study, there is a 90 percent chance that the drug will be perceived as effective whereas a non-drug company-funded study will show favorable results 50 percent of the time.

It appears that money can't buy you love but it can buy you any "scientific" result you want.

The only safeguard to reporting these studies was if the journal writers remained unbiased. That is no longer the case.

Cynthia Crossen, writer for the Wall Street Journal in 1996, published "Tainted Truth: The Manipulation of Fact in America," a book about the widespread practice of lying with statistics.22 Commenting on the state of scientific research she said that:

"The road to hell was paved with the flood of corporate research dollars that eagerly filled gaps left by slashed government research funding."

Her data on financial involvement showed that in l981 the drug industry "gave" $292 million to colleges and universities for research. In l991 it "gave" $2.1 billion.

The First Iatrogenic Study

Dr. Lucian L. Leape opened medicine's Pandora's box in his 1994 JAMA paper, "Error

in Medicine."16 He began the paper by reminiscing about Florence Nightingale's maxim--"first do no harm." But he found evidence of the opposite happening in medicine. He found that Schimmel reported in 1964 that 20 percent of hospital patients suffered iatrogenic injury, with a 20 percent fatality rate. Steel in 1981 reported that 36 percent of hospitalized patients experienced iatrogenesis with a 25 percent fatality rate and adverse drug reactions were involved in 50 percent of the injuries. Bedell in 1991 reported that 64 percent of acute heart attacks in one hospital were preventable and were mostly due to adverse drug reactions.

However, Leape focused on his and Brennan's "Harvard Medical Practice Study" published in 1991.16a They found that in 1984, in New York State, there was a 4 percent iatrogenic injury rate for patients with a 14 percent fatality rate. From the 98,609 patients injured and the 14 percent fatality rate, he estimated that in the whole of the United States 180,000 people die each year, partly as a result of iatrogenic injury. Leape compared these deaths to the equivalent of three jumbo-jet crashes every two days.

Why Leape chose to use the much lower figure of four percent injury for his analysis remains in question. Perhaps he wanted to tread lightly. If Leape had, instead, calculated the average rate among the three studies he cites (36 percent, 20 percent, and 4 percent), he would have come up with a 20 percent medical error rate. The number of fatalities that he could have presented, using an average rate of injury and his 14 percent fatality, is an annual 1,189,576 iatrogenic deaths, or over ten jumbo jets crashing every day.

Leape acknowledged that the literature on medical error is sparse and we are only seeing the tip of the iceberg. He said that when errors are specifically sought out, reported rates are "distressingly high." He cited several autopsy studies with rates as high as 35 percent to 40 percent of missed diagnoses causing death. He also commented that an intensive care unit reported an average of 1.7 errors per day per patient, and 29 percent of those errors were potentially serious or fatal.

We wonder: what is the effect on someone who daily gets the wrong medication, the wrong dose, the wrong procedure; how do we measure the accumulated burden of injury; and when the patient finally succumbs after the tenth error that week, what is entered on the death certificate?

Leape calculated the rate of error in the intensive care unit. First, he found that each patient had an average of 178 "activities" (staff/procedure/medical interactions) a day, of which 1.7 were errors, which means a 1 percent failure rate. To some this may not seem like much, but putting this into perspective, Leape cited industry standards where in aviation a 0.1 percent failure rate would mean:

Two unsafe plane landings per day at O'Hare airport

In the U.S. mail, 16,000 pieces of lost mail every hour

In banking, 32,000 bank checks deducted from the wrong bank account every hour

Analyzing why there is so much medical error Leape acknowledged the lack of reporting. Unlike a jumbo-jet crash, which gets instant media coverage, hospital errors are spread out over the country in thousands of different locations. They are also perceived as isolated and unusual events. However, the most important reason that medical error is unrecognized and growing, according to Leape, was, and still is, that doctors and nurses are unequipped to deal with human error, due to the culture of medical training and practice.

Doctors are taught that mistakes are unacceptable. Medical mistakes are therefore viewed as a failure of character and any error equals negligence.

We can see how a great deal of sweeping under the rug takes place since nobody is taught what to do when medical error does occur. Leape cited McIntyre and Popper who said the "infallibility model" of medicine leads to intellectual dishonesty with a need to cover up mistakes rather than admit them. There are no Grand Rounds on medical errors, no sharing of failures among doctors and no one to support them emotionally when their error harms a patient.

Leape hoped his paper would encourage medicine "to fundamentally change the way they think about errors and why they occur." It's been almost a decade since this groundbreaking work, but the mistakes continue to soar.

One year later, in 1995, a report in JAMA said that:

"Over a million patients are injured in U.S. hospitals each year, and approximately 280,000 die annually as a result of these injuries. Therefore, the iatrogenic death rate dwarfs the annual automobile accident mortality rate of 45,000 and accounts for more deaths than all other accidents combined."23

At a press conference in 1997 Dr. Leape released a nationwide poll on patient iatrogenesis conducted by the National Patient Safety Foundation (NPSF), which is sponsored by the American Medical Association. The survey found that more than 100 million Americans have been impacted directly and indirectly by a medical mistake. Forty-two percent were directly affected and a total of 84 percent personally knew of someone who had experienced a medical mistake.14 Dr. Leape is a founding member of the NPSF.

Dr. Leape at this press conference also updated his 1994 statistics saying that medical errors in inpatient hospital settings nationwide, as of 1997, could be as high as 3 million and could cost as much as $200 billion. Leape used a 14 percent fatality rate to

determine a medical error death rate of 180,000 in 1994.16 In 1997, using Leape's base number of 3 million errors, the annual deaths could be as much as 420,000 for inpatients alone. This does not include nursing home deaths, or people in the outpatient community dying of drug side effects or as the result of medical procedures.

Only a Fraction of Medical Errors are Reported

Leape, in 1994, said that he was well aware that medical errors were not being reported.16 According to a study in two obstetrical units in the U.K., only about one quarter of the adverse incidents on the units are ever reported for reasons of protecting staff or preserving reputations, or fear of reprisals, including law suits.24 An analysis by Wald and Shojania found that only 1.5 percent of all adverse events result in an incident report, and only 6 percent of adverse drug events are identified properly.

The authors learned that the American College of Surgeons gives a very broad guess that surgical incident reports routinely capture only 5 percent to 30 percent of adverse events. In one surgical study only 20 percent of surgical complications resulted in discussion at Morbidity and Mortality Rounds.25 From these studies it appears that all the statistics that are gathered may be substantially underestimating the number of adverse drug and medical therapy incidents. It also underscores the fact that our mortality statistics are actually conservative figures.

An article in Psychiatric Times outlines the stakes involved with reporting medical errors.26 They found that the public is fearful of suffering a fatal medical error, and doctors are afraid they will be sued if they report an error.

This brings up the obvious question: who is reporting medical errors?

Usually it is the patient or the patient's surviving family. If no one notices the error, it is never reported. Janet Heinrich, an associate director at the U.S. General Accounting Office responsible for health financing and public health issues, testifying before a House subcommittee about medical errors, said that:

"The full magnitude of their threat to the American public is unknown." She added, "Gathering valid and useful information about adverse events is extremely difficult."

She acknowledged that the fear of being blamed, and the potential for legal liability, played key roles in the under-reporting of errors. The Psychiatric Times noted that the American Medical Association is strongly opposed to mandatory reporting of medical errors.26 If doctors aren't reporting, what about nurses? In a survey of nurses, they also did not report medical mistakes for fear of retaliation.27

Standard medical pharmacology texts admit that relatively few doctors ever report adverse drug reactions to the FDA.28 The reasons range from not knowing such a reporting system exists to fear of being sued because they prescribed a drug that

caused harm. 29 However, it is this tremendously flawed system of voluntary reporting from doctors that we depend on to know whether a drug or a medical intervention is harmful.

Pharmacology texts will also tell doctors how hard it is to separate drug side effects from disease symptoms. Treatment failure is most often attributed to the disease and not the drug or the doctor. Doctors are warned, "Probably nowhere else in professional life are mistakes so easily hidden, even from ourselves."30 It may be hard to accept, but not difficult to understand, why only one in twenty side effects is reported to either hospital administrators or the FDA.31,31a

If hospitals admitted to the actual number of errors and mistakes, which is about 20 times what is reported, they would come under intense scrutiny.32

Jerry Phillips, associate director of the Office of Post Marketing Drug Risk Assessment at the FDA, confirms this number. "In the broader area of adverse drug reaction data, the 250,000 reports received annually probably represent only 5 percent of the actual reactions that occur."33 Dr. Jay Cohen, who has extensively researched adverse drug reactions, comments that because only 5 percent of adverse drug reactions are being reported, there are, in reality, 5 million medication reactions each year.34

It remains that whatever figure you choose to believe about the side effects from drugs, all the experts agree that you have to multiply that by 20 to get a more accurate estimate of what is really occurring in the burgeoning "field" of iatrogenic medicine.

A 2003 survey is all the more distressing because there seems to be no improvement in error reporting even with all the attention on this topic. Dr. Dorothea Wild surveyed medical residents at a community hospital in Connecticut. She found that only half of the residents were aware that the hospital had a medical error-reporting system, and the vast majority didn't use it at all. Dr. Wild says this does not bode well for the future. If doctors don't learn error reporting in their training, they will never use it. And she adds that error reporting is the first step in finding out where the gaps in the medical system are and fixing them. That first baby step has not even begun.35

Public Suggestions on Iatrogenesis

In a telephone survey, 1,207 adults were asked to indicate how effective they thought the following would be in reducing preventable medical errors that resulted in serious harm:36

Giving doctors more time to spend with patients: very effective 78 percent

Requiring hospitals to develop systems to avoid medical errors: very effective 74 percent

Better training of health professionals: very effective 73 percent

Using only doctors specially trained in intensive care medicine on intensive care units: very effective 73 percent

Requiring hospitals to report all serious medical errors to a state agency: very effective 71 percent

Increasing the number of hospital nurses: very effective 69 percent

Reducing the work hours of doctors-in-training to avoid fatigue: very effective 66 percent

Encouraging hospitals to voluntarily report serious medical errors to a state agency: very effective 62 percent

Drug Iatrogenesis

Drugs comprise the major treatment modality of scientific medicine. With the discovery of the "Germ Theory" medical scientists convinced the public that infectious organisms were the cause of illness. Finding the "cure" for these infections proved much harder than anyone imagined. From the beginning, chemical drugs promised much more than they delivered. But far beyond not working, the drugs also caused incalculable side effects. The drugs themselves, even when properly prescribed, have side effects that can be fatal, as Lazarou's study1 shows. But human error can make the situation even worse.

Medication Errors

A survey of a 1992 national pharmacy database found a total of 429,827 medication errors from 1,081 hospitals. Medication errors occurred in 5.22 percent of patients admitted to these hospitals each year. The authors concluded that a minimum of 90,895 patients annually were harmed by medication errors in the country as a whole.37

A 2002 study shows that 20 percent of hospital medications for patients had dosage mistakes. Nearly 40 percent of these errors were considered potentially harmful to the patient. In a typical 300-patient hospital the number of errors per day were 40.38

Problems involving patients' medications were even higher the following year. The error rate intercepted by pharmacists in this study was 24 percent, making the potential minimum number of patients harmed by prescription drugs 417,908.39

Recent Adverse Drug Reactions

More recent studies on adverse drug reactions show that the figures from 1994

(published in Lazarou's 1998 JAMA article) may be increasing. A 2003 study followed 400 patients after discharge from a tertiary care hospital (hospital care that requires highly specialized skills, technology or support services). Seventy-six patients (19 percent) had adverse events. Adverse drug events were the most common at 66 percent. The next most common events were procedure-related injuries at 17 percent.40

In a NEJM study an alarming one-in-four patients suffered observable side effects from the more than 3.34 billion prescription drugs filled in 2002.41 One of the doctors who produced the study was interviewed by Reuters and commented that:

"With these 10-minute appointments, it's hard for the doctor to get into whether the symptoms are bothering the patients."42

William Tierney, who editorialized on the NEJM study, said

" ... given the increasing number of powerful drugs available to care for the aging population, the problem will only get worse."

The drugs with the worst record of side effects were the SSRIs, the NSAIDs, and calcium-channel blockers. Reuters also reported that prior research has suggested that nearly 5 percent of hospital admissions--over 1 million per year--are the result of drug side effects. But most of the cases are not documented as such. The study found one of the reasons for this failure: in nearly two-thirds of the cases, doctors couldn't diagnose drug side effects or the side effects persisted because the doctor failed to heed the warning signs.

Medicating Our Feelings

We only need to look at the side effects of antidepressant drugs, which give hope to a depressed population. Patients seeking a more joyful existence and relief from worry, stress and anxiety, fall victim to the messages blatantly displayed on TV and billboards. Often, instead of relief, they also fall victim to a myriad of iatrogenic side effects of antidepressant medication.

Also, a whole generation of antidepressant users has resulted from young people growing up on Ritalin. Medicating youth and modifying their emotions must have some impact on how they learn to deal with their feelings. They learn to equate coping with drugs and not their inner resources. As adults, these medicated youth reach for alcohol, drugs, or even street drugs, to cope.

According to the Journal of the American Medical Association, "Ritalin acts much like cocaine."43 Today's marketing of mood-modifying drugs, such as Prozac or Zoloft, makes them not only socially acceptable but almost a necessity in today's stressful world.

Television Diagnosis

In order to reach the widest audience possible, drug companies are no longer just targeting medical doctors with their message about antidepressants. By 1995 drug companies had tripled the amount of money allotted to direct advertising of prescription drugs to consumers. The majority of the money is spent on seductive television ads. From 1996 to 2000, spending rose from $791 million to nearly $2.5 billion.44 Even though $2.5 billion may seem like a lot of money, the authors comment that it only represents 15 percent of the total pharmaceutical advertising budget.

According to medical experts "there is no solid evidence on the appropriateness of prescribing that results from consumers requesting an advertised drug." However, the drug companies maintain that direct-to-consumer advertising is educational. Dr. Sidney M. Wolfe, of the Public Citizen Health Research Group in Washington, D.C., argues that the public is often misinformed about these ads.45

People want what they see on television and are told to go to their doctor for a prescription.

Doctors in private practice either acquiesce to their patients' demands for these drugs or spend valuable clinic time trying to talk patients out of unnecessary drugs. Dr. Wolfe remarks that one important study found that people mistakenly believe that the "FDA reviews all ads before they are released and allows only the safest and most effective drugs to be promoted directly to the public."46

How Do We Know Drugs Are Safe?

Another aspect of scientific medicine that the public takes for granted is the testing of new drugs. Unlike the class of people that take drugs who are ill and need medication, in general, drugs are tested on individuals who are fairly healthy and not on other medications that can interfere with findings. But when they are declared "safe" and enter the drug prescription books, they are naturally going to be used by people on a variety of other medications and who also have a lot of other health problems.

Then, a new Phase of drug testing called Post-Approval comes into play, which is the documentation of side effects once drugs hit the market. In one very telling report, the General Accounting Office (an agency of the U.S. Government) "found that of the 198 drugs approved by the FDA between 1976 and 1985 ... 102 (or 51.5 percent) had serious post-approval risks ... the serious post-approval risks (included) heart failure, myocardial infarction, anaphylaxis, respiratory depression and arrest, seizures, kidney and liver failure, severe blood disorders, birth defects and fetal toxicity, and blindness."47

The investigative show NBC's "Dateline" wondered if your doctor is moonlighting as a

drug rep. After a year-long investigation they reported that because doctors can legally prescribe any drug to any patient for any condition, drug companies heavily promote "off-label" and frequently inappropriate and non-tested uses of these medications in spite of the fact that these drugs are only approved for specific indications they have been tested for.48

The leading causes of adverse drug reactions are:

Antibiotics (17 percent)
Cardiovascular drugs (17 percent)
Chemotherapy (15 percent)
Analgesics and anti-inflammatory agents (15 percent) 49

Specific Drug Iatrogenesis: Antibiotics

Dr. Egger, in a recent editorial, wrote that after 50 years of increasing use of antibiotics, 30 million pounds of antibiotics are used in America per year.50 Twenty-five million pounds of this total are used in animal husbandry. The vast majority of this amount, 23 million pounds, is used to try to prevent disease, the stress of shipping, and to promote growth. Only 2 million pounds are given for specific animal infections.

Dr. Egger reminds us that low concentrations of antibiotics are measurable in many of our foods, rivers, and streams around the world. Much of this is seeping into bodies of water from animal farms.

Egger says overuse of antibiotics results in food-borne infections resistant to antibiotics. Salmonella is found in 20 percent of ground meat but constant exposure of cattle to antibiotics has made 84 percent of salmonella resistant to at least one anti-salmonella antibiotic. Diseased animal food accounts for 80 percent of salmonellosis in humans, or 1.4 million cases per year.

The conventional approach to dealing with this epidemic is to radiate food to try to kill all organisms but keep using the antibiotics that cause the original problem. Approximately 20 percent of chickens are contaminated with Campylobacter jejuni causing 2.4 million human cases of illness annually. Fifty-four percent of these organisms are resistant to at least one anti-campylobacter antimicrobial.

A ban on growth-promoting antibiotics in Denmark began in 1999, which led to a decrease from 453,200 pounds to 195,800 pounds within a year. Another report from Scandinavia found that taking away antibiotic growth promoters had no or minimal effect on food production costs. Egger further warns that in America the current crowded, unsanitary methods of animal farming support constant stress and infection, and are geared toward high antibiotic use. He says these conditions would have to be changed along with cutting back on antibiotic use.

In America, over 3 million pounds of antibiotics are used every year on humans. With a population of 284 million Americans, this amount is enough to give every man, woman and child 10 teaspoons of pure antibiotics per year. Egger says that exposure to a steady stream of antibiotics has altered pathogens such as Streptococcus pneumoniae, Staplococcus aureus, and entercocci, to name a few.

Almost half of patients with upper respiratory tract infections in the United States still receive antibiotics from their doctor.51 According to the CDC, 90 percent of upper respiratory infections are viral and should not be treated with antibiotics. In Germany the prevalence for systemic antibiotic use in children aged 0 to 6 years was 42.9 percent.52

Data taken from nine U.S. health plans between 1996 and 2000 on antibiotic use in 25,000 children found that rates of antibiotic use decreased. Antibiotic use in children, aged 3 months to under 3 years, decreased 24 percent, from 2.46 to 1.89 antibiotic prescriptions per/patient per/year. For children, 3 years to under 6 years, there was a 25 percent reduction from 1.47 to 1.09 antibiotic prescriptions per/patient per/year. And for children aged 6 to under 18 years, there was a 16 percent reduction from 0.85 to 0.69 antibiotic prescriptions per/patient /per year.53 Although there was a reduction in antibiotic use, the data indicate that on average every child in America receives 1.22 antibiotic prescriptions annually.

Group A beta-hemolytic streptococci is the only common cause of sore throat that requires antibiotics, penicillin and erythromycin being the only recommended treatment. However, 90 percent of sore throats are viral. The authors of this study estimated there were 6.7 million adult annual visits for sore throat between 1989 and 1999 in the United States. Antibiotics were used in 73 percent of visits. Furthermore, patients treated with antibiotics were given non-recommended broad-spectrum antibiotics in 68 percent of visits.

The authors noted, that from 1989 to 1999, there was a significant increase in the newer and more expensive broad-spectrum antibiotics and a decrease in use of penicillin and erythromycin, which are the recommended antibiotics.54 If antibiotics were given in 73 percent of visits and should have only been given in 10 percent, this represents 63 percent, or a total of 4.2 million visits for sore throat that ended in unnecessary antibiotic prescriptions between1989 and 1999. In 1995, Dr. Besser and the CDC cited 2003 cited much higher figures of 20 million unnecessary antibiotic prescriptions per year for viral infections.2 Neither of these figures takes into account the number of unnecessary antibiotics used for non-fatal conditions such as acne, intestinal infection, skin infections, ear infections, etc.

craig-oxley - September 13, 2008 05:00 PM (GMT)

The Problem with Antibiotics: They are Anti-Life

On September 17, 2003 the CDC relaunched a program, started in 1995, called "Get Smart: Know When Antibiotics Work."55 This is a $1.6 million campaign to educate patients about the overuse and inappropriate use of antibiotics. Most people involved with alternative medicine have known about the dangers of overuse of antibiotics for decades. Finally the government is focusing on the problem, yet they are only putting a miniscule amount of money into an iatrogenic epidemic that is costing billions of dollars and thousands of lives.

The CDC warns that 90 percent of upper respiratory infections, including children's ear infections, are viral, and antibiotics don't treat viral infection. More than 40 percent of about 50 million prescriptions for antibiotics each year in physicians' offices were inappropriate.2 And using antibiotics, when not needed, can lead to the development of deadly strains of bacteria that are resistant to drugs and cause more than 88,000 deaths due to hospital-acquired infections.9

However, the CDC seems to be blaming patients for misusing antibiotics even though they are only available on prescription from a doctor who should know how to prescribe properly. Dr. Richard Besser, head of "Get Smart," says "Programs that have just targeted physicians have not worked. Direct-to-consumer advertising of drugs is to blame in some cases." Dr. Besser says the program:

"Teaches patients and the general public that antibiotics are precious resources that must be used correctly if we want to have them around when we need them. Hopefully, as a result of this campaign, patients will feel more comfortable asking their doctors for the best care for their illnesses, rather than asking for antibiotics."56

And what does the "best care" constitute? The CDC does not elaborate and patently avoids the latest research on the dozens of nutraceuticals scientifically proven to treat viral infections and boost the immune system. Will their doctors recommend vitamin C, echinacea, elderberry, vitamin A, zinc, or homeopathic oscillococcinum? No, they won't. The archaic solutions offered by the CDC include a radio ad, "Just Say No--Snort, sniffle, sneeze--No antibiotics please." Their commonsense recommendations, that most people do anyway, include resting, drinking plenty of fluids, and using a humidifier.

The pharmaceutical industry claims they are all for limiting the use of antibiotics. In order to make sure that happens, the drug company Bayer is sponsoring a program called, "Operation Clean Hands," through an organization called LIBRA.57 The CDC is also involved with trying to minimize antibiotic resistance, but nowhere in their publications is there any reference to the role of nutraceuticals in boosting the immune system nor to the thousands of journal articles that support this approach.

This recalcitrant tunnel vision and refusal to use available non-drug alternatives is

absolutely inappropriate when the CDC is desperately trying to curb the nightmare of overuse of antibiotics. The CDC should also be called to task because it is only focusing on the overuse of antibiotics. There are similar nightmares for every class of drug being prescribed today.

Drugs Pollute Our Water Supply

We have reached the point of saturation with prescription drugs. We have arrived at the point where every body of water tested contains measurable drug residues. We are inundated with drugs. The tons of antibiotics used in animal farming, which run off into the water table and surrounding bodies of water, are conferring antibiotic resistance to germs in sewage, and these germs are also found in our water supply.

Flushed down our toilets are tons of drugs and drug metabolites that also find their way into our water supply. We have no idea what the long-term consequences of ingesting a mixture of drugs and drug-breakdown products will do to our health. It's another level of iatrogenic disease that we are unable to completely measure.58-67

Specific Drug Iatrogenesis: NSAIDs

It's not just America that is plagued with iatrogenesis. A survey of 1,072 French general practitioners (GPs) tested their basic pharmacological knowledge and practice in prescribing NSAIDs. Non-steroidal anti-inflammatory drugs (NSAIDs) rank first among commonly prescribed drugs for serious adverse reactions. The results of the study suggested that GPs don't have adequate knowledge of these drugs and are unable to effectively manage adverse reactions.68

A cross-sectional survey of 125 patients attending specialty pain clinics in South London found that possible iatrogenic factors such as "over-investigation, inappropriate information, and advice given to patients as well as misdiagnosis, over-treatment, and inappropriate prescription of medication were common."69

Specific Drug Iatrogenesis: Cancer Chemotherapy

In 1989, a German biostatistician, Ulrich Abel PhD, after publishing dozens of papers on cancer chemotherapy, wrote a monograph "Chemotherapy of Advanced Epithelial Cancer." It was later published in a shorter form in a peer-reviewed medical journal.70

Dr. Abel presented a comprehensive analysis of clinical trials and publications representing over 3,000 articles examining the value of cytotoxic chemotherapy on advanced epithelial cancer. Epithelial cancer is the type of cancer we are most familiar with. It arises from epithelium found in the lining of body organs such as breast, prostate, lung, stomach, or bowel.

From these sites cancer usually infiltrates into adjacent tissue and spreads to bone,

liver, lung, or the brain. With his exhaustive review Dr. Abel concludes that there is no direct evidence that chemotherapy prolongs survival in patients with advanced carcinoma. He said that in small-cell lung cancer and perhaps ovarian cancer the therapeutic benefit is only slight. Dr. Abel goes on to say, "Many oncologists take it for granted that response to therapy prolongs survival, an opinion which is based on a fallacy and which is not supported by clinical studies."

Over a decade after Dr. Abel's exhaustive review of chemotherapy, there seems no decrease in its use for advanced carcinoma. For example, when conventional chemotherapy and radiation has not worked to prevent metastases in breast cancer, high-dose chemotherapy (HDC) along with stem-cell transplant (SCT) is the treatment of choice.

However, in March 2000, results from the largest multi-center randomized controlled trial conducted thus far showed that, compared to a prolonged course of monthly conventional-dose chemotherapy, HDC and SCT were of no benefit.71 There was even a slightly lower survival rate for the HDC/SCT group. And the authors noted that serious adverse effects occurred more often in the HDC group than the standard-dose group. There was one treatment-related death (within 100 days of therapy) in the HDC group, but none in the conventional chemotherapy group. The women in this trial were highly selected as having the best chance to respond.

There is also no all-encompassing follow-up study like Dr. Abel's that tells us if there is any improvement in cancer-survival statistics since 1989. In fact, we need to research whether chemotherapy itself is responsible for secondary cancers instead of progression of the original disease. We continue to question why well-researched alternative cancer treatments aren't used.

Drug Companies Fined

Periodically, a drug manufacturer is fined by the FDA when the abuses are too glaring and impossible to cover up. The May 2002 Washington Post reported that the maker of Claritin, Schering-Plough Corp., was to pay a $500 million fine to the FDA for quality-control problems at four of its factories.72 The FDA tabulated infractions that included 90 percent, or 125 of the drugs they made since 1998. Besides the fine, the company had to stop manufacturing 73 drugs or suffer another $175 million fine. PR statements by the company told another story. The company assured consumers that they should still feel confident in its products.

Such a large settlement serves as a warning to the drug industry about maintaining strict manufacturing practices and has given the FDA more clout in dealing with drug company compliance.

According to the Washington Post article, a federal appeals court ruled in 1999 that the

FDA could seize the profits of companies that violate "good manufacturing practices." Since that time Abbott Laboratories Inc. paid $100 million for failing to meet quality standards in the production of medical test kits, and Wyeth Laboratories Inc. paid $30 million in 2000 to settle accusations of poor manufacturing practices.

The indictment against Schering-Plough came after the Public Citizen Health Research Group, lead by Dr. Sidney Wolfe, called for a criminal investigation of Schering-Plough, charging that the company distributed albuterol asthma inhalers even though it knew the units were missing the active ingredient.

Unnecessary Surgery Procedures

Summary:

1974: 2.4 million unnecessary surgeries performed annually resulting in 11,900 deaths at an annual cost of $3.9 billion.73,74

2001: 7.5 million unnecessary surgical procedures resulting in 37,136 deaths at a cost of $122 billion (using 1974 dollars).3

It's very difficult to obtain accurate statistics when studying unnecessary surgery. Dr. Leape in 1989 wrote that perhaps 30 percent of controversial surgeries are unnecessary. Controversial surgeries include:

Cesarean section
Tonsillectomy
Appendectomy
Hysterectomy
Gastrectomy for obesity
Breast implants and elective breast implants 74
Almost 30 years ago, in 1974, the Congressional Committee on Interstate and Foreign Commerce held hearings on unnecessary surgery. They found that 17.6 percent of recommendations for surgery were not confirmed by a second opinion. The House Subcommittee on Oversight and Investigations extrapolated these figures and estimated that, on a nationwide basis, there were 2.4 million unnecessary surgeries performed annually, resulting in 11,900 deaths at an annual cost of $3.9 billion.73

In 2001, the top 50 medical and surgical procedures totaled approximately 41.8 million. These figures were taken from the Healthcare Cost and Utilization Project within the Agency for Healthcare Research and Quality.13 Using 17.6 percent from the 1974 U.S. Congressional House Subcommittee Oversight Investigation as the percentage of unnecessary surgical procedures, and extrapolating from the death rate in 1974, we come up with an unnecessary procedure number of 7.5 million (7,489,718) and a death rate of 37,136, at a cost of $122 billion (using 1974 dollars).

Researchers performed a very similar analysis, using the 1974 'unnecessary surgery percentage' of 17.6, on back surgery. In 1995, researchers testifying before the Department of Veterans Affairs estimated that of 250,000 back surgeries in the United States at a hospital cost of $11,000 per patient, the total number of unnecessary back surgeries each year in the United Staes could approach 44,000, costing as much as $484 million.75

The unnecessary surgery figures are escalating just as prescription drugs driven by television advertising. Media-driven surgery such as gastric bypass for obesity "modeled" by Hollywood personalities seduces obese people to think this route is safe and sexy. There is even a problem of surgery being advertised on the Internet.76 A study in Spain declares that between 20 percent and 25 percent of total surgical practice represents unnecessary operations.77

According to data from the National Center for Health Statistics from 1979 to 1984, there was a 9 percent increase in the total number of surgical procedures, and the number of surgeons grew by 20 percent. The author notes that there has not been a parallel increase in the number of surgeries despite a recent large increase in the number of surgeons. There was concern that there would be too many surgeons to share a small surgical caseload.78

The previous author spoke too soon--there was no cause to worry about a small surgical caseload. By 1994, there was an increase of 38 percent for a total of 7,929,000 cases for the top ten surgical procedures. In 1983, surgical cases totaled 5,731,000. In 1994, cataract surgery was number one with over two million operations, and second was Cesarean section (858,000 procedures). Inguinal hernia operations were third (689,000 procedures), and knee arthroscopy, in seventh place, grew 153 percent (632,000 procedures) while prostate surgery declined 29 percent (229,000 procedures).79

The list of iatrogenic diseases from surgery is as long as the list of procedures themselves. In one study epidural catheters were inserted to deliver anesthetic into the epidural space around the spinal nerves to block them for lower Cesarean section, abdominal surgery, or prostate surgery. In some cases, non-sterile technique, during catheter insertion, resulted in serious infections, even leading to limb paralysis.80

In one review of the literature, the authors demonstrated:

"a significant rate of overutilization of coronary angiography, coronary artery surgery, cardiac pacemaker insertion, upper gastrointestinal endoscopies, carotid endarterectomies, back surgery, and pain-relieving procedures."81

A 1987 JAMA study found the following significant levels of inappropriate surgery:

17 percent of cases for coronary angiography
32 percent for carotid endarterectomy
17 percent for upper gastrointestinal tract endoscopy 82
Using the Healthcare Cost and Utilization Project (HCUP) statistics provided by the government for 2001, the number of people getting upper gastrointestinal endoscopy, which usually entails biopsy, was 697,675; the number getting endarterectomy was 142,401; and the number having coronary angiography was 719,949.13

Therefore, according to the JAMA study 17 percent, or 118,604 people had an unnecessary endoscopy procedure. Endarterectomy occurred in 142,401 patients; potentially 32 percent or 45,568 did not need this procedure. And 17 percent of 719,949, or 122,391 people receiving coronary angiography were subjected to this highly invasive procedure unnecessarily. These are all forms of medical iatrogenesis.

We have added, cumulatively, figures from 13 references of annual iatrogenic deaths. However, there is invariably some degree of overlap and double counting that can occur in gathering non-finite statistics.

Death numbers don't come with names and birth dates to prevent duplication On the other hand, there are many missing statistics. As we will show, only about 5 percent to 20 percent of iatrogenic incidents are even recorded.16,24,25,33,34 And, our outpatient iatrogenic statistics 112 only include drug-related events and not surgical cases, diagnostic errors, or therapeutic mishaps.

We have also been conservative in our inclusion of statistics that were not reported in peer review journals or by government institutions. For example, on July 23, 2002, The Chicago Tribune analyzed records from patient databases, court cases, 5,810 hospitals, as well as 75 federal and state agencies and found 103,000 cases of death due to hospital infections, 75 percent of which were preventable.152

We do not include this figure but report the lower Weinstein figure of 88,000.9 Another figure that we withheld, for lack of proper peer review was The National Committee for Quality Assurance, September 2003 report, which found that at least 57,000 people die annually from lack of proper care for common diseases such as:

High blood pressure
Diabetes
Heart disease 153
Overlapping of statistics in this article may occur with the Institute of Medicine (IOM) paper that designates "medical error" as including drugs, surgery, and unnecessary procedures.6 Since we have also included other statistics on adverse drug reactions, surgery and, unnecessary procedures, perhaps a much as 50 percent of the IOM number could be redundant. However, even taking away half the 98,000 IOM number

still leaves us with iatrogenic events as the number one killer at 738,000 annual deaths.

Medical and Surgical Procedures

It is instructive to know the mortality rate associated with different medical and surgical procedures. Even though we must sign release forms when we undergo any procedure, many of us are in denial about the true risks involved. We seem to hold a collective impression that since medical and surgical procedures are so commonplace, they are both necessary and safe. Unfortunately, partaking in allopathic medicine itself is one of the highest causes of death as well as the most expensive way to die.

Shouldn't the daily death rate of iatrogenesis in hospitals, out of hospitals, in nursing homes, and psychiatric residences be reported like the pollen count or the smog index? Let's stop hiding the truth from ourselves. It's only when we focus on the problem and ask the right questions that we can hope to find solutions.

Perhaps the words "health care" give us the illusion that medicine is about health. Allopathic medicine is not a purveyor of health care but of disease-care. Studying the mortality figures in the Healthcare Cost and Utilization Project (HCUP) within the U.S. government's Agency for Healthcare Research and Quality, we found many points of interest.13 The HCUP computer program that calculates the annual mortality statistics for all U.S. hospital discharges is only as good as the codes that are put into the system.

In an e-mail correspondence with HCUP, we were told that the mortality rates that were indicated in tables and charts for each procedure were not necessarily due to the procedure but only indicated that someone who received that procedure died either from their original disease or from the procedure.

Therefore there is no way of knowing exactly how many people died from a particular procedure. There are also no codes for adverse drug side effects, none for surgical mishap, and none for medical error. Until there are codes for medical error, statistics of those people who are dying from various types of medical error will be buried in the general statistics. There is a code for "poisoning & toxic effects of drugs" and a code for "complications of treatment."

However, the mortality figures registered in these categories are very low and don't compare with what we know from studies such as the JAMA 1998 study 1 that said there were an average of 106,000 prescription medication deaths per year.

Why aren't Medical and Surgical Procedures Studied?

In 1978, the U.S. Office of Technology Assessment (OTA) reported that, "Only 10 percent to 20 percent of all procedures currently used in medical practice have been shown to be efficacious by controlled trial."83

In 1995, the OTA compared medical technology in eight countries:

Australia
Canada
France
Germany
Netherlands
Sweden
United Kingdom
United States

... and again noted that few medical procedures in the United States had been subjected to clinical trial. It also reported that infant mortality was high and life expectancy was low compared to other developed countries.84

Although almost 10 years old, much of what was said in this report holds true today. The report lays the blame for the high cost of medicine squarely at the feet of the medical free-enterprise system and the fact that there is no national health care policy. It describes the failure of government attempts to control health care costs due to market incentive and profit motive in the financing and organization of health care including private insurance, hospital system, physician services, and drug and medical device industries.

Whereas we may want to expand health care, expansion of disease care is the goal of free enterprise. "Health Care Technology and Its Assessment in Eight Countries" is also the last report prepared by the OTA, which was shut down in 1995. It's also, perhaps, the last honest, in-depth look at modern medicine. Because of the importance of this 60-page report, we enclose a summary in the Appendix.

Surgical Errors Finally Reported

Just hours before completion of this paper, statistics on surgical-related deaths became available. An October 8, 2003 JAMA study from the U.S. government's Agency for Healthcare Research and Quality (AHRQ) documented 32,000 mostly surgery-related deaths costing $9 billion and accounting for 2.4 million extra days in the hospital in 2000.85 In a press release accompanying the JAMA study, the AHRQ director, Carolyn M. Clancy, M.D., admitted:

"This study gives us the first direct evidence that medical injuries pose a real threat to the American public and increase the costs of health care." 86

Hospital administrative data from 20 percent of the nation's hospitals were analyzed for 18 different surgical complications including:

Postoperative infections
Foreign objects left in wounds
Surgical wounds reopening
Post-operative bleeding
In the same press release the study's authors said that:

"The findings greatly underestimate the problem, since many other complications happen that are not listed in hospital administrative data." They also felt that, "The message here is that medical injuries can have a devastating impact on the health care system. We need more research to identify why these injuries occur and find ways to prevent them from happening."

One of the authors, Dr. Zhan, said that improved medical practices, including an emphasis on better hand washing, might help reduce the morbidity and mortality rates. An accompanying JAMA editorial by health-risk researcher Dr. Saul Weingart of Harvard's Beth Israel Deaconess Medical Center said, "Given their staggering magnitude, these estimates are clearly sobering."87

Unnecessary X-Rays

When X-rays were discovered, no one knew the long-term effects of ionizing radiation. In the 1950s monthly fluoroscopic exams at the doctor's office were routine. You could even walk into most shoe stores and see your foot bones; looking at bones was an amusing novelty. We still don't know the ultimate outcome of our initial escapade with X-rays.

It was common practice to use X-rays in pregnant women to measure the size of the pelvis, and make a diagnosis of twins. Finally, a study of 700,000 children born between 1947 and 1964 was conducted in 37 major maternity hospitals. The children of mothers who had received pelvic X-rays during pregnancy were compared with the children of mothers who had not been X-rayed. Cancer mortality was 40 percent higher among the children with X-rayed mothers.88

In present-day medicine, coronary angiography combines an invasive surgical procedure of snaking a tube through a blood vessel in the groin up to the heart. To get any useful information during the angiography procedure X-rays are taken almost continuously with minimum dosage ranges between 460 and 1,580 mrem. The minimum radiation from a routine chest X-ray is 2 mrem. X-ray radiation accumulates in the body and it is well-known that ionizing radiation used in X-ray procedures causes gene mutation. We can only obtain guesstimates as to its impact on health from this high level of radiation. Experts manage to obscure the real effects in statistical jargon such as, "The risk for lifetime fatal cancer due to radiation exposure is estimated to be four in 1 million per 1,000 mrem."89

However, Dr. John Gofman, who has been studying the effects of radiation on human health for 45 years, is prepared to tell us exactly what diagnostic X-rays are doing to our health. Dr. Gofman has a PhD in nuclear and physical chemistry and is a medical doctor. He worked on the Manhattan nuclear project, discovered uranium-2323, was the first person to isolate plutonium, and since 1960, he's been studying the effects of radiation on human health.

With five scientifically documented books totaling over 2,800 pages, Dr. Gofman provides strong evidence that medical technology, specifically:

X-rays
CT scans
Mammography
Fluoroscopy
... are a contributing factor to 75 percent of new cancers.

His 699-page report, updated in 2000, "Radiation from Medical Procedures in the Pathogenesis of Cancer and Ischemic Heart Disease: Dose-Response Studies with Physicians per 100,000 Population to here"90 shows that as the number of physicians increases in a geographical area with an increase in the number of X-ray diagnostic tests, there is an associated increase in the rate of cancer and ischemic heart disease. Dr. Gofman elaborates that it's not X-rays alone that cause the damage but a combination of health risk factors including: poor diet, smoking, abortions, and the use of birth control pills. Dr. Gofman predicts that 100 million premature deaths over the next decade will be the result of ionizing radiation.

In his book, "Preventing Breast Cancer," Dr. Gofman says that breast cancer is the leading cause of death among American women between the ages of 44 and 55. Because breast tissue is highly radiation-sensitive, mammograms can cause cancer. The danger can be heightened by a woman's:

Genetic makeup
Preexisting benign breast disease
Artificial menopause
Obesity
Hormonal imbalance 91
Even X-rays for back pain can lead someone into crippling surgery. Dr. Sarno, a well-known New York orthopedic surgeon, found that X-rays don't always tell the truth. In his books he cites studies on normal people without a trace of back pain who have spinal abnormalities on X-ray.

Other studies have shown that some people with back pain have normal spines on X-ray. So, Dr. Sarno says there is not necessarily any association between back pain and spinal X-ray abnormality.92 However, if a person happens to have back pain and an

incidental abnormality on X-ray, they may be treated surgically, sometimes with no change in back pain, or worsening of back pain, or even permanent disability.

In addition, doctors often order X-rays as protection against malpractice claims to give the impression that they are leaving no stone unturned. It appears that doctors are putting their own fears before the interests of their patients.

Unnecessary Hospitalization

In summary:

8.9 million (8,925,033) people were hospitalized unnecessarily in 2001.4
In a study of inappropriate hospitalization 1,132 medical records were reviewed by two doctors. Twenty-three percent of all admissions were inappropriate and an additional 17 percent could have been handled in ambulatory out-patient clinics. Thirty-four percent of all hospital days were also inappropriate and could have been avoided.93 The rate of inappropriate admissions in 1990 was 23.5 percent.94 In 1999, another study confirmed the figure of 24 percent inappropriate admissions indicating a consistent pattern from 1986 to 1999,95 showing steady reporting of approximately 24 percent inappropriate admissions each year.

Putting these figures into present-day terms using the HCUP database, the total number of patient discharges from hospitals in the United States in 2001 was 37,187,641.13 The above data indicate that 24 percent of those hospitalizations need never have occurred. It further means that 8,925,033 people were exposed to unnecessary medical intervention in hospitals and therefore represent almost 9 million potential iatrogenic episodes.4

Women's Experience in Medicine

Briefly, we will look at the medical iatrogenesis of women in particular. Dr. Martin Charcot (1825-1893) was world-renowned--the most celebrated doctor of his time. He practiced in the Paris hospital La Salpetriere. He became an expert in hysteria diagnosing an average of 10 hysterical women each day, transforming them into ... "iatrogenic monsters," turning simple 'neurosis' into hysteria.96 The number of women diagnosed with hysteria and hospitalized rose from 1 percent in 1841 to 17 percent in 1883.

Hysteria is derived from the Latin "hystera," meaning uterus. Dr. Adriane Fugh-Berman stated very clearly in her paper that there is a tradition in U.S. medicine of excessive medical and surgical interventions on women. Only 100 years ago male doctors decided that female psychological imbalance originated in the uterus. When surgery to remove the uterus was perfected it became the "cure" for mental instability, effecting a physical and psychological castration. Dr. Fugh-Berman noted that U.S. doctors

eventually disabused themselves of that notion but have continued to treat women very differently than they treat men.97 She cites the following:

Thousands of prophylactic mastectomies are performed annually.

One-third of U.S. women have had a hysterectomy before menopause.

Women are prescribed drugs more frequently than are men.

Women are given potent drugs for disease prevention, which results in disease substitution due to side effects.

Fetal monitoring is unsupported by studies and not recommended by the CDC.98 It confines women to a hospital bed and may result in higher incidence of cesarean section.99

Normal processes such as menopause and childbirth have been heavily medicalized.

Synthetic hormone replacement therapy (HRT) does not prevent heart disease or dementia. It does increase the risk of breast cancer, heart disease, stroke, and gall bladder attack.100

We would add that as many as one-third of postmenopausal women use HRT.101,102 These numbers are important in light of the much-publicized

Women's Health Initiative Study, which was forced to stop before its completion because of a higher death rate in the synthetic estrogen-progestin (HRT) group.103

craig-oxley - September 13, 2008 05:01 PM (GMT)

Cesarean Section

In 1983, 809,000 cesarean sections (21 percent of live births) were performed, making it the most common obstetric and gynecologic (OB/GYN) surgical procedure. The second most common OB/GYN operation was hysterectomy (673,000), and diagnostic dilation and curettage of the uterus (632,000) was third. In 1983, OB/GYN operations represented 23 percent of all surgery completed in this country.104

In 2001, Cesarean section is still the most common OB/GYN surgical procedure. Approximately 4 million births occur annually, with a 24 percent C-Section rate, i.e., 960,000 operations. In the Netherlands only eight percent of babies are delivered by Cesarean section. Assuming human babies are similar in the United States and in the Netherlands, we are performing 640,000 unnecessary C-Sections in the United States with its three to four times higher mortality and 20 times greater morbidity than vaginal delivery.105

The cesarean section rate was only 4.5 percent in the United States in 1965. By 1986 it had climbed to 24.1 percent. The author states that obviously an "uncontrolled pandemic of medically unnecessary cesarean births is occurring."106 VanHam reported, in a high-risk population undergoing cesarean section, a:

Cesarean section postpartum hemorrhage rate of 7 percent
Hematoma formation rate of 3.5 percent
Urinary tract infection rate of 3 percent
Combined postoperative morbidity rate of 35.7 percent 107

Never Enough Studies

Scientists used the excuse that there were never enough studies revealing the dangers of DDT and other dangerous pesticides to ban them. They also used this excuse around the issue of tobacco, claiming that more studies were needed before they could be certain that tobacco really caused lung cancer. Even the American Medical Association (AMA) was complicit in suppressing results of tobacco research. In 1964, the Surgeon General's report condemned smoking, however the AMA refused to endorse it. What was their reason? They needed more research. Actually what they really wanted was more money and they got it from a consortium of tobacco companies who paid the AMA $18 million over the next nine years, during which the AMA said nothing about the dangers of smoking.108

The Journal of the American Medical Association (JAMA), "after careful consideration of the extent to which cigarettes were used by physicians in practice," began accepting tobacco advertisements and money in 1933. State journals such as the New York State Journal of Medicine also began to run Chesterfield ads claiming that cigarettes are, "Just as pure as the water you drink ... and practically untouched by human hands."

In 1948, JAMA argued "more can be said in behalf of smoking as a form of escape from tension than against it ... there does not seem to be any preponderance of evidence that would indicate the abolition of the use of tobacco as a substance contrary to the public health."109 Today, scientists continue to use the excuse that they need more studies before they will lend their support to restrict the inordinate use of drugs.

Overview of Statistical Tables and Figures

Adverse Drug Reactions

The Lazarou study 1 was based on statistical analysis of 33 million U.S. hospital admissions in 1994. Hospital records for prescribed medications were analyzed with the following results:

The number of serious injuries due to prescribed drugs was 2.2 million

2.1 percent of in-patients experienced a serious adverse drug reaction
4.7 percent of all hospital admissions were due to a serious adverse drug reaction
Fatal adverse drug reactions occurred in 0.19 percent of in-patients and 0.13 percent of admissions.
The authors concluded that a projected 106,000 deaths occur annually due to adverse drug reactions.
We used a cost analysis from a 2000 study in which the increase in hospitalization costs per patient suffering an adverse drug reaction was $5,483. Therefore, costs for the Lazarou study's 2.2 million patients with serious drug reactions amounted $12 billion.1,49

Serious adverse drug reactions commonly emerge after Food and Drug Administration approval. The safety of new agents cannot be known with certainty until a drug has been on the market for many years.110

Bedsores

Over 1 million people develop bedsores in U.S. hospitals every year. It's a tremendous burden to patients and family, and a $55-billion health care burden.7 Bedsores are preventable with proper nursing care. It is true that 50 percent of those affected are in a vulnerable age group of over 70. In the elderly bedsores carry a four-fold increase in the rate of death.

The mortality rate in hospitals for patients with bedsores is between 23 percent and 37 percent.8 Even if we just take the 50 percent of people over 70 with bedsores and the lowest mortality at 23 percent, that gives us a death rate due to bedsores of 115,000. Critics will say that it was the disease or advanced age that killed the patient, not the bedsore, but our argument is that an early death, by denying proper care, deserves to be counted. It is only after counting these unnecessary deaths that we can then turn our attention to fixing the problem.

Malnutrition in Nursing Homes

The General Accounting Office (GAO), a special investigative branch of Congress, gave citations to 20 percent of the nation's 17,000 nursing homes for violations between July 2000 and January 2002. Many violations involved serious physical injury and death.111

A report from the Coalition for Nursing Home Reform states that at least one-third of the nation's 1.6 million nursing home residents may suffer from malnutrition and dehydration, which hastens their death. The report calls for adequate nursing staff to help feed patients who aren't able to manage a food tray by themselves.11 It is difficult to place a mortality rate on malnutrition and dehydration. This Coalition report states that malnourished residents, compared with well-nourished hospitalized nursing home residents, have a five-fold increase in mortality when they are admitted to hospital. So,

if we take one-third of the 1.6 million nursing home residents who are malnourished and multiply that by a mortality rate of 20 percent,8,14 we find 108,800 premature deaths due to malnutrition in nursing homes.

Nosocomial Infections

The rate of nosocomial [originating or taking place in a hospital] infections per 1,000 patient days has increased 36 percent--from 7.2 in 1975 to 9.8 in 1995. Reports from more than 270 U.S. hospitals showed that the nosocomial infection rate itself had remained stable over the previous 20 years with approximately five to six hospital-acquired infections occurring per 100 admissions, which is a rate of 5 percent to 6 percent. However, because of progressively shorter inpatient stays and the increasing number of admissions, the actual number of infections increased.

It is estimated that in 1995, nosocomial infections cost $4.5 billion and contributed to more than 88,000 deaths--one death every six minutes.9 The 2003 incidence of nosocomial mortality is quite probably higher than in 1995 because of the tremendous increase in antibiotic-resistant organisms. Morbidity and Mortality Report found that nosocomial infections cost $5 billion annually in 1999.10 This is a $0.5 billion increase in four years. The present cost of nosocomial infections might now be in the order of $5.5 billion.

Outpatient Iatrogenesis

Dr. Barbara Starfield in a 2000 JAMA paper presents us with well-documented facts that are both shocking and unassailable.12

The U.S. ranks twelfth out of 13 countries in a total of 16 health indicators. Japan, Sweden, and Canada were first, second, and third.
More than 40 million people have no health insurance.
20 percent to 30 percent of patients receive contraindicated care.
Dr. Starfield warns that one cause of medical mistakes is the overuse of technology, which may create a "cascade effect" leading to more treatment. She urges the use of ICD (International Classification of Diseases) codes that have designations called: "Drugs, Medicinal, and Biological Substances Causing Adverse Effects in Therapeutic Use" and "Complications of Surgical and Medical Care" to help doctors quantify and recognize the magnitude of the medical error problem. Starfield says that, at present, deaths actually due to medical error are likely to be coded according to some other cause of death.

She concludes that against the backdrop of our abysmal health report card compared to the rest of the Westernized countries, we should recognize that the harmful effects of health care interventions account for a substantial proportion of our excess deaths.

Starfield cites Weingart's 2000 article, "Epidemiology of Medical Error" on outpatient iatrogenesis. And Weingart, in turn, cites several authors and provides statistics showing that between 4 percent to 18 percent of consecutive patients in outpatient settings suffer an iatrogenic event leading to 112:

116 million extra physician visits
77 million extra prescriptions
17 million emergency department visits
8 million hospitalizations
3 million long-term admissions
199,000 additional deaths
$77 billion in extra costs

Unnecessary Surgeries

There are 12,000 deaths per year from unnecessary surgeries. However, results from the few studies that have measured unnecessary surgery directly indicate that for some highly controversial operations, the fraction that are unwarranted could be as high as 30 percent.74

It's a Global Issue

A survey published in the Journal of Health Affairs pointed out that between 18 percent and 28 percent of people who were recently ill had suffered from a medical or drug error in the previous two years. The study surveyed 750 recently-ill adults in five different countries. The breakdown by country showed:

18 percent of those in Britain
25 percent in Canada
23 percent in Australia
23 percent in New Zealand
The highest number was in the U.S. at 28 percent 113
Health Insurance

A recent finding by the Institute of Medicine is that the 41 million Americans without health insurance have consistently worse clinical outcomes than those who are insured, and are at increased risk for dying prematurely.114

Insurance Fraud

When doctors bill for services they do not render, advise unnecessary tests, or screen everyone for a rare condition, they are committing insurance fraud. The U.S. General Accounting Office (GAO) gave a 1998 figure of $12 billion lost to fraudulent or unnecessary claims, and reclaimed $480 million in judgments in that year. In 2001, the federal government won or negotiated more than $1.7 billion in judgments, settlements,

and administrative impositions in health care fraud cases and proceedings.115

Warehousing Our Elders

It is only fitting that we end this report with acknowledgement of our elders. The moral and ethical fiber of society can be judged by the way it treats its weakest and most vulnerable members. Some cultures honor and respect the wisdom of their elders, keeping them at home--the better to continue participation in their community. However, American nursing homes, where millions of our elders die, represent the pinnacle of social isolation and medical abuse.

Title: UPERIOR HEALTH PROTOCOL - BY 2TUFF 14/7/6

craig-oxley - September 13, 2008 04:55 PM (GMT)

SUPERIOR HEALTH PROTOCOL

BY 2TUFF

14 JULY 2006

Original Link

Breakfast

0. Take 1 teaspoon or more of **Manuka honey** on the empty stomach leaving a gap of 20 mins at least.

1. Use a **Netipot** filled with **SOL-LAY** (Himalayan or Redmond Salt + Water)
This should be squirted in each nostril 7 times one at a time. Most decent detox camps use this to clear the sinus of bacteria, pollen etc.

2. 8-16oz of **Pau D' Arco** tea made from the bark pieces and not commerical powdered tea bags. Leave to simmer on the stove for 15-20 minutes. I add half a teaspoon of green powdered **Stevia**.

30-40 mins later...

3. Make up some **Slippery Elm** gruel using two heaped teaspoons of the powder along with water. Pour the water slowly whilst constantly stirring until you get the paste/gruel like porridge. Eat all of this which will aid in lubricating joints, pulling multiple toxins and mucus from the body along with it coating/protecting the stomach allowing regeneration of damage.

30 mins later...

4. Eat a large serving of fruit, I usually have something like half a large Pineapple, 4 large black Plums, 4 Satsumas, 1-2 Oranges & 1-2 Apples. Basically have a large serving well mixed.

*Note: I snack on a raw cooking **Onion** or more before my dinner*

Dinner

5. Make a large Salad containing non-starchy vegetables (which are mucus). We're trying to keep from mucus disease producing foods. I use a lot of Cucumber, Onion, Lettuce, Tomatos, Horseradish, Carrots, Spinach and sometimes adding bean sprouts. I also highly rate Beetroot as one of the best Blood and Liver cleansers there is. I have quite a large plate of this. I sprinkle 1/2 teaspoon of Himalayan salt upon the salad.

1 hour later...

6. Drink 8oz of water

wait 30 mins...

7. I eat around 6-9 **Figs** which are rich in Potassium etc and contain Benzaldehyde

2 hours later...

8. Eat 8-12 **Brazil Nuts** and a small handful of **Walnuts**.

2 hours later...

Evening

9. 1-3 tablespoons of **Black Strap Molasses**

2 hours later...

10. Eat a large serving of fruit, I usually have something like half a large Pineapple, 4 large black Plums, 4 Satsumas, 1-2 Oranges & 1-2 Apples. Basically have a large serving well mixed.

2 hours later...

11. 8-16oz of **Mullelin tea** made from the leaf and not commerical powdered tea bags. Leave to simmer for 15-20 minutes in a cup with a saucer on top. I add half a teaspoon of green powdered **Stevia**.

NOTE

I recommend people Water Fast regular after studying hard on the subject first. I suggest people make sure their **Colons** are cleaned out. I did this without the typical supplement cleanses, I just used masses of fruit, Acidophilus and Ozone back in the day which worked very well. Once this area is giving you proper bowel movements then you go onto the Anti-parasitic herbs Wormwood, Green Blackwalnut Hull, Cloves & Olive Leaf. I personally prefer my herbs as the powerful **liquid Tinctures wether distilled or Alcohol**. This is the most powerful way of taking the herbs and saves from having toxic capsules whilst allowing the herb to work correctly. Capsules merely do not come close and the herb needs to be tasted prior to ingestion for full power. Once on the parasite program you stay on this for life. I take the following as a parasite program:

Wormwood 5ml 1x day
Olive Leaf 5ml 1x day
Cloves 5ml 1x day
Green BlackWalnut Hull 10ml 1x WEEK

People should learn how to flush the Liver and cleanse this area asap. Your liver is your body's General commander and gets congested with parasites, poisons, bile, stones etc. You will need to do around 6 or more flushes to get anywhere close to getting decent health. Clark recommends it can take up till 2000 stones if you have them of cause. Study on this practice as its yet again one of the most powerful healing treatments and again its hated by the Rockefellas who own the Pharmaceutical cartels because its almost **FREE** just a few dollars/pounds.

You should do some light exercise for 20-30 minutes a day which ideally means taking a nice relaxing walk. This would ideally be away from car pollution etc unfortunately I cannot do this living in a large city. This will increase Oxygenation naturally helping to again relief the body of unwanted old mucus and more. Remember on Onions are very good for this in raw form also.

I strongly suggest people get on a Heart herbal program like myself. I again suggest quality herbal tinctures. You should most definately look into Hawthorn, Cayenne Pepper (ideally Birdseye or better), Valerian, Ginger, Gota Kula. You should eat at least half a good raw cooking onion daily also, I have up to 3 a day and the hotter the better. If you can source those tinctures take:

Hawthorn 5-7.5ml 1x a day
Cayenne 5-10ml 3x a day
Valerian 5ml 1x a day
Ginger 5-10ml 3x a day
Gota Kula 5ml 1x a day

Another idea is to give your Liver a boost whilst your rebuilding your body up. Look into herbal tinctures of:

Shizandra
Milk Thistle
Artichoke

So now we've addressed cleansing your elimination organs, detoxing the body, increasing ambient oxygenation, de-parasiting & a muculess diet.

I strongly suggest people research:
Professor Arnold Ehret, Dr John Christopher & Dr Joel Fuhrman

I must remind people that the most powerful healing therapy known is the **WATER Fast** and again its totally free. **Urine Therapy** is another free and very powerful healing treatment indeed. Don't believe the hype of Juice fasting as it simply doesn't compare to Water fasting and its just juice fasters trying to fool themselves. Do people honestly think people would go through the hassles of Water Fasting if Juice fasting was as good or better? Of course not. I'll stick to Water Fasting thankyou, again make sure you know what your doing as it can result in Coma and Death if you do something wrong.

You should check up on any health problems you have before rushing into my protocols. Remember you cannot Water fast for instance with Type I Diabetes and you need a 5-6 month muculess diet before fasting with Type II. So I've given you tips on how to keep your medical costs right down, feel great and have a healthy body. Its up to you what you do with this information from now on.

Now I must inform people that right now our bodies have never been under such assault ever before. We're bombarded by more chemicals than we've ever been and now we have one of the most dangerous events happening daily above our heads. The Chemtrail programs regardless of their agendas are very worrying. Aerosolised Barium, Aluminium, Titanium and many other dangerous compounds are contained in this. Aerosol Barium is HIGHLY Cancerous on its own! This is how they know Alzheimers is going to go through the roof in a few years by at least 35%. You have Chemtrails and the chemicals like MSG, Aspartame as well adding to the problem. So my friends you need to keep your respitory cleansed and the protocol above will certainly do this especially with Water Fasting. The Mullelin tea will add with the respitory function. The Chemtrails are devastating to the respitory system and this is why were seeing more and more suffering with terrible episodes of respitory distress and Pluerisy type problems. I strongly suggest people stock up on Mullelin Tea, **Mate Tea & Lobelia** (The king of respitory herbs). I'm well known for promoting **Nebulising**, I have quite some experience in this area. I strongly recommend people get themselves an Ozone generator and a Nebuliser from the likes of SOTA and OMRON. Ozone the water for 10

minutes then pour 6ml in your nebuliser right away and use right away. There was a time when all over the world we were being attacked by some chemical in the Chemtrails. Many we're discussing this in a thread I created online. I'd found I couldn't even get rid of it with Colloidal Ionic Silver in the Nebuliser. Before I became fully aware of herbs all this was happening. The only thing which helped me was the Urine Therapy and OZONE in the Nebuliser. My mother suffered a similar problem not long after and we destroyed it within 4 days tops whilst others locally were suffering up to 3-4 weeks. I strongly suggest you also use Ginger and Cayenne in these times of need for respitory problems and Onions. Lobelia is the king of Respitory herbs but can be very dangerous so understand how to use it before you do anything. Lobelia can *collapse your lungs* so beware.

Therapy Information

The Hundred Year Lie - Randall Fitzgerald
AID INC - Jon Rappoport

I take much criticism for helping people making dramatic changes to their ill-health by creating health once again. My information has stood the test of time and is based on the work of some of the greatest healers and minds in Natural health. I make no money from my help and advice. My payment is the satisfaction I'm helping people move away from David Rockefella's evil Medical empire trying to Enslave the population to his

worthless poisons. The Rockefella family have tried to destroy the true healers of this world like Christopher, Hoxsey & Gerson etc. They fear this information getting out but don't mind practising it themselves. Drugs costing $1000 a shot and for instance Colon Cancer patients hoodwinked into useless medical treatments end up needing 20 shots a month. Work the cost of that out and see how the Pharmaceuticals make so much money accounting for a minimum 15% of the U.S Economy for instance. People who get off their backsides and get angry with how they've been treated will see results. If you sit back and allow your mind to be fooled by the Medical giants you simply will get no where. So no matter how weird it may sound or how nasty it may taste, GET ON WITH IT! Lets take our right to an healthy life back! I have no doubt the Rockefella family detest me and especially when it comes to AIDS.

Hope this becomes of use.

CANCER PROTOCOLS AND INFORMATION

One Gadget I Recommend People look into

Robert C Beck's Blood Electrification Device.

Feel free to distribute far and wide

craig-oxley - September 13, 2008 04:56 PM (GMT)

We frequently here the phrases "mucusless diet" and "mucus-forming diet". The following excerpt puts into practical terms in a way that makes it easy to see and understand some of the practical effects involved.

Some of you may be familar with William Donald Kelley. In 1963 at the age of 37 he was told by his regular doctor there was nothing more they could do and it was time for him to go home and die within 2 to 4 weeks. He had late-stage pancreatic cancer that had also spread to the liver, lungs and other areas. He was a doctor and dentist, by the way, and one of my favorite all time quotes of his, from his Lesson #14 on how to self treat cancer: "shoot your dentist. Since the dawn of history, dentists have been responsible for more deaths than all wars combined, and they have never been given proper credit for this" Undoubtedly he had managed to learn and apply something as it concerns cancer after having been sentenced to die. The cancer protocl he developed

has many parallels with what is taught here in regards to obeying nature; it was very big on promoting a diet of organic substances (fruits, vegetables, grains and nuts). At the same time there were methods that he used that do not necessarily agree with what is taught here. His protocol also highly recommends the uses of supplements such as molasses (he preferred black strap) as the ideal source of minerals. Perhaps this excerpt of a seminar he presented in 1971 can be used as a means for rallying around things we agree on rather than focusing on what we dont' agree on. Also try to remember that he developed his protocol during the process of saving his life over 40 years ago, a time when he didn't have the WWW to aid his frantic search, and we 40 years later may have the advantage of information that was not readily available to him back then. Dr. Kelley died January 30, 2005 at the age of 79.

What do we do in our society? We go out and we eat a salad and we eat it first at the meal. That tells the stomach and the hydrochloric acid function to turn off. So turn off. So we don't need that, we're having salad today. Or we're having fruit and we really don't need (typo in the source document says "really need") hydrochloric acid particularly for that, right now. So it turns it off. You need the hydrochloric acid mostly for meat and for the protein's. We eat things backwards in our society. We should, when we go to the restaurant, and they serve you a salad, set it aside and slap the waiter's hand if he takes it away before he serve's you, and then eat it after you eat the meat. Then eat your vegetables and stuff, which would be the ideal way. You eat the meat first, why? It turn's on your hydrochloric acid. However, if you're an ulcer prone person, it's OK to eat your salad first. That cuts off the hydrochlorlic acid so you don't get too much of it and that will help you along with ulcers. But the vast majority of us don't have ulcers. Unless it's specifically a regional thing. Maybe in New York City you do but in most of the country, not everybody has ulcers. But you might consider that possibility.

Now that you've got the food into your stomach with a good hydrochloric acid supply, then it comes down into your small intestine and here, really, this is where the whole factory blows up. You have several factors in the small intestine. It is really significant. First of all your pancreas has dumped a lot of enzymes into there, and we assume that's right. Your liver has to dump a lot of digestive juices, a lot of bile, and so forth. From the factors the liver dumps into your intestinal tract, makes it alkaline. It gets bile and does the fat metabolism. If you don't have a good liver, why then you have a strike against you.

So now we need to balance, and get your liver working better. And this is not too bad a job, but anyhow we must consider this possibility. We must always have your liver working right. So you have a small intestine that really is a beautiful machine and it has millions of little finger-like projections out from the inside of the intestine, and these little finger-like projections give a mass surface of many miles of digestive capacity so that it

absorbs. Inside this little, villi finger-like, thing sticking out into the intestinal tract are the blood vessel's where the food is absorbed and goes into the main artery, goes into the liver, into the body to supply the body with food. We've eaten so much milk that these little finger-like projections into the intestinal tract have got mucus stacked about this deep in there. There's nothing, short of dynamite, that can get this mucus out of the way long enough for the food to get up here to these finger-like projection's. So all these finger-like projection's are just coated and filled with mucus. This is why we eat so much and we're so hungry all the time. You take a big heavy girl and she is starving to death. You look at her and say, "Why, does that big girl eat so much?" Sure she eats like a lot. Why? This finger down here is starving to death. It sends a message up to the brain, "Give me something to eat, my God, give me something to eat, for heaven's sake, I'm starving to death". After that turns on, this poor lady eats and eats and eats and it goes down into the intestinal tract, and what happens? Some of the water and a little bit of the sugar trickles into these villi (coated with mucus) that's working there. She's starved to death for minerals and proteins and vitamins. She lives on a little bit of sugar and a whole lot of water. She's just stuffed full of water and sugar.

Now you take a real skinny 'ol guy, and he is so skinny, he'd eat you out of house and home, and he's still skinny. There's no way on earth you can put weight on him. He's suffering from the same thing, he's got so much mucus attached in there. This mucus is selective. On some people, it only lets sugar go through, and on some people, only protein. On this guy, it only lets protein go through or maybe a few minerals, but mostly, just proteins. All he can assimilate is protein. He can't assimilate any of the vitamins and minerals and carbohydrates. He's starved to death. You say, "My God, he's got a tape worm. It's bad enough to have one kid to feed, but to have one kid with three tape worms is an impossible grocery bill."

But it coud be the mucus, because you've fed him milk all of his life, and cottage cheese. Now cottage cheese and milk is so good, such a good mucus builder that you can just kill yourself with it. And Metracal is anther one, and all these things that you're trying to reduce with. You eat more and more Metrecal, and this type of junk, and this wipes you out. You can't absorb any food. So that's OK, you just go around starving for the rest of your life. And then people expect you to function good at work. Your husband expects you to feel good all the time and you can't. It's impossible for you to starve to death and feel good. The boss expects you to perform, and you can't do it. The teacher expects you to perform at school, and you can't do it...because you're starved to death. Basically, we're just starved to death. There's great malnutrition in our nation, just unbelievable. It's from many causes, but this is one.

So let's assume that, in some miracle way, barring dynamite, we can get this mucus out of the intestinal tract. We can digest it off with enzymes. And finally get this upper intestinal tract cleaned out. Now, a lot of people say, "Well, I'm going to go home and take a lot of colonics and enemas." Well, they won't ever get up to your small intestines, so don't try that for this reason. Don't try to take enough enemas to clean out your small

intestinal tract, because you can't do it. But you can digest this off with enzyme's. And let's assume you've gotten that digested off. Now you've got a villi sticking out here that's just coated with food and now it's ready to absorb all this food. You've got a blood vessel inside that little villi just circulating blood. Then you've got two primary factors involved there that's keeping you from getting the food down here to this little cell at the end of your finger. One is, this blood vessel should be this big around, say, and it's about that big around. You just barely get anything through it. Most of this blood vessel is coated with white sugar. You've eaten white sugar all your life and your body can't utilize all that and it can't even store it all so it has to do something. It can't even throw it off as waste, you've put so much down from lemon meringue pie to chocolate eclairs. You've just jammed your body with so much white sugar it has to store it somewhere. So it store's it on the blood vessel and the blood vessel get smaller and smaller and smaller, mixed up with cholesterol and other junk that you eat. So you have a little tiny hole and your blood flow should be, maybe, a gallon through this vessel in an hour, and maybe you get a pint through there. And so that's a problem. The best way we've found to clean up this blood vessel is just plain simple "Terribly expensive", black strap molasses. If we could make it more expensive, some way, why people might utilize it more, but it's so cheap, black strap molasses is so cheap that they won't ever use it. This sugar can be cleaned out with this simple black strap molasses. Take a tablespoon in a cup of hot water, twice a day, or three times a day, twice a day is adequate. Now, you take grandma who's senile or grandpa, and you get them on black strap molasses a couple of times a day, or three times a day, and in about 6 month's they'll be sharper than you are and you'll have to hustle to keep up with them. If you don't live with them, just make the nursing home take care of that problem. Anyhow, they'll run circles around you. At the nursing home, you can let them have the black strap molasses. And so we get this blood vessel cleaned out. Now you've got a big vessel there that's got plenty of freedom, but the next factor involved, you just hate to drink water or anything. I guess it is kind of dangerous to drink water anymore.

http://www.whale.to/cancer/kelley.html

Parting quote:

"Cancer can be attacked directly by metabolic enzymes and then be assisted by the enzyme diet programme. The second greatest cancer breakthrough of the 20th century is the metabolic organic effect on malignant tumours of correcting ***the body fluid pH to a non-acidic pH 7.1 to 7.5****. A neutral pH 7.0 resists cancer formation.* ***An acid body fluid pH of 6.44 and below permits tumours to biochemically become malignant****. At pH 7.5 cancer may become inactive; at 8.5 tumours may disintegrate."—Dr Carson*

craig-oxley - September 13, 2008 04:56 PM (GMT)

Mucus Clearing Diet

Excerpt from NORTH AMERICAN DIET

http://www.freedomyou.com/nutrition_book/mucus.htm

Bug the body enough, and it's going to react. The cold virus is a great example of a body being bugged and, boy, do you know it. Sore throat, puffy eyes, and loads and loads of you know what!

Mucus is a sure sign of a body in a state of extreme agitation. The heavy, over-processed, dairy-rich makeup of the North American diet demands the human body to react as if it is fighting a viral invasion every day. In the morning we can feel its effect, foggy clogged head, puffy eyes and dulled senses. The answer, a large mug of strong coffee to kick-start the system so that we can face the rigors of the day. Most of us have forgotten what it is like to awaken, clear-minded and full of energy. Yet, within two weeks, of a changed diet, the transformation can be quite remarkable, jumping out of bed in celebration of the new day; a throwback to a younger, healthier you.

The human body is an incredibly, complex system. It transfers vital fluids through miles of tubes and membrane highways. The circulatory system is 60,000 miles long. You would need a truck load of road maps to travel a small portion of your body. The kidneys, alone, contain 500 miles of internal plumbing. Each time you breathe, 300 billion—yes billion—capillaries in the lungs await to absorb life-giving oxygen. However, mucus can slow down or stop the important movements along the many pathways of the body, creating a feeding ground for viruses and pathogens (disease-producing bacteria).

Let's look at an antibody soap opera. Antibody X must seek and demolish Microbe Z, a bacterial bad guy, responsible for an irritating cold. The body is tracking his position, Agent X has been assigned to a search-and-destroy mission to intercept Microbe Z

before he does greater damage to the host. On his way through the lymph, he finds himself in a traffic jam, an underpass full of mucus. In this vulnerable position, Agent X is a sitting duck. From above, he is ambushed by two million bacterial bad guys who have been feasting on the mucus for days. The last thought in Agent X's mind before he dies is, in spite of his perfect conditioning and training, nothing had prepared him to deal with the obstruction of thick, sticky mucus. Finally, after the host had suffered for days with a raw throat, coughing, sneezing, reinforcements were able to destroy the bacterial bad guys.

Not all mucus is bad. Healthy mucus is a clear, slippery, lubricating secretion, used to protect mucus membranes along the digestive, respiratory, urinary and reproductive tracts. Unhealthy mucus is cloudy, thick, and sticky. Mucus is secreted to stop irritants, pollutants, or carcinogenic compounds, created by putrefying, undigested food residues. It's like a blanket of protection. Certain foods such as milk and bread cause an increase of mucus secretions. These foods have large protein molecules (casein and gluten) which are difficult to digest and are more prone to putrefaction, and may be toxic or an irritant to the body. For many, bread and milk cause sinus congestion.

Mucoid is a mixture of large gelatinous particles, which has a sticky or jelly-like consistency. The word mucoid encompasses the terms mucin, colloid, mucoproteins and glycoproteins. Mucoid is caused by many toxins, pollutants, food additives and allergies. Mucoid can be present in any body tissue but is most commonly associated with the respiratory system, gastrointestinal tract, lymphatic system, uterus, vagina urinary system and the joints. Cartilage in a joint contains mucus membrane cells which secrete a clear slippery mucus to keep joints lubricated. When mucoid-forming substances are present, toxic mucoid builds up deposits within the joint.

Mucoid within the body tissues, drains into the lymph which filters waste from the intercellular fluid. The blood absorbs 90% of this cellular waste fluid and the lymph absorbs the other 10% composed of the larger waste particles. The lymph glands contain one-way valves, lined with muscle tissues that behave like pumps. If an overload of mucoid from the cells accumulates in the lymph and is not cleansed from the system, it can become stagnant and prone to infection.

Dr. Robert Gray, a nutritionist, determined, through intensive testing that certain foods are mucus-forming and others are mucus cleansing. The foods shown to cause mucus are dairy products, white flour, meat, eggs, potatoes, beans, rice, grains, fish, peanuts and fats.

MAKING CELL FOOD FROM CELLS

The relationship between mucus and diet is not a new theory. In 1912, Dr. Arnold Ehret released a book called, The Mucusless Diet and Healing System. He discusses in great detail, the mucus-forming effect of various foods. Ehret theorized that all disease is caused by a clogging of the tube and membrane structures within the body due to a

build-up of restrictive mucus.

The process of digestion is to liquefy food small enough to be infused by the absorptive cells on the villus in the intestine. For any nutrient to pass through the membrane of a cell, it must be less than 44,000,000,000 th. of an ounce. The rest of the substance not absorbed remains within the colon until elimination.

Foods that form mucus have a glue-like bond, tightly holding their molecules together. In milk, it is casein, in wheat, rye, oats and barley, the glue-like substance is gluten. The dictionary defines gluten as a tough, sticky mixture of plant proteins, obtained by washing out the starch from wheat or other cereal flour and used as an adhesive and thickener. These glue-like bonds require strong stomach acids for digestion.

Lack of chewing and poor food combinations make it impossible for the stomach acids to properly dissolve the bond between these molecules. After digestion, many food particles are still too large to be used by the body. In a short time, the oversized, partly-digested food particles start to putrefy and are coated with mucus to prevent further putrefaction while still in the intestine.

The intestinal wall is contains over four million microvillus. Their job is the absorption of nutrients. Due to the vast number of microvilli the total effective area for absorption, within the colon is more than 2,200 square feet. On the surface of these microvillus is mucus-secreting cells. Mucus is secreted by these cells to protect the intestinal wall and to impede the absorption of harmful substances through the colon.

Eighty percent of all absorption takes place in the small intestine. Only 20 percent is absorbed by the stomach and large intestine. The stomach performs very little absorption because the gastric contents are so acidic. The entire gastric epithelium must be devoted to mucus production. Without mucus to protect the stomach, ulcers would develop in a few hours. Within the duodenum (small intestine) the submucosal glands produce copious quantities of mucus. This mucus contains buffers that elevate the pH balance. The more acid forming the food, the greater the amount of mucus secreted.

As the mucus and food particle solution pass through the intestines, moisture is removed. As more moisture is removed, the mucus becomes sticky and gluey. In passing, it leaves a coating on the intestinal wall. Layer after layer of gluey feces build up over the years. It forms into a tough, rubbery, black substance found in lumps in the corners of the intestinal tract. X-ray studies show that the accumulation of hardened feces badly deforms the intestines. Autopsies have shown that an average male has seven to nine pounds of this hardened feces within his intestine. This coating causes constipation, a reduction in the absorption of nutrients through the intestinal wall and is a breeding ground for parasites.

Imagine a drain, clogged with human hair, dust, old soap and pieces of decaying food, all forming a sticky mass of rotting waste that cannot be removed. The medical names labeled for these diseases are diverticula, colitis, stricture, prolapsus, hemorrhoids, worms, yeast infection, chronic constipation, colon cancer and appendicitis.

Colonics are given by naturopaths or colon therapists using a device to circulate water through the intestine while your stomach is being massaged. Numerous clients have been helped through this therapy. Removal of clogged waste allows the human machine to work again. But, unless there is dietary change, the symptoms will simply return.

Without the natural, sponge-like properties of fruits and vegetables, intestinal diseases will continue to abound, especially amongst the elderly.

Grapes and citrus fruits are some of the greatest mucus-cleansers. They help the body to remove mucus and toxins, supplying vital nutrients in the correct balance for rejuvenation and healing.

The most powerful method of removing mucus from the intestines and mucoid from the organs and lymph glands is the combined cleansing effect of a non-mucus/mucoid-forming diet and fasting.

Factors Which Increase Mucus

LARGE MEALS. Our body's need for food is often much less than what we eat. Any foods eaten beyond our body's need is a burden. Some of this excess food will be converted into fat. Yet the body can create only so much fat per day. If you eat above digestive capacity, the excess must be eliminated. During elimination, the lymph glands are overloaded and mucoid forms in response to putrefaction.

EATING WITHOUT HUNGER. When food is eaten before complete digestion of the previous meal, partially-digested food will be released into the colon thus causing mucus.

GULPING FOOD. Improper chewing overworks the digestive system. If the food particles are too big to be assimilated, they must be eliminated through the colon. On the way, these particles putrefy, thus causing mucus.

IMPROPER COMBINATIONS. A typical meal contains starch, protein, sugars and fats, each requiring a completely, different digestive secretion. Complex food mixtures create mucus because the food molecules cannot be dissolved efficiently.

THE MEDICAL OP---PLANET EARTH

http://www.nomorefakenews.com/archives/arc...ew.php?key=2331

OCTOBER 20, 2005. This op can be looked at in a number of ways from a number of levels:

the profit motive;

the desire of doctors and researchers to advance their status;

the desire of patients to be controlled and told what to do;

the desire of people to be labeled with a condition as a way of explaining what they perceive is their unsolved predicament;

the confirmation of a belief system that ascribes a high place to the concept of illness;

the medical desire to control others;

a political arm of a general op to control and thin out populations;

a rubric under which human rights and freedoms can be curtailed as part of declared medical emergencies or as a thread in the lattice of "we want to protect you";

a way of forwarding a parental State;

transnational corporate expansion;

a symbolic method for proving humanitarian concerns.

Note that all these levels and vectors lie outside the natural hope of giving and receiving

healing.

I want to mention briefly the overall medical op as a doorway into the future.

For many, the psychiatric revolution of the 20th century replaced religion as a path to salvation. With the onset of chemical treatment as the preferred choice (as opposed to talk therapy), it was envisioned that the brain itself would be experimented on to tease out the ways of creating happiness and ecstasy---or outright submission to higher authority.

Actually, this experiment always ends up with submission---because chemical dependency is a condition in which the hoped-for state of mind is controlled by dosage and substance.

Therefore, the person ingesting the chemical is on the string.

See, for example, the use of Soma in Aldous Huxley's novel, Brave New World. Inevitable moments of confusion and fear and sadness in the great utopia are dealt with by a visit to the government pharmacy branch office, where the drug is dispensed.

Of course, back in the real world, much education (operant conditioning) is necessary before the general populace believes that a drug will produce steady-state happiness.

For this we have the entire underground street-drug "promotion," as well as the above ground medical propaganda---"we're getting there, we just need more money for research."

The political premise of drug-into-happiness is: YOU CAN BE HAPPY REGARDLESS OF EXTERNAL CIRCUMSTANCES.

This translates into: you may be living in conditions of severe injustice and slavery, but the drug will make you rise above all that.

You might say this is the wet dream of the slavemaster. To have a population brought into line in this fashion.

Wave One of the new psychiatric revolution was the introduction of all those drugs which could loosely be called tranquilizers.

Wave Two was the onset of the antidepressants, particularly the class of substances called SSRIs, beginning with Prozac.

To be somewhat ruthless about it, the entire revolution could have been short-circuited by merely making all the tranquilizers, antidepressants, and street drugs completely legal.

No prescription necessary. Just walk into a store and buy anything from heroin and Thorazine to Paxil.

After a generation or two, people would have seen that repeated ingestion brings with it major debilitation.

I liken the effect, at best, to that noticed by many long-term pot smokers. As the years roll by, more substance is needed to simply stay even. And there is a dulling outcome. The mind does not work as quickly as it once did. The former sheen of perception, in which the world appears to be a joyous place, recedes.

At worst, I would point to what happens to many, many inmates of psych wards. They incur grave brain damage.

However, if you keep people going with the carrot and the stick, they can be maintained in a hopeful state: many of the drugs are only permitted with a doctor's script; you can be arrested for possession of street drugs; new research looks very promising.

This is the classic squeeze play. Give a little, hold back a little, paint a rosy picture of the future.

Unfortunately, most of planet Earth is unwilling to go through the damage and discover the truth that complete freedom of choice will bring. People want to be told what to do.

On this basis, a Brave New World can be ushered in, with a limp, as it were.

For every Glaxo-Paxil scandal (undisclosed severe addictive properties of the drug, suicides), we get a thousand press releases printed as articles by the press. These releases pump up the latest breakthrough discoveries in the area of treating depression and other feelings.

The old whipsaw: yes it could be dangerous, but we are monitoring the situation, and we have researchers working on better chemicals---so go ahead and stick your toe in the water.

You might incur A or B or C or D or E, all dangerous adverse effects, so ask your doctor if XYZ is right for you.

Give a little, hold back a little.

With complete legalization of, and easy access to, all drugs, the devastation might slightly outflank what we have now, but in the long run people would discover for themselves that the paradise to be attained through chemistry is an illusion.

Insights? Changes in behavior? Better perception of reality? You might get there now and then through some drug taking, but you will also get to the point where you, on your own hook, view the limits and experience the downside.

And if you disagree with this assessment, you're free to go full steam ahead, for as long as you want to.

My point is, the "masters" want to move us into a Brave New World, and they know that the road to the goal is paved with the kinds of restrictions and lies that only whet the appetite.

Medical boards, the FDA, cops, prescription pads, so-called addiction clinics, jails groaning with drug offenders, the tightly built street-drug cartels under the throne of banks and financiers, the whole medical apparatus itself---all these exist to do more than make profit. They are the alternating yes and no of a game that (like a sexual tease) makes people want to move forward under the chemical banner into a new garden of Eden. The dream. The great dream.

A dream to be controlled by Them, just as the gateway to heaven itself is controlled, for its registered aspirants, by one professional priesthood or another.

Slaves ask, Am I permitted? Will I get away with it? Will I be given the diagnosis that leads to the prescription so I can get the drug?

In other words, Brave New World is possible only when the People are juvenile, passive, expectant, resentful, cunning, and stupid.

If the drugs are all made legal, after some horrific damage (which society is already experiencing under the current system), people will wake up and say: WE TOOK THE DRUGS ON OUR OWN; WE THOUGHT THEY WERE GREAT FOR A WHILE, THEN WE REALIZED THEY HAD HORRIBLE EFFECTS; THEN WE STOPPED. IT WAS ALL OUR OWN DOING.

And if you are one of those people who decide that pot or Prozac is just what you want forever, you go ahead and imbibe until the cows come home. It's your decision.

It's exactly when you strip away the illusion of CERTAIN KNOWLEDGE RESIDING IN THE MINDS OF THE APPOINTED AUTHORITIES that you open the door. You open the door to the possibility of the slaves becoming free. Free from what? The drugs? Free from having to believe in the infallibility of the authorities.

Glaxo. Pfizer. Merck. Lilly. I have a deal for you. No more lawsuits aimed at collecting millions and billions from you for unleashing wave after wave of toxic drugs on the population. Those suits are OVER. In return, we make ALL your drugs legal for adults. Any adult can walk into a shop and buy your pills. No doctor. No prescription. Just cash.

No Liability for Beetles in Baby Food

By JACK BOUBOUSHIAN ShareThis
http://www.courthousenews.com/2011/07/19/38258.htm

CHICAGO (CN) - Baby formula laced with beetles and larvae does not necessarily violate its manufacturer's promises of wholesomeness and quality, a federal judge ruled, in dismissing without prejudice a class action involving Abbot Laboratories' Similac.
Lead plaintiff Chalonda Jasper, an Indiana mother, may have been grossed out by the beetle parts, but she may have no legal recourse against Abbott, even though she relied upon Abbot's ad slogans, which included, "When it comes to the science of nutrition, Similac stands apart."
Abbott recalled more than 5 million containers of Similac in September 2010, less than a week after Jasper had bought it and began feeding it to her son.
"Abbott announced that it was recalling more than five million containers of formula because the product may have been contaminated with beetles or beetle larvae," U.S. District Judge Virginia Kendall wrote, citing Jasper's complaint.
Shortly afterward, the FDA "found that infants who ingested the formula experienced gastrointestinal discomfort and temporary refusal to eat," the judge wrote.
Jasper filed a class action seeking for "extreme mental anguish and pain and suffering."
In a claim of misrepresentation, Jasper said that Abbott "misrepresented its product to consumers by marketing Similac infant formula as a healthy product while omitting information about the beetle infestation at its Sturgis [Michigan] facility."
Jasper said the Sturgis plant had "a history of beetle infestation," about which Abbott had received numerous customer complaints.
But Judge Kendall found that Jasper's inability to prove a specific injury or show that beetle parts reduced Similac's nutritional value doomed her complaint.
"Jasper does not allege a physical injury and her allegations of emotional distress are

insufficient. Jasper does not allege that she purchased a defective container of Similac, merely that the Similac that she purchased was subject to a recall," Kendall wrote.
Indiana law allows damages for a purely emotional injury provided that one show that the conduct in question caused a "direct impact" on her well-being.
But Judge Kendall said the complaint "does not allege that she fed her child any beetle larvae and makes no allegations that she or her son experienced a direct physical impact."
Kendall also was unable to uncover "any Indiana precedent allowing a negligent misrepresentation claim to proceed against a manufacturer of consumer goods based on the manufacturer's advertisements to the public."
Abbott cannot be held liable for, on one hand, insisting that "you can trust Similac Sensitive to provide a strong start for your baby's developing digestive system," and on the other, being less than judicious with complaints of beetle infestation at its factories.
Such complaints do not provide the type of "constructive notice" required to give rise to a claim under Indiana's Deceptive Consumer Sales Act. "The notice must come from the consumer bringing the action," Kendall wrote.
"Jasper's complaint includes no marketing statements from Abbott that claim Similac is safe. Instead, Abbott's advertisements only refer to the nutritional value and nutrient blend of Similac."
The same logic undermined Jasper's claim of breach of warranty.
"Jasper fails to adequately allege that the Similac that she purchased lacked the benefits that Abbott advertised or that she subsequently failed to receive the benefit of the bargain."
To sum it up: "Jasper does not allege that a formula containing beetles or beetle larvae fails to contain a balanced blend of nutrients," Kendall wrote.
She granted Abbott's motion to dismiss, without prejudice.

TheUnhivedMind - July 21, 2011 03:41 AM (GMT)

NYT Launches Attack on Supplement-Protecting Senator—Just as DSHEA Comes under Renewed Threat

July 19, 2011
http://www.anh-usa.org/nyt-attack-as-dshea-under-threat/

(Note: Please see the two related Action Alerts—one on the FDA's new NDI guidance, the other on the Durbin bill—in the last paragraph of this article.)

The New York Times made nasty insinuations about both the supplement industry and Sen. Hatch, one of the two authors of DSHEA—and got the facts completely wrong about ANH-USA.

The New York Times recently ran a piece about Sen. Orrin Hatch's support for the supplement industry. The article was full of innuendo about Sen. Hatch being in bed with supplement companies, in effect helping them make exaggerated claims to push their products. ANH got a similar treatment. The paper calls us "a trade group" (that is, a front for supplement companies) that helped defeat the McCain bill. This is similar to the treatment we received in the Citizens for Responsibility and Ethics in Washington (CREW) report which also identified us as a trade group.

The Alliance for Natural Health is not a trade group—we are a consumer-run and consumer-serving advocacy organization. Contrary to what the Times piece suggested, it was our activists—consumers who themselves buy nutritional supplements—who helped defeat the McCain bill. Access to natural health products is a consumer choice, and the pressure to protect them from drug-related interests isn't coming from industry, lobbyists, or Washington "politics" as the Times (and the CREW report before it) claimed, but from consumers like you.

The article also repeats the familiar tactic of conflating a few bad actors with the entire nutritional supplement industry. The reporter was only able to point to a few companies that have made exaggerated health claims—yet made these anecdotes representative of the entire industry.

The article assumes that further regulation is needed. But the offenses they repeatedly point to—exaggerated health and disease claims, including steroids in supplements, etc.—are already illegal. As we have noted many times before, supplements are already subject to extensive regulation. In order to keep consumers safe, the FDA merely has to enforce the current regulations—not add new ones!

For example, Xango juice company is quoted as having thanked Sen. Hatch for "helping their exotic fruit juice business 'operate without excessive intrusion' from Washington," and the piece reports that some supplement companies are making donations to Hatch's campaign. This insinuates that Hatch was helping companies engage in questionable business practices by stepping in and opposing regulation. But as noted, exaggerated health claims are already illegal, and Sen. Hatch has never supported any illegal actions from this industry, legislatively or otherwise. The implication that, but for Hatch, companies would not be able to make exaggerated health claims, is ridiculous.

The piece further implies that Hatch has hindered regulators from preventing dangerous products from being put on the market, including supplements that are illegally spiked with steroids or other unapproved drugs. This is also ridiculous. The senator has never tried to prevent enforcement against illegal products. In fact, Sen. Hatch co-authored, along with Sen. Harkin, the DSHEA Full Implementation and Enforcement Act, a bill designed to bolster enforcement against the few supplement companies engaged in illegal behavior.

The Times article adopts a familiar paternalistic tone—as in, "We know what's best for you!"—particularly in referring to natural health products as "niche industries or parochial programs." In fact, over 50% of Americans use supplements, so supplements are hardly a "niche" interest. Is it any surprise that these citizens are making their voices heard?

The article presents the McCain bill as a law to protect consumers when in reality it would have greatly restricted consumer access to natural health products. One reason we fought so hard against the McCain bill was that it would have given the FDA full discretion and power to compile a list of supplements that would be allowed to remain on the market and ban the rest. This would have been completely arbitrary—just whatever the FDA decided to list, and we all know that the FDA is much too close to the drug industry and much too hostile to supplements.

We've seen what has happened in the European Union, with their adoption of strict new guidelines on supplement accesses, and we do not want to go down that path. The European Food Safety Authority has sharply reduced the list of available supplements and is in process of lowering the potencies allowed, e.g., less beta carotene than can be found in half of a large carrot.

There are numerous other problems in the New York Times article:

It suggests that McCain backed off his own bill because he was concerned about the damage to his campaign from a highly motivated industry. But industry didn't "rally consumers"—opposition came from the groundswell of self-motivated grassroots opposition opposing the bill, with more than 200,000 messages from our activists alone.

It implicitly criticizes current legislation for not requiring supplements to be subject to the FDA drug approval process. But as regular Pulse readers know, this completely ignores the fact that manufacturers of natural, non-patentable substances cannot afford the billion-dollar costs associated with FDA drug approval, because without patent protection they would never make back their money.

The article claims, "Just in the last two years, 2,292 serious illnesses, including 33 that were fatal, were reported by consumers of supposedly harmless nutritional supplements, federal records show." We contacted the New York Times and asked where this data came from, since we have not seen it elsewhere. They told us that an unnamed source within the FDA had given them these figures by phone. No such figures are available on the FDA website. Moreover, in its reporting of adverse events, the FDA does not presently break out supplements from drugs—perhaps because the agency does not want to highlight that almost all the adverse events are coming from pharmaceuticals that have gone through the FDA drug approval process.

A federal agency that does publish annual statistics on supplement adverse events and deaths is the national Poison Control Center. Its 2009 Annual Report, which is the latest available data, records only a single death concurrent with supplement use—an "unknown dietary supplement or homeopathic agent"—with no deaths reported before 2009. (By way of comparison, the same report attributed 122 deaths to acetaminophen—an over-the-counter pain reliever sold under the brand name Tylenol.)

It is notable that this one death was concurrent with an "unknown dietary supplement or homeopathic agent." So there was an alleged supplement or homeopathic agent, but they don't know what it was! Furthermore, for anyone who understands homeopathy,

the notion that a homeopathic agent caused death is ludicrous. It is also completely inconsistent with the conventional medical view that homeopathy is just sugar pills that do nothing other than create a placebo effect. Conventional medicine can't have it both ways: homeopathy can't be both a killer and a harmless placebo.

It states that under legislation Hatch "pushed through Congress," nutritional supplement companies could introduce products without FDA approval, and make general health claims without proving their effectiveness or safety." But it is already illegal to make disease claims under DSHEA, and there are strict protocols for other claims.

The only doctor the article cites is Steven Novella. He is president and co-founder of the New England Skeptical Society—a group which, like its ally Quackwatch, is violently opposed to all Complimentary and Alternative Medicine—hardly what you would call a balanced and unbiased source. He certainly is not representative of the high number of physicians who both recommend and take supplements themselves.

We find it interesting that less than two weeks before the Durbin bill was introduced and the FDA simultaneously released its New Dietary Ingredient (i.e., supplement) guidelines—both of them frontal attacks on DSHEA—we get this article in the New York Times defaming Sen. Hatch, one of the principal authors of DSHEA and one of few people still able to tell everyone what Congress's original intent was when passing DSHEA. The irony is that Sen. Hatch is hardly someone who is anti-FDA—in fact, he has authored legislation to give the FDA more funding!

No, this carefully orchestrated campaign is nothing less than an attempt to crush DSHEA and outlaw the vast majority of nutritional supplements—which will ensure a total monopoly for the pharmaceutical industry.

To that end, we want to reiterate both our Action Alert on the Durbin bill and our Action Alert on the FDA's NDI guidance. If you have not already done so, please send your messages to Congress on both these matters immediately. Your access to natural supplements is at risk.

Third of Citizens Obese in 12 States, Agency Says

By Elizabeth Lopatto - Jul 19, 2011 5:09 PM GMT+0100
http://www.bloomberg.com/news/2011-07-19/t...gency-says.html

(Corrects Thomas Frieden's name in the third, fourth paragraphs.)

At least 30 percent of people in 12 states were obese in 2010, according to the U.S. Centers for Disease Control and Prevention.

No state reported that less than 20 percent of adults were obese, the Atlanta-based agency said in a statement today. That means no state met the national Healthy People 2010 goal to lower the prevalence to 15 percent.

The South had the highest rate of obesity, with 29.4 percent, and the West had the lowest, of 24.1 percent, the CDC report said. Medicare and Medicaid, the public health plans, each spend more than 20 percent of their budgets to treat illnesses related to obesity and smoking, avoidable health risks, according to the Trust for America's Health and the Robert Wood Johnson Foundation. Obesity is also a death risk, said the director of the CDC, Thomas Frieden, in today's report.

"Some of the leading causes of death are obesity-related - -heart disease, stroke, type 2 diabetes and certain types of cancer," Frieden said in the statement today. "We must continue our efforts to reverse this epidemic."

Obesity is defined as having a body mass index above 30. A six-foot-tall adult man weighing 221 pounds (100 kilograms) or more is considered obese, as is an adult woman standing five feet, six inches tall weighing 186 pounds or more, according to the U.S. National Institutes of Health. People with obesity are at higher risk for diabetes and

hypertension, according to the U.S. Centers for Disease Control and Prevention.

The states with 30 percent or more prevalence of obesity are Alabama, Arkansas, Kentucky, Louisiana, Michigan, Mississippi, Missouri, Oklahoma, South Carolina, Tennessee, Texas and West Virginia, according to the CDC report.

Today's data come from the Behavioral Risk Factor Surveillance System, a phone survey that collects information from about 400,000 people over the age of 18.

Title: Babies fed home-cooked food from birth are 'more l
Description: *likely to eat fruit and vegetables late*

TheUnhivedMind - July 19, 2011 05:45 PM (GMT)

Babies fed home-cooked food from birth are 'more likely to eat fruit and vegetables later in life'

By Daily Mail Reporter
Last updated at 3:09 PM on 19th July 2011
http://www.dailymail.co.uk/health/article-...423/Babies.html

Home cooked? Variations in taste and texture should expose an infant's palate to a wider range of experience, increasing the likelihood they will accept different foods

Babies fed home-cooked food are more likely to eat fruit and vegetables when they are older than those given meals from jars and packets, researchers say.

Infants weaned on home-made casseroles and puddings develop a taste for what is good for them by the age of seven.

Experts from De Montfort University in Leicester, and the universities of Bristol and Birmingham, analysed data from 7,866 mothers of children born in 1991 and 1992.

The results showed that youngsters who were frequently given home-cooked fruit or vegetables aged six months were more likely to be eating higher amounts of fruit and vegetables at the age of seven than those given home-cooked meals less often.

There was no positive effect on later eating habits for babies fed shop-bought meals.

Writing in the journal Public Health Nutrition, the researchers said: 'The findings support the concept that exposure to fruit and vegetables is important in the early weaning period.'

Dr Helen Coulthard, from De Montfort University, said mothers should be giving their infants a home-cooked fruit or vegetable every day.

She said: 'The range and type of foods that young children eat is becoming an increasing cause for concern.

'In particular, children do not seem to be eating the amounts of fruit and vegetables recommended for health.

'It is interesting that feeding babies ready-prepared fruit and vegetables at six months had no positive effect on later fruit and vegetable consumption.

'It may also be that mothers who use ready-prepared foods do not eat as much fruit and vegetables themselves or are more likely to rely on convenience foods.

'In addition fruit and vegetables from packets, jars and tins are likely to have a uniform taste and texture, whereas those cooked at home or eaten raw will vary according to the variety of the particular fruit or vegetable, whether it is in season and the cooking method.

'These variations in the taste and texture of fruit and vegetables should expose an infant's palate to a wider range of experience, increasing the likelihood they will accept a wider range of foods.'

TheUnhivedMind - July 18, 2011 01:21 AM (GMT)

Mozart died at 35 'because he didn't get enough sun'

Vitamin D deficiency led to early death, claim scientists

Last updated at 10:44 PM on 15th July 2011
http://www.dailymail.co.uk/news/article-20...-didnt-sun.html

If only Mozart had spent a little more time outdoors enjoying the sunshine – because then we might have had a few more masterpieces.

Scientists discovered the composer, who died at just 35, did not get enough sunlight.

He lived in Austria, which was darker than most of Europe, and would work through the night and sleep during the day.

This prevented his body from producing sufficient levels of vitamin D.

Mozart suffered illness throughout his life, including kidney disease, smallpox, typhoid fever, tonsillitis and strep throat.

Retired Nasa scientist Dr William Grant, believes that vitamin D deficiency was the underlying cause of his poor health and early death.

Dr Grant said: ‘Almost every disease has a vitamin D connection. If only Mozart had known about vitamin D and had access to supplements, he could have doubled his lifetime’s output of work.’

The ‘sunshine vitamin’ is essential for bone health and is produced when the skin is exposed to the ultraviolet B sunrays.

Vitamin D deficiency is linked to many medical conditions, and increases the risk of developing influenza, pneumonia, certain cancers, cardiovascular disease and musculoskeletal pain.

'The same goes for several other famous musicians who died at young ages.

'I think modern-day musicians are unaware of the fact that by staying indoors, they are not getting the adequate amount of vitamin D that they need.'

The study 'Medical Problems of Performing Artists' also suggests two other famous musicians died from lack of sunlight.

British cellist Jacqueline Mary du Pre died in 1987 aged 42 from multiple sclerosis, a disease linked to vitamin D deficiency.

Austrian composer Gustav Mahler died in 1911 from bacterial endocarditis, which is also caused by a lack of vitamin D.

Many have speculated over Mozart’s death. He was buried just three days after he died in 1791, and no autopsy was ever performed.

View Full Version: Diet is Key to Spiritual Advancement

Title: Diet is Key to Spiritual Advancement

TheUnhivedMind - July 18, 2011 01:05 AM (GMT)

Diet is Key to Spiritual Advancement

The corruption of the body in terms of food consumption is a big part of spiritual corruption

by Mike P
July 15, 2011
http://www.henrymakow.com/diet_care_of_bod...ecedes_sou.html

TAIWAN- Upon reviewing your pointed article, "How to Worship God", I felt there was a point of practical importance that you might want to append to that. Diet.

How can a man, or woman, or child (especially), who does not consume the necessary nutrition for the body be expected also to pay attention to the soul?

I have lived in Taiwan for some time. Several years ago, I thought I was dying. I had severe pain in my lungs daily, and each afternoon and evening I was overwhelmed by drowsiness and lethargy. Lines had appeared on my forehead. I suffered gastrointestinal enteritis three times, in six months.

I once heard a speaker state, "People tend to stay where they are, until the pain of where they are is estimated to be greater than the pain of change." I expect that that is generally true. In any case, I finally took it to heart, and I took control of my diet.

This action, has transformed my life. Constant close attention to what I eat, how I eat, and when I eat, has revitalized a body and mind. The lines have disappeared from my face. The pain and lethargy are gone. I look great and feel good. My exercise capability has tripled. I research what is good for me to consume, and I incorporate that into my diet. I am what I eat. That's a fact.

When I recommend nutritional caution to anyone here, it's perceived as elitism. People can't stand that I eat right, while they eat shit.

I have a wife. Bet your ass we eat right. I care about her health, because digestion is everything. It affects the mind, it affects the mood, it affects mental state, it affects the ability to think logically and clearly, it affects our relationship, and a right diet is worth the pain of change.

I'm a teacher. I daily suffer the sight of lazy, ignorant parents who bring their children to my school, with a cluster of McDonald's bags in their hands. If you guessed that their children are the low performers in my classes....

We expend much energy over the corruption of the soul. Corruption of the body is perhaps not exactly as critical, but it is primary; in fact, often, it is the corruption of the body, not just sexually, but in bare terms of food consumption, which makes spiritual corruption far easier to perform in the longer term.

Diet Recommendation:

Stay away from these "food" items and components, because even if you can't feel it, they are killing you:

gluten; refined sugar; preservatives (of any kind); other chemical food additives (of any kind); nutritionally unnecessary oils; processed soy products; processed meat; pork (do some research - stay away from it);
beef (same thing); canned fish and vegetables (mercury); any juices produced in a factory; carbohydrate-heavy foods such as bread and pasta.

To build a reliably healthy diet, follow these rules (allergy-prone individuals may have to double-check with a physician and a professional nutritionist):

1. Take in as broad of protein sources as possible, without consuming damaging protein sources. Fish, nuts of all kinds, dark or black chocolate, occasional chicken and chicken liver, cod liver and cod liver oil, black beans (and other beans), real butter (yes), fruits, and vegetables. Kelp is a fantastic source of protein and non-heme iron. Don't forget chicken eggs: you need that. If you include protein drinks, you're taking a risk on liver and kidney damage in the long run, so be careful.

2. Make your diet 75% completely fruit and vegetable. Get a blender. Wash everything thoroughly, and throw it all in there together. Figure out what you like, make blends, and sip from it all day. Focus on cooked broccoli and tomato (do some research), carrot, celery, apple, orange, lemon, blueberry, strawberry, cranberry, banana (but watch the potassium draw), and anything that has strong colors. Don't take off the fruit peels when you blend oranges and such, because you need the pectin in the peels. Don't like the

taste? Grow up. Get used to it. You'll learn to like it. Include cabbage and cauliflower in your cooked meals.

3. For carbohydrate intake, choose sweet potatoes or yams. They'll give you what you need, and the mineral nutrition is incredible. Cut bread out - it's useless. Of course athletes may need additional sources, such as high-quality wheat pasta.

4. Avoid most or all grains. If you insist on having some grains, go for purple or black rice. Unless you have unusual needs, grains in general are not necessary, and they may aggravate developmental nervous disorders.

5. Make the following items part of your daily intake. Please don't blither and act like a child, when I tell you this. I don't want to hear any complaints about "the taste" or "the difficulty". You're going to do it, or you're not. But you don't have to answer to me, so I'll shut up. Here are some of the things you should be consuming daily:

2-4 cloves of raw garlic; half an onion; two tablespoons of extra-virgin olive oil; one tablespoon of apple cider vinegar; one strongly-colored vegetable
one glass of red wine (or real grape juice); half a teaspoon of cinnamon, mixed in two tablespoons of unboiled honey; half a teaspoon of cayenne pepper (obviously, this can't be taken straight);

6. Drink green tea all day. ALL DAY. I CANNOT EMPHASIZE THIS POINT ENOUGH. Make it from actual leaves and not teabags, if you can. Drink it from when you get up, and until a reasonable time in the evening that won't interfere with your night's sleep. I recommend making your green tea water with softly boiled ginger (new or dried). This may provide a significant anti-bacterial boost to your immune system.

Don't drink it during meals, because it will block needed iron absorption, so wait an hour. Green tea is your best friend: it removes metals, blocks oxidation, and supports the brain.

7. Supplement your green tea intake with a lot of water. So what if you have to pee more often? You're getting the "other" stuff out, and that's what peeing is for. Try to appreciate what your body is doing for you.

This is my offering to you, and I wish you the best. Take care of yourself, and your loved ones.

Description: *killing pets*

TheUnhivedMind - July 16, 2011 04:05 AM (GMT)

Irradiated pet food endangering pets health, killing pets The Australian government in late May ordered an immediate stop to sterilizing cat food via irradiation after reviewing scientific studies pointing to food irradiation as the culprit behind illnesses characterized by ataxia or paralysis of the limbs, especially the hind limbs. Symptoms in the Australian cats first appeared three to six months after they were exposed to the dry food, Child said. Some had eaten the food for as few as three weeks; others for more than six months. The problem affected 90 cats in Australia, of which 30 died, mostly by euthanasia after they became paraplegic or tetraplegic, according to Dr. Georgina Child, a neurologist at the Small Animal Specialist Hospital and University of Sydney Teaching Hospital. The U.S. Food and Drug Administration (FDA) also allows animal feed, including pet food and treats, to be irradiated up to 50 kGy.

Title: Teenagers who eat with their parents are up to 35%
Description: *less likely to have eating disorders*

TheUnhivedMind - July 15, 2011 10:11 PM (GMT)

Teenagers who eat with their parents are up to 35% less likely to have eating disorders

By Fiona Macrae
Last updated at 12:00 PM on 14th July 2011
http://www.dailymail.co.uk/health/article-...-disorders.html

Teenagers who switch off the TV and sit down to family meals are less likely to suffer eating disorders.

A study has credited eating together with lower rates of bulimia and anorexia. Meals are also less likely to be skipped, and adolescents used to eating round the table are less likely to take up smoking to lose weight.

Researcher Barbara Fiese said: ‘The common belief is that teens don’t want to be around their parents very much, and that teens are just too busy for regular meals with the family.

‘Parents may not be able to get their families together around the table seven days a week, but if they can schedule three family meals a week, they will safeguard their teens’ health in significant ways.

Professor Fiese spoke out after reviewing 17 studies on eating patterns and nutrition involving almost 200,000 children and teenagers.

She found that teens who eat at least five meals a week with their families are 35 per cent less likely to be ‘disordered eaters’.

The definition of disordered eating involves bingeing followed by vomiting - a tack

favoured by those suffering bulimia - taking diet pills or laxatives, skipping meals, eating very little and smoking to keep a lid on weight.

Even three family meals a week helped, with youngsters 12 per cent less likely to be overweight than those who ate with their families less often.

They were also 24 per cent more likely to eat healthy foods and have healthy eating habits than those who didn't share three meals with their families, the journal Pediatrics reports.

The University of Illinois professor said that families who eat together are likely to be more connected, making conversations about bad diet and dangerous eating habits less awkward.

She said: 'For children and adolescents with disordered eating, mealtime provides a setting in which parents can recognise early signs and take steps to prevent detrimental patterns from turning into full-blowing eating disorders.

Teens can also use family meals as a time to get their thoughts across.

Professor Fiese said: 'Family meals give them a place where they can go regularly to check in with their parents and express themselves freely.

'If family meals are not a forced activity, if parents don't totally control the conversation, and if teens can contribute to family interaction and feel like they're benefiting from it, older kids are likely to welcome participating.'

Previous American research found children who miss out on family meals are much more likely to struggle at school, drink and take drugs.

For those who aren't sure what to talk about, Professor Fiese advises against quizzing youngsters about their day at school.

Better ice-breakers include 'If you won a million dollars, what would you do with it and why?'

View Full Version: Do tea, coffee drinkers have lower risk of MRSA

Title: Do tea, coffee drinkers have lower risk of MRSA
Description: *superbug?*

TheUnhivedMind - July 15, 2011 05:18 PM (GMT)

Do tea, coffee drinkers have lower risk of MRSA superbug?

NEW YORK | Thu Jul 14, 2011 1:08pm EDT
http://www.reuters.com/article/2011/07/14/...E76D0GG20110714

(Reuters Life!) - People who regularly drink tea or coffee may be less likely to be carriers of the "superbug" MRSA, according to a U.S. study.

Out of more than 5,500 Americans who took part in a government study published in the Annals of Family Medicine, those who drank hot tea or coffee were about half as likely as non-drinkers to harbor methicillin-resistant Staphylococcus aureus (MRSA) in their nostrils.

But exactly what it means is still unclear.

"Hot tea and coffee have been found to have antimicrobial properties," wrote lead researcher Eric Matheson, of the University of South Carolina, Charleston.

"Consumption of hot tea or coffee is associated with a lower likelihood of MRSA nasal carriage."

In general, about 1 percent of the U.S. population carries MRSA in the nose or on the skin, but does not get sick.

The idea for the study came from the fact that, in both the lab dish and in humans, topically applied or inhaled tea extracts have shown some anti-MRSA activity, Matheson said.

Less research has been done on coffee compounds, but there is some evidence of antibacterial powers there as well.

Matheson's team found that, indeed, tea and coffee drinkers were less likely to carry MRSA.

Overall, 1.4 percent of the study group harbored the bacteria in their noses. But those odds were about 50 percent lower among people who said they drank hot tea or coffee, versus non-drinkers.

The big caveat, though, is that the link does not prove that tea or coffee are the reason for the lower risk, Matheson said.

The study shows an association between the two, "but you never can conclude causation from an association. I can't tell you that this finding isn't just a coincidence," he added.

The researchers tried to account for several other factors, such as age, income or self-rated health, but the beverages were still linked to lower odds of being a MRSA carrier.

"Our findings raise the possibility of a promising new method to decrease MRSA nasal carriage that is safe, inexpensive, and easily accessible," Matheson wrote.

One issue is that even if coffee and tea drinkers do have a lower risk of carrying MRSA, whether that makes them less likely to actually fall ill is unknown. Matheson said there is also still debate about whether MRSA carriers are at increased risk of developing an active infection.

For now, Matheson stops short of recommending that people start drinking coffee or tea in the hopes of fending off MRSA.

"Based on one association study, that would probably be too much," he said. SOURCE: bit.ly/qA66m7

TheUnhivedMind - July 12, 2011 11:05 PM (GMT)

Science with real bite: Full set of teeth grown in the lab

By Fiona Macrae
Last updated at 11:44 PM on 12th July 2011
http://www.dailymail.co.uk/sciencetech/art...-grown-lab.html

Scientists have grown fully formed teeth from stem cells.

The artificial teeth looked like the real thing, were sensitive to pain and could chew food.

The breakthrough was made on mice but could pave the way for those who lose teeth to decay or injury being able to ‘grow’ replacements.

Cutting edge: A bioengineered tooth, bottom right, successfully transplanted into the

jaw of a mouse

The researchers harnessed the power of stem cells – ‘master cells’ which have the potential to be used to grow any part of the body – to generate teeth.

Two types of stem cell which between them contain all the instructions for making teeth were mixed together and grown in the lab in a mixture of chemicals and vitamins that started their transformation.

After five days, they had formed a tiny ‘tooth bud’. The fledgling tooth was then placed in a tailor-made plastic box deep inside a mouse’s body, where over the next 60 days it grew to form a full tooth.

While this might seem bizarre, putting it inside the body ensured it had access to the fluids and chemical signals it needed to develop further.

When fully grown, it was taken out of the box and transplanted deep into the jawbone of a mouse that had had a tooth removed.

Six weeks later, it had fused with the jawbone, the journal PLoS ONE reports. The tooth had all the components of normal teeth, including enamel, crown and root, and connective fibres to fix it to bone.

Glowing report: The tooth bud, marked with fluorescent dye, shortly after transplantation

The researchers, from Tokyo University of Science, have previously transplanted tooth buds into mice and watched and waited for them to break through the gum.

But given how slowly human teeth grow, they think transplanting fully-formed teeth is much more practical.

Human teeth bioengineered in this way could provide a more natural-looking alternative to false teeth and synthetic implants.

A tooth that matches the real thing would also have psychological benefits for patients.

'The bioengineered teeth were fully functional ... there was no trouble biting and eating food after transplantation,' wrote Masamitsu Oshima, assistant professor at the Research Institute for Science and Technology, Tokyo University of Science.

The researchers hope this is a step towards the development of new human organs grown from a patient's own cells.

'At present, researchers worldwide do not have the method to culture three-dimensional organs in vitro (outside the body),' Professor Takashi Tsuji, who led the research, said.

'It is important to develop technologies for the culture of the bioengineered organ ... for the realization of future organ replacement regenerative therapy.'

Wise precaution: Brushing your own teeth is still a good idea until replacements can be grown

Likely to cost around £2,000 each – the same as the implants used at the moment – the stem cell teeth may also produce a more natural 'bite'.

However, the research is still at an early stage and researchers say it will be at least a decade before people can 'grow their own teeth'.

Hurdles to be overcome include finding a suitable source of stem cells for use in the human mouth.

Damien Walmsley, scientific advisor to the British Dental Association, warned the bioengineering was still a long way from being something that will directly benefit patients.

'For the foreseeable future, it is important patients brush twice a day with fluoride toothpaste, restrict their intake of sugary food and drinks and visit their dentist regularly,' he said.

TheUnhivedMind - July 12, 2011 06:27 PM (GMT)

Sex Parasite Is Most Common in Women Older Than 40, Study Finds

By Elizabeth Lopatto - Jul 12, 2011 12:00 PM GMT+0100
http://www.bloomberg.com/news/2011-07-12/s...tudy-finds.html

A sex disease that's more prevalent than gonorrhea and chlamydia, and less well-known, is suffered by 13 percent of women aged 50 and older, a study found.

The sexually transmitted parasite Trichomonas vaginalis causes urogenital infection, and can raise susceptibility to HIV. A study, reported at the International Society for STD Research in Quebec City, found the infection is twice as prevalent in those over 40 than in younger women because it isn't adequately screened for. Women in their 40s had an 11 percent infection rate, according to the data.

Most STDs are more common in young people, said the study's senior author, Charlotte Gaydos, a professor at Johns Hopkins University School of Medicine. Instances of syphilis, gonorrhea and chlamydia must be reported by doctors to state and federal health officials. There's no mandate to do that for Trichomonas even though an estimated 7.4 million new cases occur every year.

"It's not a reportable disease, although it's more prevalent than chlamydia and gonorrhea combined," Gaydos said in a telephone interview. "Maybe we should make this reportable and get good data."

The study, of 7,593 U.S. women aged 18 to 89 in 28 states, showed an 8.3 percent overall infection rate among women. Testing is needed because most infected people show no symptoms, according to the study.

In men, the parasite is usually asymptomatic, according the U.S. Centers for Disease

Control and Prevention in Atlanta. In women, infection can also cause pelvic inflammatory disease, vaginal discharge and low birth weight babies.
Single-Cell Protozoan

For a long time it was difficult to test for Trichomonas, because doctors had to grow the parasite in culture or see it in a sample. The organism, a single-cell protozoan, doesn't survive well outside the body, so those tests were inaccurate about half the time, Gaydos said.

Gen-Probe Inc. (GPRO) of San Diego manufactures a test for the disease now, she said. She was involved in the clinical trials for the test's regulatory approval. The test was approved April 20 by the U.S. Food and Drug Administration.

Gen-Probe provided tests but did not fund the study, Gaydos said.

View Full Version: FDA unleashes end game scheme to outlaw virtually

Title: FDA unleashes end game scheme to outlaw virtually
Description: *all dietary supplements formulated after*

TheUnhivedMind - July 7, 2011 12:11 AM (GMT)

FDA unleashes end game scheme to outlaw virtually all dietary supplements formulated after 1994

by Mike Adams, the Health Ranger
Wednesday, 06 July 2011 06:16 | | |
http://www.domasjefferson.com/news/fda-unl...ated-after-1994

(NaturalNews) In the wake of hundreds of dietary supplements recently being outlawed across the EU, the U.S. Food and Drug Administration has quietly unleashed a regulatory scheme that, if fully implemented, couldban virtually all dietary supplements in the USA that were formulated after 1994.

That means nearly all superfoods, multivitamins, detox supplements, and medicinal herbal products we have all come to depend on to prevent disease and boost our immune health could soon be stripped from store shelves and outlawed across the nation. I call it the "End Game" of the FDA's war against humanity: Phase one was the enforcement of nutritional ignorance by threatening and raiding companies that dared to make truthful health claims on their own websites (http://www.naturalnews.com/021791.html). Phase two involves "nuking" the entire dietary supplements industry by simply denying the use of nearly all the ingredients presently used in supplement products.
On the front lines of health freedom

The discovery of this new End Game strategy by the FDA to outlaw virtually all dietary supplements comes to us from theAlliance for Natural Health, the leading health freedom non-profit group in America, and the group that consistently reports fact-based information on how the FDA and FTC are squashing health freedom in America. Their most recent announcement, entitledFDA's New Sneak Attack on Supplements(http://

www.anh-usa.org/fda-new-snea...) explains how this new assault on your freedom is being engineered by the FDA.

Here's the brief story of where this comes from and how the FDA is now waging a new war on ourvitamins, herbs and supplements:

In 1994, after years of armedraids, oppression and censorship by the FDA, Congress passed a law known as DSHEA. This is the law that essentially forced the FDA to stop regulatingdietarysupplements out of existence, and groups such as the Life Extension Foundation (www.LEF.org) were instrumental in helping get this law passed in 1994.

But one of the little-known sections of the law required dietary supplement manufacturers to "notify" the FDA any time they used a new ingredient in their formulations. However, the details on how supplement companies were supposed to abide by these notification guidelines (called "NDI" or New Dietary Ingredient rules) were never published by the FDA, and since 1994, this entire section of DSHEA has remained essentially unenforced (or selectively enforced).

Now, suddenly, the FDA has decided it wants to enforce NDI, and its enforcement of this technicality would essentially amount to the FDAdenying permission to use nearly all dietary supplement ingredients introduced since 1994. So last Friday, the FDA proposed its new rules on NDI -- on the Friday before a long weekend, no less, which is a common tactic government uses when it wants to do something that nobody notices -- and these new rules run the risk of being adopted as active regulations, threatening virtually the entire dietary supplement industry with an eventual shutdown.

Why did the FDA wait17 yearsto take action on NDI rules? Believe it or not, this was mandated under the newFood Safety Bill(S.510 remember?) that Congress passed into law late last yearwithout even reading the bill(http://www.naturalnews.com/030789_F...). So now, the FDA has been forced into issuing these new guidelines, and it obviously is going to take every opportunity it can to destroy thenutritional supplements industry (and thereby protect the profits of Big Pharma).
FDA goes Fukushima on dietary supplements

Importantly,nearly all vitamin and supplement ingredientscould soon be banned under the FDA's new NDI rules becausevery few supplement ingredients can be conclusively shown to have been widely used BEFORE 1994. As the ANH points out, the FDA recently banned a common form ofvitamin B6by claiming the vitamin was a "drug" that was never "approved" for use in supplements (http://www.anh-usa.org/when-is-a-vi...).

That story is also covered here on NaturalNews:http://www.naturalnews.com/025606_v...

The upshot of all this is that by issuing new guidelines on the NDI requirements, the

FDA can now essentiallydisallowthe use of virtually all supplement ingredients that exist in the market today. As ANH warns:

"We fear that they will use this power to ban any supplement innovation unless the supplement is turned into a drug and brought through the drug approva lprocess. Since nobody can afford to pay for the new drug approval process if the substance is not patented, and supplements generally already exist in nature and cannot therefore be patented, to require full new drug approval is to ensure that there will be no new supplements. This should suit the drug industry very well and, based on past behavior, the FDA as well."
Supplement companies would need to seek FDA approval for all their formulations

Through this clever trick with NDI rules, the FDA can now position itself asthe gatekeeper for all supplement approvals. Far from merely being a requirement to "notify" the FDA of the use of new ingredients, NDI rules essentially subject supplements toapprovalfrom the FDA.

As the FDA has proven time and time again, it can simply refuse to approve anything used in natural products. Even today, the FDA refuses to approve walnuts for preventing heart disease, or vitamin C preventing scurvy. The FDA won't even admit that vitamin D can prevent rickets! Imagine the difficulty of trying to get the FDA to approve cherry extracts, or Chinese medicine herbs, or glucosamine for that matter. Nearly all the top supplements you've come to enjoy and value over the last two and a half decades are now threatened with being utterly outlawed and stripped off the shelves.

The FDA, in other words, is now gearing up togut the natural products industry, bankrupt vitamin retailers and enslave the American people in a system of failed chemical medicine where they now have zero options for natural nutritional therapies. This, of course, would cause chronic disease rates to explode across the nation, greatly enriching the pharmaceutical industry and cancer treatment centers, all of which must be cheering these proposed new rules as a great way to recruit new patients who can then be milked for profits.
But synthetic drugs need no notification approval!

Amazingly (or maybe not, if you know the FDA), the new NDI rules state thatsynthetic copiesof natural molecules are exempted from any new reporting requirements. Thus, drug companies that commit biopiracy and steal molecules from nature then turn them into chemical drugs are exempted from this whole thing. But natural product companies offering safe, effective and full-spectrum nutrients made by Mother Nature are suddenly put out of business.

These rules are selectively applied, in other words, only to natural products, not synthetic chemicals. It is yet another monopolistic betrayal of the American people by

the FDA, an agency that has consistently and maliciously taken every opportunity to protect the drug companies while destroying the natural products industry. (http://www.naturalnews.com/021952.html)

"In these proposed rules, the FDA has effectively created a de facto pre-market approval system" for nutritional supplements, says the ANH. And the FDA will, of course, routinely deny virtually all supplement ingredients from ever being approved. Because the FDA is already on the record with its position that there is no such thing as any vitamin, nutrient, herb or food that has any biological effect whatsoever that could prevent, cure or reverse any disease or health condition.

That's the FDA's official position! With that kind of distortion, it is impossible for this agency to ever recognize the innate ability of any natural ingredient to actually produce a health benefit.
Take action now

Help us oppose the FDA's proposed new rules by signing this online petition: https://secure3.convio.net/aahf/site/Advoca...erAction&id=833

Once again, your representatives in Washington need to hear from you --pronto!-- if you hope to maintain your right to purchase vitamins and supplements in the USA.

Lest you think this is an exaggerated warning, keep in mind thathundreds of dietary supplements have just been banned across the EU(http://www.naturalnews.com/032302_h...). Regulators in the USA are gunning for the same kind of wipeout of the supplements industry as a way to lock in decades of disease profits for Big Pharma and the greed-driven cancer industry (which cares far more abouttreatingcancer thanpreventingit).

If these new FDA regulations go into effect, your access to dietary supplements could simply disappear before the end of this year, turning vitamin sellers into "criminal dealers" and "smugglers" (much like raw milk retailers today). Armed FDA raids would be conducted on vitamin and supplement companies, and the founders of those companies would be rounded up and sent to prison for their "crimes" of selling unapproved ingredients.

This is the FDA's end game. Even if the FDA only partially enforces this new rule, it would still place a heavy compliance burden on smal lnutritional supplement companies. As the ANH says, "The bottom line is that when new and unreasonable burdens are placed on supplement manufacturers, it immediately becomes a financial increase for consumers. And if the pressure becomes too great, the nutritional supplements on which you rely may simply become unavailable."

That's exactly what the FDA wants, of course: To put dietary supplement companies

out of business, leaving the field open only to those pharma-chemical vitamin companies largely owned by the drug companies themselves. They use synthetic chemicals which are NOT subjected to these new FDA rules. Many of those synthetic vitamins are, in essence, poisons. Isn't it interesting that the FDA says companies need no approval to usepoisonsin their formulations, but they need FDA permission to use natural substances that actually prevent disease?

Learn more at the ANH:http://www.anh-usa.org/fda-new-snea...

And please consider supporting this outstanding group with a donation so that it can continue its mission of staying on top of legislative and regulatory issues that impact our health freedoms. NaturalNews is a long-time ANH supporter, and we honor the work this group is doing.

Stay tuned to NaturalNews.com for more reporting on this latest FDA assault on health freedom.

Title: Tests in Leicester show silver helps kill bacteria

TheUnhivedMind - July 7, 2011 12:04 AM (GMT)

Tests in Leicester show silver helps kill bacteria

The trial at the nursing home lasted five months

Friday, 14 May 2010 16:52 UK E-mail this to a friend Printable version
http://news.bbc.co.uk/1/hi/england/leicest...ire/8683426.stm

Products containing a silver antimicrobial agent helped kill bacteria at a Leicester nursing home, studies have shown.

A series of tests at Arbour residential home compared the amount of bacteria found in a treated room compared to a room that was not treated.

Microbiologists said they found an average reduction of 94% in bacteria in five months of testing.

Hospitals already use silver for wound dressings and in operating theatres.

The testing was carried out on light fixtures, call systems, curtains, furniture, sinks and beds in the two rooms.

Leicester City Council has trialled the use of the new technology with the cooperation of BioCote Ltd, which produces the silver coating, in a bid to reduce MRSA, E.coli and salmonella.

"Working alongside Leicester City Council, tests have shown that antimicrobial treated products are effective when used as part of infection prevention and control strategies, complementing cleaning to dramatically reduce the risks of cross-contamination," BioCote microbiologist Richard Hastings said.

Silver is already used in some household products because it is highly toxic to a wide range of bacteria.

Tests show silver kills bacteria

TheUnhivedMind - July 5, 2011 05:23 PM (GMT)

PUPILS TO GET A £100K FOOTPATH LINKING SCHOOL TO MCDONALD'S

About 200 pupils from Brynteg School in Bridgend make the half-mile journey every lunchtime

Tuesday July 5,2011
By Giles Sheldrick
http://www.express.co.uk/posts/view/256846...l-to-McDonald-s

HEALTH experts voiced concern last night at plans to spend £100,000 building a footpath from a secondary school to a McDonald's restaurant.

They said the proposal made "absolutely no sense," was a waste of public money and puts pupils at greater risk of obesity and heart disease by encouraging a diet of fast food.

Each day hundreds of pupils in Bridgend, south Wales, trek to the McDonald's rather than have a school dinner. Their route forces them to walk beside a busy dual carriageway.

Councillors, fearing an accident, have proposed building a railed-off path from Brynteg Comprehensive School to the fast-food outlet. Inevitably, it has been dubbed a "McPath".

One in 10 of the 2,000 pupils at the school walks half a mile along a verge by the A48 to reach the McDonald's.

The plans are backed by the school headteacher David Jenkins. He said: “The road is extremely busy and presents a significant hazard for pupils. A footpath would significantly enhance the safety of our pupils.”

Bridgend Town Council spokeswoman Barbara Parish said safety was “far more important than risking more pupils eating fast food”.

The plan was revealed at the start of National Childhood Obesity Week.

Tam Fry, chairman of the Child Growth Foundation, said: “I can’t imagine that councillors would spend public money guiding children towards an outfit that sells less than healthy food.

“South Wales has a huge obesity problem and there is absolutely no sense in building a path so children can go to McDonald’s for lunch.”

Melissa Little, of the British Dietetic Association, said: “It’s clearly not the best option for children having fast food every day. If they’re eating at McDonald’s every day, they risk obesity and heart disease.”

A spokesman for the restaurant chain said: “The decision was made at a local level without any involvement of McDonald’s.”

Title: ITS ALL ABOUT CHERNOBYL !
Description: *[WAKE UP TO THOSE WHO HIDE IT]*

TheUnhivedMind - July 5, 2011 04:51 PM (GMT)

I was doing some research on felion hyperthyoridism and noticed that vets and others cannot explain why in the last 25 years the rate of Cat thyroid disease has risen dramatically. I CAN TELL YOU! The same reason for human thyroid problems and Cancer being in one of three people today. Its all goes back to 1986 & The Worshipful Company of Fuellers attack on an scalar interferometer not far from Chernobyl which created that incident poisoning the World still today with radiation now we have Fukushima by the same villians.

The radiation affects the Kidneys and Spleen functioning whilst damaging the Pineal gland regulation of the left and right hemispheres of the brain once thyroid problems expand. Remember on the Liver is damaged by Cesium 137, Strontium 90, Yttrium 0, Plutonium 244 and Uranium. Whilst the Spleen is damaged directly by Cesium 137. The Kidneys take a direct hit from Uranium 235 and Barium 140. The Thyroid will take a direct hit from the Iodine 131. Now remember the Kidneys, Spleen and Liver are very closely connected together when dealing with your health. The Liver balances the Spleen and the Spleen balances the Kidneys whilst these power the Liver and look after Heart function. Now you'll see why things expand and increase in illness symptoms.

Interesting how a few years ago the establishment gave projected statistics for Cancer after 2010 at one in every two people. This has been happening as planned in parts of Canada in masculines. But you'll see it widespread after the 3rd of March 2011 with the Fukushima, Japan attack. They know exactly what they're doing and if you could read Audrey Tomason's thesis you'd see its all laid out in there mentioning the radiation slow kill for a supposed humane death. All of course to aid the U.N. Agenda 21 program working to the agenda of depopulation for the Club of Rome and its Global 2000 Report.

View Full Version: FDA now admits breast implants only last 10 years

Title: FDA now admits breast implants only last 10 years
Description: *and have to be removed in ALL women*

TheUnhivedMind - July 4, 2011 11:08 PM (GMT)

FDA now admits breast implants only last 10 years and have to be removed in all women

Friday, July 01, 2011 by: J. D. Heyes
http://www.naturalnews.com/032867_breast_i...plications.html

Reversing earlier statements that breast implants are completely safe and never have to be replaced, the Food and Drug Administration now says many women who have implants must have them removed or replaced within a decade.

According to the agency, new research data from a long-term study found that the implants should be examined every 10 years because they were at risk of rupturing, and that some are linked to a rare form of cancer.

"The key point is that breast implants are not lifetime devices," Jeff Shuren, director of the FDA's Center for Devices and Radiological Health, told Reuters. "The longer you have the implant, the more likely you are to have complications."

The agency says there were some 400,000 breast enhancement or reconstruction surgeries in the U.S. alone last year, making it the number one cosmetic surgery procedure in the country. Breast implant and augmentation surgery is followed in popularity by nose reshaping, eyelid surgery, liposuction and abdominoplasty (tummy tucks).

The FDA banned silicone gel-filled implants in 1992 after some women complained they leaked and caused some chronic illnesses. The health regulatory agency approved silicone implants made by Allergen and Johnson & Johnson's Mentor division for use again in November 2006.

Then, the agency said it approved the silicone-filled implants only "after rigorous scientific review" that the agency said took years.

"FDA has reviewed an extensive amount of data from clinical trials of women studied for up to four years, as well as a wealth of other information to determine the benefits and risks of these products," Daniel Schultz, M.D., director of the agency's Center for Devices and Radiological Health. The extensive body of scientific evidence provides reasonable assurance of the benefits and risks of these devices. This information is available in the product labeling and will enable women and their physicians to make informed decisions."

Now, however, the agency is singing a different tune.

Implants "are not lifetime devices," adding that "the more likely she is to experience complications," with one in five women who have implants "will need them removed within 10 years of implantation."

http://www.express.co.uk/posts/view/256474...ce-liver-threat

MORE than half a million young people risk developing liver disease because they are overweight.

Already a quarter of four- and five-year-olds are reckoned to be overweight or obese and experts say that by 2050, almost two-thirds of children will be obese.

Sarah Matthews of the British Liver Trust said: “Children’s livers are being cultivated for disease by a poor diet and lack of exercise.

“Even though alcohol is regarded as the key cause of liver disease in the UK, weight-related liver damage is set to become a huge public health problem.”

Professor Martin Lombard, national clinical director for liver at the Department of Health, said: “We do not want to see the next generation dying young from a condition that can be prevented.

“We know that with childhood obesity on the rise we can expect more children to be at risk of fatty liver disease in the near future.”

TheUnhivedMind - July 2, 2011 04:21 AM (GMT)

Eating blueberries helps build strong bones, suggests study

Thursday, June 30, 2011 by: Jonathan Benson
http://www.naturalnews.com/032861_blueberr...l#ixzz1Qs2QwJuz

(NaturalNews) Move over calcium, there is a new bone builder in town. Research published in the Journal of Bone and Mineral Research back in 2010 showed that blueberry compounds helped improve bone development in lab rats, and new research conducted by the same team of scientists is now investigating how the fruit works in humans to boost bone development.

Jin-Ran Chen and his colleagues from the Arkansas Children's Nutrition Center in Little Rock recently received funding from the US Department of Agriculture (USDA) to explore bone development in humans during infancy, childhood, and early adulthood. Part of this includes studying how blueberry compounds play a role in bone development.

In their first study, Chen and his colleagues observed that blueberry polyphenols, which are the pigments in the fruit that give them their bluish, purple, and red colors, are clearly associated with building strong, healthy bones. Rats fed freeze-dried blueberry powder as ten percent of their diets developed significantly more bone mass than rats not fed the powder, which spurred further research into which blueberry compounds were responsible for this amazing effect.

Blood samples taken from the blueberry-fed rats revealed high rates of phenolic acids, the antioxidant compounds believed to help improve bone development. When blood serum taken from the blueberry-fed rats was applied to lab cultures of osteoblasts, the cells responsible for forming bones, researchers noted that osteoblasts formed into mature, functional bone cells much more quickly than they otherwise would apart from

exposure to the polyphenol-rich serum.

TCF and LEF, two types of human genes, promote the synthesis of beta-catenin, a type of protein. Beta-catenin is responsible for telling osteoblasts to form into fully mature bone cells, and it is blueberry polyphenols' interaction with these various human components that Chen and his team believe is responsible for improved bone synthesis.

Editor's Note: NaturalNews is strongly against the use of all forms of animal testing. We fully support implementation of humane medical experimentation that promotes the health and well-being of all living creatures.

Title: Woman hospitalised with hepatitis after drinking
Description: *TEN bottles of high-caffeine energy drin*

TheUnhivedMind - July 2, 2011 03:09 AM (GMT)

Woman hospitalised with hepatitis after drinking TEN bottles of high-caffeine energy drink every day for two weeks

Battery of medical tests drew a diagnostic blank
She had enough vitamin B3 in her blood for a 50-hour day

Last updated at 5:35 PM on 1st July 2011
http://www.dailymail.co.uk/news/article-20...ing-10-day.html

Doctors struggled to diagnose a mystery illness when a woman was admitted to the emergency room.

The 22-year-old initially showed symptoms of liver failure and medics believed she was suffering from acute hepatitis.

However, it was on her second emergency trip to hospital that she finally admitted to a ten-a-day caffeine drink habit that stretched back for weeks.

The woman told doctors that she had been drinking energy boost drink 5-Hour Energy repeatedly throughout the day.

If the makers claims are to be believed she had 50 hours of energy to use up in a 24-hour day.

Literature for the high caffeine shots say the drink should only be taken twice a day and with a lengthy gap between drinks.

When the woman first stumbled vomiting into hospital she had symptoms including

upper abdominal pain, nausea and fever doctors in the States struggled to diagnose what was wrong with her and sent her home.

But it was on a second visit tinged yellow and even more ill that medics thought her liver was failing and diagnosed her with hepatitis.

After tests for viral infections, alcohol and drug misuse proved clear doctors discussed with her what she had been eating and drinking in the previous two weeks.

When she told them she had been downing ten bottles of the caffeine boost drink every day for previous two weeks, the mystery was solved.

After further tests doctors believe the woman, who has not been named, overdosed on niacin, more commonly called vitamin B3, which can damage the liver if taken in large amounts.

She was successfully treated and discharged as her system returned to normal and the symptoms disappeared.

TODAY Show regular and nutritionist author Joy Bauer said: 'Energy drinks are propped up by all sorts of sexy marketing, but they're not as magical as the ads would have you think.

'The ‘lift’ they give you comes from caffeine - nothing fancy there. The high doses of B vitamins and amino acids they dump in are purely for glitz and glam - they don’t actually help you instantly perk up.

'Energy shots offer a very concentrated dose of caffeine, which makes it difficult to stop when you feel like you’ve had too much, unlike if you’re slowly sipping a cup of coffee.'

But even coffee has its limits in terms of human consumption, according to the website energyfiend.com - which offers a macabre calculator to reveal the fatal dose of nearly any caffeinated beverage, based on body weight.

According to the site a 130-pound person, for example, would 'be pushing up daises' after guzzling 151.67 cans of Pepsi's Mountain Dew drink.

And for a 200-pound person, the site warns, 'Gulp down 143.68 cups of Starbucks Tall Cafe Mocha and you’re history.'

Caffeine exists naturally in certain plants but it can also be produced synthetically and used as an additive in food products.

It is a central nervous system stimulant and a diuretic, which means it increases urination.

Description: *People, Scientists Find*

TheUnhivedMind - June 30, 2011 04:18 PM (GMT)

Bacteria From Dutch Poultry Linked to Superbugs in People, Scientists Find

By Jason Gale - Jun 30, 2011 8:37 AM GMT+0100
http://www.bloomberg.com/news/2011-06-30/b...tists-find.html

Bacteria on raw poultry meat in the Netherlands may be a source of superbugs in people, according to a study that suggests the use of antibiotics in food animals is causing life-saving drugs to lose their potency.

Multidrug-resistant bacteria were found in 80 percent of raw chicken bought from grocery stores in the southern Netherlands. When the researchers compared the germs with specimens collected from hospital patients, they found the predominant resistance genes were identical.

The findings, reported in the July edition of the journal Emerging Infectious Diseases, indicate drug-resistant bacteria in food are leading to harder-to-treat infections in people. While human use of antibiotics in the Netherlands is among the lowest in Europe, the country is one of the region's biggest users of the medicines in farm animals, the researchers noted.

"The Netherlands provides a good setting to monitor spread of drug resistance from an animal reservoir into the human population," Ilse Overdevest, a physician in the microbiology laboratory at St. Elisabeth Hospital in Tilburg, and colleagues wrote.

Their research focused on a genetic component in bacteria that causes resistance to a range of antibiotics, including a class known as third-generation cephalosporins. These medicines, which include Sanofi's Claforan and GlaxoSmithKline Plc (GSK)'s Fortaz, are used to treat bacterial meningitis, pneumonia as well as some infections caused by

E. coli and other so-called Gram- negative bacteria. Pfizer Inc. (PFE) makes a similar product, called Excede, for use in cattle, swine and horses.

Death Risk

Hospital patients infected with a bacterium resistant to a third-generation cephalosporin typically stay five days longer than those without the resistant bugs. They are also 2.5 times more likely to die within a month of being infected, according to a 2010 study in the Journal of Antimicrobial Chemotherapy.

In the Dutch study, 262 samples of fresh chicken, beef, pork and ground meat were tested for drug resistance. Of 71 chicken samples tested, 80 percent carried bacteria producing an antibiotic-destroying enzyme known as ESBL. In comparison, ESBL-producing bacteria were found in fewer than 12 percent of the other meat types.

When rectal swabs were tested from 876 patients, the researchers found 4.9 percent of people harbored ESBL-producing bacteria in their bowels.

Among E. coli samples collected from patients in the Netherlands, resistance to third-generation cephalosporins increased to 4.3 percent in 2009 from 0.1 percent in 2000, according to data compiled by the European Antimicrobial Resistance Surveillance Network.

Chicken Source

ESBL contamination of retail chicken meat in the Netherlands is a “plausible source” of the increase in multidrug-resistant infections in people, the authors said.

“Most samples of retail chicken meat contain transmissible drug resistance genes in bacterial species that are part of the normal human intestinal flora,” they said. “This finding may have a profound effect on future treatment options for a wide range of infections.”

The Netherlands is trying to reduce the volume of antibiotics used in food-animal production, Christianne Bruschke, the nation’s chief veterinary officer, said in an e-mail today. The government aims for a 20 percent reduction from 2009 levels this year, with a 50 percent cut targeted by 2013, she said.

“There is an increasing abundance of evidence showing superbugs such as ESBL E. coli are in the foods we eat and people get serious infections with them,” said Peter Collignon, head of infectious diseases at Australia’s Canberra Hospital, who serves on a World Health Organization panel studying antibiotic resistance in the food chain. “It’s time we banned the use of antibiotics in food animals that cause superbugs to develop and spread.”

HOPE FOR ANTI-AGEING PILL AS ‘ELIXIR OF YOUTH’ FOUND IN TROPICAL MUD

Easter Island has wonder soil

Thursday June 30,2011
By Jo Willey Health Correspondent
http://www.express.co.uk/posts/view/255858...in-tropical-mud

A WONDER pill can reverse premature ageing and could be the secret to a longer life.

The “elixir of youth” drug has previously been shown to extend lifespan by up to 23 years. Now researchers have found it can reverse age-related damage in human cells.

The drug comes from a compound found in the soil on Easter Island in the Pacific, one of the most remote places on Earth.

The compound appears to block damaging proteins which are responsible for the ageing process.

It is hoped the new findings could lead to the creation of drugs that dramatically slow down ageing – and also reverse the process.

Previous studies on mice showed the compound – rapamycin – was found to extend expected lifespan by 38 per cent.

Now US researchers have found it reverses defects in cells taken from patients suffering from Hutchinson-Gilford progeria syndrome, which causes children to age rapidly and die. Progeria is caused by a gene mutation which creates an improperly

processed version of the protein lamin A, called progerin, which accumulates in cells and wreaks havoc on their function.

Previous studies on mice showed the compound – rapamycin – was found to extend expected lifespan by 38 per cent

Rapamycin helped rid the cells of progerin, reversed slowed cell growth, shortened life span and damage. Normal human cells also express tiny amounts of progerin.

A clinical trial on children with progeria is being planned.

Researchers at the National Human Genome Research Institute, the University of Maryland, Massachusetts General Hospital and Harvard Medical School, say the progeria study opens the door to the first generation of pills that will hold back the ageing process.

Rapamycin is already used to stop the bodies of transplant patients rejecting organs, and in heart operations.

But Dr Dimitri Krainc, from Massachusetts General Hospital, said: "It should be emphasised that we are not recommending rapamycin as an anti-ageing medicine at this point. Safer versions would have to be developed for such purpose.

Description: *[FUKUSHIMA RADIATION!]*

TheUnhivedMind - June 29, 2011 04:17 PM (GMT)

NHS faces 'diabetes time bomb'

High blood sugar levels can damage the body

29 June 2011 Last updated at 08:39
http://www.bbc.co.uk/news/health-13928359

The health service could face a "diabetes time bomb" according to an audit of patients in England and Wales.

The report says 800,000 Type 1 and Type 2 patients have elevated blood sugar levels which could lead to kidney failure, limb amputation and stroke.

It warned that many of the patients were young or middle aged and could require "substantial hospital care in a matter of years".

Diabetes UK said the findings highlighted the need for urgent action.

All forms of diabetes result in raised blood sugar levels. If this is not controlled then it can cause serious damage.

The NHS Information Centre report confirmed that the number of cases of diabetes, especially Type 2, is increasing - particularly in deprived communities.

When it came to controlling blood sugar levels, around a third of more than 2 million patients had raised levels that placed them at risk of developing complications.

This was a greater problem for the under 55s.

Nearly 300,000 people were at "high risk" and 144,000 were at "dangerously high risk"

in that age category.

Poor care

The report also found nearly half of patients were not getting the appropriate checks.

The National Institute for Health and Clinical Excellence recommends patients with diabetes receive nine checks annually including: blood sugar levels, whether they are smoking, and an assessment of damage to the eyes or feet due to diabetes.

The study showed that 53% of patients with Type 2 diabetes and 32% with Type 1 received all nine tests.

Audit lead clinician, Dr Bob Young, consultant diabetologist and clinical lead for the National Diabetes Information Service, said: "These results ring alarm bells.

"They show that younger people make up a quarter of all those with diabetes yet have the highest risks of potentially preventable complications.

"If these risks could be reduced, much future disability and shortened life expectancy could be prevented."

Dr Rowan Hillson, National Clinical Director for Diabetes, said: "I am very concerned that the National Diabetes Audit shows that we still have a long way to go in delivering basic standards of diabetes care for everyone.

"In particular, young and middle-aged people with diabetes are not getting the regular checks they need to manage their condition and improve outcomes.

"These checks are vital to reduce serious but avoidable complications. All health care professionals should follow NICE's clear recommendations. There is no excuse for not doing the basics well."

Barbara Young, Chief Executive at Diabetes UK, said: "This highlights the need for urgent action to ensure that people with diabetes start to receive all the basic care processes otherwise there will be more amputations, more people going blind, and more cases of kidney failure, heart disease and stroke."

View Full Version: Obesity 'is higher among non-smoking women'

Title: Obesity 'is higher among non-smoking women'

TheUnhivedMind - June 29, 2011 04:15 PM (GMT)

Obesity 'is higher among non-smoking women'

The study claimed non-smokers were more likely to be obese

29 June 2011 Last updated at 10:20
http://www.bbc.co.uk/news/uk-scotland-13955516

Non-smoking woman are more likely to be obese and die of associated illnesses than those who smoke, according to research.

About 8,000 women were recruited to the Renfrew and Paisley study from 1972 to 1976. Of these, 40% had never smoked.

The authors, led by Dr Laurence Gruer from NHS Health Scotland, found 60% of non-smokers were overweight or obese compared with 40% of those who smoked.

The study claimed extra weight acted as a major contributor to premature death.

However, experts stressed that smoking was a "much stronger" risk factor than obesity.

The study of women aged 45 to 64, published in the British Medical Journal, said the highest rate of obesity among non-smokers was found in low income groups.

Almost 70% of women in this category were overweight or obese, according to the research.

Dr Gruer said: "You can certainly assume that if you are obese, you are more likely to die of things like diabetes, heart attacks and strokes."

Researchers also suggested declining numbers of female smokers over the past few

decades may have had a direct impact on obesity levels - with fewer people using cigarettes in an attempt to suppress their appetites.

The study also found that non-smokers from a lower occupational group were no more likely to die early if they lived a healthy lifestyle.

Dr Gruer said: "If you never smoke and you keep your weight within the reasonable limit then even if you earn below average income and live in a more disadvantaged area, you can still expect to live a long and healthy life.

"You are not doomed to die early just because you happen not to have a high income or good job or live in a leafy suburb.

"It goes against the idea that if you live in a poor neighbourhood or came from a working class background, then your health will be worse, regardless."

Prof Johan Mackenbach from the Erasmus Medical Centre in Rotterdam welcomed the study but added: "It is important not to forget that smoking is a much stronger risk factor for mortality than most other risk factors, including obesity."

View Full Version: 50-somethings who are 'fitter than in their 20s'

Title: 50-somethings who are 'fitter than in their 20s'

TheUnhivedMind - June 28, 2011 04:06 AM (GMT)

50-somethings who are 'fitter than in their 20s'

The average 50-something now leads a fitter and more active life than they did in their 20s, according to a survey.

By Stephen Adams, Medical Correspondent
6:30AM BST 27 Jun 2011
http://www.telegraph.co.uk/health/8599525/...-their-20s.html

Older adults are reaping the benefits of better diets, more exercise and increased free time to focus on their health, suggests the poll of 1,500 over 50s.

The survey found that they were taking more exercise and eating more healthy food than they were when they were younger.

Free of the pressures of working life and raising a family, they could also dedicate more time to exercise.

The poll, commissioned by the insurer Engage Mutual, found that seven in 10 people over 50 were doing more exercise than in their youth.

A similar number now pay more attention to their diet, eating much more fruit and vegetables and many less take-aways than they did in decades past.
Related Articles
Failure to reform elderly care 'will be catastrophic' 27 Jun 2011

While only a fifth said they would have consumed the recommended five portions of fruit and vegetables a day in their 20s, that rose almost four-fold to 75 per cent today.

A quarter said exercise formed an important part of their social lives.

By comparison, nearly a third said that working long hours or running round after children had got in the way of their health and fitness when they were young.

Louise Withy, from Engage Mutual, said the study showed many perceptions of older people were outdated.

She said: "It's great that so many people feel so fit in their fifties and above.

"It challenges many of the preconceptions around ageing and is good news when we consider that in light of increased life expectancy, many more of us will be spending a larger proportion of our life 'over 50'.

"Current predictions for life expectancy state that men age 65 could expect to live another 17 years and women at 65 could expect to live another 20 years.

"These kind of predictions make taking action on health and fitness in our later years just as important as when we are younger. "

The report found around one in five over 50s felt "more energetic" and enjoyed "more of a zest for life" than they did in their 20s. Almost seven out of ten of those who felt healthier put their new-found motivation down to a better awareness of the importance of a healthy lifestyle.

Those who felt fitter than in their 20s took exercise, on average, four times a week. The most popular ways to keep fit were walking, swimming, cycling and attending fitness classes.

Weight gain prompted more than half to adopt a healthier lifestyle, while for almost a third (29 per cent) it was the desire to be able to help out with grandchildren. One in six (17 per cent) said they had experienced a health scare.

More than a half believed they looked younger than their age - a statistic that suggests a degree of wishful thinking among some.

Miss Withy added: "For some, turning 50 can be a new beginning."

"The 50s can be a time when many people reflect on their health and consider their longevity.

"Children moving away from home, and winding down at work can provide the space to address their own needs and where required, adjust lifestyles and introduce a healthier routine."

View Full Version: Working more than 40 hours per week increases

Title: Working more than 40 hours per week increases
Description: *'burnout' risk [SPLEEN DYSFUNCTION!]*

TheUnhivedMind - June 27, 2011 06:07 PM (GMT)

Working more than 40 hours per week increases 'burnout' risk

Last updated at 8:00 AM on 27th June 2011
http://www.dailymail.co.uk/news/article-20...g-40-hours.html

Working more than just 40 hours a week can burn you out, experts claimed last night.

Putting in more than an eight-hour-day five days a week makes you six times more likely to suffer ‘burnout syndrome’.

The psychological condition leaves employees suffering from long-term exhaustion, diminished interest in their work and irritability.

Hard day at the office? Experts say workplace stress is on the rise and boring jobs can lead to a burn-out

Chronic workplace stress combined with a lack of recognition of their efforts by bosses are two important factors, researchers revealed.

Jeszs Montero-Marmn, of Spain's Aragon Institute of Health Sciences, said the condition can be broken down into three sub-types - 'frentic', 'under-challenged' and 'worn out'.

Writing in journal BMC Psychiatry he said: 'This condition is increasing in prevalence in Spain and poses a serious problem to society because of the economic losses it causes and its consequences for health.'

He said that the frenetic profile was linked to the number of hours worked, with those

spending more than 40 hours a week at work six times more likely to burn out than those working fewer than 35.

They are normally heavily involved in their workplace, ambitious and with a large taskload.

The 'under challenged' profile fits those carrying out monotonous task, while the 'worn out' profile applies to those with a long history in the same job who carry a perceived lack of recognition.

A worker with more than 16 years' service in the same place of work is five times more at risk of developing this form of the syndrome than another worker with a service record of less than four years.

The researchers used questionnaires to survey a sample of 409 employees working at the University of Zaragoza, including administrative, services, teaching and research staff and interns.

Those afflicted with the syndrome suffer emotional exhaustion, cynicism or lack of efficacy at work and experts say that the syndrome is present if the person displays at least one of these three characteristics.

But a solid family life can help stave off the condition, said Dr Montero-Marin.

He said: 'Having a family, partner or children can act as a protective 'cushion', because when people finish their day at work they leave their workplace worries behind them and focus on other kinds of tasks.'

TheUnhivedMind - June 27, 2011 01:18 AM (GMT)

7 surprising things you're not supposed to know about sunscreen and sunlight exposure

Saturday, June 25, 2011
by Mike Adams
http://www.naturalnews.com/032815_sunscreen_chemicals.html

(NaturalNews) Ask somebody about sunscreen and you're likely to receive an earful of disinformation from a person who has been repeatedly misinformed by health authorities and the mainstream media. Almost nothing you hear about sunscreen from traditional media channels is accurate. So here's a quick guide to the 7 most important things you need to know about sunscreen, sunlight and vitamin D:

#1) The FDA refuses to allow natural sunscreen ingredients to be used in sunblock / sunscreen products
It's true: If you create a truly natural sunscreen product using exotic botanicals with powerful sunscreen properties, you will never be able to market it as a "sunscreen" product. That's because the FDA decides what can be used as sunscreen and what can't, regardless of what really works in the real world. And there are really only two natural ingredients the FDA has allowed to be sold as sunscreen: Zinc oxide and titanium dioxide.

Any other non-chemical sunscreen ingredients, if sold as "sunscreen," would be considered mislabeled by the FDA and result in your products being confiscated... even if they offer fantastic sunscreen protection!

Not surprisingly, this whole monopoly over sunscreen chemicals is designed to protect the profits of the chemical companies while marginalizing the natural product companies which could easily formulate far better solutions. I have personally spoken to

the founders of several health product companies who have figured out amazing sunscreen formulations using nothing but natural botanicals, but the FDA won't let them market their products as sunscreen products!

It's just another example of the FDA standing in the way of health innovation.

#2) Nearly all conventional sunscreen products contain cancer-causing chemicals
Read the ingredients list of any sunscreen product sold at Wal-Mart, or Walgreens, or any other mainstream store. I dare ya!

You will not be able to pronounce most of the chemicals found in the ingredients list. That's because most sunscreen products are formulated with cancer-causing fragrance chemicals, parabens, harsh alcohols, toxic chemical solvents and petroleum oils. A typical sunscreen product is actually a chemical assault on your body. That's why research shows that using sunscreen actually causes more cancer than it prevents (http://www.naturalnews.com/023317_s...).

#3) In a nation where over 70% of the population is vitamin D deficiency, sunscreen actually blocks vitamin D production
Vitamin D deficiency is perhaps the most widespread vitamin deficiency in North America. According to the research, 70 percent of whites are deficient in vitamin D, and up to 97 percent of blacks are deficient (http://www.naturalnews.com/030598_v...).

Chronic vitamin D deficiency promotes cancer (http://www.naturalnews.com/031560_v...), winter flu and infections, depression, osteoporosis and hormonal imbalances. Depending on whom you believe, vitamin D alone can prevent anywhere from 50% to nearly 80% of all cancers (http://www.naturalnews.com/021892.html).

By blocking vitamin D production in the skin, sunscreen products actually contribute to cancer-promoting nutritional deficiencies.

This doesn't mean you should never wear a sunscreen product, of course. If your skin is really pale and you're planning a day on the beach in Hawaii, you will obviously benefit from some level of sun protection using a truly natural sunscreen product. But an informed health-conscious person would try to allow their skin to achieve a natural, healthy tan (yes, a tan truly is healthy if it's combined with good nutrition, see below) through sensible exposure levels that activate vitamin D production in the skin.

#4) You can boost your internal sun resistance by changing what you eat
Here's the real secret about sun exposure that no one in conventional medicine is talking about (because, as usual, they are woefully ignorant about nutrition): You can boost your internal sunscreen by eating antioxidant-rich foods and superfoods.

The supplement astaxanthin, for example, is very well known for boosting your skin's natural resistance to sunburn. Its fat-soluble carotenoids are actually transported to skin

cells where they protect those cells from UV exposure.

The more natural antioxidants you have in your diet, the more sunlight your skin will be able to handle without burning. Nearly everyone mistakenly believes that a person's sunlight burn response is purely a genetic factor. They're wrong. You can radically improve your resistance to UV exposure through radical dietary changes.

I'm a great example of this, actually, as I used to burn in just 20 - 30 minutes of sunlight when I was on a junk food diet years ago. But now, as someone who eats superfoods and high-end nutritional supplements every day, I can spend hours in the sun and will only turn slightly red (which fades a few hours later and does not result in a burn or skin peeling).

Except for one time on an all-day visit to a water park, I have not worn sunscreen in over 8 years. I spend a large amount of time in the sun, and I have absolutely no concerns whatsoever about skin cancer. My skin, most people tell me, looks significantly younger than my biological age. That's not from sunscreen; it's from nutrition. Sun exposure does not make your skin "age" if you follow a high-nutritional density diet.

#5) UV exposure alone does not cause skin cancer
It is a complete medical myth that "UV exposure causes skin cancer." This false idea is a total fabrication by the ignorant medical community (dermatologists) and the profit-driven sunscreen companies.

The truth is actually more complicated: Skin cancer can only be caused when UV exposure is combined with chronic nutritional deficiencies that create skin vulnerabilities.

To create skin cancer, in other words, you have to eat a junk food diet, avoid protective antioxidants, and then also experience excessive UV exposure. All three of those elements are required. Conventional medicine completely ignores the dietary influences and focuses entirely on just one factor: Sunscreen vs. no sunscreen. This is a one-dimensional approach to the issue that's grossly oversimplified to the point of being misleading.

The medical industry, it seems, does not want people to figure out they can literally eat their way to healthier skin. It's amazing, actually: Your skin is made entirely out of the food you eat, so how could your diet not affect your skin health? Yet no one in conventional medicine -- not the dermatologists, not the doctors and not the health regulators -- has the intellectual honesty to admit that what you eat largely determines how your skin reacts to UV exposure.

#6) Not all "natural" sunscreen products are really natural
Be careful when shopping for so-called "natural" sunscreen products. While there are

some good ones out there, many are just examples of greenwashing, where they use terms like "natural" or "organic" but still contain loads of synthetic chemicals anyway.

A good guide for checking on sunscreen products is the Environmental Working Group guide (EWG) at:
http://www.ewg.org/skindeep/

Some of the products that are truly natural include Loving Naturals sunscreen and Badger All Natural Sunscreen. Read the ingredients labels to see for yourself. Don't use any sunscreen product containing ingredients that sound like chemicals:

• Methyl...
• Propyl...
• Butyl...
• Ethyl...
• Trieth...
• Dieth...
etc.

Always buy unscented sunscreen unless for some reason you just enjoy coating your skin with artificial perfume chemicals. A typical sunscreen product is made with over a dozen cancer-causing fragrance chemicals, and they're absorbed right through your skin. Most sunscreens, when applied as directed, are really just toxic chemical baths that heavily burden your liver and can give you cancer.

#7) Many "chemical free" sunscreens are loaded with chemicals
Search Amazon.com for "chemical free natural sunscreen" and you'll see a listing for:

Jason Natural Cosmetics - Earth's Best Sun Block Chemical Free, 4 oz cream

Click on the product and you'll find a listing of its ingredients which includes: C12-15 Alkyl Benzoate, Caprylic/Capric Triglyceride, Sorbitan Isostearate, Sorbitan Sesquioleate, Ethylhexyl Palmitate, Ethyl Macadamiate, Calcium Starch Octenylsuccinate, Stearalkonium Hectorite

So how are those not chemicals? Ethylhexyl Palmitate is NOT a chemical? Who are these people kidding? The Amazon.com description (title) of this product is false and misleading. In all fairness, however, this product title looks like it was added into the Amazon.com system by the vendor and not the Jason company itself. But it's an example of how the information you see from online vendors can often be misleading.

Always read the ingredients of any sunscreen product before using it. Don't poison yourself with sunscreen!

Beware the disinfo minefield surrounding sunscreen products

Perhaps more with sunscreen than any other personal care product, the "official" information distributed through the mainstream media is hopelessly misleading (if not downright false). Remarkably, no one in the media or the government is even willing to admit that fragrance chemicals are bad for your health. Similarly, no one is willing to admit that the chemicals you put on your skin get ABSORBED by your skin.

Without those two truths being acknowledged right up front, the rest of whatever they say about sunscreen is worthless babble. Any honest talk about sunscreen must acknowledge the simple truth that the chemicals you put on your skin get absorbed into your skin, and that most sunscreen products are made out of a chemical cocktail of cancer-causing substances.

This is the truth about sunscreen that both the sunscreen industry and the cancer industry doesn't want you to hear. It's the dirty little secret of sunscreen: The more you use, the more you CAUSE cancer in your body! (And the more money the cancer centers make "treating" your cancer with yet more deadly chemicals known as chemotherapy.)

So buyer beware. Sunscreen products are a minefield of lies, fraud and disinformation designed to keep you ignorant of the importance of sun exposure as well as the health risks associated with using cancer-causing chemicals on your skin.

Stick with truly natural sunscreen products (when needed) and try to build up a healthy tan while consuming large quantities of superfoods and antioxidants in your diet. Consider taking astaxanthin or other fat-soluble nutrients on a regular basis. Engage in daily juicing of fresh fruits and vegetables which are loaded with living nutrients. Time your sun exposure to build up a healthy tan so that you don't need sunscreen at all. Contrary to all the misinformation we've all been fed, a healthy tan is actually a good sign that you're achieving adequate vitamin D synthesis in your own skin.

View Full Version: Diabetes rate 'double that of 1980'

Title: Diabetes rate 'double that of 1980'
Description: *[RADIATION, GM, SYRUPS]*

TheUnhivedMind - June 25, 2011 04:57 PM (GMT)

Diabetes rate 'double that of 1980'

25 Jun 2011
http://www.thisislondon.co.uk/standard/art...that-of-1980.do

Rates of diabetes have exploded in the past three decades, meaning an estimated 350 million people in the world now have the disease.

In almost every region of the planet diabetes prevalence has risen or at best remained unchanged, according to a major international study published in a special online report by The Lancet medical journal.

The condition, caused by poor blood sugar control, can lead to heart disease and stroke and can damage the kidneys, nerves and eyes. Each year, high blood sugar levels and diabetes kill three million people worldwide.

Increasing life span and body weight are two of the strongest factors influencing diabetes rates, especially among women, say researchers. But ethnic genetic factors, nutrition in the womb and soon after birth, quality of diet and physical activity are also thought to be important.

Scientists analysed blood sugar data on 2.7 million people aged 25 and over throughout the world and used the results to estimate diabetes prevalence. They found that the number of adults with diabetes more than doubled from 153 million in 1980 to 347 million in 2008, considerably higher than a 2009 estimate of 285 million.

Across the three decades, the proportion of men with diabetes rose by 18% from 8.3% to 9.8%. The proportion of women with diabetes increased even more sharply, from 7.5% to 9.2%, an increase of 23%.

Professor Majid Ezzati, from Imperial College London, who co-led the investigation, said: "Diabetes is one of the biggest causes of morbidity (illness) and mortality worldwide. Our study has shown that diabetes is becoming more common almost everywhere in the world. This is in contrast to blood pressure and cholesterol, which have both fallen in many regions. Diabetes is much harder to prevent and treat than these other conditions."

Between 85% and 95% of diabetes cases fall into the type 2 category, which is linked to lifestyle. Type 1, or insulin-dependent, diabetes is a separate auto-immune disorder and much less common.

The study showed that diabetes rates had risen most dramatically in Pacific island nations, where a greater proportion of people have the condition than anywhere else in the world. In the Marshall Islands, one in three women and one in four men have diabetes. Elevated blood glucose and diabetes prevalence was also high in southern Asia, Latin America, the Caribbean, central Asia, North Africa and the Middle East.

Among high-income countries, those of Western Europe had seen a relatively small increase in diabetes prevalence. Rates were highest in the US, Greenland, Malta, New Zealand and Spain and were lowest in The Netherlands, Austria and France.

Once Rare, Infection by Tick Bites Spreads

By LAURIE TARKAN
Published: June 20, 2011
http://www.nytimes.com/2011/06/21/health/2...ner=rss&emc=rss

A potentially devastating infection caused by tick bites has gained a foothold in the Lower Hudson Valley and in coastal areas of the Northeast, government researchers have found.

The condition, called babesiosis, is a malaria-like illness that results from infection with Babesia microti, a parasite that lives in red blood cells and is carried by deer ticks. Though far less common than Lyme disease, babesiosis can be fatal, particularly in people with compromised immune systems.

Because there is no widely used screening test for babesiosis, its spread poses a particular threat to the blood supply, scientists said. “We are very worried about it and are doing everything in our power to address this,” said Sanjai Kumar, chief of the laboratory of emerging pathogens at the Food and Drug Administration.

According to a recent report by the Centers for Disease Control and Prevention, there were six cases of babesiosis in the Lower Hudson Valley in 2001 and 119 cases in 2008, a 20-fold increase. In areas where Lyme disease is endemic, like coastal Rhode Island, Massachusetts, Connecticut and Long Island, babesiosis also is becoming very common, said Dr. Peter Krause, senior research scientist at the Yale School of Public Health.

In one study of residents of Block Island, R.I., Dr. Krause found babesiosis to be just 25 percent less common than Lyme disease. Babesiosis also is spreading slowly into other regions where it did not exist before, like the Upper Midwest, said Dr. Krause.

Many people who are infected with the parasite have no symptoms at all, while others experience mild to moderate flu-like symptoms that may last for a few days or as long as six months. “But some people get so sick that they wind up hospitalized, put into an intensive care unit, or even dying,” said Dr. Gary Wormser, chief of infectious diseases at Westchester Medical Center in New York.

In states that track the disease, there are an estimated 1,000 reported cases a year, said Dr. Krause, but he and other experts believe this represents a fraction of the people who are infected. In the Block Island study, researchers tested about 70 percent of the islanders and found that about one quarter of adults and half of children who were infected had no symptoms and were therefore not reported. Even people with mild to moderate symptoms may never see a physician. Even if they do, the condition may not be accurately diagnosed.

Experts fear that many undiagnosed patients may be donating blood. Currently, blood banks do not screen for Babesia because the Food and Drug Administration has not licensed a test for this purpose. The only way to screen a patient is by using a questionnaire, which simply asks blood donors if they are infected.

Babesiosis already is the most frequently reported infection transmitted through transfusion in the United States, responsible for at least 12 deaths. In New York City, six transfusion-associated cases of babesiosis were reported in 2009. Infection by this route can be serious: One study found approximately 30 percent of people who were infected by a transfusion died.

Between 1999 and 2007, several infants in Rhode Island developed babesiosis following blood transfusions. The Rhode Island Blood Center has become the first in the country to use an experimental new test to screen blood for the parasite.

Experts urge blood transfusion patients and their doctors to be aware of symptoms of babesiosis, which can occur up to nine weeks after a transfusion.

The symptoms can be vague (there is no tell-tale rash as there may be with Lyme disease) and include fever, sweats, chills, headache, fatigue, and muscle aches and pains. In people who also have Lyme disease, doctors might suspect babesiosis if the symptoms are particularly severe or the antibiotics are not working, said Dr. Krause. A diagnosis can be confirmed through blood testing.

Infants and adults over age 50 are more likely to get moderate to severe symptoms if infected. People at increased risk of complications include patients with compromised immune systems (such as people receiving immunosuppressants), those who’ve had their spleens removed, and those with lymphoma or H.I.V. or who are being treated for cancer.

If not caught and treated early, babesiosis can lead to such complications as kidney, lung or heart failure. The infection can be treated with antimicrobial medications, but people with serious complications are less responsive to the drugs.

Why the parasite is spreading and why it's spreading more slowly than Lyme disease are not well understood. One theory is that Babesia may be carried primarily in mice, which don't tend to travel far afield. The bacterium causing Lyme disease, Borrelia burgdorferi, can be carried by birds.

Is 'Big Food's' Big Money Influencing the Science of Nutrition?

By DAN HARRIS (@danbharris) and MAGGY PATRICK
June 21, 2011
http://abcnews.go.com/US/big-food-money-ac...ory?id=13845186

David Allison is a renowned scientist who runs an obesity research center at the University of Alabama in Birmingham. He has a 108-page resume and was honored at the White House.

But even though study after study have shown soda to be a significant contributor to America's staggering obesity crisis, he says there is too little "solid evidence."

Meanwhile, the Centers for Disease Control last week warned teenagers to cut down on their soda consumption, citing studies that show soda contributes to obesity and other health problems such as diabetes.

Allison has said such studies haven't been rigorous enough to prove soda contributes to obesity, but critics say his skepticism stems from his financial ties to entities such as Coca-Cola, Pepsi and the American Beverage Association, who, critics say, have paid Allison to poke holes in the scientific consensus.

"And then his articles can be cited by the companies, can be used to say, 'Look at this article in a major journal concludes we don't know yet if sugar sweetened beverages are bad for children and adult health,'" said Barry Popkin, a food researcher at the University of North Carolina.

It's not just soda companies. Allison has also taken money from Kraft, McDonald's,

General Mills, Kellogg's, Mars and Nabisco, according to his financial disclosures.

Allison, who studied at Hofstra, Johns Hopkins and Columbia universities, was paid by the New York Restaurant Association to file an affidavit in its case against New York City and its law requiring restaurants to post calorie information on menus, saying the law might actually make people eat more.

His actions outraged many of his colleagues and Allison eventually submitted his resignation as the incoming president of the Obesity Society over the controversy that followed the filing of his affidavit, which he signed as president-elect of the Obesity Society.

Allison has also taken an industry-friendly stance when it comes to breast feeding.

The International Formula Council funded Allison's research questioning the World Health Organization's assertion that breast-feeding cuts a child's risk of obesity. The paper was published in the November 2008 issue of Obesity Reviews.

Critics say Allison is part of a concerted effort by big food to co-opt scientists not only by funding their research but by offering them lucrative speaking and consulting deals, in an effort to confuse U.S. families about the health effects of popular food products.

Such tactics, critics say, are similar to those once used by Big Tobacco.

In a recent commentary in the Journal of the American Medical Association, respected food researchers asserted that the industry has participated in "deceptive science and advocacy." They say "the food and beverage industry has created or funded front groups reminiscent of the tobacco institute that give the appearance of grassroots support."

The groups, they say, include Americans Against Food Taxes and the Center for Consumer Freedom, organizations that are largely funded by the food and beverage industries.

"Big tobacco, big sugar," food researcher Popkin said, "identical in the way they treat scientists."

Popkin admits he has taken some industry money for research but, he says, turned down many of big food's most tantalizing offers.

"I've been offered $5,000 to go speak to this meeting or that meeting," he said. "You get $2,000 to $5,000 a day. They'll fly you on business class tickets to exotic places. They'll take you to Paris or Rio. They'll take you to places in Brazil."

The food companies don't just fund individual scientists; they also give money to entire

groups.

The Children's Hospital of Philadelphia was criticized for taking $10 million for obesity research from the soda industry, and after the American Association of Family Physicians took money from Coca-Cola, some members ripped up their membership cards.

Both groups say their scientific conclusions are not affected by industry funding.

American Beverage Association Calls Allegations Baseless

The American Dietetic Association took money from Hershey to collaborate on a "Moderation Nation" website, to reach millions with a healthy-eating message, they said. Some obesity experts were appalled that it included recipes such as "Fudgey Fruit Pizza" and "Crispy Chocolate Ice Cream Mud Pie," which has 14 teaspoons of sugar in each slice.

In a statement, the ADA defended the program, saying that website helped deliver healthy eating messages to a wider consumer audience than it otherwise could.

"Our 'total diet' approach follows the new USA MyPlate, with a focus on the role of fruits, vegetables, low-fat dairy, lean protein choices and whole grains," the statement said. "When individual consumers choose wisely 80 to 90 percent of the time, they can also include an occasional treat."

A 'Master Switch' for Obesity? Watch Video

Childhood Obesity Rates on the Rise Watch Video

Bill Clinton Sounds Off on Obesity Watch Video

Representatives from the food industry, including the American Beverage Association, said the notion that industry money taints the scientific research is "baseless."

As for Allison, although he has received tens of millions of dollars in research grants from the government, he has also received at least $2.5 million in research grants from private industry, ABC News has learned.

The $2.5 million doesn't include any consulting or speaking fees he has received from industry or any money he has received from Coke, Pepsi, or the American Beverage Association.

His employer, the University of Alabama, said some of his research contradicts the interests of his corporate sponsors.

Allison turned down ABC News' repeated requests for an interview. When ABC News confronted him early one morning at a convention in Washington D.C., he had no comment when asked if he was a "hired gun" for the food industry.

He has said that he is happy to be involved in the pursuit of truth and, sometimes, amid that pursuit, he might help the government or groups such as the restaurant industry.

'Catalyn'.. Wholefood Rip-Offs And Chiropractors

By Alan Graham
With Alfred Lehmberg
6-23-11
http://rense.com/general94/cata.htm

I have carried a lot of water-wholly justified-for the Chiropractic profession over the last 25 years. This is prosecuted given truly extraordinary treatment: my own and the treatment I have witnessed, personally, regarding many, many others over the years.

My steadfast support is further evidenced, moreover, by the recent and very positive article (News Letter) I'd written for the Jeff Rense site, et al, cataloguing many of the true wonders associated with quality Chiropractic care. Consequently, and it pains me-on multiple levels-to have just recently and very innocently discovered the forthcoming: that many in the Chiropractic community indorse and fervidly push a suspicious and questionable supplement called Catalyn... by Standard Process Inc. (SP).

My contention?

The headline would be: "Catalyn is NOT a complete "Multi-Vitamin/Mineral." It is a... let's call it a "unique" supplement more appropriately described as a "Raw Multi-Glandular Herbal Formula w. Enzymes." It is, at best, what one might use in concert with aREAL multi-Vitamin, eh?

BTW, there are many, cheap, excellent Multi-Glandular Formula's out there that don't claim to be a "Complete-Multi" just by throwing in some suspiciously small amounts of a meager handful of six Vitamins and Minerals.

So, to pass Catalyn off as a "Complete" Multi-Vit/Min is absurd, to be kind, forgetting the grave disservice to all those trusting people who spend their hard earned cash feeling this is something it's not.

I think it might, perhaps, be a pretty good, if too minimal "supplement." That jury is still out. I pass on it regardless and can tell you why, here and now...

First... Reader! Please don't write and tell me how great you feel after taking Catalyn! All that "good will" is likely to evaporate upon learning the truth about many of these so-called "Whole-Foods", as you become aware precisely from where your affect actually comes. Think... nowhere, that place of smoke and mirrors, empty promises, literary slight of hand, and deft misdirection!

See, many years ago, myself and many thousands of other dupes suffered from the very same "Placebo-Effect" alluded to in the previous paragraph. We testified heartily and with great sincerity to "feeling great" after taking "SeaSilver!" Then, the boom got lowered! An independent Lab was hired by a legitimate supp-maker to validate this seeming magic elixir, "SeaSilver"!

You guessed it! The Lab analysis revealed that SeaSilver was essentially grape juice, reader, with very tiny (read Non-Therapeutic) TRACE amounts of every nutrient listed on the label, you know, so they wouldn't actually be lying when they advertised all those wonderful things being in there... even in amounts so small as to be virtually non-existent! Again, this kind of "Half-Truth" is the most insidious kind of lie... Rightfully, all my "Great Feelings" regarding "SeaSilver" evaporated into empty air.

Now, SP makes over one hundred Whole-Food (WF) Supp's which I suspect may be great products! It remains, the only item I am addressing is their "Whole-Food" Multi-Vit/Min, Catalyn, and the only reason I looked at it in the first place was because my Chiropractor asked me to. He seemed genuinely confident, even proud of "his" product... It was indorsed by the Chiropractic hierarchy, after all! Though, when I went home and researched it, fully anticipated it to be a quality and effectual product, I was straight away disabused of that wrongful notion!

Oh yeah, uh-huh... disabused even as I was to discover that it is also indorsed by thousands of websites as the greatest Multi EVER! That's right! Hundreds of doctors, nutritionists, dieticians and the 'man on the freakin' street'... all love Catalyn... ...So stop reading me right now, Right?! How can 10,000 websites be wrong?! I'm obviously the guy with one toy short of a Happy Meal, right? Be disabused, yourself.

Anyway, much to my shocked dismay, it took about 2 minutes to see the first obvious signs that this is just another Whole-Food "Shuck & Jive"... but take heart! The signs are easy to spot when you know what to look for!

Back to my Catalyn research, after only about 20 minutes of reviewing their Web-site I was hanging my head in dismay ... then my tortured dismay was further exacerbated by a scathing report I discovered from the watch-dog service, supplementwatch.com , to which I am a paid subscriber. It said, frankly, "Don't waste your money" (the highlights of that report are at the end of this piece).

Really, this is "Connect the Dots - 101, for beginners"... which really makes me wonder about all those "doctors" on those thousands of sites just drooling over Catalyn. It's humiliating!

Indeed, I'm driven to the startling conclusion that Chiropractors, much like MD's, "don't understand squat" about supplements and nutrition. Nothing "airy-fairy" here at all, reader. I'm only talking about the best peer-reviewed nutritional science that big food and medicine won't pay attention to for self-interested pecuniary reasons!

As aside, if you want to understand many of these tricks employed by Bogus Whole Foods scams, read my paper about "FrequenSea"... another "Whole-Food" rip-off, Courting CODEX: "Whole-Food" Deceptions... Drop me a note and I'll forward the link.

Back to business, it took just a few minutes of looking at the revealing "Supplement Facts" and "Other Ingredients" sections forCatalyn to discover a new sneaky little twist even Supplement-Watch missed! It was a trick that you normally don't see in products so fervently declaring their "Whole-Foodiness." Let me first give some necessary info, then I will explain this interesting twist...

The main deception generally used by bogus "Whole-Food" Multi's, as opposed to "real" Whole-Food Multi's, is that the former won't list the "amounts" of every Vitamin, Mineral, Enzyme, etc. contained, so you have no way of knowing what you are really getting. This is key, reader.

The bogus WF's will tell you that because they are natural Whole foods, every batch will be "slightly different," but still "in balance." See, you would not expect the grocery store to try to list the amount of Vit. C in every Orange, say, because every orange is "slightly different"... yet still "in balance," eh?

OK, this may sound logical but it is a disingenuous ruse! Believe me; we have all the affordable technology we need to standardize each batch so you could list the amounts of each item. ...But Folks, the dishonest WF's don't want to list the amounts... because then you might notice that the really important required nutrients, or even the highly bragged about nutrients, are in such small "Trace" amounts as to be wholly non-therapeutic at all... at least that is my opinion forgetting "Supplement-Watch" confirms same!

Believe me folks, there are some real WF Multi's out there that do list the amounts of all

the Vit's & Min's... in fact I take 2 different true Whole-Food Multi's (in my opinion) showing the distinction between those listing the amounts and those not. BTW, I'm not pushing or selling any product.

Anyway, this is because it is difficult to get a halfway therapeutic dose into a reasonable number of capsules or tablets. From 3 to about 8 capsules is reasonable...but if you have to take 15 or 20 capsules to get even close to a therapeutic dose, one that really works for you, people won't buy it...so...

(1).. Those quality WF supplements listing the amounts of each Vit & Min have to go to the trouble and expense of growing special,nutrient-rich, and arcane little types of flora you've never heard of and will never see in the produce section of "Wally World." This is necessary, you see, in order to get the adequate concentrated dose of nutrients into only 3 or 4 capsules and still be part of the food matrix.

(2).. Those not listing the amounts essentially just take regular foodstuffs, grind them up, and then suck out the moisture to be put into capsules. Consequently, even if these are nutritious foods like the glandular-herbal-veggie formula in Catalyn, it is virtually impossible to get more than just insignificant amounts of the necessary Vit's & min's you need into the 3 tablet Catalyn dose! I think this is why they had to add a handful of Vit's & Min's listed in the "Supp facts."

I suspect that when confronted with the fact that there are only trace (or very small) amounts of most recommended nutrients, your Catalyn supporters would counter with the 'mumbo-jumbo' claims about Catalyn being a "Catalyst," which speeds up chemical reactions.

OK, without a catalyst's activity it would take a week or so to digest the contents of your stomach... so I assume they mean the digestive enzymes (catalysts) which are found in most raw whole foods. OK, but see, all the enzymes in the world can't take the very small, 800 milligrams of ground up food in Catalyn and magically turn it into ALL the nutrients you need... this is insultingly stupid!

Moreover, I understand that a Whole Food tablet or capsule will not have nearly the amounts of the Vit's & Min's (in the same amount of space) that you find in a quality Organic, Natural Multi-Vitamin... so, it is OK and perfect understandable that a big WF tablet will have fairly small amounts of the Vit's & Min's... I get that!

See, I can look at the amounts listed in the "Supplement-Facts" of a "REAL," Whole-food capsule, one generally having only maybe 1/5 or 1/6 of the recommended amounts found in a "regular" full-featured, or complete Multi tablet of the same size...

...But that would still be fine, reader, because, at least, the real WF capsule shows me the amounts! With that info I can then decide if I want to take only the one or 2, 3, or

howsoever many more capsules or tablets... so I could get up closer to a therapeuticamount! Yes, yes, yes... this is keeping in mind the Whole-Food philosophy that you likely don't need the 100% of the Gov. recommended %DV because even though the WF has a lesser amount, you should get better utilization due to the synergistic effect of the Vit/Min being part of the Food-matrix... again, I get it !

However; if the "Whole Food" doesn't list any amounts... How. Do. You. Know? See the problem?

OK...here's that cute Catalyn trick I alluded to above! Sometimes these "less than honest" WF's will, in fact, list a few amounts of the handful of Vit's, etc. just high enough to register an amount other than only the insignificant trace amounts. So look at the "Supp-Facts" % DV and in particular, the ***Other Ingredients*** for the 3 tablet dose of Catalyn.

Supplement Facts Serving Size: 3 Tablets

% Daily Value
Vitamin A
1,200 IU
25%
Vitamin C
4 mg
6%
Vitamin D
312 IU
80%
Thiamine
0.2 mg
15%
Riboflavin
0.2 mg
15%
Vitamin B6
1 mg
50%

Other Ingredients: Honey, glycerin, arabic gum, ascorbic acid, pyridoxine hydrochloride, vitamin A palmitate, gelatin,cocarboxylase, riboflavin, and cholecalciferol.

OK, on the honor system, now... how many of you see the disconnect showing this is not really a 100%, "Whole-Food"! Maybe I'm wrong, but it looks to me like the only nutrients listed above in amounts remotely large enough to list on the label, are not from

the whole food, at all, but were added... ...later! The way you can tell, reader, is that all 6 items are also listed in the "Other Ingredients" section! You see, if they were part of the touted and ostensible "Whole Food" it would not be necessary to list them in the "Other Ingredients," would it! No.

A lay person might not readily notice this because they do not know that - The Vit.D in the above "Supp-Facts" is called by another name, cholecalciferol, in the "Other Ingredients"... the Thiamine in "Supp-Facts" is called cocarboxylase in the "Other Ingredients"... the Vitamin B6 in the "Supp-Facts" is called pyridoxine hydrochloride in the "Other Ingredients"...the Vit.C in the "Supp-Facts" is called ascorbic acid in the "Other Ingredients".

See? This is really not a true whole-food multi because they added Vit's & Min's the same way a quality (Natural, Organic) Multi-Vit. does... but while duplicitously railing against those rival Multi's and the very process they, themselves, employ! What foul disingenuousness is this? That's a measure of dismissive disrespect for you, good reader! If I'm wrong and these 6 items are actually an integral part of and came from the Whole Food, then please explain my mistake so I can be improved.

Interestingly, you find, when SP does its adding Vitamins, they don't actually do as good a job as the "Regular" Multi's they bad-mouth because a "Regular Multi" would put in the minimum 100% of the % DV! So, instead of 0.2mg Thiamine at a meager 15%, a good multi would put in 100%... instead of 0.2mg of riboflavin (B-2) at a measly 15% in Catalyn, a good Multi would run that sucker up to at least 100% of the Daily Value. See the subterfuge? You only think you're getting what you need based on the sellers seeming duplicity of artful labeling!

Here is part of what supplement-watch reported - the rest at the end :

Theory-
Meaningful long-term dietary multivitamin/mineral supplementation should be complete, by providing the recommended intakes for all vitamins and minerals. Catalyn meets the SupplementWatch Essential Nutrients criteria for only 2 of the 22 vitamins and minerals. Vitamin D and vitamin B6 were the only nutrients present at levels above 50% of the NRC recommended intakes. Trace minerals are present in the formula as part of the food concentrates, but the amount of each mineral was not available and could not be included in this review.
Value
Catalyn did not score well based on the SupplementWatch criteria. Catalyn is lacking many of the essential nutrients needed for a basic multivitamin and mineral supplement. Catalyn is only available through health care professionals and costs 30 cents per day.
.
copyright supplementwatch Inc. 2007

Let me be clear about something: I don't expect the nutrient amounts in Catalyn or any other Whole Food to even come close to the recommended 100% of the % DV... but whatever it is, I want to know the amount, even if it is very small! Especially when it is very small!

I want to decide how many tablets I want to take! I want to make an informed consent; I would know! If; however, a recommended daily dose of 3 big tablets like Catalyn only contain a trace amount of the necessary Vit's & Min's, then all the enzymes, synergy and whole-foodness in the world can't turn virtually nothing into something significant! They provide disservice only implying to you that they can!

In reference to the "quality," the "high-tech processing," and "purity," etc.: all of this "Fluff" means nothing if the product is as therapeutic as combining V-8 and grape juice together with inadequate amounts of regular "non-WF" Vitamins... added later to inadequate amounts of whole-food!

Now, the preceding is a considered speculation and justified hyperbole because I have no idea how nutritiously efficacious the WF portion of Catalyn might be so as to make that comparison... but, oh yeah, that was the problem, wasn't it! You can't make that comparison because that info is not made available to you!

See?! This is in fact one of the tricks bogus "Whole Food" Supplement makers use to confuse and beguile us! They overwhelm us with the "high-techiness," the quality-control, and the wonderful processing, but that is all but "fluffy-crap-word-salad" to make you forget that you have no idea how much "stuff" is actually in there.

Go to the Catalyn web-site and you will see yet another trick! They overwhelm you with lists of hundreds of phyto-nutrients (sans amounts!) to make it look like this product is loaded with lots of great stuff, though, look at it this way:

...V8 juice is heavy with tomatoes... the lowly tomato has over 10,000 different phyto-chemicals! If V8 decided to list about a thousand of these nutrients on it's label, it would look very impressive but it would mean virtually NOTHING (it's still just a tomato)... just like the long list of nutrients on the Catalyn web-site means virtually NOTHING because, think about this, reader...

...You could sell a freaking bottle of tap-water and boldly list all 72 trace minerals found naturally in tap-water on the label! ...And, Elements like Praseodymium & Dysprosium would impress some boned-headed people into believing the crap was a "Mineral-Health Drink" and a 30 day supply might cost $30 for a one tablespoon "daily dose" you mix in your freaking juice or slosh on your grits!

It remains, this single tablespoon of plain, fluorine laden tap-water will have a great selling point when it "truthfully" says on the label "Contains every Mineral needed for

Good Health." "Good for your teeth": considering fluorine!

You see, a Tbls of tap-water DOES have every mineral needed for good health BUT in such tee-tiny amounts as to be almost nonexistent. That's truth in advertising?

We need a pretty big daily dose of Calcium... so do you think the eentcy, weency, teeny, tiny trace amount of Calcium in a spoonful of tap-water could come close to being a therapeutic dose? Of course not, though our imaginary ad is true - it does have "every" mineral, but our imaginary ad also implies that 1 tablespoon's worth has enough "for good health" when it has virtually nothing to do with good health.

That's the whole, "Whole-Food conundrum" in a nutshell! It is just too easy to mislead people with Whole-Food flash. This is not forgetting that Catalyn does have some good "Glandular" nutrients with all the associated beneficial enzymes, etc, so if it was sold as a "Glandular-Enzyme, Herbal Formula" to be used in conjunction with a good MultiVitamin/Mineral, then I would say "fine"! ...But to pass itself off as a "Complete" MultiVit/Min. is deception of the highest order.

When Dr. Royal Lee invented Catalyn back in 1929 it was supposedly the first "Multi" Vitamin ever made. I certainly feel sure he was headed in the right direction with his Whole-Food Philosophy and I'm sure the nutrients in Catalyn are helpful to some people... though, I don't think we can expect it, 7 decades later, to be considered a "COMPLETE" MultiVitamin/Mineral... considering back then no one was sure what an adequate "MultiVitamin/Mineral" should actually look like.

Also Dr. Lee is philosophically endorsed by the "Weston A. Price" Foundation, which is WAY ahead of its time and one of the greatest Organizations on this planet so it is very uncomfortable for me to be at odds with them... the two PhD gals who run that place are my heroes!

Believe me Folks, this whole business makes me very sad because I think the world of my Chiropractor and I have a profound respect for Chiropractors in general... so jeez, can't they just stop calling the damn thing a...

Complete MULTI-Vitamin/Mineral

That is just wrong, in my opinion.

Closing: an admonition to Standard Process Inc! The errant representation of Catalyn foments a ready faux-necessity of the CODEX - that foul initiative removing self-administered nutritional supplementation materials from lay hands. Who can buy their product line, then, eh?

Questions?

Alan Graham
E-mail - alan068@centurytel.net
Paper Archive - http://www.alienview.net/ALLTCON.html

That's enough. Well be.

Supplement-Watch report:

Rating
Don't waste your money

Company
Standard Process Inc.

Claims
Catalyn is a multiple vitamin, mineral, trace mineral, and enzyme-concentrate, formulated by Dr. Royal Lee in 1929. Catalyn is the antithesis of the "mega-dose" approach to nutritional supplementation. Dr. Lee summoned the whole of his considerable nutritional experience and know-how to provide a nutritional "catalyst", a supplement using whole food ingredients which he named Catalyn. Dr. Lee's goal was to provide a food-based package of nutrients in the most potent and "bioavailable form" - its natural state.

Science
Criteria #1 = Essential Nutrients = Catalyn meets the SupplementWatch Essential Nutrients criteria for only 2 of the 22 vitamins and minerals. Vitamin D and vitamin B6 were the only nutrients present at levels above 50% of the NRC recommended intakes. Criteria #2 = Vitamin and Mineral Sources = Vitamin E and all of the minerals reviewed were not present in the formula. Criteria #3 = Antioxidant Blend = Catalyn does not provide optimal levels for any of the evaluated antioxidant nutrients. Vitamin E (0 IU), vitamin C (3 mg), beta carotene (0 IU) and selenium (0 mcg) all fell below the optimal levels. Criteria #4 = B-vitamin blend = None of the B-vitamins were present in optimal levels that will support normal homocysteine levels or energy metabolism. Criteria #5 = Bone Nutrition = Catalyn provides optimal levels for only one of the six required bone nutrients. Catalyn provides no calcium, magnesium, vitamin K, boron or silicon.

Safety
Catalyn provides safe (very low) levels of all vitamins and minerals. None of the ingredients exceed the NOAEL.

Theory
Meaningful long-term dietary multivitamin/mineral supplementation should be complete, by providing the recommended intakes for all vitamins and minerals. Catalyn meets the SupplementWatch Essential Nutrients criteria for only 2 of the 22 vitamins and minerals. Vitamin D and vitamin B6 were the only nutrients present at levels above 50% of the NRC recommended intakes. Trace minerals are present in the formula as part of the food concentrates, but the amount of each mineral was not available and could not be included in this review.

Value
Catalyn did not score well based on the SupplementWatch criteria. Catalyn is lacking many of the essential nutrients needed for a basic multivitamin and mineral supplement. Catalyn is only available through health care professionals and costs 30 cents per day.

View Full Version: Type 2 diabetes in newly diagnosed 'can be reverse

Title: Type 2 diabetes in newly diagnosed 'can be reverse
Description: *[JUST FIGURED THAT OUT? WOW SHERLOCK!]*

TheUnhivedMind - June 24, 2011 03:39 AM (GMT)

Type 2 diabetes in newly diagnosed 'can be reversed'

Going on an extreme diet to lose excess fat could help some people get rid of diabetes.

24 June 2011 Last updated at 01:19
http://www.bbc.co.uk/news/health-13887909

An extreme eight-week diet of 600 calories a day can reverse Type 2 diabetes in people newly diagnosed with the disease, says a Diabetologia study.

Newcastle University researchers found the low-calorie diet reduced fat levels in the pancreas and liver, which helped insulin production return to normal.

Seven out of 11 people studied were free of diabetes three months later, say findings published in the journal.

More research is needed to see whether the reversal is permanent, say experts.

Type 2 diabetes affects 2.5m people in the UK and is caused by too much glucose in the blood, as a result of insufficient insulin being produced by the pancreas.

The 11 participants in the study were all diagnosed with Type 2 diabetes within the previous four years.

They cut their food intake drastically for two months, eating only liquid diet drinks and non-starchy vegetables.
Fat loss

After one week of the diet, researchers found that the pre-breakfast blood sugar levels

of all participants had returned to normal.

MRI scans of their pancreases also revealed that the fat levels in the organ had decreased from around 8% - an elevated level - to a more normal 6%.

Three months after the end of the diet, when participants had returned to eating normally and received advice on healthy eating and portion size, most no longer suffered from the condition.

Professor Roy Taylor, director of Newcastle Magnetic Resonance Centre at Newcastle University and lead study author, said he was not suggesting that people should follow the diet.

"This diet was only used to test the hypothesis that if people lose substantial weight they will lose their diabetes.

"Although this study involved people diagnosed with diabetes within the last four years, there is potential for people with longer-standing diabetes with to turn things around too."
Susceptibility question

Dr Ee Lin Lim, also from Newcastle University's research team, said that although dietary factors were already known to have an impact on Type 2 diabetes, the research showed that the disease did not have to be a life sentence.

"It's easy to take a pill, but harder to change lifestyle for good. Asking people to shift weight does actually work," she said.

However, not everyone in the study managed to stay free of diabetes.

"It all depends on how much individuals are susceptible to diabetes. We need to find out why some people are more susceptible than others then target these obese people. We can't know the reasons for that in this study," Dr Lim said.

Professor Edwin Gale, a diabetes expert from the University of Bristol, said the study did not reveal anything new.

"We have known that starvation is a good cure for diabetes. If we introduced rationing tomorrow then we could get rid of diabetes in this country.

"If you can catch people with diabetes in the early stages while beta cells are still functioning then you can delay its onset for years, but you will get it sooner or later because it's in the system."

But Keith Frayn, professor of human metabolism at the University of Oxford, said the

Newcastle study was important.

"People who lose large amounts of weight following surgery to alter their stomach size or the plumbing of their intestines often lose their diabetes and no longer need treatment.

"This study shows that a period of marked weight loss can produce the same reversal of Type 2 diabetes.

"It offers great hope for many people with diabetes, although it must be said that not everyone will find it possible to stick to the extremely low-calorie diet used in this study."

Dr Iain Frame, director of research at Diabetes UK, which funded the study, said the diet was not an easy fix.

"Such a drastic diet should only be undertaken under medical supervision. Despite being a very small trial, we look forward to future results particularly to see whether the reversal would remain in the long term."

Title: My dishwasher is trying to kill me! Deadly bacteri
Description: *found in household appliances*

TheUnhivedMind - June 21, 2011 11:46 PM (GMT)

My dishwasher is trying to kill me! Deadly bacteria found in household appliances

By Daily Mail Reporter
Last updated at 5:38 PM on 21st June 2011
http://www.dailymail.co.uk/health/article-...appliances.html

Dishwashers are a breeding ground for potentially killer bugs, say scientists.

The moist and hot environment serves as a perfect habitat for two types of dangerous fungi which can also be found in other kitchen appliances such as washing machines and coffee machines.

Researchers found 62 per cent of dishwashers contained the fungi Exophiala dermatitidis and E. phaeomuriformis on the rubber band in the door. Both of the black yeasts are known to be dangerous to human health.

Both Exophiala species displayed remarkable tolerance to heat, high salt concentrations, aggressive detergents and to both acid and alkaline water.

This explains why the fungi survived even in high temperatures between 60 to 80C and despite the use of detergents and salt in the dishwasher.

Researchers say that this is a combination of extreme properties not previously observed in fungi.

Exophiala dermatitidis is frequently encountered as an agent of human disease and is also known to colonise in the lungs of patients with cystic fibrosis.

On rare occasions it has caused fatal infections in healthy humans.

The researchers, whose findings are published in Fungal Biology, say the invasion of black yeasts into our homes is a potential health risk.

Biologist Dr Polona Zalar, of the University of Ljubljana, Slovenia, and colleagues said: 'The discovery of this widespread presence of extremophilic fungi in some of our common household appliances suggests these organisms have embarked on an extraordinary evolutionary process that could pose a significant risk to human health in the future.'

In the case of dishwashers, high temperatures are intermittently produced and aggressive detergents and high concentrations of salt are used in each washing cycle.

The researchers studied the presence of fungus in dishwashers taken from a sample of private homes from 101 cities across the world.

They added: 'Enrichment of fungi that may require specific environmental conditions was observed in dishwashers, 189 of which were sampled in private homes of 101 towns or communities.

'One-hundred-and-two were sampled from various localities in Slovenia; 42 from other European countries; 13 and 3 from North and South America, respectively; 5 from Israel; 10 from South Africa; 7 from Far East Asia; and 7 from Australia.

'Sixty-two per cent of the dishwashers were positive for fungi, and 56 per cent of these accommodated Exophiala. Both Exophiala species are known to be able to cause systemic disease in humans and frequently colonise the lungs of patients with cystic fibrosis.

'We conclude that high temperature, high moisture and alkaline values typically occurring in dishwashers can provide an alternative habitat for species also known to be pathogenic to humans.'

Description: *shows*

TheUnhivedMind - June 21, 2011 06:28 PM (GMT)

More new mothers are opting to breastfeed UK data shows

The figures only reflect how many babies are initially breastfed

21 June 2011 Last updated at 16:11
http://www.bbc.co.uk/news/health-13863887

More new mothers are opting to try breastfeeding their babies, latest UK figures reveal.

The NHS Information Centre data shows more than eight out of 10 newborns are now breastfed at least once after birth, up from six out of 10 in 1990.

Experts said the increase was welcome and partly due to public awareness that "breast is best" for mother and child.

But the figures do not reveal how many mums stick at it for the recommended first six months of a baby's life.

Many women struggle to continue to exclusively breastfeed. And the Royal College of Midwives is concerned that some new mothers are not getting the support they need to encourage breastfeeding.

Spokeswoman Jane Munro criticised the Department of Health in England for axing funding for National Breastfeeding Awareness Week, which runs this week.

"We do not want to see the ground we have gained lost."

She added: "We know that many women stop breastfeeding when they leave hospital.

"This is why it is so important that they are able to get advice and support from their midwife, and that there are enough midwives with the time to offer these women the help they need."
Smoking

The government said it was committed to training up to an extra 4,200 health visitors by 2015 who would "be able to help support women who want to breastfeed but may find it difficult".

According to the latest figures, breastfeeding rates were higher in England than in Scotland, Northern Ireland and Wales, although rates have risen in most areas.

And the percentage of women who are choosing to smoke either before or during pregnancy has fallen.

U.S. soldier 're-grows leg' after pioneering injection of pig bladder hormone

Last updated at 10:15 AM on 20th June 2011
http://www.dailymail.co.uk/news/article-20...-injection.html

A U.S.soldier who had most of his leg muscle blown off in Afghanistan has become the first to see it grow back in a pioneering experimental operation.

Marine Isaias Hernandez lost 70 per cent of his right thigh muscles when an enemy mortar exploded as he tried to carry out repairs to a truck in Afghanistan.

With such severe muscle damage Hernandez would ordinarily have had his leg amputated.

But a re-think in the way soldiers are treated led to the wounded warrior being injected with a growth promoting substance extracted from pig bladders.

The revolutionary treatment gives hope to the hundreds of maimed veterans returning from conflicts with severe limb trauma.

Stephen Badylak, the tissue engineering director at the McGowan Institute for Regenerative Medicine at the University of Pittsburgh said: 'It was a remarkable recovery.'

Since the experimental growth hormone was used, Hernandez has regained most of the strength in his right thigh.

The wounded Marine's recovery is particularly exciting for scientists as it involves the

regeneration of skeletal muscle which ordinarily does not grow back.

The new treatment could in theory revolutionise how not just how soldiers are treated, but all potential amputees.

In preparation for the operation, corporal Hernandez was made to build up the remaining 30 per cent of muscle left on the damaged thigh.

Surgeons then sliced into the thigh, placing a thin slice of a substance called extracellular matrix.

The surgery is the result of a $70 million investment by the U.S. military into regenerative medicine research.

Marine Hernandez was 19 when he was gearing up his truck in Afghanistan ahead of a long journey.

As he approached the vehicle an enemy mortar exploded, throwing shrapnel into his exposed body parts.

Fortunately the Marine, he was carrying a TV which shielded the upper half of his body.

Speaking to The Australian, Corporal Hernandez said: 'Pretty much anything that wasn't covered, arms and legs, was hit.'

Title: Lyme Disease Symptoms: Key Facts About This
Description: *Mysterious Illness*

TheUnhivedMind - June 20, 2011 03:03 AM (GMT)

Lyme Disease Symptoms: Key Facts About This Mysterious Illness

Posted: 06/18/11
http://www.huffingtonpost.com/leo-galland-...s_b_876096.html

Summer is peak season for transmission of Lyme disease.

The only known transporter of Lyme bacteria -- the deer tick -- goes through the most infectious stage of its life cycle in the summer.

But you don't need to be in contact with a deer to get a deer tick bite. Deer ticks can hitch a ride on small animals and land right in your backyard.

Here is a case study that highlights why Lyme disease is a mystery illness:

Anne had been diagnosed with three different autoimmune diseases, each by a top specialist:
Crohn's disease, an inflammatory disorder of the intestinal tract that causes abdominal pain and diarrhea.

Iritis, an inflammatory disorder of the eyes that causes eye pain and blurred vision.

Spondyloarthritis, an inflammatory disease that attacks the spine and other joints.

Two of the specialists wanted to treat her with immune suppressive drugs, a decision that would have been counterproductive, given the fact that her real diagnosis was Lyme disease -- an infection spread by a tick bite.

Anne had suffered a tick bite five years ago, about six months before the onset of her arthritis, and had been treated with an antibiotic, doxycycline, for three weeks. Subsequent testing of her blood for antibodies to the Lyme bacteria were negative on four separate occasions. Her doctors, therefore, discounted the idea that Lyme disease could be causing her chronic illness.

Two Key Points About Lyme Disease
Active Lyme disease can persist after antibiotic therapy.

Active Lyme disease may occur in the absence of positive blood antibody tests. This condition, called false negative serology, may be more likely in people who received antibiotics very early in the course of infection, as had Anne.

Learn more about the source of Lyme from a new book: Lyme Disease -- Risk of Lyme Disease Expands

The Infectious Diseases Society of America has stated that three weeks of antibiotics will cure "over 95 percent" of people with Lyme disease. But many experts have challenged these treatment guidelines as being inaccurate. As I see it, even if the Infectious Diseases Society of America's guidelines are accurate, they are grossly inadequate: a failure rate approaching five percent for a curable disease is unacceptable.

New Cases of Lyme Disease

Let's check the math: At present there are about 30,000 new cases of Lyme disease reported to state health departments each year. Everyone acknowledges that under-reporting is the rule, so that there are undoubtedly many more cases of Lyme disease acquired in the U.S. every year. The annual incidence is probably more than 100,000 new cases each year.

Lyme disease has been with us for at least 30 years. So, even if the failure rate of the IDSA guidelines is only 1 to 4 percent, as claimed, there are tens of thousands of Americans living with incompletely treated Lyme disease. Anne was one of these and, like so many others, saw many competent physicians for her complaints without the correct diagnosis being made.

Anne Sought Evaluation for a Different Condition

She came to see me not for evaluating Lyme disease, but to find a nutritional therapy for Crohn's disease because she did not want to take the medication her gastroenterologist was recommending. Although her digestive complaints were controlled by a special diet and her iritis could be prevented by supplements of curcumin, an herbal extract, the cycles of joint and muscle pain and fatigue that she had

experienced for the past five years continued.

I ordered some detailed blood tests to evaluate the possibility that she may still be suffering from active Lyme disease. The evidence was inconclusive, but strong enough that she and I agreed that further antibiotic therapy was warranted.

Like many other patients with Lyme disease who start antibiotic therapy, Anne originally felt worse with antibiotics. Fortunately, this reaction, called a "Herxheimer response," only lasted for about a week. Within a month, it had become clear that antibiotics, not immune suppressant drugs, were the right therapy for her. Although not totally well, Anne no longer has any evidence of Crohn's disease, iritis or spondyloarthritis. What appeared to be autoimmune diseases were the deceptive manifestations of a chronic infection of Lyme disease.

To Watch: Under Our Skin: Lyme Disease Film

Essential Facts About Lyme Disease
It is an infection with a bacteria called Borrelia burgdorferi, transmitted by the bite of a deer tick.

The tick is so small -- sometimes as small as a poppy seed -- that you may not be aware of a tick bite.

Symptoms of Lyme disease may occur within days or may not occur for many weeks after infection.

Lyme disease may involve any part of your body: skin, joints, muscles, the nervous system, the heart or the intestinal tract.

Laboratory tests for Lyme disease are imperfect and can be misleading.

Prompt treatment of early infection improves the likelihood of cure, but persistent chronic infection may occur and can take many forms. It is important to note though, that some people with chronic symptoms confuse them for chronic Lyme disease. It's ultimately important to explore all possible explanations for these sorts of symptoms.

The possibility of Lyme disease should be carefully considered in anyone with unexplained fatigue, fever or muscle pain, in people with an acute unexplained change in emotional or cognitive function, and in everyone given a diagnosis of autoimmune or degenerative neurological disease.

Many people feel that their thoughts or feelings about their condition, particularly with

Lyme, have been brushed off by conventional medicine. Get my take on treating the whole person, and how to talk with your doctor in my article Is Conventional Medicine Ignoring You?

Now I'd like to hear from you:

Do you have unexplained symptoms? Has your doctor considered Lyme Disease?

Have you had any treatments? Did they help?

Please let me know your thoughts by posting a comment below.

Best Health,

Description: *osteoporosis due to lack of Vitamin D*

TheUnhivedMind - June 20, 2011 02:12 AM (GMT)

Bad British diet is putting bones at risk of osteoporosis due to lack of vitamin D

Call for a national strategy to educate the public about vitamin D deficiency and halt the rise in bone breakages, following 10-year study by MPs

Robin McKie, science editor
The Observer, Sunday 19 June 2011
http://www.guardian.co.uk/society/2011/jun...s-eating-habits

A national campaign to improve British bone health should be set up as soon as possible, a group of MPs will urge. A report by the all-party parliamentary osteoporosis group (Appog) will warn that the spread of unhealthy diets and a general decline in drinking milk, consuming other dairy products and eating fresh fish has left an increasing number of people suffering from vitamin D deficiency.

Without sufficient vitamin D – which is also produced in the skin by exposure to sunlight – bone growth is affected and conditions such as osteoporosis, in which bones become increasingly porous, become common. This can result in more bone breakages and fractures. According to Appog, the number of British men admitted to hospital for a hip fracture rose by 77% between 1998-99 and 2008-09.

The parliamentary group, which is made up of peers and MPs, has been studying the issue for 10 years and will publish a list of recommendations on Wednesday aimed at improving bone health in the population.

The group's proposals include a recommendation that more research be carried out to determine the optimum dose of vitamin D that is required by the public. In addition, the report urges that:

■ A wider choice of dietary supplements and fortified and non-fortified products should be made available.

■ Malnutrition in older people in hospital must be tackled.

■ The food supplement industry should have greater freedom to create vitamin D products which can be targeted at different demographic groups.

■ There should be opportunities for young people to learn about bone health in the classroom.

"By adopting a healthy lifestyle, the risk of breaking a bone as a result of osteoporosis in later life is likely to be reduced," the report states. "As such, it would appear beneficial to promote healthy diet and safe sunlight exposure as part of a strategy to prevent osteo- porosis and fractures."

Title: r. Richard Schulze Liver 5 day Cleansing/Detox

craig-oxley - September 13, 2008 05:07 PM (GMT)

Dr. Richard Schulze

Liver
Five-day
Cleansing and Detoxification Program

Liver Five-day Cleansing **and Detoxification Program** 2 *Days of a Purifying Raw-Food Program and a 3-Day Juice Fast*

IMPORTANT NOTICE: You must complete the 2-week **bowel detoxification** and rebuilding program using Intestinal Corrective Formulae #1 and #2, and CONTINUE taking #1 & #2, while completing this program. Then you may either do this 5-day Liver Cleanse, or the **5-day Kidney Cleanse**. Or you may do both! The liver usually is detoxified before the kidneys, but you may reverse this if desired.

Day 1: Upon arising drink 8 ounces of distilled water

Breakfast: This is a great way to start your day. The water rinses and flushes your digestive tract of any leftover food and digestive juices. **Within 1 hour prepare for the following Morning Drink: Morning Drink (Liver & Gallbladder Flush**) (Mix in a Blender) (in Spring and Summer) 8 ounces of fresh orange juice or a citrus juice combination (1 lemon or 1 lime and enough orange, grapefruit or tangerine to make 8 ounces) or (in Fall and Winter) 8 ounces of fresh apple and/or grape juice

8 ounces of Distilled Water
1-5 clove(s) of garlic (start with one and increase daily)

1-5 tablespoon(s) of organic virgin cold-pressed olive oil (start with one and increase daily)
1 small piece of fresh Ginger Root (about 1 inch long)

15 minutes after this drink, consume 2 cups of Detoxification Tea. Consume 2 dropperfuls of Liver/Gallbladder - Anti-Parasite tonic 4 times daily during this cleanse. Take in a few ounces of water. It should be quite bitter.

Day #1 Breakfast
Live, **FRESH** fruit or vegetable juice is the best way to get your Vitamins, Minerals and other Essential Nutrients. They are also very important for cleansing and detoxification. If you are hungry before lunch time you may have fruit, diluted fruit juices, and fruit smoothies. Stop all fruit or fruit juices at least 1 hour before lunch. It is best while on this program not to mix fruit and vegetables together.

Day #1 Lunch
For lunch you can have diluted fresh raw vegetable juices, raw vegetables alone or in salads, sprouts, potassium broth, and herb **teas.** You may make dressings for the salad if you like using Olive oil, Avocado, Raw Apple Cider Vinegar, Lemon Juice, Garlic, Onions and any Herbs and Spices.
Afternoon Snacks: Raw vegetables, raw vegetable salads, diluted vegetable juices, sprouts, potassium broth and herb teas. All vegetable food must be stopped by 6 p.m.

Day #1 Dinner
Diluted fruit juices, fruits, fruit smoothies, fruit salads and herb teas.

Day #2, #3 and #4 Now we begin the 3 day fast. Start with your water, morning flush drink and herbal tea. Diluted fruit juices and herb tea until noon, diluted vegetable juices, Potassium Broth and herb tea mid-day and afternoon and diluted fruit juices and herb tea again in the evening. **Consume at least 1 gallon (128 ounces) of liquid. That is 8 ounces every hour! If you get hungry, DRINK MORE!!!**

Potassium Broth Recipe
This is a great-tasting addition to your cleansing program. It will flush your system of toxins, poisons and unwanted salts and acids while giving you a concentrated amount of vitamins and minerals.
Fill a large pot with 25% potato peelings, 25% carrot peelings and whole chopped beets, 25% chopped on-ions including 50 cloves of garlic , 25% celery and dark greens. Add hot peppers to taste. Add enough distilled water to cover vegetables and simmer on very low temperature for 1-2 hours. Strain, or just dip your mug in, and drink only the broth. Put the vegetables in your compost. Make enough for two days, refrigerating the leftover broth. It is important to use Organic vegetables. We do not want to consume any toxic insecticides, pesticides or inorganic chemical fertilizers while we are on a **cleansing** and detoxification program.

Day #5:
Today is the day to break your fast. Make this day the same as day #1. Continuation of the fast with your morning drink and then you can have some fresh fruit. Chew it very slowly and mix each mouthful with plenty of saliva. Remember, breaking your fast is a very important part of this program. Chew your food well and eat until satisfied, not full. You can always eat more later if you are still hungry.

After 1:00 PM you may have a small vegetable salad, and fruit again in the evening, chewing everything to a liquid pulp. Remember, this program restricts the types of food you will be eating, not the amount. If you are hungry at any point during this detoxification program, drink and/or eat more. The more you eat and drink, the more you will flush the toxins out of your body. Also remember to have a fun time. Your positive, healing attitude is most important to achieve maximum benefits out of this program; be loving to yourself. Take it easy when returning to a new healthy food program. Choose lighter foods for a few days and be careful not to overeat. Chew your food well. Eating smaller meals more often is better than one or two large meals. Enjoy your new set of values on food choices and amounts. For the best health, become a vegetarian. Repeat this program until you are well but do it at least once every 3 months.

Veritas - October 18, 2008 04:50 PM (GMT)

Craig, have you tried Schulze's method before? I started it today, and I'm wondering if I could get an idea as to what to expect out of it? Can I leave home, or should I stay for any reason while on the program?

Thanks

craig-oxley - October 18, 2008 11:15 PM (GMT)

I've never done the Shulze Liver cleanse, I've only utilised the Hulda Clark method. The time to worry about toilet trips and being out is when theres Epsom Salts used. You should be okay with the above but ideally if you stay home then this is the best bet as with any detoxification. I've done around 20 Liver flushes all Hulda Clark and with 12 coming in just 12 weeks haha (don't copy me!).

dorean - December 8, 2009 08:33 PM (GMT)

I have completed Dr. Schulzes Liver Flush and I would recommend it. I will take his liver flush drink on a regular basis from now on, maybe 1 morning a week. I prefered to have 2 lemons, 1 lime and 1-2 oranges to make up the juice content and half the water

content. Dr. Schulze recommends taking his Liver flush drink any time you have a problem with the gall-bladder, he suggests using just lemons or just apples in such a case. The Liver flush drink actually tastes very refreshing, the Liver flush 5 day detox was quite enjoyable, alot more pleasant than the Bowel or Kidney flushes.

I do feel the herbs and teas he includes with his program are of a higher quality than anything you will get in your local stores, and he explains why. Even organically grown herbs are most often treated with a chemical to kill bacteria before they are bottled, he names one prominant Californian "organic" herb producer that was fined for air pollution when releasing this chemical after treating their "organic" herbs. He also says most herb tinctures that use glycerin are of no use at all. So after my Schulze cayenne tincture is finished I will make my own, following Craigs advice.

It is very possible to make your own version of Dr. Schulzes teas and herbs mixtures to acompany this Liver flush program which should probably do alot of good. He recommends that everyone with a decent diet do at least four 5-day flushes a year, the Bowel twice, the liver and kidneys once a year each (or more). Obviously those with liver or heart or kidney issues, he recommends do a succession of flushes to clear your problems.

My feeling is that Dr. Schulze wants to dissolve and then flush any stones as opposed to flushing them out whole like in Hulda Clarks method. I didn't pass any stones that I noticed. Dr Schulze does make reference to other flushing methods, he mentions Epsom salts so I assume he is refering to the Clark flush.

Dr. Schulzes flushes do also include excellent well-written booklets that have alot of very useful information. It seems clear he blames junk foods and animal foods (which he calls "sludge") for most of the health problems facing westerners today, along with toxic pollution of all kinds.

Dr Schulze also places emphasis of drinking distilled water during his flushes, particularly for kidney flush. Unfortunately my own distiller hasn't arrived yet and I did feel uncomfortable about drinking only filtered tap water during this flush, but it must be alot better than doing nothing. Actually Dr Schulze has alot to say about tap water, basically says never drink it!!!!

His potassium broth is also worth making and tastes ok. I think I will continue making it in the future and will even use it as a stock for making vegetable soups too.

View Full Version: William Donald Kelley Liver Flush - Cleanse

Title: William Donald Kelley Liver Flush - Cleanse

craig-oxley - September 13, 2008 05:08 PM (GMT)

The Liver-Gallbladder Flush - Cleanse

As prescribed by **William Donald Kelley**, DDS, in 1981.
Dr. Kelley is the author of "**One Answer to Cancer**"

INSTRUCTIONS
(Required items are capitalized.)

Preparation: Drink as much Organic (or 100% pure) **APPLE JUICE** as comfortable, for 5 - 6 days before the liver flush, in order to soften gall stones. For maximum softening, add PHOSFOOD drops (ortho-phosphoric acid) to the apple juice, for a total of 60 drops per day.

Rinse your teeth after taking the ortho-phosphoric acid: Brush them briefly with a BAKING SODA solution (or Milk of Magnesia), to neutralize the acid.

"Phosfood Liquid" is from Standard Process Inc., Palmyra, WI 53156 (http://www.standardprocess.com).
It is sold by some homeopathic pharmacies, vitamin suppliers, and by some health practitioners. "Super Phos 30" is a similar product.

START -> 3 hours following dinner, and 7 hours before bed, typically on a Saturday. (For an 11 pm bedtime, finish eating dinner by 1 pm.) Take 2 Table-spoons (1 oz.) EPSOM SALTS, dissolved in 6 oz. cool water. Then rinse your mouth with water. (Use a "shaker jar" to dissolve the Epsom salts. The taste is much less objectionable with cool water.) Drink more water, as desired... Epsom salts are MgSO4 -- magnesium

sulfate -- an intestinal purge, and also a muscle relaxant for the bile ducts and the gall bladder, to prevent cramps and retention of gall stones. Epsom salts are available in drug stores.

Hour 2 -> Optional, but always to be used if "stomach cramps" should occur during the liver flush. (This is rare when using epsom salts. Cramps would indicate that stones are lodged in, and blocking liver ducts.)
However, this step is very beneficial in ALL cases, to stimulate the liver's release of waste and bile.
Begin with several plain, warm-water enemas - then follow with a 4 cup ORGANIC COFFEE enema.
Use 1 Table-spoon (1/2 oz.) coffee per cup, drip-filtered. Dissolve 1/2 cup (4 oz.) EPSOM SALTS into the hot coffee, then cool the coffee down to 98 - 100 degrees F. (body temperature) before using. (You can rapidly cool the pan in a sink of cold water.) Retain the coffee enema for 10 - 15 minutes, while relaxing in a reclining position on a floor mat.

Hour 3 -> Take 1 Table-spoon (1/2 oz.) EPSOM SALTS, dissolved in 4 oz. cool water. Then rinse your mouth with water. Drink more water, as desired...

Hour 4.5 -> (Optional) This step is used to increase bile flow, which helps dislodge stones deep in the liver ducts. This step also helps to eliminate hunger. Eat: 8 oz. CREAM on fresh berries or FRUIT, mixed. (organic heavy cream, without carrageenan) (frozen berries are optional if necessary)
or: These variations have also worked: 8 oz. CREAM and 6 - 8 oz. fruit KEFIR, mixed.
or: 16 - 32 oz. vanilla HIGH-FAT ICE CREAM. (quality ice cream, without carrageenan)

Hour 7 -> Bedtime -- Have the required items prepared : Have a TIMER handy, and also ALKA-SELTZER "GOLD".

Take 4 oz. (1/2 cup) room-temp. **Organic OLIVE OIL**, followed by 4 oz. fresh-squeezed **LEMON JUICE**. Olive oil, taken following the above procedure, causes the liver ducts and the gall bladder to forcefully contract, and expel their collection of gall gravel and gall stones. (The acid lemon juice speeds the transit of the olive oil thru the stomach and into the duodenum, which helps prevent or minimize nausea.) Next: Rinse your teeth: Brush them briefly with a BAKING SODA solution (or Milk of Magnesia), to neutralize the acid of the lemon juice.

*** Go Immediately to Bed, "face down." Pull your right knee fully upwards, towards your right shoulder. A pillow under your left shoulder will help. Now relax into this position, and then shift your weight to your right side. Keep your right knee held fully upwards, to your chest. Using a TIMER, hold this position for 30 minutes. (You can briefly stretch your right leg, if necessary.) Gall bladder contractions and expulsion of stones will occur at this time. These can often be felt and heard. Optional, but helpful:

Massage your gall bladder with your finger tips, up under your right ribs. After 30 minutes - relax, stretch out, and go to sleep.

If any nausea or acid-reflux is felt during the night, get up and immediately take ALKA-SELTZER "GOLD" in water (the "Gold" type contains no aspirin). This is safe and effective.

The following morning, immediately do the following : Take 2 Tea-spoons (1/3 oz.) EPSOM SALTS, dissolved in 3 oz. cool water. Next, drink 8 - 12 ounces of water. Later, drink more water or orange juice, as desired. Wait 2 - 3 hours before eating a light breakfast.

Plan to repeat the liver flush at least 6 times, especially when large gall stones (1/2 to 1 + inches across) are expelled -- or when there is a large volume of stones (more than about 1/4 cup).
If few (or no) gall stones are seen, this is OK -- however this is usually a false negative. Repeat the flush in 4 - 6 weeks.

When a large volume of gall stones is seen, the liver flush should be repeated in 2 weeks.

Generally, the liver flush is repeated at 2 - 4 week intervals until the volume of gall stones seen (each time) has been greatly reduced. This can require 10 - 15 flushes, or more, because your liver will be "pulling" cholesterol out of your body, where it may have accumulated for many years or decades.

After the initial series, repeat the liver flush 2 - 4 times per year, for "maintenance."

View Full Version: The HULDA CLARK Liver Flush instructions

Title: The HULDA CLARK Liver Flush instructions
Description: *(The Most Powerful and Rewarding Flush)*

craig-oxley - September 13, 2008 05:06 PM (GMT)

Cleansing the liver of gallstones dramatically improves digestion, which is the basis of your whole health. You can expect your allergies to disappear, too, more with each cleanse you do! Incredibly, it also eliminates shoulder, upper arm, and upper back pain. You have more energy and increased sense of well being.

It is the job of the liver to make bile, 1 to 1.5 quarts in a day! The liver is full of tubes (biliary tubing) that deliver the bile to one large tube (the common bile duct). The gallbladder is attached to the common bile duct and acts as a storage reservoir. Eating fat or protein triggers the gallbladder to squeeze itself empty after about twenty minutes, and the stored bile finishes its trip down the common bile duct to the intestine.

For many persons, including children, the biliary tubing is choked with gallstones. Some develop allergies or hives but some have no symptoms. When the gallbladder is scanned or X-rayed nothing is seen. Typically, they are not in the gallbladder. Not only that, most are too small and not calcified, a prerequisite for visibility on an X-ray. There are over half a dozen varieties of gallstones, most of which have cholesterol crystals in them. They can be black, red, white, green or tan colored. The green ones get their color from being coated with bile. Notice in the picture (pg. 545) how many have imbedded unidentified objects. Are they fluke remains? Notice how man are shaped like corks with longitudinal grooves below the tops. We can visualize the blocked bile ducts from such shapes. Other stones are composites- made of many smaller ones- showing that they regrouped in the bile ducts some time after the last cleanse.

At the very center of each stone is found a clump of bacteria, according to scientists, suggesting a dead bit of parasite might have started the stone forming.

As the stones grow and become more numerous the back pressure on the liver causes it to make less bile. Imagine the situation if your garden hose had marbles in it. Much

less water would flow, which in turn would decrease the ability of the hose to squirt out the marbles. With gallstones, much less cholesterol leaves the body, and cholesterol levels rise.

Gallstones, being porous, can pick up all the bacteria, cysts, viruses and parasites that are passing through the liver. In this way "nests" of infection are formed, forever supplying the body with fresh bacteria. No stomach infection such as ulcers or intestinal bloating can be cured permanently without removing these gallstones from the liver.

Preparation

You can't clean a liver with living parasites in it. You won't get out many stones, and will feel quite sick. Zap daily the week before, or get through the first three weeks of the parasite killing program before attempting a liver cleanse. If you are on a parasite maintenance program, do a high dose program the week before.
Completing the kidney cleanse before cleansing the liver is also recommended. You want your kidneys, bladder and urinary tract in top working condition so they can efficiently remove any undesirable substances incidentally absorbed from the intestine as the bile is being excreted.
Do any dental work first, if possible. Your mouth should be metal free and bacteria free (cavitations are cleaned). A toxic mouth can put a heavy load on the liver, burdening it immediately after cleansing. Eliminate that problem first for best results.

Liver cleanse and gallbladder cleanse flush NO surgery

Ingredients

1/2 CupOlive Oil Extra Virgin (= 1.25 dl)

1 Big grapefruit (2 small) (Or 3 lemons)

4 tablespoon EPSOM salts = ($MgSO_4 + 7H_2O$)

(EPSOM salts = Magnesium Sulphate = EPSOMITE = Magnesium Sulfate Heptahydrate)

3 cups water (=750 dl)

(P.S .!! 1 cup = 250 ml = 2.5 dl = 0.25 l)

Choose a day like Saturday for the cleanse, since you will be able to rest the next day.

Take no medicines, vitamins or pills that you can do without; they could prevent success. Stop the parasite program and kidney herbs too, the day before.

Eat a no-fat breakfast and lunch such as cooked cereal with fruit, fruit juice, bread and preserves or honey (no butter or milk), baked potato or other vegetables with salt only. This allows the bile to build up and develop pressure in the liver. Higher pressure pushes out more stones.

2:00 PM. Do not eat or drink after 2 o'clock. If you break this rule you could feel quite ill later. Get your Epsom salts ready. Mix 4 tbs. in 3 cups water and pour this into a jar. This makes four servings, 3/4 (three fourths) cup each. Set the jar in the refrigerator to get ice cold (this is for convenience and taste only).

[You can substitute 3 cups water with 3 cups freshly pressed grapefruit juice, or freshly pressed apple juice, it tastes better .]

6:00 PM. Drink one serving 3/4 (three fourths cup) of the ice cold Epsom salts. If you did not prepare this ahead of time, mix 1 tbs. in 3/4 (three fourth) cup water now. You may add 1/8 (one eight) tsp. vitamin C powder to improve the taste. You may also drink a few mouthfuls of water afterwards or rinse your mouth. Get the olive oil (ozonated, if possible) and grapefruit out to warm up.

Alternative Schedule 1: Omit the first Epsom Slats dose at 6 p.m. Take only one dose, waiting till 8 p.m. Change nothing else. Many people still get stones with one less dose. If you do not, do the full course next time. "The Cure For HIV and AIDS" By Hulda Clark pg.585

8:00 PM. Repeat by drinking another 3/4 (three fourths) cup of Epsom salts.You haven't eaten since two o'clock, but you won't feel hungry. Get your bedtime chores done. The timing is critical for success.

9:45 PM. Pour 1/2 (half) cup (measured) olive oil into the pint jar. Add 2 drops HCl to sterilize. Wash grapefruit twice in hot water and dry; squeeze by hand into the measuring cup. Remove pulp with fork. You should have at least 1/2 (half) cup, more (up to 3/4 (three fourths) cup) is best. You may use part lemonade. Add this to the olive oil. Also add Black Walnut Tincture. Close the jar tightly with the lid and shake hard until watery (only fresh grapefruit juice does this).

Now visit the bathroom one or more time, even if it makes you late for your ten o'clock drink. Don't be more than 15 minutes late. You will get fewer stones.

10:00 PM. Drink the potion you have mixed. Take 4 ornithine capsules with the first sips

to make sure you will sleep through the night. Take 8 if you already suffer from insomnia. Drinking through a large plastic straw helps it go down easier. You may use oil and vinegar salad dressing, or straight honey to chase it down between sips. Have these ready in a tablespoon on the kitchen counter. Take it all to your bedside if you want, but drink it standing up. Get it down within 5 minutes (fifteen minutes for very elderly or weak persons).

Lie down immediately. You might fail to get stones out if you don't. The sooner you lie down the more stones you will get out. Be ready for bed ahead of time. Don't clean up the kitchen. As soon as the drink is down walk to your bed and lie down flat on your back with your head up high on the pillow. Try to think about what is happening in the liver. Try to keep perfectly still for at least 20 minutes. You may feel a train of stones traveling along the bile ducts like marbles. There is no pain because the bile duct valves are open (thank you Epsom salts!). Go to sleep, you may fail to get stones out if you don't.

Next morning. Upon awakening take your third dose of Epsom salts. If you have indigestion or nausea wait until it is gone before drinking the Epsom salts. You may go back to bed. Don't take this potion before 6:00 am.

2 Hours Later. Take your fourth (the last) dose of Epsom salts. You may go back to bed again.

"The Cure For HIV and AIDS" By Hulda Clark pg.585
Alternative Schedule 2: After taking the first dose of Epsom salts in the morning, wait two hours and take a second dose of the oil mixture (but only 1/2 cup)and go back to bed. After two more hours take another dose of Epsom salts. This schedule can increase the number of stones you remove."

After 2 More Hours you may eat. Start with fruit juice. Half an hour later eat fruit. One hour later you may eat regular food but keep it light. By supper you should feel recovered.

How well did you do?

Expect diarrhea in the morning.

View Full Version: Got Insomnia: Perhaps You Need a Gallbladder Clean

Title: Got Insomnia: Perhaps You Need a Gallbladder Clean

craig-oxley - July 24, 2009 05:37 PM (GMT)

Got Insomnia: Perhaps You Need a Gallbladder Cleanse

Monday, July 13, 2009 by: Kim Evans
http://www.naturalnews.com/026606_gallblad...nia_health.html

Chronic insomnia has to be one of the most annoying health problems around. Imagine not being able to fall asleep or stay asleep for nights on end. Your work will suffer, as will your general happiness and contentment. Unfortunately, 35 million Americans suffer from long-term insomnia, and slightly fewer experience insomnia occasionally. The medical establishment offers drugs to sedate you, and for mild cases some melatonin or sleep-inducing herbs like chamomile can help. But those with chronic insomnia might want to consider the root cause, and that often relates to your gallbladder.

In Chinese medicine, the gallbladder and sleep are closely connected, and problems with the gallbladder often manifest as sleep problems. Problems with the gallbladder can also be manifested in the shoulders, which can be felt as tight shoulder muscles, or even seen as feelings of resentment. In Chinese medicine, each organ is also related to a specific emotion and the gallbladder is commonly associated with resentment, which is essentially anger at a wrong that has been done to you.

Problems with the gallbladder are actually quite common, as mainstream 21st century dietary habits create them with ease. Diets with meat, white flour, and processed foods do the trick quite well. It's also theorized that a tiny bacteria or parasite might be at the center of each gallstone and that the body tries to contain the filth by wrapping cholesterol and bile around it, thus creating the stones.

Some experts think that most of the adult population has gallstones, although most don't know it. If your doctor finds them first, although it's rare for medical doctors to check the gallbladder for insomnia, your doctor will often recommend you have the

entire organ removed. About half a million people have this done in the U.S. each year. Unfortunately, that sets most of them up for digestive problems and a much higher likelihood of being overweight, because your gallbladder stores the bile that helps your body digest fat.

A much easier way to remove those stones is to do an overnight gallbladder cleanse. The most common and effective gallbladder cleanse around involves drinking a couple concoctions of Epsom salts, followed by a drink of lemon juice and olive oil. While drinking lemon juice and olive oil sounds awful, it's really not that bad. Drinking the Epsom salts however, really is that bad. But when it's over, most agree that it was worth it. The next morning, you'll find the toilet filled with gallstones and if you had insomnia, there's a decent chance it will be flushed away too.

xtiml - June 7, 2010 05:44 PM (GMT)

I had soem pain in my upper front abdomen under my ribs cage and it was not going away,it was a duller type pain indicatiiong it was inside me not a muscle or liek that, a friend tolsd me to do a gall blkadder cure, three days of 1 qt or more of aple juice on third day take 12 tablespoon of epsom salts in late aftwer noon two times 1 hour apart. wait an hour and take 4ounces olive oil and 4 ounces fresh lemon juice(it tyastes good really makes a good dresising)I had a bm before bed not much of one bit i had fasted the three days which isnt nesecary but i did it anyways, and in the morning i had a nother and then another and have not had any pain since then and it seems to be a good thing thank god,doctors know of this but are forbidden to advise to do this,also like the operation fees.I think these natural cures are really good of course.at least this one is.

seekerx - March 20, 2011 10:35 AM (GMT)

Actually most of this insomnia could be attributed to lack of sunlight, we weren't meant to live in buildings all day, nor directly in the sunlight.

View Full Version: liver flush and my personal testimony

Title: liver flush and my personal testimony

kalongi - May 19, 2009 02:59 PM (GMT)

I'm your natural 25 years old guy, just when life is running great (the mindset that everything happens to the others), it backfired; was diagnozed with an 'eritema multiforme' - don't know the term in english (very luckily, only my hands and feet were affected, and my mouth for two times, the rest of the body was ok). Needless to say that 4 years under the medical inquisition brought me nothing but more chemicals inside my body.

Tried the liver flush 2 months ago, and the next morning it was so obvious that the problem was solved - not just i felt better but i could CLEARLY see what came out.

I was told that my syndrome did not have cure in our days by a million different dermatologists and different people in the alternative medicine ..... 4 years of a total lack of health (last 2 years being a 'living hell'), FLUSHED in 2 hours. Amazing.

and I actually found out that we have a naturopat following H. Clarks material here in Portugal ! Not even 50 miles from where i live - the doctor told me that their place is the only one in Europe where we have access to all her material; dunno if it is true or not, but i surely marked an appointment, went there and got my colon cleanse kit along with a free lymphatic cleanse !

Will follow 4 or 5 more liver flushes after.

Been telling this to everyone around me, even my barber man, his wife and a girl friend of them got all interested, since they all have their health issues to solve (back pain mostly and some other annoying things)

Liver flush is definatly amazing, it works, the full 2 day process worked like a beauty. Can't wait to start the, 25 day process, colon cleanse to see what it will bring in terms of health, Ha !

craig-oxley - May 19, 2009 04:24 PM (GMT)

Sounds excellent

seekerx - September 4, 2010 05:46 AM (GMT)

Why is hulda clark on quackwatch? Also don't give me that medical mafia answer that is just character assasination.

craig-oxley - September 4, 2010 12:43 PM (GMT)

If you want me to address your question then do not talk to me as if I'm of low intelligence. Quackwatch is controlled by the Medical Mafia controlled by Knight of Malta, David Rockefeller and his masters. If you want more information on this devilish organisation then click the link provided below. You'll also hear quackwatch nonsense in one of the new Cancer reversal videos which may be 'Dying to have Known' if I remember correctly. When one has healing information whether it be all of their work or just part of it, and it heals disease which rakes in profits for the pharmaceutical industry along with eventually death for the depopulation agenda, well you can't tamper with this. This is one of the population controls and economic aiders you see so you're tampering with their wishes. You'll be demonised as a quack to try to put uneducated people off even dreaming of trying your information which comes cheap and easily whilst working unlike the expensive, complicated (no need) pharmaceutical poisonous actions. You'll then end up down the road of all idiots who follow the doctors of death and of course this is a wooden box or at the very least Liver and Kidney damage from drugs.

The biggest quacks on the planet are the doctors of death and their quackwatch. I suggest you research Steven Barrett a lot further. I know for instance that the Liver flush works as said and has some great restorative healing actions on the body. I've proven this in the past on myself with certain issues. I've done over twenty Liver flushes and I have many observations on the body from it thus experience unlike most who simple listen to paid lackies of the death industry spitting out vile hate. This is why these silly quackwatch website listeners really annoy me. If you wish to stay on this site then please do not bring up the establishment's purposeful confusion systems to help gatekeeper and pull thinking people back into illusion lar lar land. Theres some very respectable healers attacked by this cretinous group and all because they healed people of Cancer, AIDS and other diseases which the establishment claim are incurable.

seekerx - September 8, 2010 11:07 AM (GMT)

Im in no doubt doctors are dangerous, saw a report of a baby that was apparently born dead, baby was put to mother as she wanted to hold it, she wrapped it up and put it close to her heat, and it started to move. Doctor says its a mystery, bullshit the child feeds off the mothers energy and since it was premature never had the chance to finish collecting enough energy to sustain itself at birth. Anyways I don't believe doctors tell the truth. Most of the time they are just useful idiots trained by the ama, who basically controls the university courses anyway. I wonder how many of them actually question everything they are taught, cause most people don't because the workload for wading through the bullshit would be to high. Btw I know barack obama is set to become the world leader for the NWO, have recently seen enough info that unlocks all that information, you mentioned you had a really old dictionary, i'm curious what is it and where can I get one.

First of all I don't believe anything is incurable, second of all the reason for this is simple, if it can be built it can be reversed.

Keith - September 24, 2010 08:44 PM (GMT)

QUOTE (kalongi @ May 19 2009, 02:59 PM)

I'm your natural 25 years old guy, just when life is running great (the mindset that everything happens to the others), it backfired; was diagnozed with an 'eritema multiforme' - don't know the term in english (very luckily, only my hands and feet were affected, and my mouth for two times, the rest of the body was ok). Needless to say that 4 years under the medical inquisition brought me nothing but more chemicals inside my body.

Tried the liver flush 2 months ago, and the next morning it was so obvious that the problem was solved - not just i felt better but i could CLEARLY see what came out.

I was told that my syndrome did not have cure in our days by a million different dermatologists and different people in the alternative medicine ..... 4 years of a total lack of health (last 2 years being a 'living hell'), FLUSHED in 2 hours. Amazing.

and I actually found out that we have a naturopat following H. Clarks material here in Portugal ! Not even 50 miles from where i live - the doctor told me that their place is the only one in Europe where we have access to all her material; dunno if it is true or not, but i surely marked an appointment, went there and got my colon cleanse kit along with a free lymphatic cleanse !

Will follow 4 or 5 more liver flushes after.

> Been telling this to everyone around me, even my barber man, his wife and a girl friend of them got all interested, since they all have their health issues to solve (back pain mostly and some other annoying things)
>
> Liver flush is definatly amazing, it works, the full 2 day process worked like a beauty. Can't wait to start the, 25 day process, colon cleanse to see what it will bring in terms of health, Ha !

cool.. i'm happy for ya kalongi. "flushed in two hours" from "4 years of hell"..... awesome.

kalongi - September 24, 2010 11:43 PM (GMT)

Thank you brother. Doing another liver flush next week by the way and will keep doing it until nothing else comes out (4 flushes so far). My liver was a really big MESS I'll tell you that. Oh yes, that colon cleanse also worked like a beauty !

edit: dang, just turned 27 two days ago, and got saved by the glorious King Jesus just about the time I made this thread. Thank you for bringing it out, it brought good memories - what an amazing journey it has been since then hihihi :)

View Full Version: Spring Tips for a Happy Liver

Title: Spring Tips for a Happy Liver

craig-oxley - November 30, 2009 04:54 PM (GMT)

Spring Tips for a Happy Liver

Posted by: Lesley Tierra in seasonal herbs, herbs on Apr 01, 2009
http://www.planetherbs.com/index.php?optio...8&limitstart=10

Spring is the beginning of the year, when the earth awakens and new life bursts forth. It's a time of planting seeds, physically and mentally. This season stirs the uprising of vital energy; just as sap begins to rise in trees, so our inner fire stirs and ascends in spring. The hint of new growth surges through us, moving us out of winter's cocoon with renewed vitality. It's time now to shake off any excess or sluggishness developed during winter. This is the key to spring: cleansing.

The Chinese associate spring with the wood element and its Organs, the Liver and Gallbladder. A healthy Liver is like a young sapling growing strong, yet flexible, flowing and rooted. Thus, the Liver controls the smooth and even flow of Energy and Blood. This is nurtured by the trust fund energies in the Kidneys, just as a tree (the wood element and Liver) is nourished by water (the water element and Kidneys). The Liver also stores and replenishes Blood, a function similar to the Western understanding of the Liver. Spring is the time to cleanse the Blood and Liver, and to regulate our habits and activities.

Spring Ailments
If spring winds invade, or stir Internal Wind, they cause tension, stiffness, spasms, tics, clumsiness, numbness, headaches, allergies, convulsions, itching, skin conditions and pains which change severity and location. The Liver then becomes congested, resulting in anger, frustration, irritability, stiff neck and shoulders, hypertension, PMS, depression, mood swings and irregular menstruation. People who feel worse in spring often have congested livers.

Those who experience red face and eyes, irritability, propensity to outbursts of anger, dizziness, dry mouth, splitting headaches or migraines, insomnia, thirst and constipation

at this time of year have excessive Heat in the Liver. Prolonged ingestion of caffeine (including coffee, black tea, cocoa, colas and chocolate), alcohol, sugar, fried, fatty and greasy foods, dairy, nuts and nut butters, turkey, avocados, chips, cheese and spicy foods causes this condition. It is further aggravated when the Kidney's trust fund is depleted from prolonged over-activity (mental, physical or sexual) and insufficient food or protein to sustain that activity.

To balance Spring's energy, eat plenty of dark leafy greens, such as collards, kale, mustard, and chard, as these cleanse the Blood and Liver. Include other greens naturally growing at this time such as watercress, lamb's quarters, malvae, chickweed, nettle, purslane and dandelion. Add lemon juice (to make iron more available from the greens and clear Liver Heat) and an oil high in gamma-linolenic acids (GLAs), such as flaxseed oil (which supports normal liver function). Ingest white meats (except turkey, which "heats" the Liver) instead of red, legumes, a large variety of cooked vegetables, some fresh fruit and whole grains. Use grain drinks, green tea or dandelion tea instead of coffee for energy, and chamomile tea in place of alcohol to relax.

Others may experience Dampness and Heat in the Liver this time of year, with symptoms of nausea, jaundice, vaginal discharge and itching, migraines, headaches, redness and swelling of the scrotum and frequent urinary infections. Dampening and Heating foods help cause these conditions, such as caffeine (including coffee, black tea, cocoa, colas and chocolate), alcohol, sugar, fried, fatty and greasy foods, dairy, nuts and nut butters, turkey, avocados, chips, cheese and spicy foods. Further, if digestive powers are diminished from prolonged intake of cold and damp foods (iced foods and drinks, juices, raw foods, salads, soy milk and flour products) then Dampness accumulates and impairs the Liver function.

These folks should eat plenty of protein from white meats (except turkey) and legumes, a large variety of cooked vegetables and dark leafy greens (collards, kale, mustard, dandelion and chard) and a small amount of whole grains. Avoid all cold, raw, greasy, damp foods and iced drinks and foods. Drink herb teas or green tea, and eliminate caffeinated substances and alcohol.

Many may experience symptoms of pain in the sides and chest, depression, moodiness, frustration, anger, PMS, swollen breasts before periods, irregular menses, nausea, belching, poor appetite, alternating diarrhea and constipation, abdominal distension and lumps in the neck, breast, groin or sides this time of year. Due to Stagnant Liver Energy, these are caused by a sedentary lifestyle and lack of exercise, long-term stuffed or repressed emotions, unexpressed creativity and/or weakened Kidneys.

Physical movement and exercise are extremely important to moving Stagnant Energy. Moderate your habits and balance your focus between inward and outward activities. Set routines for eating, sleeping and exercising and keep them with regularity. Alternate

work with rest and play. Discover creative outlets and actively pursue them, yet pace yourself. Use appropriate channels to express pent-up emotions.

Go to sleep by 11 PM, as the Liver peaks between 11 PM and 3 AM (you'll actually feel more rested than if you went to bed later and got the same number of hours of sleep). Directing the Liver's energy into other activities during these hours diverts it from cleansing and renewing the Blood, causing tiredness, toxicity and stagnation. Eat the foods suggested for a Damp and Heated Liver above, as these protect the digestive powers and nourish the Kidney's trust fund, both of which support the Liver.

If you start dressing and eating as if it were already summer instead of spring, or if you inadequately exercised during winter, then you'll more easily experience colds and flu now. Although your internal body heat is moving toward the surface, there is still sensitivity to cool air, so remain well-covered up outdoors. This is the windy season, and External Wind blows colds and flu into the body at the back of the neck. Wear a scarf until it warms up. Likewise, refrain from eating cold foods and drinks (iced drinks and foods, juices, raw foods, salads, soymilk). Continue eating cooked foods, including beef, pork, chicken and eggs, to help your body adjust to temperature changes. Add in a large variety of cooked vegetables, dark leafy greens, some whole grains and cooked fruit with spices.

Spring Herbs and Foods for Balance
Gently stimulating herbs with pungent, bitter or sour tastes are particularly good for spring. Sorrel, dandelion, nettles, watercress and other young green leaves provided by nature now are perfect balancing foods for the liver as they cleanse the blood and release toxins. Dandelion, gentian, barberry, sarsaparilla, turmeric, chamomile, isatis, burdock, yellow dock and gardenia cleanse the liver and bowels and strengthen digestion. Bupleurum, fennel and green tangerine peel regulate Liver energy, as lycii and dang gui build Liver Blood. Milk thistle is particularly helpful for spring allergies, while an antiviral tea of one part each dandelion root, forsythia fruit and isatis leaf quickly clears spring colds and flu.

Fasting, a traditional spring ritual, cleanses the Blood and assists the Liver in releasing stored toxins and winter's accumulated fat. A good fast benefitting the Liver combines 8 ounces each water and apple juice with 1-4 cloves garlic and 1-4 tablespoons olive oil. Take each morning on an empty stomach for four days. Follow with decoction of equal parts fennel seeds and dandelion root.

If appropriate for your body, also fast on warm apple juice and green vegetable juice, and take 1-2 "00" capsules cayenne powder 1-3 times daily.

Alternatively, eat spring kicharee for four days (or add into your regular diet): make kicharee (see Michael's blog post for a basic kicharee recipe), adding shiitake mushrooms, burdock root, carrots and dark leafy greens. Season with lemon juice.

View Full Version: HEPATITIS C: The 'Phantom virus'

Title: HEPATITIS C: The 'Phantom virus'

craig-oxley - November 30, 2009 04:12 PM (GMT)

HEPATITIS C: The 'Phantom virus' and Hepatitis C Cases Successfully Treated with Herbs and Diet

by Dr. Michael Tierra, OMD
http://www.planetherbs.com/case-studies/he...s-and-diet.html

The formulas I'm currently recommending include Planetary Formulas' Bupleurum Liver Cleanse, Shiitake Mushroom Supreme and Liver Defense. In addition to this I recommend two or three portions of steamed greens daily, dandelion root tea, whole grains, vegetables, shiitake mushrooms, a glass or two of freshly squeezed organic carrot juice, and fish. Other foods can be included, but these should be included daily. Avoid exceptional stress as it can activate the latent virus in the body. Also avoid refined foods as much as possible. Other substances to avoid include coffee and drugs including marijuana.

I offer the following information to many of my patients who, after being treated with herbs, with all symptoms of liver disease resolved, are still concerned with an elevated viral load test. What if, despite the fact that they indeed had a sick liver, there never was a hepatitis C virus in the first place? Therefore the viral load question becomes a moot point, measuring something that ultimately has no relevance to their liver disease. Hepatitis C and the Phantom Virus Theory

In the 1970s, a third type of hepatitis was identified and associated primarily with heroin addicts, alcoholics, and patients who have received blood transfusions. At first these were regarded as either hepatitis A or B until subsequent widespread testing found neither virus in the victims. Presently there are approximately 35,000 Americans who die each year of what is now called Hepatitis C. This so-called virus doesn't seem to behave as a normal infectious disease. Rather it is confined to a well-defined group of individuals who contract the disease only with blood-to-blood contact, typically through intravenous drug use, transfusions or needle-stick accidents. Despite this fact,

virologists continue to hope to identify the specific virus causing the disease.

In 1982, the research laboratory of Chiron corporation located near San Francisco, equipped with the most advanced technology, injected blood from supposed hepatitis C patients into chimpanzees. None of the monkeys contracted the disease. For the next step the scientists probed liver tissue for the virus. Again, none could be found. In desperation, the team hoped to find even the slightest print of a virus. Finally amplifying a small piece of genetic information, encoded in a molecule known as ribonucleic acid (RNA) that did not seem to belong in the host's genetic code, the researchers assumed this genetic information must related to the as yet and still to the present, undetected virus. This is what is tested and assayed with a viral load test. Interestingly only about half of all hepatitis C patients contain this rare foreign RNA or protein molecule. For those who do test positive only one such RNA molecule is found for every 10 liver cells -- considered insufficient evidence for this to be the cause of the disease.

Remember, we are not saying there is no liver disease, only that it is still questionable as to whether there is a Hepatitis C virus causing it. Thus it is difficult to conclude that a patient whose liver enzymes are normal and stable, upon liver biopsy exhibits no active liver destruction, and feels healthy and normal in all other ways -- but tests with an elevated hepatitis C viral load -- should, based on this single parameter, be considered to have active Hepatitis C and therefore undergo conventional and highly questionable therapies such as interferon therapy.

The Chiron Hepatitis C saga continues. Using newly available technology, the Chiron team was indeed able to reconstruct pieces of the mystery virus. This resulted in a test for antibodies against a hypothetical virus that only a slight majority of hepatitis C patients had any evidence of being in their blood. Koch's first postulate demands that a truly harmful virus should be found in large quantities in every single patient. The second postulate is that the virus particles are isolated and grown. (This despite the fact that the supposed virus has never been found intact.) The third postulate insists that newly infected animals such as chimpanzees should all get the virus after they are injected with it. This hypothetical microbe fails in all three tests. Despite these sacrosanct principles of virology, Chiron scientists announced in 1987 that they identified the "hepatitis C" virus.

More paradoxes confront the viral hypothesis with the fact that despite huge numbers testing positive for the hypothetical hepatitis C virus, most will never develop any symptoms of the disease, even though according to the tests, the virus is no less active in their bodies than it is in hepatitis patients. A recent large-scale study of people who have been watched for 18 years has revealed that those with who have tested positive live just as long as those who did not.

Despite this evidence, medical researchers are willing to declare a huge segment of the population who test positive for the hypothetical hepatitis C virus as having a 'latent'

period that can extend over 20 years. The psychological damage alone to these individuals and those with whom they have been intimate can be devastating and affect all aspects of their life.

So wouldn't it at least be good to know that a healthy diet, lifestyle, some liver herbs that simply promote overall liver health measured by standards of wellness, and normal and stable liver enzyme readings (which in a word mean that the liver is no longer destroying itself) is enough information to lead a normal and fruitful life?

Instead, Chiron and the virus-hunting establishment are happy to reap the rewards from their new virus hypothesis that took five years to evolve. They undertook an active publicity campaign to win powerful allies throughout the medical community. This led to a paper being published in respected magazines such as Science, edited by Dan Koshland, Jr., professor of molecular and cell biology at the University of California at Berkeley. Edward Penhoet, chief executive officer for Chiron, also holds a position as professor of molecular and cell biology at the University of California at Berkeley. The NIH-supported virology establishment soon lent the full weight of its credibility to the hepatitis C virus camp. As Chiron's CEO boasted, "We have a blockbuster product." A regulatory order from the Food and Drug Administration (FDA) to test the blood supply would reap enormous sales for Chiron.

I continue with a lengthy quote from the article published in New Media Explorer:

"Their big chance presented itself in late 1988 as a special request from Japanese Emperor Hirohito's doctors. The monarch was dying and constantly needed blood transfusions; could Chiron provide a test to make sure he received no blood tainted with hepatitis C? The biotech company jumped at the opportunity, making for itself such a name in Japan that the Tokyo government gave the product its approval within one year. The emperor died in the meantime, but excitement over Chiron's test was fueled when the Japanese government placed hepatitis C high on its medical priority list. Chiron's test kit now earns some $60 million annually in that country alone. By the middle of 1990, the United States followed suit. The FDA not only approved the test, but even recommended the universal testing of donated blood. The American Association of Blood Banks followed suit by mandating the $5 test for all 12 million blood donations made each year in this country - raking in another $60 million annually for Chiron while raising the nation's medical costs that much more. And all this testing is being done for a virus that has never been isolated.

"Profits from the test kit have generated another all-too-common part of virus hunting. With Chiron's new income from the hepatitis C test, Penhoet's company bought out Cetus, another biotech company, founded by Donald Glaser, who, like Penhoet, also holds a position as professor of molecular and cell biology at the University of California at Berkeley. And Chiron made an unrestricted donation of about 12 million to the Department of Molecular and Cell Biology at the University of California at Berkeley that

generates $100,000 in interest each year.

"Unfortunately for Peter Duesberg, who belongs to the same department, his supervisor is yet another professor who consults for Chiron Corporation - and displays little sympathy for Duesberg for challenging modern virus hunting by restricting his academic duties to undergraduate student teaching and by not appointing him to decision-making committees. Such conflicts of interest have become standard fixtures in university biology departments.

"The modern biomedical research establishment differs radically from any previous scientific program in history. Driven by vast infusions of federal and commercial money, it has grown into an enormous and powerful bureaucracy that greatly amplifies its successes and mistakes all the while stifling dissent. Such a process can no longer be called science, which by definition depends on self-correction by internal challenge and debate.

"Despite their popularity among scientists and their companies, 'latent,' 'slow,' and 'defective' viruses have achieved only little prominence as hypothetical causes of degenerative diseases before the AIDS era. Their hypothetical role in degenerative diseases, which result from the loss of large numbers of cells, remained confined to rare, exclusive illnesses like kuru and hepatitis C.

"However, because latent, slow, and defective viruses cannot kill cells, such "viruses" eventually achieved prominence as hypothetical causes of cancer and thus entered the courts of health care and medical research. The next chapter describes the terms under which these viruses were promoted as causes of cancer and how some of these terms were eventually used to promote latent, slow, and defective viruses as causes of degenerative diseases including, above all, AIDS."
CASES from the East West Acupuncture Clinic and Herb Center:

"Dear Dr. Tierra,

We had a phone consultation regarding my Hepatitis C about two months ago and you asked me to let you know how I was progressing. As I mentioned to you, I was with a Chinese doctor taking herbs since October. Among other things, I found out she was giving me the Bupleurum you recommended but she increased the dose after you and I spoke. She also added the Dandelion and I took another 2 cups of tea a day. I added the dark green vegetables and voila! Today I had my blood test results and my enzymes are normal!!!! For the first time since I found out I had Hep C, in 2001, they are normal. I'm soooooo happy!!!

Thanks for your advice. Now, I know you mentioned the viral load is hard to get rid of, and mine is 987,000 and has not moved from the 100,000 range. Anything you have tried that works to get that under control?

Thanks again for your help!

Mariela"

******

Man age, 55, antibodies tested positive to hepatitis A, B and C. Over the years he periodically followed a strict vegetarian diet, fasted with juices, took a number of different herbs including herbs for cleansing the blood and liver.

Amazingly a subsequent viral load test showed absolutely no trace of virus in his body. The inference is that somehow, despite his being exposed to these pathogens, through careful health regime, diet, herbs, and yoga, he was cured. When managed and treated over a period of time, even chronic viruses such as herpes and hepatitis C virus can by gradually cycled out of the body. In some cases this may take a few years.

****

Man, age 45, diagnosed with juvenile onset insulin dependent Type One diabetes also with hepatitis C. He presented with symptoms of extreme fatigue, poor digestion, swollen abdomen, weak digestion, poor appetite, jaundiced complexion, etc. At the time of our first encounter he had an extremely high liver enzyme count and high viral load test. He was unable to work and function. Was severely depressed. I prescribed the basic protocol of Planetary formulas, dandelion root tea, high leafy vegetable diet described above, modifying it according to his symptoms and needs. His diabetes was also affected in that it was erratic and he was unable to regulate his daily insulin levels. Within three months his liver enzymes were returned to normal and he was feeling normal in all ways. In addition to other liver herbs, I added two or three cups of huckleberry leaf tea daily. This was so effective that he was able to reduce his daily insulin to half. He said a cup of huckleberry leaf tea taken before going to bed, allowed him to sleep through to morning without the usual high spike of blood sugar that occurs with many diabetics around 4 a.m. or dawn.

His Los Angeles liver specialist was amazed at his recovery and wondered what he had been doing. He was feeling great for the first time in months! Curiously a subsequent viral load test showed a raise in viral load count. I asked that he have a liver biopsy and this returned completely normal. With normalized liver enzyme count and normal liver biopsy, the raised viral load count is somewhat paradoxical. Considering his level of improvement, not even his liver specialist could strongly advocate conventional interferon therapy. I have seen this happen with a number of Hepatitis C cases who continue for years without any symptoms. Conjecture is that either the diet and herbs are neutralizing the effects of the hepatitis C Virus or perhaps as a number of

researchers worldwide contend, we are not dealing with a known virus but a strange protein. This is a very controversial idea at present but hundreds of medical researchers worldwide have given it credence.

****

Email from a Woman living in Homer, Alaska:

"Michael,

I am so aware that HepC is not a virus. Using TCM herbs has helped me and the most amazing thing is that using the Gentiana formula actually chased out numerous Chinese Liver Flukes (into the toilet bowl, which I carefully removed, put in jar and showed to my doctor).

Toxins in our environment and infection with liver flukes are what I truly now believed is the cause of my having HepC. "

****

If you would like to schedule a personal consultaton with Michael Tierra for the treatment of chronic hepatitis or other diseases, fill out the online consultation form or call the East West Clinic for an appointment (831) 429-8066.

View Full Version: Detox Your Liver with These Natural Herbs

Title: Detox Your Liver with These Natural Herbs

craig-oxley - November 29, 2009 02:45 PM (GMT)

I've seen some dramatic healings happen with Artichoke from rapid weight loss stoppage to falling hair stoppage and of course dramatical lowering of blood fats. Its a wonderful herb and perfectly safe. I tend to use this rather than Milk Thistle. My formula for serious Liver work is Boldo, Vervain, Berberis & Greater Celandine. Use this after a few months on either Milk Thistle or Artichoke. -Craig

Detox Your Liver with These Natural Herbs

Saturday, November 28, 2009 by: Elizabeth Walling
http://www.naturalnews.com/027607_liver_detox_herbs.html

Maybe you have a childhood memory of forgetting to clean your fish tank's filter. After all, it's easy to forget a fish tank even has a filter until it's so clogged up it starts to malfunction. Eventually, the tank is covered in slime and the health of your fish begins to fail. This scenario is much like the way we view our liver today. We often overlook the importance of the liver until it begins to adversely affect our health. However, this organ plays a vital role in cleansing, detoxifying and purification on a daily basis. The liver is also where many important nutrients are metabolized. Without a healthy liver, we cannot be healthy.

If you want to keep the environment clear and healthy in your fish tank, regular filter maintenance is a must. Similarly, if you want to enjoy vibrant health, maintaining your liver is crucial. When liver health is declining, you may experience a variety of symptoms including fatigue, sluggishness, hormone imbalances, acne, headaches and more.

In our literally toxic modern society, maintaining liver health is more important than ever. These natural herbs provide potent results in detoxifying and restoring the liver:

Milk Thistle. By far the most famous herb for liver health, milk thistle contains

antioxidant flavonoids, which protect liver cells from damage by preventing toxin absorption and enhancing regeneration. Milk thistle is a part of most popular liver tonics, and it can also be ground fresh and sprinkled over food.

Artichoke. Thought to have a protective effect on liver cells, artichoke can aid liver regeneration and improve its function. It also supports bile production, which is important for digestion and assimilating valuable nutrients. Some clinical studies show artichoke can lower triglyceride levels, as well.

Dandelion. This herb makes an ideal liver treatment because it is highly effective and generally very safe (it is also quite inexpensive). All parts of the flower can be useful, but dandelion root is the most popular liver remedy, while the leaves are known for promoting kidney health.

Licorice. This remedy was often used in Eastern medicine to treat liver problems. One study reported licorice increased the production of interferon, which may explain this herb's unique ability to defend liver health from harmful toxins.

Keep in mind that any of these herbs should be used in conjunction with lifestyle factors which promote liver health, such as avoiding alcohol, caffeine and tobacco; staying active with regular exercise (even walking and yoga are highly beneficial); avoiding processed foods filled with junk sugars and chemical additives; and finally, learning to manage stress and developing healthy sleeping habits.

View Full Version: Is 24-hour lighting putting us on a path to

Title: Is 24-hour lighting putting us on a path to
Description: *depression?*

craig-oxley - October 26, 2009 01:10 PM (GMT)

Is 24-hour lighting putting us on a path to depression?

By Daily Mail Reporter
Last updated at 10:04 AM on 23rd October 2009
http://www.dailymail.co.uk/health/article-...arker-side.html

Bright street lighting and office blocks that remain lit all night could be affecting our mental health, scientists have warned.

Researchers said too much light at night can be linked to depression.

Those living in cities have long complained that fluorescent street lights affect their ability to sleep and can alter their mood.

Now psychologists have confirmed that being unable to escape to the dark can have a harmful effect on someone's personality.

In tests on mice, the study authors found that those kept in a lit room 24 hours a day showed more depressive symptoms than those that had a normal light-dark cycle.

Mice that lived in constant light, but could escape into a dark tube when they wanted showed less evidence of depressive symptoms than those who had no escape.

Laura Fonken, who led the study at Ohio State University in the U.S., said: 'The ability to escape light seemed to quell the depressive effects. But constant light with no chance of escape increased depressive symptoms.'

Co-author Professor Randy Nelson said the results suggested more attention needed to be focused on how artificial lighting affects emotional health in people.

He said: 'The increasing rate of depressive disorders in humans corresponds with the increasing use of light at night in modern society.

'Many people are now exposed to unnatural light cycles, and that may have real consequences for our health.'

The study, published in the journal Behavioural Brain Research, involved 24 male laboratory mice.

Half were housed in light for 16 hours a day and darkness for eight hours, while the other half had 24 hours of light.

Half of each group had dark tubes in their units that let them escape the light when they chose.

The other half had similar tubes that were clear and let light in. After three weeks, the mice began a series of tests that are used to measure depression and anxiety in animals.

In all the tests, mice living in constant light showed more depressive-like symptoms than those with normal light- dark cycles.

Miss Fonken said the results provide additional evidence that the use of artificial light at night may have harmful effects on health in humans.

She said: 'This is important for people who work night shifts, and for children and others who watch TV late into the night, disrupting their usual light-dark cycle.'

The researchers pointed out that many hospital wards are brightly lit all night, which may add to the problems of in-patients.

View Full Version: Ten Alternative Plants that Cleanse the Liver

Title: Ten Alternative Plants that Cleanse the Liver
Description: *[ARTICHOKE IS AN AMAZING HERB!]*

craig-oxley - October 8, 2009 03:09 PM (GMT)

Some Liver specific herbs have been missed. A great formula is Peumus boldo, Verbena officinalis, Chelidonim majus and Berberis aquifolium. The later three were missed out of the below for some reason. Then of course theres Glycyrrhiza glabra, Carduus marianus and Taraxacum officinali. Dont forget the use of the Swedish Bitters formula.

Ten Alternative Plants that Cleanse the Liver

Sept 29 2009
http://www.naturalnews.com/027117_chamomil...ra_disease.html

By now most Natural News readers understand the importance of liver detoxification, and many are familiar with the more common liver cleansing herbs such as burdock, dandelion, licorice and milk thistle. Some who have experienced the strong results provided by these plants may be wondering what similar plants are available. It turns out there are many such plants! This article, the first of a two-part series, will explore 5 lesser-known examples of natural foods that are known to cleanse and detoxify the liver.

_____

1) Artichoke (leaf extract) - Cynara scolymus (Compositae)
A perennial native to the Mediterranean, artichoke plants thrive in warm climates and loamy soil. The flower heads, leaves and root are used as both food and medicine. Artichoke contains sesquiterpene lactone cynaropicrin (a strong bitter that contains inulin) and the leaves contain cynarin (an antioxidant). Both are known to have liver protective properties. Similar to milk thistle, artichoke (in particular the leaf) defends the liver against toxins and infections. All parts of the plant are bitter and induce bile secretion. Artichoke is used to lower cholesterol, treat gallbladder problems, nausea,

indigestion and late-onset diabetes as it lowers blood sugar. Fresh artichoke leaf juice is a valuable liver tonic. Artichoke has diuretic properties.

2) Astragalus (root) - Astragalus membranaceus (Leguminosae)
Astragalus is a member of the pea family that has been used for thousands of years in China, where it is called "huang qi". Astragalus helps to promote the liver and gallbladder to release toxins (according to Chinese folklore this was to "rid the stagnant (sha or killing) qi" from the liver). With a sweet taste and warming effect it is particularly suited for young and/or physically active people. Astragalus boosts the immune system, improves circulation, relieves night sweats, reduces fluid retention, and increases both strength and endurance. It is considered similar to and even superior than ginseng. Despite being one of the most popular herbs in Chinese medicine, astragalus is not well known in the western world. Astragalus has adaptogenic, diuretic and antiviral properties.

3) Bilberry (fruit and leaf extract) - Vacciniuim myrtillus (Ericacea)
Bilberry is a deciduous shrub with berries that ripen to purple-black. Native to Europe and North America (and related to blueberry and cranberry) bilberry thrives in undergrowth, on moors and in heathland. The fruit and leaves are collected in the summer. Bilberry contains anthocyanosides which have a tonic effect on blood vessels. Bilberry also contains vitamins A, B and C. Bilberry extract has a strong effect on the liver and it reduces stress-induced damage. Bilberry strengthens capillaries, treats varicose veins, and relieves hemorrhoids along with urinary tract infections. Bilberry has antioxidant, anti-inflammatory and antiseptic properties. Caution: Bilberry should only be used for short lengths of time due to high tannin content or it may actually damage the liver.

4) Boldo (leaf extract) - Peumus boldus (Umbelliferae)
A strongly aromatic evergreen that grows up to 20 feet high, boldo is native to Chile and Peru. The leaves contain isoquinoline alkaloids, including boldine along with volatile oil and flavonoids. The berries are also eaten as food. Known as a traditional liver tonic and remedy by the Araucanian people in Chile, boldo stimulates bile flow. Chiefly valued as remedy for gallstones or gallbladder pain, boldo leaf is normally only taken for a few weeks at a time (this is a good general strategy for all herbs). Boldo treats urinary tract infections, cystitis, and (when combined with barberry and fringe tree) treats gallstones. A tincture or infusion of the boldo leaves are the normal method to administer. Boldo has antiseptic and demulcent properties. Caution: Boldo should not be taken by pregnant women. Some countries impose legal restrictions on this plant (so it must be good).

5) Chicory (root) - Cichorium intybus (Compositae)
A perennial with deep roots, oblong leaves, and blue flowers, chicory is native to Europe where it flourishes along roadsides and in dry fields. The roots are unearthed in the spring or autumn and contain 58% inulin along with sesquiterpene lactones. Chicory

is primarily a liver tonic that is a mild bitter. Similar to dandelion, chicory supports the stomach, digestive tract and liver along with cleansing the urinary tract. Used to treat arthritis and gout, chicory aids digestion and is a mild laxative that is safe for children. Historically the juice was mixed with rose oil and vinegar for a headache remedy. The roasted root is used as a coffee substitute. Chicory has anti-inflammatory properties.

6) Club Moss (spore) - Lycopodium clavadum (Lycopodiaceae)
Club moss is an evergreen moss found mainly on mountains or in moorland in Europe and Russia. Gathered in summer, the moss and spores contain .1 to .2% alkaloids along with lycopodine, polyphenols, flavonoids and triterpenes. Used medicinally since the middle ages, club moss aids in the flushing of liver toxins and kidney stones. Club moss treats chronic urinary problems, indigestion and gastritis. The spores can be applied to the skin to relieve itching and for insect bites and eczema. The spores are also used to coat tablets since they are water resistant and (because they ignite explosively) they are used in fireworks! Club moss is normally used in powdered capsule form and a Chinese form was shown to improve cognitive function in Alzheimer's disease. Club moss has diuretic, antispasmodic and sedative properties. Caution: Club moss is potentially toxic in high doses. Do not take while pregnant. Use only under professional supervision.

7) German Chamomile (flower) Chamomilla recutita (Compositae)
German chamomile (similar to Roman chamomile) is an aromatic, slightly bitter flower that is familiar to tea drinkers. The medicinal uses however are not so well known. Chamomile contains the volatile oils proazulenes, farnesine, alpha-bisabolol and spiroether. Chamomile also contains the flavonoids anthemidin, luteoliin and rutin, along with the bitter glycoside anthemic acid, coumarins and tannins. Used since the 1st century AD, chamomile has many uses including treating disorders of the liver, lung, skin and digestive tract. Chamomile helps relieve pain and nervous tension, and helps with auto-immune disorders such as Crohn's disease and irritable bowel syndrome. Chamomile has anti-inflammatory, antispasmodic, and carminative properties.

8) Nettle (root) - Urtica dioica (Urticaceae)
Known as "stinging", nettle is native to Africa, Australia and the Andes. The sting from nettle is caused by tiny hairs that contain histamine, serotonin and acetylcholine which burn like poison ivy. The key uses for nettle are cleansing and detoxification, as it will encourage the elimination of waste products. Nettle increases urine production and also treats skin disorders such as eczema and arthritis (often an indication of a sluggish liver). Nettle slows or stops nosebleeds and menstruation, treats allergies, and relieves hay fever and asthma. Nettle can be applied to insect bites to relieve itching, and nettle juice even treats the sting of nettle itself! Nettle has diuretic, astringent and anti-inflammatory properties.

9) Picrorrhiza (rhizome) - Picrorhiza Kurroa (Scrophulariaceae)
A perennial with elliptical leaves and spiked flowers, picrorrhiza is native to the

mountains of Nepal, India and Tibet. The rhizome or picrorrhiza contains the bitter glycoside kutkin (containing picrosides I, II, III and kutkoside), cucurbitacins and apocynin (a powerful anti-inflammatory that reduces platelet aggregation). Used in Ayurvedic medicine since the earliest times, picrorrhiza induces the liver to produce bile. Used as the antidote to snake bite venom and to treat hepatitis, picrorrhiiza is used as a bitter tonic and is similar to gentian (Gentiana lutea). Given for a wide range of liver or digestive troubles, picrorrhiza helps treat indigestion, ulcers, jaundice, cirrhosis, constipation, diarrhea, dysentery, asthma, infections, immune disorders, vertigo, psoriasis and auto-immune disease. Picrorrhiza helps kill parasites such as Lishmania donovani which causes the tropical disease leishmaniasis. Picrorrhiza has anti-inflammatory properties. Caution: Professional supervision is recommended.

10) Schisandra (fruit) Schisandra chinensis (Schisandraceae)
One of the most popular tonic herbs in China (where it is known as wu wei zi) schisandra has protective effects on the liver, kidneys and sexual organs. It strengthens the nervous system, cleanses the blood and increases stamina. With a sour and salty taste, schisandra contains lignans, phytosterols and volatile oil, along with vitamins C and E. The nearly 30 different lignans in schisandra have a pronounced anti-hepatotoxic (liver protective) action. A 1976 study showed it to be 76% effective on treating hepatitis with no side effects noted. Schisandra is also known to stimulate the nervous system, improve vision and hearing, treat depression, and mental illness, increase sex drive, and relieve diarrhea. Schisandra has both stimulant and sedative properties (adaptogenic).

View Full Version: Liver flush and kidney problems

Title: Liver flush and kidney problems
Description: *Liver flush and kidney problems*

hanb - April 21, 2009 09:22 PM (GMT)

Dear Craig,

I have a question/problem concerning my kidneys, after doing 4 liver flushes.

After my 4th liver flush about 2 months ago, I started having problems with my kidneys (as far as I know, I never had that before). I already did cleanse my colon with Colonix, but up until then I hadn't done the kidney cleanse. There was in Holland (that's where I come from) a good site informing about a liver flush, and they also give some brief information about the kidney cleanse, which might be needed too, because of the liver flushed.

So I purchased the herbs somewhere on the internet, and here is the list:

1. Marjoram (origanum majorana)
2. Cat's Claw (Uncaria tomentosa)
3. Comfrey Root (Symphytum officinale)
4. Fennel Seed (Foeniculum vulgare)
5. Chicory Herb (Chichorium intybus)
6. Uva Ursi of Bearberry (Arctostaphylos)
7. Hydrangea Root (Hydrangeo arborescens)
8. Gravel Root (Symphytum officinale)
9. Marshmallow Root (Althaea officinalis)
10. Golden Rod Herb (Solidag virgaurea)

I bought the powder form (most of them at least). Mixed them together, and almost every day I put of the herb mixture 3 tablespoons into 2-3 cups of water, cooked it and got 2 cups of a 'tea', after filtering most of the herbs out. It didn't really helped me, but it gave some comfort, the pains/pressure were a little bit less. (maybe I should have bought the herbs in leave form?) (did it for a little more than 3 weeks, drank 1 or 2 cups of the tea a day)

Before I wanted to go on with my 5th liver flush, I wanted to get my kidneys clean. I understood that doing the liver flush you might get problems. But after my failure with those herbs I sought for more on the internet.

I found an interesting video on YouTube on how to dissolve kidney stones with just lemons. See http://www.youtube.com/watch?v=bVjLdBwTVjM. Squeeze 20 lemons, drink 8 of them in one time, then for the next 12 hours drink each hour the juice of one squeezed lemon together with a full glass of water. I don't know what happened, as I can't look inside of me, but I didn't notice any difference after doing this…

Then a few days later I tried the asparagus and coke method to get rid of my kidney stones: first in about 2 hours drink every 20 minutes a can of Coca-Cola. Then right after that eat 8 ounce of asparagus, just lightly cooked and blended. After that flush it away with lots of water I found this remedy here:
http://infinity.usanethosting.com/Kidney/index.htm
There are a few similar remedies on that webpage, and I choose the one which stated that the juice of 4 squeezed lemons should be added to the 2 litres of Coke.

Drinking the Coke and eating the Asparagus was just okay to do. But then I started drinking the water, that made me sick. The next day I was still sick and had more pain in my kidneys (something was happening). But after two days there was less pain then before the remedy. A few days after that the pain got a little stronger again, but I guess it worked out something. Might do it again.

Well, interesting is that I found on the same webpage (http://infinity.usanethosting.com/Kidney/index.htm), another remedy using the juice of 3 squeezed lemons and 3 ounce of Olive oil to get rid of kidney stones… That's almost similar to the liver flush…

So to me there are three possibilities:
1) Because of the liver flush (oil + lemon juice) and what is coming out of the liver and gall, the kidneys get somehow kidney stones.
2) Because of the liver flush (oil + lemon juice) the kidney stones which are already in the kidney get a blow too and are stirred up somehow. Because of this they are being moved to the bladder, and thus creating the pain.
3) A combination of 1 and 2.

Maybe you could help me out and give my some advice of what perhaps is going on. You heard any of those things before? Can I go on with my 5th liver flush, expecting that my kidneys will get cleaner too? For your info: there was at least 2 weeks between each liver flush.

Looking forward to your answer,

Kind regards,

hanb
The Netherlands

craig-oxley - April 21, 2009 11:56 PM (GMT)

You havent had any coughing at all have you or lung issues? If you do then your Kidney chi mayl be deficient and thus pull on your lung. The cough will help indicate chi problems in that region. When we cleanse we pull out a lot of accumulated poisons which will burdon the organs. This is why the Colon is a must to be cleansed first. Then some will go to the Kidneys next for a cleanse prior to the Liver. Some go for the Liver then the kidneys. You may have been better off going for the Kidneys next instead of the Liver Flushing. Unfortunately we're all different and can't know these things till we're in trouble.

When you start cleansing the body with these powerful methods you'll always most times come across niggles and sometimes hardcore niggles. If for instance your Kidneys are a weak spot and you put more burdon on them via increasing the potency of another organ then your balance will be interrupted. You see your body has over time gradually wired itself one way very slowly. All of a sudden you cleanse this and that organ and the rewiring is all over the place and a weak organ cannot cope and brings on troubles until corrected. Now lets say you have a misalignment in T10 and T11 of your spine then until this is realigned you may always have kidney issues. This is why I advise everyone they must think hollistically and get their spine sorted quick smart as a protocol with herbs etc. I would correct all my eczema problems only for them to keep coming back. Why was this? Simply because the mid thoracic region of the back was misaligned and not allowing the nerve impulses to the gut. So no matter what I did, I would always have the problem until this was addressed. So thats an avenue for you to try also. Its like T4 and T5 are tied to the Liver so why are we cleansing the organ if we may also have a spinal misalignment which needs addressing for full action? Understand!

What Liver Flush did you do? The safest is the Hulda Clark one from the point of removal of large stones but I have one big hate about it. This is the Epsom Salts which isn't natural and they irritate the hell out of the adrenals and stomach lining etc. The Dr Richard Schulze is about the safest all round but it can't reach what the Clark one can sometimes. Always a downside. What would be nice is a herb which could fully open all the ducts as well as Epsom Salts whilst not increasing bile, I don't think there is one.

You may not even have stones and may be suffering from a weakened or damaged organ in need of feeding and balancing up. When one say uses a organ

specific herb say for the Liver then they should use others for the other organs to try and keep a balance. Why do you think chinese herbology has 8-12 herbs in most formulas? So if you had the cough for instance you'd strengthen the lungs whilst addressing the Kidney issue etc, trying to create balance. Okay look at all this from another angle. Herbs and cleanses are stimulants and kick starts. Imagine your a worker and your bosses are on your case all day long nagging you. You're either going to rush and make a mistake or say sod it they can wait and give in. Where as if your bosses asked once and didn't put the pressure on you'd stand a better chance of meeting the deadline. This is similar to a herb on a region, hammering it sometimes. The idea is balance as chinese medicine highlights so well.

Lemon juice is highly powerful indeed and people just do not know the power of Lemons. Lemons can kill their so powerful at cleansing the body. They work hard on the Liver and make it puker up well. Calm down on the lemons thats for sure, you'd do better on oranges etc. Never drink coca cola, this is one of the greatest poisons consumed on planet Earth.

So what I suggest is you lay off the Liver Flushes for a good while. Let your body settle down a little for a couple of weeks or a month if you can do so. During this rest from herbs and flushes go to a chiropracter or osteopath and get your spine fully aligned and tell them your problem and what I've highlighted and below highlights. After a month you can utilise the heated virgin Castor Oil packs over the region which is hurting you. Do this for 1.5 hours then wash it all off. See how you go and eventually you might be able to gradually increase to 8 hours of Castor Oil. I have Castor Oil all over the head and torso for at least 8 hours a day. You'd be surprised the power of Castor Oil. Then take a look at the herbs below. Drink just reasonable amounts of water but not too much or too little. This break might help the body relax and gain a little bit of balance back hopefully. We all jump in bull at a gate with these cleanses and some hurt us, I know I've done it myself and I also know whats its like when you're not sure whats happening.

Let us know how you get on.

QUOTE

Kidney

Definition:

Anything related to the kidneys.

Symptoms:

An unhealthy, morbid condition of the kidneys. [SNH p.35]

Cause:

Kidney trouble is caused by a local infection. [SNH p.35]

Herbal Aids:

General Instructions: The greatest aids for this problem are juniper berries, marshmallow root, parsley, and watermelon seeds. [SNH p.35]

Plantain: Drink one teacupful of the tea four to five times daily until relief is obtained. [SNH p.53]

Parsley: Make at least 2 quarts of the parsley root strong decoction and drink copiously. [SNH p.246]

Diaphoretic: See formula using juniper berries, parsley seed and rest harrow. [SNH p.251]

Spearmint: It has a gentle diaphoretic action of mild perspiration, and as a diuretic it is very beneficial to the kidney, bladder (especially for suppression of urine). [SNH p.238]

Strong Decoction of Gravel Root (cystitis and kidney troubles,). See formula using gravel root, water and glycerine. [SNH p.256]

Gravel, Stone or Calculi: See formula using gravel root, wild carrot, meadowsweet, marshmallow, uva ursi and honey. [SNH p.256]

Kidney and Bladder: See formula using uva ursi, mountain mahogany, couchgrass, buchu leaves, juniper berries, prince's pine, shavegrass and celery seeds. [SNH p.260]

Gravel, Kidney and Bladder Problems: See formula using buchu powder, uva ursi, parsley root, gravel root and ginger. [SNH p.272]

Herbal Kidney Aid: See formula using cayenne, ginger, golden seal, gravel root, juniper berries, marshmallow, parsley root and uva ursi. This will dissolve the stones that are in the kidneys, as well as clean out other sedimentation and infection in the prostate. [SNH p.524]

Kidney Formula: Dr. Christopher's Kidney Formula: for kidney malfunction. Approximately 80% of the body is liquid, and much of this field must be pumped, filtered, etc., etc., through the urinary system of the individual. We do not take the best of care of this delicate tract, but through it go lots of irritating and clogging-type materials, i.e., tea, coffee, soft drinks, hard water, alcohol, etc.

Over the years we have used a formula of herbs with people who have been afraid to be out in public, because of a lack of control over the urinary tract and unknowingly void urine. After using this formula, many people have found relief from this condition and are living normal lives again.

This formula consists of juniper berries, parsley, uva ursi, marshmallow root, lobelia, ginger, and golden seal. Suggested use is a cup morning and evening, or two tablets or capsules morning and evening taken with a cup of parsley tea. [HHH p.183]
Male Urinary Tract: Dr. Christopher's Prostate Formula: In case of malfunction we suggest this combination to assist the male: cayenne, ginger, golden seal root, gravel root or queen of the meadow

root, juniper berries, marshmallow root, parsley root or herb, uva ursi leaves. This will dissolve the stones that are in the kidneys, as well as clean out other sedimentation and infection in the prostate. Mix the powders and place in No. 0 capsules and take two or more morning and night, with parsley tea when possible. [HHH p.191]

Aloe Vera: Aloe Vera taken internally is said to help maintain good blood vessel tone and healthy circulation. The potassium in the plant is said to aid the heart's rhythm and stimulate the kidney to dispose of body wastes. The herb is said to help the action of digestive enzymes and deter kidney stones. [UW-Aloe Vera]

Hydrangea: There is much disagreement about Hydrangea's stone-dissolving properties. Most authorities agree that it does remove the stones, but not everyone considers the herb a solvent. Dr. Butler affirmed that the herb relieves the pain of the passing of the calculi. Dr. Shook explained that the sharp pain that is associated with gravel deposits comes from the sharp points of the crystal piercing the kidney or ureter. When the sharp points are even partially dissolved, he said, the pain, hemorrhage and inflammation all subside, and the stone or stones frequently pass with just a stretching of the tubes. How, he asked, is it possible to account for the fact that when these stones pass through easily after the administration of Hydrangea, they are found to be smooth and round, while x-rays revealed their sharp point piercing the tissues? He said that their clinical evidence proved that Hydrangea is truly a stone solvent (ShoA:85). He said it was destined to become a universal remedy for phosphaturia, cystitis, alkaline urine, stony deposits, deposits of calcium oxalate (which forms many calculi), chronic gleet, mucus irritation of the bladder in old people, backaches caused by kidney trouble, rheumatism of long standing, arthritis and gouty affections, arteriosclerosis and many other common conditions--quite a claim for a disputed herb! As Dr. Shook said, "Dear student, you will never find a more remarkable herb " (ShoA:83). [UW-Hydrangea]

Juniper Berry Wine: For a kidney and stomach tonic, Juniper berry wine is easy to make. Place a large handful of the berries in any gallon of any kind of good quality wine. The bottle is capped and allowed to stand for three days. During this period the bottle is shaken thoroughly once a day. At the end of three weeks the berries are strained off and thrown away (Luc:Secrets:120). [UW-Juniper]

Kelp: In recent years, we have found that the kidneys are not only eliminative organs, they also aid in assimilation and are partly responsible for adequate nutrition (Ibid). Kelp cleanses and tones these organs, and can be especially valuable in cases of irritable or painful kidneys. Dr. Powell cleared up kidney cases that were very stubborn and had failed to respond to other treatments, whether natural or medical. [UW-Kelp]

Juices for Gravel in Kidney's: Carrot & cucumber, endive & parsley. [NL 3-5]

Juices for Kidney and Bladder Troubles: Cucumber & parsley, dandelion, spinach. [NL 3-5]

Juices for Renal Calculus (Stones in Kidney): Carrot & cucumber, celery & parsley. [NL 3-5]

Bladder Formula: Dr. Christopher's Formula for Bedwetting: For more severe cases of incontinence, enuresis (bedwetting, etc.), a formula we have used a long time is as follows: parsley root, juniper berries, marshmallow root, white pond lily, gravel root, uva ursi, lobelia, ginger root and black cohosh root.

This formula is a specific for helping control or overcome bedwetting and to strengthen the entire urethral canal, kidneys, bladder, etc.

Recommended dosage two No. 0 capsules three times a day with a cup of parsley tea. Upon retiring at night fasten about a six or eight inch ball of yarn or string or cloth onto night clothes in the middle of the back. This is for the purpose of preventing the individual from lying on the back, as this is generally the time the valves release to void urine. [HHH p.184]

Water: The main trait common to men who complain about kidney problems is that they do not drink

enough water. They will admit and even brag about it if you ask them. 'Water? That's the stuff you wash with. I never drink it. Don't like the taste." Coupled with a heavy consumption of meat, salt, coffee, alcohol, and soda pop (or any of the above) the "waterless wonder" is bound to suffer distress and discomfort. This includes the kidney damage which he passes on to his children. We must realize that our bodies are made up of 80% water and that this water needs to be filtered and replaced. The delicate tubules which run from the kidneys to the bladder could be pinched through and broken with a fingernail! The amazing apparatus which are our filters and elimination system have the tremendous task of pumping hundreds of thousands of gallons of liquid through them in a lifetime. Why wear them out in a few years through neglect and abuse? It is as though we were throwing a great gift from the Creator into the garbage can with the trash.

Distilled (steam distilled, if available) water is the only water we recommend for herbal teas or drinking. A person should drink about two ounces of distilled water per kilogram of body weight daily. That's about one gallon for the average weight man. If this is done faithfully along with a good diet, there is relatively no chance of contracting any kidney disease. [NL 3-6]

Kidney Infections: Kidney infections can be extremely painful. There is the burning sensation when urinating, the dull to excruciating back pain, and the possible retention of urine. There is the low grade fever which accompanies the chronic kidney infection or the high fever accompanying the acute attack. Prevention is the superior cure, but if the infection has already set in, we can use the kidney-bladder formula with parsley tea, or juniper berry tea and, if urination is extremely painful we can drink a demulcent or soothing tea such as marshmallow root or slippery elm. Of course all irritants to the kidneys should be discontinued. [NL 3-6]

Retention of Urine: If there is retention of urine, juniper berry tea is the quickest acting diuretic we have known. People who were writhing on the floor in agony from retention of urine have voided in a few minutes after the administration of juniper berry tea. Sometimes, when the urinary tract is loaded with mucus and morbid matter, and has been so for years, there will be a rush for the sludge to get out through the small opening to the outside of the body. If this is the case, elimination should be attempted more slowly and a diluted dose of diuretic tea can be used. Once elimination has started and the tract does become clogged, however, hot fomentations alternating with cold can be used on the kidney and groin area to make elimination possible by breaking up the blockage by increasing circulation to the area. [NL 3-6]

Kidney Cleanser: Women who do not have a lot of money to spend on fancy vitamins and food supplements (and even those who do) would do well to take no less that 15 alfalfa tablets daily. Alfalfa is also a well-known kidney cleanser. [NL 3-6]

Cabbage Leaves for Kidney Disease: Apply cabbage leaves over the kidney areas and leave on overnight and also for a few hours during the day [NL 4-12]

Dropsy: This is a sign that the kidneys are partially paralyzed and are not eliminating the urine sufficiently, so the diuretic agent should be used in combination with a diffusive stimulant (such as Jamaica ginger or Virginia snake root), or even cayenne may be used. [SNH p.242]

See formula using parsley, juniper berries, buchu and flax seed. [SNH p.247]
Inflammation of the Kidneys: See formula using wild carrot, pellitory-of-the-wall, uva ursi, dandelion, marshmallow, white poplar and cayenne. [SNH p.265]
Inflamed Kidneys: Combine comfrey root with gravel root (Eupatorium purpureum) in a decoction. [SNH p.310]

Nephritis (fomentation): See formula using marshmallow, wormwood and southernwood. Place a piece of flannel in the liquor, wring it out and apply as hot as conveniently possible over the kidneys. Cover with a thick piece of blanket and change the application when it begins to cool. Repeat for 1 hour and at the same time give an appropriate tea internally. [SNH p.330]

Testimonials:

1. Knowledge by Divine Assistance: I had a personal acquaintance, a Mrs. Hanger, who came here from England in her twenties. She was very sickly; at the time had no children, so her husband (who was a paperhanger and painter) told her to go to the doctor. She did, and when she returned home she was very discouraged and very unhappy, because he told her, "You have a kidney infection which is a very progressive type and there is nothing we can do to heal it; you will have possibly six months to live."

So she was at home meditating (the house was in Salt Lake City) when she heard a knock at the front door. There stood a bearded man in a gray suit; he said: "Sister Hanger, may I have a glass of water?" To which she replied "Certainly," although she didn't know him. She gave him the glass of water, and he said: "Sit down, I want to talk to you a minute, Sister Hanger," and she wondered then how he knew her name. He continued: "I would like to help you if you would like me to. You have just come from the doctor's and he told you that you have a bad kidney condition. Well, you are from England and you have brought your herbs with you, and you have a little herb garden out in the back in which you have a nice stand of parsley. Now, if you will take a handful of parsley each day and put it into a pint of water, cover and steep it, and drink it in regular doses during the day, it will heal this condition. The doctor told you that you have only six months to live, but I will tell you what you will see; you will see another depression"--and he went on and told her all the things she would see--"and there will be a Third World War, but you won't see this one; it will be after you go." When he had finished the short interview, something momentarily distracted her attention and in that instant he disappeared.

Well, I spoke at her funeral; and it wasn't six months after she was supposed to die, she was eighty-six years old, and she had raised a number of wonderful children. [SNH p.248]

2. Parsley: We have had several students testify in herbology classes as to the value of parsley, among which is the following: "I talked to a man who went into the hospital for infection. He was there six weeks and it was costing $45.00 a day for the drugs they gave him. Then someone told his wife to take him some parsley. The doctor said, "Well, it won't hurt him, but it won't help him." He was released from the hospital after he had taken it for one day; it had started to drain the infection he had." [SNH p.248]

3. Juniper Berries Saves Pioneer Woman: In N. B. Lundwall's book, Assorted Gems of Priceless Value, there is an attested account by Elizabeth J. Barney, concerning her mother, who was about to die during a pioneer journey (at the beginning of this century) of an apparent kidney ailment. The wagon caravan stopped because of her and made camp for the night, intending to bury the rapidly-declining woman in the morning. A stranger suddenly was seen approaching the camp, and he told the husband (the father of the lady attesting to the account) to go and gather juniper berries and leaves growing in the vicinity and to "mix them together, steep them and give them to your wife and you can be on your way within an hour." Then the stranger said he had to go, and at that moment something drew the people's attention away, and during that instant he disappeared. The prescription was obeyed, the woman revived miraculously, helped prepare the breakfast, and continued on the journey completely healed. So you will find that these herbs will not only repair the body as with a "divine touch," but they restore our faith in the Supreme Maker. [SNH p.253]

4. Marshmallow Relieves Pain from Unvoided Urine: Marshmallow is excellent as a diuretic and kidney healer. One of Dr. Christopher's students, living in the southern part of Salt Lake Valley, had a teenage boy who was continually ridiculing his mother for studying about herbs and becoming a "witch doctor". One day he was brought home from football practice with severe pain in the abdomen, unable to void his urine. He refused to be taken to the hospital from school, asking instead to be brought home. He lay there on the floor screaming in pain and doubled up in a fetus position. He begged his mother, whom he'd ridiculed, to help him. She went out and pulled up some Marshmallow plants, root and all, because fortunately it was just after an irrigation turn and the fields were flooded. When she returned to the house, the boy asked how long it would take for her to make up the tea, as the pain seemed almost more than he could stand. She replied, ten or fifteen minutes. Instinct made him ask her to wash and hand him a Marshmallow root immediately. This she did, and he immediately began to chew on the root. Within seconds, he straightened out, stood up, and headed for the bathroom, voided his urine, and was

relieved of the excruciating pain. He never again ridiculed his mother's herbal studies. [UW-Marshmallow]

5. Parsley: Parsley root tea will help remove all stones including gallstones and kidney stones if they are not too large. One doctor who made a trip to Holland was surprised to see medical doctors prescribing Parsley tea for kidney stone and other kidney and related complaints, including pressure of the prostate. He returned to his practice at home and began prescribing the same remedy with the same good results (Luc:Herbal:89). [UW-Parsley]

6. Kidney Infection Cured by Sage: However, in one case the combination of peppermint and Sage is particularly good. It is used thus for kidney infections, equal parts being made into a tea. The herbs are covered with boiling water, the pan lidded and the tea allowed to stand until cold. One cupful is taken three times daily. One woman reported that she suffered from a kidney infection for more than a year, antibiotics only helping temporarily. She finally had so many treatments of antibiotics that they stopped working entirely. Her son brought home an Oriental friend whose father was an herbalist. He suggested a tea of Sage and peppermint. The next day she began drinking the tea, two cups a day for three months and her kidney infection never returned (Luc:Secrets:127). [UW-Sage]

7. Dr. Christopher's Kidney and Prostate Formulas: (White Mallow and Male Urinary Tract) First, I want to thank you for making your herbs and combinations and knowledge available! My husband was suffering from kidney/prostate troubles and had gone to the urologist after the local P.A. was unable to help him. The urologist had him on a septra which made his health seem to improve for a couple of weeks--then he had the same symptoms all over again and a lot worse. So much so, he stayed home from work for four days, sleeping and very uncomfortable. When he went back to the urologist and had x-rays they weren't able to find anything, told him to go off the medicine and that the urologist felt he would just have to "live with it." He must of thought my husband was off upstairs or something, maybe.

So we went to the health food store for help. Through reading material and the lady there he started on distilled water and KB and PR. He is much better and has been able to do heavy work again. Thank you greatly. [NL 3-4]

QUOTE

Kidney Formula

Formerly Juni-Pars

Usages:

Approximately 80% of the body is liquid, and much of this fluid must be pumped, filtered, etc., through the urinary system of the infividual. We generally do not take the best care of this delicate tract. Through it circulates irritating and clogging-type materials, i.e., tea, coffee, soft drinks, hard water, alcohol, etc.

Over the years we have used a formula of herbs with people who have been afraid to be out in public because of lack of control over the urinary tract and unknowingly voiding urine. After using this formula, many people have found relief from this condition and are living normal lives again.

Dosages:

Suggested use is 2 or 3 capsules between meals, or a cup of tea morning and evening taken with a cup of parsley tea.

Ingredients:

Juniper Berries

Parsley Root
Marshmallow Root
Golden Seal Root
Uva Ursi Leaf
Lobelia Herb
Ginger Root

QUOTE

KIDNEY STONES

Kidney Stones are termed renal calculi in medical language. When a stone passes down the ureter from the kidney to the bladder, the pain produced is perhaps the most severe of all pains man experiences in bodily illnesses.

When the stones remain in the pelvis of the kidney, however, there is often little or no pain. The problem facing the individual who has a kidney stone is either to leave it alone or to remove it by dissolution or surgery of one type or another.

In considering the cause and the treatment of these calculi found so frequently in the urinary tract, one should always look at the disease syndrome as a physiological process rather than as a static condition of a stone in place. For there are causative factors which gradually distort the physiology of the body in such a manner that over a long period of time a stone is formed, bit by bit - often without sign or symptom. When the condition is discovered, the aberrant functioning is finally recognized and must be either treated or left alone. There is always a choice.

Three stages of kidney stone pathology may be roughly defined: (1) tendencies toward calculi in the urinary tract - a condition wherein normal eliminations are breaking down (the trouble has its inception in the kidneys); (2) the acute or semi-acute stage, in which stones have formed and are in the process of passing or causing chronic trouble; and (3) the body has come to a relative balance and manages to maintain a homeostasis in spite of one or more stones in the kidney's pelvis. In this kind of a problem the stone may deteriorate at any point and cause acute pain and difficulty as it starts to pass down the ureter. On the other hand, some individuals live out their lives with a stone in place and may never be bothered by any discernible trouble.

The traditional course of events is to ease the pain, soothe the mucous membranes of the urinary tract, and either let the stone pass or remove it surgically. Sometimes, it is the better part of judgment to let it merely remain in the pelvis of the kidney if it is not causing a problem.

In the Cayce material, the viewpoint is taken that there is always a cause, and the correction of the condition involves restoration of a more normal physiology. Surgery is sometimes needed, but when undertaken inadvisedly can frequently cause more harm than benefit. The incoordinations, subluxations, destructive attitudes, and accumulations from inadequate eliminations must always be attended to and corrected if possible. And this job sometimes becomes more tedious than many sufferers are willing to undertake with enough persistence to be successful. However, this is the story that comes out of the Edgar Cayce readings given for those who were experiencing one degree or another of urinary calculus.

I. Physiological Considerations

The onset of symptoms from a kidney stone announces that a process has been going on for a long time during which sufficient precipitated or sedimented material has accumulated to form what we call a stone (although not the best name for it). The stone can be composed of a number of materials found in the body's bloodstream. However, the liquid excreted by the kidney as it performs its eliminatory function may be saturated to such a degree that portions are no longer in solution, and the crystallization

process or sedimentary process begins. The length of time it takes to form a stone that would cause symptoms is really unknown; it probably differs with individuals and circumstances. But it most certainly takes weeks, months, or sometimes even years.

How does such a condition begin? Obviously, there are more substances to be eliminated by the kidney than is possible under existing conditions. Cayce describes the condition of the blood as having "refuse forces accumulated by the activity from the lack of distributing forces in the system." (843-7) Or said another way, "the toxic forces that are being carried in the system without proper eliminations through their proper channels" are among the causative factors. (1060-1)

But it is not simply the overflow of toxins in the bloodstream. From the standpoint of physiology as seen in the readings, circulation to the liver and kidney is impaired, thus causing a decrease and an incoordination in the eliminatory process. Because of the stresses on the kidneys themselves, accumulations begin. But this is still an intermediary step. The actual beginning of the problem is more basic.

In many of the readings, no specific reference was made to the causes of impaired elimination - although trouble in the alimentary process was always present. In other references, however, an injury to the spine, a fall, a blow - often forgotten - produced faulty neurological impulses to the liver and kidney (often also to the spleen, pancreas, and intestinal tract), which in turn brought on incoordination and disturbed functions. (141-1, 370-4, 1055-1) In one instance, lack of proper care of the kidneys and eliminations during pregnancy and following delivery brought on the stone six months later. Subluxations were causative in another instance.

In the physical readings, past lives are seldom mentioned, but in the life readings the Cayce source often stated that there are no accidents. So these so-called accidents to the spine might be viewed as karmic responses to past-life experiences and represent the other major etiological factor - destructive attitudes. In one instance, the kidney stone recurred. (843-7) Cayce suggested that the repeat performance came from mental attitudes of fears, oversensitivity, and anger, and from nonadherence to diets. The kidney, liver, gall bladder, pancreas, upper intestinal tract, and spleen are all under the influence of the adrenal glands (called in the endocrinology texts the "fight-flight glands"). These organs normally respond to any emotions or attitudes that activate the sympathetic nervous system through the adrenals or the hormones that arise in those glands.

We see, then, that the supersaturated conditions existing in the kidney excretions, the incoordinations between the liver and the kidneys, the toxins accumulated in the bloodstream, and even the injuries which might bring about some of the problems may all have as an underlying essence, as a primary cause, the attitudes and emotions that cause destruction in the body.

Remember that the attitude of the body - towards circumstances, towards individuals, towards conditions - ever has much to do with creating an environment for disturbing or for helpful things as related to the bodily functions...
Know that there are ever those experiences to be met in the experience of each soul, that must be met. Meet these, not in anger, not in wrath but in gentleness and the fruits of the spirit; not in swearing vengeance or any of those attitudes. (370-5)

II. Rationale of Therapy

Throughout the Cayce readings, repeated references are made to the importance of persistent follow-through in therapeutic measures. In this particular problem, the theme is the same. For a 53-year-old man, [370], with passage of a stone and a deteriorating physical condition, Cayce saw the possibility of building the body back to normal, "if there is the persistence and consistence in the activities, the application and the attitudes of the body towards a constructive influence throughout its bodily functioning itself, as well as its applications to those things that may make for helpful influences." (370-4)

In cases in which the problem is quite complicated physiologically or the physical condition can easily turn into a critical situation, then all of Cayce's suggestions must be followed - these were the instructions. To [1054], a 37-year-old woman who had a calculus, it was pointed out that the problem could be eliminated; but, he warned her, unless they are "done consistently and persistently, for a sufficient period to insure that the causes in the first, and the effects that have already been produced, have been rejuvenated and resuscitated for their normal activity, then don't begin them!" (1054-1) And another, a 53-year-old man, [1060], was told he would run into extreme measures of therapy [surgery?] "unless all are done. . ." But, he added, if those suggestions would be done cooperatively and in a way that would aid the body to produce helpful influences, "resuscitating forces, revivifying energies, may be brought about in the body." (1060-1)

In applying these suggestions to individuals today, it must be kept in mind that every person is different. No two readings contain exactly the same directions. Thus with mild, severe or asymptomatic renal calculi, a given course of therapy - including consideration of attitudinal changes - must be followed with patience and persistence. It is always a process of aiding the body in altering its functioning physiology in such a manner that balance is maintained and constructive influences are always kept. And it is well to remember that healing the body physical without giving it hope in the spiritual is to save a body for destruction in materiality.

Therapies for Renal Calculus

In the readings studied, including all those currently indexed under kidney stones, the following suggestions were identified as being helpful:
Turpentine stupes: These were prepared in different strengths. For [843], 1/2 pint of spirits of turpentine was added to one to one-and-a-half quarts of hot water. Heavy flannel, five to six thicknesses, was dipped in the solution and applied over the bladder and pubic area, "so that there may be the relaxation of the urethra and the penetrating forces of the turpentine to alleviate." (843-4) Cayce gave some interesting information to this man: ". . we find that the application of the turpentine stupes over the area as indicated would offer a means for causing a disintegrating of the stone sufficient for its passage without operative forces; because of the very nature of the penetrating influences of the turp." (843-5)
For a 35-year-old woman, [540], a milder solution was suggested: two ounces of turpentine to a quart of water. The pack was to be placed over the kidney area, and a massage done afterward to the abdomen with a mixture of equal parts of mutton tallow, spirits of turpentine, and spirits of camphor.
And in reading 1472-16, an even more dilute solution of spirits of turpentine was suggested - one teaspoonful to a gallon of water, heated to 90 degrees. The flannel cloth dipped in this solution was to be applied for an hour across the kidney area twice a week, followed immediately by massage with a solution of peanut oil (one ounce), olive oil (one ounce), and melted lanolin (one-half teaspoon).
Osteopathic manipulations were suggested frequently. Most often those areas of the spine below the shoulder blades and down into the lumbar and coccygeal vertebrae were designated as needing most attention, but the upper dorsal and the cervical were frequently mentioned. Treatments were to be given sensitively, deeply for some and very gently for others, depending on their need and, of course, their physical condition.
Massage has already been mentioned. Various combinations of oils have been suggested. In 843-6, for instance, Cayce suggested a combination made up of equal parts of olive oil, tincture of myrrh and compound tincture of benzoin, this to be massaged across the lower back from the kidney area to the sacrum. Instructions were to heat the olive oil, then add the other two constituents. The massage was to prevent "the body from tiring so" and to relax the patient. Another common massage formula is equal parts of mutton tallow, spirits of turpentine, spirits of camphor and compound tincture of benzoin.
Diet is a factor in all instances. Only foods that are easily assimilated should be eaten. If foods are taken at all, cooked vegetables and cooked fruits could be eaten when the problem is acute. As a general maintenance diet one should eat one meal consisting of only fresh raw vegetables or fruit, a simple breakfast (avoid combining citrus and cereal at the same meal), and a dinner of principally vegetables. Baked potato peel is very good; pears or grapes are perhaps the best fruit. When able, such patients may eat fish, fowl or lamb as protein. It must be kept in mind that the diet should always be such as not to add more to the body than the body can tolerate and use adequately. This means no

alcohol, pastries, or desserts; avoid sugars and to a great extent starches. Cayce reminded one person that chewing food well would activate the salivary glands to supply the "lactics - or the alkalines - as they enter the system." (1060-2)
Mullein stupes and mullein tea were both recommended, but infrequently.
Watermelon seed tea (made like any herb tea) has been found in the readings to be beneficial in all kidney conditions, so it is not surprising to find it mentioned where stones have been formed. It was not a frequently recommended suggestion, however.
Colonics and enemas are suggested for both these procedures increase the elimination of toxins from the bloodstream, giving relief to the kidneys in their attempts to return to normal conditions.
The wet cell battery, radio-active appliance, and diathermy were all suggested to at least one of these individuals for whom readings were given, but it cannot be determined for certain that they were specifically for relief of the kidney condition. In one instance, reference was made to "vibrations" which would help to disintegrate the stone, and we might assume that that was meant to refer to the wet cell battery.
A prescription of oils to be taken orally was suggested for a man with nephritis and a kidney stone. To stimulate the dissolving of the "sediments" and to bring about better eliminations through the liver and kidneys, the following (in reading 149-1) was suggested to be taken in a capsule once daily, along with osteopathic treatments:

Eucalyptol, 1 minim
Rectified oil of turpentine, 1/2 minim
Oil of juniper, 1 minim

A pack of baking soda, saturated in hot water and applied over the bladder area, was suggested in one case (149- 1) to ease stresses in the bladder and urethra.
Castor oil packs were recommended to aid elimination of toxic forces that had gradually built up destructive influences in the body. Laxatives for [1060] at that time were not good; rather he needed something that would not only aid eliminations but also build up vitality and resistance within the body. It was suggested that the packs be used for three-and-a-half to four hours, changed every 20 to 30 minutes, using two to three to four thicknesses of heavy flannel. They were to be applied as hot as could be endured and gentle osteopathic manipulations were to be done during the period when the packs were being used. Two days later, another reading was taken on the man, who had by then greatly improved (he had gall bladder gravel as well as kidney stones). Cayce's psychic report was that the sedimentary conditions in the gall bladder and the hardening in the kidneys "have in a manner been dissolved by the use of the oil packs and the manipulations that have aided same to be expelled from the body itself." The one session with the packs was all that was needed. After that, colonics and enemas provided cleansing for the intestinal tract.
For a teen-ager (427-2) who was diagnosed as having stones, or "sediments" in the kidneys as Cayce called it, a prescription was given to be taken "every second day" in the morning before breakfast:

Phosphate of soda, 1/2 teaspoon
Syrup of sarsaparilla, 2 minims
Oil of juniper, 1 minim
And, every fifth day, one minim of sweet spirits of nitre was to be added to the mixture.

Attitudes were always directed toward constructive thinking and helpfulness. Anxieties were to be replaced by faith in the knowledge that help is available. The 14th chapter of St. John was recommended at least once in these particular readings, to be read every night before retiring.
For a man of 34 years who was experiencing an acute attack of kidney stones, Cayce suggested (in reading 5580-1) osteopathy and the following herbal remedy: To one gallon of rain water, add

Sarsaparilla root, 4 ounces
Wild cherry bark, 2 ounces
Yellow dock root, 2 ounces
Calisaya bark, 2 ounces
Black root, 2 ounces
Mandrake root, 30 grains
Buchu leaves, 10 grains
Reduce by simmering to one quart. Strain while warm. Add three drams of balsam of tolu cut in four ounces of grain alcohol. Give two teaspoonfuls four times daily.

Finally, surgery was occasionally prescribed. For a 56-year-old woman with a large stone, Cayce saw "accumulations in the kidney itself from conditions where incoordination between the circulations of liver and kidneys has caused sediments to form, irritations that, as to size and condition, will require operative measures ... We would operate." (3623- 1)

III. Suggested Therapeutic Regimen

For prevention of stones, the Cayce readings suggest that one should always look first to one's attitudes and emotions. Make corrections there, if needed. Then adopt a good basic diet which avoids fried foods, red meats (for the most part), white flour and white sugar products, and certain combinations of foods (such as cereals and citrus at the same meal). There are many publications on the market now dealing with Cayce's suggestions about diet, and these should be consulted. Lots of green vegetables and fruits are good, with fish, fowl and lamb supplying the protein.

Exercise regularly. Osteopathic or chiropractic treatments at intervals, even when one feels normal, are good procedures to follow. Full-body massages are good alternatives to the manipulations, especially if the latter are not available.

For the acute case of kidney stones, it is vitally important that relaxation be induced, so that the stone can pass without surgical interference. Here, the turpentine stupes can be used as well as the castor oil packs. Both of these tend to help break up the stone, and so are helpful. Osteopathic manipulations are very important in these instances; they aid in the relaxation of the tissues and help in the coordination of the liver and kidneys. Colonics or enemas are also helpful. The eucalyptol prescription in step 9 above might be helpful and, of course, it is very important that the patient help all he can by allowing his body to relax. (While biofeedback had not even been thought of when Cayce gave his readings, it is one way of training people to relax portions of their bodies.)

Attitudes should be of the nature of believing that the condition can be overcome. But it should be remembered that acute renal calculus is a very severe condition, and the aid of a narcotic to relax the ureter and the possibility of surgery as a final necessity should not be ruled out.

For the chronic case of renal calculi, all of those measures suggested for prevention should be utilized, keeping the body in a constructive phase and letting dissolution of the stone come about gradually - if it does come about at all. If the stone is large, such as a "staghorn" calculus, pieces may break off as dissolution occurs; these could cause acute problems as they try to pass down the ureter. Turpentine stupes may be used over a long period of time - and other measures that have been suggested in this commentary - but it must always be recognized that each person must make choices for himself. A large stone residing in the pelvis of the kidney is not an easy thing to correct. In many instances because of the psychological makeup of the individual, it may not be easily possible for the condition to be corrected. On the other hand, if the Cayce readings are to be taken at face value, it is always possible to clear up any condition. Choice is necessary as well as prayer, then definitive action to arrive at the method and the correction.

But no matter what the problem one faces regarding kidney stones - their formulation or their presence - the instruction that Cayce gave to a 53-year-old man suffering from a kidney stone should be kept in mind:

And let thy prayer oft be, in thy deeper meditation:
Father, God, Thou art life! Thou art hope! Thou art justice! Thou art mercy! In these may I, Thy servant, claim Thy care, Thy love; that my body may be cleansed as my mind may be cleansed, that I may be before Thee holy and acceptable unto Thee to do service to my fellow man in Thy name; and that the glory of Thy love as manifested in the Christ, my Savior, our Savior, may be manifested more and more in the earth...
And be consistent as to the applications of those suggestions and those activities that may bring about this; for every force and every power in the earth is of Him. Will you use it in His service or in defying Him in thy vain glory? (370-5)

Thanks for the info. Had no coughs.

Will take some time of rest, meaning no liver flushes. Maybe in a month or so.

Did an enema today, you can feel some relief!

Keep you posted.

Dear Craig,

An update. Just talked to an acquainted MD this weekend. He didn't anything about liver flushed, but I pointed to him where my pain is. The pain is definitely lower than the kidneys, so the pain is probably not caused by the kidneys. Don't have a clue what it is, but it appeared clearly after the 4th liver flush. It's about where the belt of a trauser is (vertically), and further between the flanks and the spine (horizontally).

Any clue?

hanb

craig-oxley - June 24, 2009 05:09 PM (GMT)

Not too sure either to be honest but maybe its Pancreas related. Check for any dysfunctional Pancreas symptoms and see if you have those. You may have blocked a duct a little with a stone etc tying either to the common hepatic duct, cystic duct, common bile duct, pancreatic duct, hepatopancreatic ampulla. See these are all tied in together. If this is the case then further flushing may be needed or long term Liver herb supplementation. You would want to make sure you have good back pressure before taking any oil in a Liver flush, meaning strictly no fats for 24 hours preferably 48 hours. You may want to try 1-2 litres of freshly juiced apples for a couple of weeks on empty stomachs and see if this might aid you. The malic acid in the apples works well at softening up stones etc. Don't do a Liver flush though straight after Malic Acid for that length of time. Try the Apple Juice and what I say next before anymore Liver flushing. I will suggest you get to a chiropracter or Osteopath and have them check for any sublaxations. Get them to focus between T4 and L4. Maybe this might aid you. Let us know.

craig-oxley - March 10, 2009 04:30 AM (GMT)

I can tell you now that when I suffered bad brain fog through low thyroid I concentrated on the Liver. I took just an organic tincture of Greater Celandine 5ml 3x daily. This removed the brain fog within a couple of days. This man is spot on there. Remember Thyroid causes much brain fog but people never concentrate on the Liver when dealing with Thyroid. The Liver is key with the conversion of thyroid hormones. You should tackle the Liver, Adrenals, Kidneys. Utilise a few thyroid specific herbs and utilise herbal all over tonics like Avens and Hoelon. -Craig

View Full Version: Bild Duct Volume

Title: Bild Duct Volume

craig-oxley - February 12, 2009 08:39 AM (GMT)

If you just count the ducts and ductules they account for about 0.1% of total volume (when fully charged with blood and bile) and 3% - 5% of nuclear volume. Similar to the difference between a wet and dry sponge.

The liver volume for body weight is:
20.2 ml/kg in females and
22.9 ml/kg in males.

Example for my liver duct volume. I am a male weighing 170 lbs (77.1Kg)

22.9 x 77.1 x 0.1 = 176 mL

Note this is only an approximate value and due to the maths could be in the range 85 mL to 220 mL. My own opinion is that it around 200 mL.

British Water Might Be Laced With Drugs

09-29-2008
http://www.telegraph.co.uk/news/uknews/309...tion-drugs.html

Cancer drugs are of particular concern because they dissolve easily in water.

The "cytotoxic" drugs, which are used in chemotherapy, are potentially dangerous because they are hard to break down through traditional water purification methods and remain potent in low concentrations.

About 50 of these drugs are prescribed to patients in Britain and researchers are concerned they could be very dangerous if one or more of the drugs mixed together in the water supplies. The drugs make their way into the water system when people prescribed the treatments use the toilet.

Although drinking water in the UK is monitored, none of the cytotoxic drugs are included in the list of contaminants.

The Government has commissioned a pilot project to test river supplies and drinking water after it has been through the water-treatment process, it was reported.

The project has been ordered by the Department for Environment, Food and Rural Affairs (Defra) and the Drinking Water Inspectorate (DWI), which is responsible for overseeing the monitoring of water supplies in Britain.

In January the DWI warned that tap water should be tested after they found traces of bleomycin, a cancer chemotherapy drug, and diazepam, a sedative, in samples of drinking water.

Researchers estimated that an adult drinking more than three pints of water a day

would receive a weekly dose of between 300 and 30,000 times lower than recommended safety levels.

Andrew Johnson, a water quality scientist at the Centre for Ecology and Hydrology at Wallingford, Oxfordshire, said: "We have no evidence that these particular drugs are entering the drinking water supply, but we conclude that there is a least the theoretical risk of low-level contamination by cytotoxic drugs.

"It is highly unlikely that concentrations below the nanograms per litre level would represent a risk to adults, however, the developing human embryo inside a pregnant woman could be particularly vulnerable to minute amounts of these agents as they would be able to pass through the gut and placenta."

The testing programme is expected to begin next year at four sites along a major river which yet to be designated. It would continue for at least a year before the results were evaluated.

Title: High Blood Pressure by Dr.Batmanghelidj

craig-oxley - September 13, 2008 05:10 PM (GMT)

High blood pressure

by Dr F. Batmanghelidj

'Physicians think they are doing something for you by labelling what you have as a disease.' **-Immanuel Kant**

High blood pressure (essential hypertension) is the result of an adaptive process to a gross body water deficiency.

The vessels of the body have been designed to cope with fluctuation of their blood volume and tissue requirements by opening and closing different vessels. When the body's total fluid volume is decreased, the main vessels also have to decrease their aperture (close their lumina), otherwise there would not be enough fluid to fill all the space allocated to blood volume in the design of that particular body. Failing a capacity adjustment to the 'water volume' by the blood vessels, gases would separate from the blood and fill the space, causing `gas locks'. This property of lumen regulation for fluid circulation is a most advanced design within the principle of hydraulics and after which the blood circulation of the body is modeled,

Shunting of blood circulation is a normal routine. When we eat, most of the circulation is directed into the intestinal tract by closing some capillary circulation elsewhere. When we eat, more capillaries are opened in the gastrointestinal tract and fewer are open in the major muscle systems. Only areas where activity places a more urgent demand on the circulatory systems will be kept fully open for the passage of blood. In other words, it is the blood-holding capacity of the capillary bed that determines the direction and rate of flow to any site at a given time.

This process is naturally designed to cope with any priority work without the burden of maintaining an excess fluid volume in the body. When the act of digestion has taken place and less blood is needed in the gastrointestinal region, circulation to other areas will open more easily. In a most indirect way, this is why we feel less active immediately after

a meal and ready for action after some time has passed. In short, there is a mechanism for establishment of priority for circulating blood to any given area - some capillaries open and some others close. The order is predetermined according to a scale of importance of function. The brain, lungs, liver, kidneys, and glands take priority over muscles, bones, and skin in blood distribution unless a different priority is programmed into the system. This will happen if a continued demand on any part of the body influences the extent of blood circulation to the area, such as muscle develop-ment through regular exercise.

Water shortage: potentials for hypertension

When we do not drink enough water to serve all the needs of the body, some cells become dehydrated and lose some of their water to the circulation. Capillary beds in some areas will have to close so that some of the slack in capacity is adjusted for. In water shortage and body drought, 66 per cent is taken from the water volume normally held inside the cells; 26 per cent is taken from the volume held outside the cells; and 8 per cent is taken from blood volume (see Figure 13). There is no alternative for the blood vessels other than closing their lumina to cope with the loss in blood volume .The process begins by closing some capillaries in less active areas. The deficient quantity must come either from outside or be taken from another part of the body.

Water loss in chronic dehydration

66% is lost from water held in some cells

26% is taken from water volume held outside the cells

8% is taken from water held in the vascular bed

Blood vessels close lumina to compensate for the water loss

Lumina closing causes the rise in tension we recognise as hypertension

Figure 13: The vascular system all over the body adapts to the blood volume loss by selective closing of its lumina. A major cause of blood volume loss is the loss of body water or its under-supply through loosing thirst sensation.

It is the extent of capillary bed activity throughout the body that will ultimately determine the volume of circulating blood. The more the muscles are exercised, the more their capillaries will open and hold a greater volume of blood within the circulation reserves. This is the reason why exercise is a very important component for physiological adjustments in those suffering from hypertension. This is one aspect to the physiology of hypertension. The capillary bed must remain open and full and offer no resistance to blood circulation. When the capillary bed is closed and offers resistance, only an increased force behind the circulating blood will ensure the passage of some fluids

through the system.

Another reason why the capillary bed may become selectively closed is shortage of water in the body. Basically, water we drink will ultimately have to get into the cells - water regulates the volume of a cell from inside. Salt regulates the amount of water that is held outside the cells - the ocean around the cell. There is a very delicate balancing process in the design of the body in the way it maintains its composition of blood at the expense of fluctuating the water content in some cells of the body.
When there is a shortage of water, some cells will go without a portion of their normal needs and others will get a predetermined rationed amount to maintain function (as explained, the mechanism involves water filtration through the cell membrane). However, blood will normally retain the consistency of its composition. It must do so in order to keep the normal composition of elements reaching the vital centres.

This is where the solutes paradigm is inadequate and goes wrong. It bases all assessments and evaluations of body functions on the solids content of blood. It does not recognise the comparative dehydration of some other parts of the body. All blood tests can appear normal and yet the small capillaries of the heart and the brain may be closed and cause some of the cells of these organs a gradual damage from increasing dehydration over a long period of time. When you read the section on cholesterol formation, this statement will become more clear.

When we lose thirst sensation (or do not recognise other signals of dehydration) and drink less water than the daily requirement, the shutting down of some vascular beds is the only natural alternative to keep the rest of the blood vessels full. The question is, how long can we go on like this? The answer is, long enough to ultimately become very ill and die. Unless we get wise to the paradigm shift, and professionally and generally begin to recognise the problems associated with water metabolism disturbance in the human body and its variety of thirst signals, chronic dehydration will continue to take its toll on both our bodies and our society!

Essential hypertension should primarily be treated with an increase in daily water intake. The present way of treating hypertension is wrong to the point of scientific absurdity. The body is trying to retain its water volume, and we say to the design of nature in us 'No, you do not understand - you must take diuretics and get rid of water! It so happens that, if we do not drink sufficient water, the only other way the body has to secure water is through the mechanism of keeping sodium in the body. The RA system is directly involved. Only when sodium is retained will water remain in the extra-cellular Fluid compartment. From this compartment, through the mechanism of shower-head production, water will be forced into some of the cells with 'priority' status. Thus, keeping sodium in the body is a last resort way of retaining some water for its 'shower-head' filtered use.

There is a sensitivity of design attached to sodium retention in the body. To assume this to be the cause of hypertension is inaccurate and stems from insufficient knowledge of the water regulatory mechanisms in the human body. When diuretics are given to get rid

of the sodium, the body becomes more dehydrated. The dry mouth level of dehydration is reached and water is taken to compensate. Diuretics maintain the body at an expanding level of deficit water management. They do not cure hypertension; they make the body more determined for salt and water absorption, but never enough to correct the problem. That is why, after a while, diuretics are not enough and supplemental medications will be forced on the patient.

Another problem in assessment of hypertension is its means of measurement. Anxiety associated with having hypertension will automatically affect the person at examination time. Readings of the instruments may not reflect the true, natural and normal blood pressure. An inexperienced or hasty medical practitioner, more in fear of litigation than mindful of accuracy of judgement, might assume the patient to have hypertension, whereas the person might only have an instant of 'clinic anxiety', thus causing a higher reading of the instrument. One other very important but less-known problem with the mechanism of reading blood pressure is the process of Inflating the cuff well above the systolic reading, and then letting the air out until the pulse is heard.

Every large (and possibly small) artery has a companion nerve that is there to monitor the flow of blood through the vessel. With the loss of pressure beyond the cuff that is now inflated to very high levels, the process of 'pressure' opening of the obstruction in the arteries will be triggered. By the time the pressure in the cuff is lowered to read the pulsation level, the recording of an artificially induced higher blood pressure will have become unavoidable. Unfortunately, the measurement of hypertension is so arbitrary (and based on the diastolic level) that in this litigious society a minor error in assessment may label a person hypertensive. This is when all the fun and games begin!

Water by itself is the best natural diuretic. If people who have hypertension, and produce adequate urine, increase their daily water intake, they will not need to take diuretics. If prolonged 'hypertension producing dehydration' has also caused heart failure complications, water intake should be increased gradually. In this way, one makes sure that fluid collection in the body is not excessive or unmanageable.

The mechanism of sodium retention in these people is in overdrive mode. When water intake is increased gradually and more urine is being produced, the oedema fluid (swelling) that is full of toxic substances will be flushed out, and the heart will regain its strength.

The following four letters are presented with the kind permission of their authors, who wished to share their welcome experiences with the readers of this book. The first is from Marjori Ramsay, a lady in her early eighties.

Dear Dr Batmanghelidj
November 22, 1993

I have just ordered another copy of your book on water, having given a son my first

copy. I tell everybody about it and my experiences Perhaps you would be interested.
My first son Charles, 58, who lives with me, is deaf and autistic. I take him three or four days a week to a facility for the handicapped. They had been taking his blood pressure there and notified me that the doctor said he should go on medication - his BP was 140-160/100-104.1 had just received your book and asked the M.D. to let me experiment for two weeks. Reluctantly he agreed, but warned me it was very dangerous.
I kept Charles home and used the water routine, also adding a little magnesium and potassium.
Two weeks later the nurse took his BP and it was 106/80. She said: 'The doctor will be in shortly'- evidently the M.D. didn't believe her and he checked it himself and had to admit it was so. He didn't ask me what I did, so I did not tell him about water, but if the BP continues as it is, I will tell him.
I went on the water routine too without any particular problem in mind, but noticed that in about 10 days my tendency to get dizzy if I moved my head quickly had disappeared. I also had been unable to lower my head to lie flat at nights and had to have several pillows. Now I am much better, and have had only one spell in over a month: I am 82 years of age.

Thank you for the work you are doing - it is much needed. More power to you.

Marjori Ramsay

If you can find out why this particular doctor was not interested in discovering how Charles's mother brought his blood pressure back to normal, you will then realise why we have a health care crisis on our hands!

The writer of the second letter is Michael Peck. He has, in the past, been involved in an administrative capacity with the Foundation for the Simple in Medicine, which I helped to establish. The foundation is a medical research ('think tank') institution. At a scientific and public education level, the foundation is engaged in the introduction of the paradigm shift on water metabolism of the body in the USA. In his letter (below) Mr. Peck briefly explains his medical problems since childhood. Who in the world would have thought so many disparate medical conditions could be related, and after so many years these conditions would disappear as a result of a simple adjustment to daily water intake? The solution to Mr. Peck's medical problems was so unique his wife also began to adopt the 'treatment ritual'.

Michael Paturis, the writer of the third letter, is a fellow Rotarian. He became aware of my work when I was asked to speak to his club a few years ago. One day we had lunch and I explained in detail why hypertension and fat accumulation in the body are gen-erally the consequences of chronically occurring dehydration. He accepted my advice of increasing his daily water intake. He also con-vinced his wife to adopt the measure. Please note the impact of increased water intake on allergies and asthma that has been stated in the

letters from Michael Peck and E Michael Paturis.

Lt Col Walter Burmeister has observed the effect of water on his own blood pressure. As you can read in the second letter, he too

Dr. F. Batmanghelidj 25 March 1992
Foundation For The Simple In Medicine
2146 Kings Garden Way
Falls Church, Va. 22043

Dear Fereydoon,
This letter is a testimony to the merits of water as an essential part of the daily dietary requirements for good health.I have been following your recommendations for nearly five years, and have found myself taking for granted the positive effects of water intake.
When I first started on the program I was overweight, with high blood pressure and suffering from asthma and allergies, which I have had since a small child.I had been receiving treatment for these conditions. Today, I have my weight and blood pressure under control (weight loss of approximately 30 pounds and a 10 point drop in blood pressure). The program reduced the frequency of asthma and allergy related problems, to the point of practical nonexistence. Additionally, there were other benefits, I experienced fewer colds and flus, and generally with less severity. I introduced this program to my wife, who had been on blood pressure medication for the past four years, and through increased water intake has recently been able to eliminate her medication.

Thanks again for your program

Michael Peck

has experienced a drug-free and nature-designed adjustment to his blood pressure.

If water is a natural diuretic, why do intelligent and apparently learned people still insist on using chemicals to get rid of water from the kidneys? As far as I am concerned, this constitutes negligence. Since this unfortunate action will eventually damage the kidneys, and ultimately the heart, its practice should stop - to the undoubted benefit of sufferers.

My colleagues who still insist on blindly using diuretics in the treatment of hypertension are walking into foreseeable litigations for

P Batmanghelidj M.D.
Foundation on For The Simple In Medicine
2146 Kings Garden Way
Falls Church, Virginia 22043

Dear Dr. Batmanghelidj,

I again wish to thank you for your kindness in helping my wife and me to better appreciate the importance of water to our health.

We feel the conscious increase in our water consumption contributed greatly to our weight loss – a weight loss which had been urged upon both of us by our respective physicians for years. My loss of approximately forty-five (45) pounds has resulted in such a lowering of my blood pressure that I am no longer taking medicine for my blood pressure. My wife's weight loss has alleviated the discomfort she has experienced for years with her back. In addition, she believes the weight loss has reduced her discomfort and problems with her allergies.

With best wishes, Iremain

Sincerely

Michael Paturis

negligent treatment of their patients. The new information will provide their patients with sufficient insight to understand what damage has been caused by stupid insistence on treating 'hypertension' with diuretics. Let the February 1995 class action suit of smokers against the tobacco industry be a warning to the health care industry.

Dr. Fereydoon Batmanghelidj 3rd August 1994
Foundation For the Simple in Medicine
2146 Kings Garden Way
Falls Church, Virginia 22043

Dear Dr. Batmanghelidj:

Since my 24 May 1994 letter, and your consequent telephone call, a physical change of address has absorbed my time. The new address is LTC Walter F. Burmeister, 118 Casitas del Este, El Paso, Texas 79935.
Albeit, much more important than these facts, I am in a position to verify how tap water effectively lowers hypertension. Starting in early April 1994, leaving years of diuretics and calcium-blockers behind, in accordance with your recommendation, for approximately 3 months I drank a minimum of eight 8-ounce glasses of tap water; occasionally more. The blood pressure, heretofore contained by drugs, gradually dropped from an average around 150/160 systolic/over 95-98 diastolic to an amazing, drug free, 130/135 systolic/over 75-80 diastolic fluctuating average. My wife makes these measures at home; each time taking two or three readings. The record shows several lows of 120s over 75d and a rare high of 140s over 90d. However, the average range, as stated above, uniformly dominates.

In addition to vitamins and minerals, this drug-free approach, based essentially on tap water and a pinch of salt, has relaxed my system and justifies the confidence that you hold the handles of a truly revolutionary and marvelous medical concept. Since your are about to publish a book with applicable testimonies of the Hydration System, my personal experience is gratefully offered as a way of saying thank you.

Respectfully yours,

Walter F. Burmeister
Lt. Col. AUS RET

Title: Rheumatoid arthritis pain by Dr F.Batmanghelidj

craig-oxley - September 13, 2008 05:09 PM (GMT)

Rheumatoid arthritis pain

By Dr F.Batmanghelidj

'The worst sin toward our fellow creatures is not to hate them, but to be indifferent to them: that's the essence of inhumanity! -**George Bernard Shaw**

In the United States, about 50 million people suffer from some form of arthritis, 30 million people suffer from low back pain, millions suffer from arthritic neck pains, and 200,000 children are affected by the juvenile form of arthritis. In Britain, an estimated 20 million people suffer with joint symptoms, of whom four million are disabled because of arthritis. In addition to this, in any year, a further 20 million will have to endure back pain, with effects which range from slight inconvenience to complete incapacity.

Once any of these conditions is established in an individual, it becomes a sentence for suffering during the rest of the individual's life unless the simplicity of problem's root-cause is fully understood. Initially, rheumatoid arthritic joints and their pain are to be viewed as indicators of water deficiency in the affected joint cartilage surfaces. Arthritis pain is another of the regional thirst signals of the body. In some arthritis pains, salt shortage may be a contributing factor.

The cartilage surfaces of bones in a joint contain much water. The lubricating property of this 'held water' is utilised in the cartilage, allowing the two opposing surfaces to glide freely over one another during joint movement.

Whereas bone cells are immersed in calcium deposits, cartilage cells are immersed in a matrix containing much water. As the cartilage surfaces glide over one another, some exposed cells die and peel away. New cells take their place from the growing ends that are attached to the bone surfaces on the two sides. In a well hydrated cartilage, the rate of friction damage is minimal. In a dehydrated cartilage, the rate of abrasive damage is increased. The ratio between the rate of regeneration of cartilage cells to their 'abrasive peel' is the index of joint efficiency.

Actively growing blood cells in the bone marrow take priority over the cartilage for the available water that goes through the bone structure. In the process of dilating the blood vessels to bring more circulation to the area, it is possible that the branch that goes through a tight hole in the bone cannot expand adequately enough to cope; the cells that depend on these vessels for an increased water and nutrient supply are under a physically imposed rationing control. Under such circumstances, and unless there is blood dilution to carry more water, the serum requirements of the cartilage will have to be satisfied from the blood vessels that feed the capsule of the joint. The nerve regulated shunting mechanisms (to all the joints) also produce signals of pain.

Initially, this pain indicates that the joint is not fully prepared to endure pressure until it is fully hydrated.

This type of pain has to be treated with a regular increase in water intake to produce some dilution of blood that is circulating to the area, until the cartilage is fully hydrated and repaired from its base attachment to the bone -the normal bone route of serum diffusion to the cartilage. A look at Figures 6 and 7 will help make these points clear.

Figure 6: *A schematic model of a normal hinge joint (found in the fingers) – its arterial supply to the bone marrow and to its capsule and the direction of serum supply to its cartilage points through the bone marrow.*

It is my assumption that the swelling and pain in the capsule of the joint is an indication there is dilation and oedema from the vessels that furnish circulation to the capsule of the joint. Joint surfaces have nerve endings that regulate all functions. When they place a demand for more blood circulation to the area to pick up water from the serum, the compensatory vascular expansion in the capsule is supposed to make up for the inefficiency of circulation from the bone route of supply.

Joint movement causes a vacuum to be created in the joint space. Water will be pulled through the bone and the cartilage into the joint cavity – if it is freely available.

Figure 7: *A schematic model intended to show and compare, side-by-side, a well hydrated joint and a dehydrated joint. The articular cartilage in a well hydrated joint gets its nutrition from the blood supply to its base attachment to the bone. A dehydrated joint will need to get some sort of fluid circulation from the capsule of the joint, hence the swelling and tenderness in the joint capsule. The inflammatory process may appear as if there is infection when there is only dehydration.*

Because dehydration in the joint surfaces will eventually cause severe damage - to the point of making the bone surfaces bare and exposed until osteoarthritis becomes established - the tissue damage will trigger a mechanism for remodelling of the joint. There are hormone-secreting cells in the capsule of the joint. When there is damage (also from dehydration), injured tissue has to be repaired. These local remodelling hormones lake over and restructure the joint surfaces. It seems that they cater to the lines of force and pressure that the joints have to endure.

Unfortunately, the repair process seems to produce a deviation of the joints. To avoid such disfigurement, one should take the initial pain very seriously and give strict attention to daily intake of water. This pain should be recognised as a sign of local dehydration. If it does not disappear after a few days of water intake and repeated gentle bending of the joints to bring more circulation to the area, one should then consult a professional practitioner of medicine.

You have nothing to lose and everything to gain by recognising the pain and the non-infectious inflammation of a rheumatoid joint as a thirst signal in your body. You are probably showing other signals for water shortage in your body, but this particular site is indicating predisposition to a more severe local damage.

If we understand the body to have difficulty in recognising its thirst state, it is possible that this lower state of alertness is also inheritable by a child. It is possible that dehydration in a rapidly growing child might also indicate its presence by the pain felt in the joints, as well as in heartburn. The mode of signal production that would denote thirst might naturally be the same in the young as in older people. It is therefore recommended that juvenile arthritis should also be treated with an increase in daily water intake.

As you can see, Dr Laurence Malone, whose letter is published on page 48, is an experienced medical doctor and an educator. His observations on the effect of water on rheumatoid joint pains in himself show that our other colleagues in the medical profession should begin to notice the medicinal values of water in

disease prevention.

Low back pain

It should be appreciated that the spinal joints - intervertebral joints and their disc structures - are dependent on different hydraulic properties of water stored in the disc core, as well as in the end plate cartilage covering the flat surfaces of the spinal vertebrae. In spinal vertebral joints, water is not only a lubricant for the contact surfaces, it is held in the disc core within the intervertebral space and supports the compression weight of the upper part of the body. *Fully 75 per cent of the weight of the upper part of the body is supported by the water volume that is stored in the disc core; 25 per cent is supported by the fibrous materials around the disc* (see Figure 8). In all joints, water acts as a lubricating agent and it bears the force produced by weight or the tension produced by muscle action on the joint.

Global Health Solutions, Inc
P.O. Box 3189
Falls Church, Va.22043

Attn: The Honorable F. Batmanghelid, M.D.

Gentlemen:

At 82 years of age I am still in fair shape and only regret I did not have the superb advice of Dr. Batmanghelid and that of his books "Your Body's Many Cries for Water" and "Low Back Pain".

Dr. Batman's reasoning is incisive, his medical knowledge indeed sparkles with wit and brilliant logic. His books are now a treasured possession in my library. I have used his advice for the painful arthritis I have in my hands and back and within two weeks, I have experienced considerable reduction of pain. I sleep better, I have more strength, with greater coordination and relaxation. I see life from a different point of view, where everything seems easier for me to do.

Dr. Batman's books are full of common sense and truthful medical advice. His suggested treatment of disease goes to the roots, the cause of it and anyone who is fortunate enough to read them won't be disappointed with their purchase.

Respectfully,

Laurence A. Malone MD Ph.D

"A Tutorial Learning Center For College Sciences"
(Licensed By The 6tate of Ohio)

8225 East Washington Street Chagrin Falls.Ohio 44O23

In most of these joints, the establishment of an intermittent vacuum promotes a silent water circulation into the joint, only for it to be squeezed out by pressure borne as a result of joint activity. To prevent back pain, one needs to drink sufficient water and do a series of special exercises to create an intermittent vacuum to draw water into the disc space. These exercises will also reduce the spasm in the back muscles that, in the vast majority of people, is the main cause of lower back pain. One also needs to adopt correct postures.

The subject of back pain and its relationship to water is so important that I have dealt with it in a special book, How to Deal With Back Pain and Rheumatoid Joint Pain, and a complementary video, How To Deal

With Back Pain. If you get back pain and in particular sciatic pain, you will benefit by reading the book and seeing the video. In a majority of cases sciatic pain can be totally relieved within half an hour when the special movements that produce an intermittent vacuum in the disc spaces - as shown in the book and video - are performed.

Neck pain

Bad posture, keeping the head bent for long periods when writing, working at a low bench, 'freeze position' while at the computer for many hours, a bad pillow or too many pillows can be contributory factors in the production of neck pain, or even the displacement of the intervertebral discs in the neck. Neck movement is essential for the establishment of adequate fluid circulation within the disc spaces in the neck. The weight of the head forces water out of the discs over a period of time. To bring back the same water, the force of vacuum has to be created within the same disc space. This can only be done if the head and neck are moved adequately backward.

A simple process in less severe cases of neck pain from disc displacement would be slowly and repeatedly bending the head and neck backward, as much as they will bend, keeping the neck extended for 30 seconds at a time. This extension enhances the force of vacuum and
brings water into the disc spaces. At the same time, because of their front attachment to the spinal ligament, all of the discs will be retracted back into their normal spaces between the vertebrae and away from the nerve roots in the neck.

Figure 8: *A schematic model showing the importance of water to the disc core. It provides the essential hydraulic support for the weight-bearing qualities of an intervertebral disc. Once dehydration sets in, all the parts of the body begin to suffer. The intervertebral discs and their joints are first in line. The fifth lumbar disc is affected in 95 per cent of cases.*

Another simple procedure to correct this problem is lying on one's back on the very edge of the bed with the head hanging back and down. This posture permits the weight of the head to stretch the non-weight-bearing neck and bend it backward. A few moments of total relaxation in this position will ease the tension in the neck. This, is a good posture to generate a type of vacuum in the disc spaces in the neck. After gently bending the head backward so that you can see the floor, raise the head until you see the wall beyond your feet. This procedure may be effective in creating an intermittent vacuum in the vertebral spaces between any two vertebrae. The vacuum draws into the disc spaces and spreads it to all parts in the neck joint and lubricates their movements. This water is needed for the disc core to re-expand to its natural size, jacking up and separating one vertebra from the other. You could now bend the head from one side to the other. Try to look at the wall and floor of the room, first one side and then the other side. People who begin to suffer from neck 'arthritis', or disc displacement in the neck, may wish to test this simple procedure to improve the mobility of their neck joints.

Anginal pain

For more information read the section on cholesterol. In brief and to address the dehydration-produced pains of the body together, anginal pain means water shortage in the body. The common factor in all the conditions labelled as different diseases of the heart and the lungs is an established dehydration.

Take a look at Mr Samuel Liguori's and Loretta Johnson's letters,
published by their kind permission (among the testimonials in the
section on cholesterol). Mr Liguori's anginal pain disappeared when he started to increase his water intake. He also had suffered from hiatus hernia and that too started to clear up. Given time, it will clear up completely. You will see from Loretta Johnson's letter that, even at the young-at-heart age of 90, anginal pain can be treated with water, to the extent that she does not need any medication for her heart pains.

Headaches

In my personal experience, migraine headaches seem to be brought about by dehydration; excess bed covers that will not permit the body to regulate its temperature during sleep; alcoholic beverages (hangover) initiating a process of cellular dehydration, particularly in the brain; dietary or allergic triggers for histamine release; excess environmental heat without water intake. Basically, migraine seems to be an indicator of critical body temperature regulation at times of 'heat stress'. Dehydration plays a major role in the precipitation of migraine headaches.

The most prudent way of dealing with migraine is its prevention by the regular intake of water. Once migraine breaks the pain barriers, a cascade of chemical reactions will stop the body from further activity. At this time, one has to take pain-relieving medications with copious water. Sufficient cold or iced water may by itself be able to cool the body (also the brain) from inside, and promote closing of the vascular system everywhere. Excess dilation of the peripheral vessels might well be the basic cause of migraine headache.

Mrs Mavis Butler, a touring Australian Adventist missionary in Silang in the Philippines, has an interesting history. She has for many years suffered from migraine headaches. She would at times be so incapacitated as to become bed-ridden. She came across this book when she was in Silang and started to increase her water intake. She wrote to tell me that she has so improved that she now wants to shout it from the house tops.

Mrs Butler's long letter is reprinted on the following pages. Hers is another of those human stories that make one wonder how it is possible that we were so ignorant of the importance of water to health that people could suffer from its lack in the body, to the point of wishing to die.

P 0 Box 1619, Innisfail 4860
North Queensland, Australia
January 23, 7995

Dear Dr. Batmanghelidj:

For many years I suffered with headaches. I consulted doctors, neurologists, chiropractors and spent hundreds of dollars for head-scans and X-rays, all to no avail. At times only my faith in God kept me from wanting to die, as I lie prone on my bed for days on end in pain.
No medication would ever stop the pain, it would just seem to run its course and then stop. I could never make any connection between my diet and the headaches, and the only pattern they seemed to follow was to always start a couple of hours after a meal.
Then one day a friend told me that he thought my headaches were caused because I never drank enough water. While I knew I didn't actually drink much water, I thought my herbal tea with fruit juices together with lots of fruits amply supplied my liquid requirements. Just three weeks later I was leafing through a health magazine when an advertisement for your book, 'Your Body's Many Cries for Water', just seemed to leap out at my eyes. I bought the magazine and sent for the book. When it came, I eagerly read and re-read it to learn this new concept about water, and as I saw the errors in my drinking habits I quickly set about to righting them. Can anyone, without experiencing it for themselves, really understand what it is like to have usually pain-filled days changed to wonderful painless days when you can do the things you want to do, instead of being 'down with a headache?'. Oh, such a blessing for which I thank God continually.
It has taken months to properly hydrate my body, but now a headache is a now-and-again event instead of the norm. I thank a loving and caring God for leading me step by step to this wonderful truth. He no doubt tried to lead me a lot earlier, but I was too blind to see. I thank you, doctor, for your great work and perseverance in bringing this truth to the people.

I lecture to adults at night classes on 'Better Food and Eating Habits' and I quickly gave one of my

sessions entirely to the body's need for water. I have been able to help many people to better health and much less pain in their lives, with this knowledge, A friend told me he was going into hospital in a few days time for stomach and ulcer treatment. I begged him to cancel this and try the water treatment you recommended.
He somewhat reluctantly did and was amazed and thankful to find his pains stop and in time, to know that the ulcer had healed, all without medication.
Please let me offer my grateful thanks again and pray that the Lord will bless and guide you and your staff as you work for the better health of humanity.

Sincerely,

(Mrs) Mavis Butler

Don’t be Deceived by the Crusade Against Salt

The Dangers of a Low Salt Diet

You Need the Right Kind of Sea Salt to Live

http://www.relfe.com/low_salt_diet_dangers.html

The media and medical system have told you a lie: that avoiding salt will help you live longer. The prevailing viewpoint is that salt is a general poison, like alcohol and tobacco. Salt has been vilified as the great devil at the dinner table. Even the health food industry has gone along with this one.

But if you think about it – this makes no sense. Our cells all contain salt. We sweat salt. Our tears contain salt. Our blood is salty. If we don’t eat salt, where will it come from?

The question should not be “Do we need salt”. We absolutely do. We cannot live without it. The questions should be “What kind of salts are good and bad for us?”.

There are basically three kinds of salt:

1) Sodium Chloride. Normal table salt. This is toxic and bad for your health, as you have been told.

2) So called "sea salt". This should be good for you but unfortunately it has been processed and many of the valuable minerals removed. It's not much better than normal table salt.

3) "Celtic sea salt" or "macrobiotic, hand-harvested, sun-dried sea salt". This is SUPER GOOD FOR YOU! And delicious! We NEED salt - REAL salt. We sweat salt. Our cells are full of salt. We cry salt. We need all the minerals, and things that science has not yet discovered, that are in the sea. We all need this salt for ideal health.

The following information is mostly from Dr. Jacques de Langre, .a California biochemist who has studied the health benefits of salt for over 35 years. He has a Ph.D. in biochemistry from the University of Brussels. He wrote two books on this topic, "Sea Salt's Hidden Powers” and "Sea Salt, the Vital Spark for Life".

Dr. de Langre openly agrees that refined salt (pure sodium chloride) is toxic to the body - and can cause high blood pressure. Yet he believes Celtic sea salt is extremely healthy, and has the exact opposite effect of refined salt. Celtic sea salt is so names because it was first produced in France.

The entire health field is very sloppy with its terminology on salt. They think all salt is the same. This is far from true. Most refined salts are a poison. But some natural salts are a nutritious food.

In America, doctors condemn salt. They take heart patients off of salt. In France, they give heart patients good salt.

"The most convincing fact that salt is critical to life is that the amniotic fluid is salty. Amniotic fluid is the fluid surrounding the embryo. (Editor’s note: And yet, ALL salt has been removed from virtually all baby foods. Where will the salt come from for these babies to produce properly functioning bodies?).

99% of the world's research on salt is done on commercial table salt. This is the only salt they know of. They think all salt

is the same - but they're wrong.

The medical doctors have a dilemma. Refined salt can cause a lot of problems. They are correct on that point, and that has been well documented. Yet, a salt-free diet has problems of its own. Neither approach, taking refined salt, or avoiding it - is the answer. People desperately need salt for good health, and medicine doesn't have any solution.

On the topic of salt, American scientists are very narrow-minded and insular. We are still in the dark ages of salt making. In many parts of France, when a person comes in with heart problems, high blood pressure, or other problems which are hard to diagnose, the first question the physician may ask is, "What kind of salt are you using?" There is no such opportunity here, because the only recognized salt is refined, white table salt.

Some of the best scientific research on the health properties of good salt are written in French, German and Portuguese. But few American doctors have read them. This country was raised on refined salt. We inherited this from the English. So, we have never been exposed to a healthy salt.

If your tears weren't salty, if your blood wasn't salty, if your sweat wasn't salty, you wouldn't be functioning very well. The current medical belief that our body can function on no salt at all, or on a restricted salt intake, causes more problems than it tries to solve.

You can't function without salt. You can't digest food without salt. Your heart can't function. Your adrenal glands can't function. Your liver can't function Your kidneys can't function.

Sodium is the predominant cation in the circulating blood plasma and tissue fluids. Derek Demon brought out this point in the medical physiology book, 'The Hunger for Salt."

Everyone was born in a salty solution - our mother's amniotic fluid This is probably the best biological proof we have that cellular structure is enhanced by salt. The amniotic fluid is a salty, 'mini-ocean' for the fetus. This is a prime example of why we need all of the ocean's minerals as part of our make-up. This is basic.

Your very blood needs salt to function. There was an article in the Scientific American on this topic in the July, 1963 issue, '"The Social Influencce of Salt." It said, '"The chemical requirements of the human body demand that the salt concentration in the blood be kept constant." They discussed how you con die on a completely salt-less diet.

A salt-free diet speeds up aging. Your cells must be bathed in a sodium-based, extracellular fluid. When the cells are not in this fluid, they will explode. This has been proven biologically. The cells of a mammal deprived of sodium literally explode.

Without salt, there is no longer any exchange between the sodium on the outside of the cell, and the potassium on the inside. Talk about aging, this is probably the one, single, most important biological fact that must be considered when you discuss salt. Deprived of that saline solution, the cells age.

On the other hand, taking refined salt is not the answer. This will promote a pathological calcification and a breakdown of cellular tissue. In either case, you have problems.

De Langre says that in most cases, high blood pressure is not measurably lowered by restricting salt intake. Even a drastically reduced sodium diet - down to less than 1/2 gram/clay, often fails to show any improvements in cardiovascular problems. Dr. John Laragh expressed the same thought in the May, 1983 issue of the Annals-of Internal Medicine (page 740) "..it is likely that even drastic sodium restriction would not prevent hypertension, because fewer than half of hypertensive patients would respond." He goes on to say, "Public health policy should be dictated by facts, and not by hopes or opinions."

De Langre believes that a low-salt diet can actually cause high blood pressure in some people. A salt-free diet can damage the valves of the heart. The contractibility of the heart muscles is negatively affected by a deficiency of salt. The heart can no longer contract normally. Remember, the heart is fed by a saline solution from the blood and lymph.

On a salt-free diet, the valves of the heart can tire. They will begin to lacerate, and break up in shreds. Biochemically, without salt, the cells starve. On a salt-free diet, you will not recover quickly after an iilness.

Salt is an energizer. Athletes drink salt-based fluids. There is a definite need for sodium chloride to maintain and rebuild the cells.

If salt was so bad, why do they feed intravenous saline solutions in hospital patients? They do that because the body runs on salt. Without salt, we run out of electrolytes. Without electrolytes, our human batteries die out.

A lot of vegetarians eat a salt-less diet. This is bad because you have so much ingested potassium from the green leafy vegetables which is not neutralized by the sodium. If potassium is in excess in relation to sodium, the body loses its ability to produce hydrochloric acid. Then you have digestion problems, which a number of vegetarians have.

Nature put 84 elements in salt, as a buffer, to protect you from pure sodium chloride. In the USA people have been taught that salt is pure sodium chloride. When people talk about salt, they overlook completely that there are 84 buffering elements in salt to protect people from the harshness of sodium chloride in its pure state.

Nature put these complementary elements in salt for two reasons. First, to make sure that people could use the sodium properly. And second, to ensure that once the sodium has been utilized, it will be eliminated completely and quickly from the kidneys.

An analysis of salt goes way beyond the minerals and the chemical elements. There was an article on this topic in the September 1982 issue of Ocean Magazine. They made a fantastic defense of salt, saying salt is not just chemicals, it is a lot more. There is:

bio-electric energy
magnetism
vital and inert gases, such as helium, neon, and argon
micro organisms that are critical for the life of salt
84 of the 103 known elements

Sea water is a complex chemical soup, containing 84 of the 103 known elements.

Nature had a purpose in making our blood like the ocean. In the ocean, sodium is buffered. In our blood, the sodium is buffered. And in our diet, the sodium should be buffered as well.

If you tried to inject pure sodium chloride intravenously, you would kill the patient. He goes into salt shock. This is well-known in medical circles.

In the 1900's, a medical doctor named Jacques Loeb, from the University of California, performed an epic experiment. He put fish in a tank of water mixed with refined salt, the same concentration of salt that exists in sea water. All the fish died. If fish can't live on pure sodium chloride in dilute concentrations, how can we?

The Celtic process of drying the salt by the sun and the wind first started well over 900 years ago. Today, this same pristine process of salt-making continues Celtic salt contains every element that is in seawater, minus the mud. There are actually more than 84 elements in the ocean, but they haven't all been detected yet. There is never any heat used. What remains is biologically active, pure, moist, Celtic salt. No chemicals, preservatives, or anything else has been added.

De Langre has said that he has had reports of people going to the doctor and their doctor saying, "Well, you must be taking less salt, because your blood pressure is lower." But the truth was, they didn't cut down their salt intake at all. They were taking the Celtic salt.

Here's a letter from a man in Los Angeles to De Langre: "Two weeks ago I donated blood at a Red Cross station. At that time my blood pressure was 160 over 90. (Normal is 120 over 80). Yesterday, after hardly one week of using the Celtic salt, the only new addition to my diet, I recorded a blood pressure reading of 105 over 82”.

De Langre reported that over several decades around a couple of thousand people have reported similar stories - that suddenly their blood pressure became normal when they switched from no salt or table salt to celtic sea salt. Of course, results will vary from individual to individual and there are always exceptions.

In regular salt, the refined sodium chloride often stays in the body long after it has done it's job. Celtic salt helps to remove this excess sodium, as soon as it is no longer needed. This is because the Celtic salt has magnesium.

It's one of the great nutritional paradoxes, that you have to give salt, in order to lower the level of salt in the tissues. The Celtic salt literally "scrounges" around the body looking for excess salt deposits in the interstitial tissue and it just drains this sodium through the kidneys. De Langre said that medical doctors had told him that the Celtic salt will also help to dissolve kidney stones.

De Langre claims that if a person has low blood pressure, taking the Celtic salt will not make their pressure go even lower. The Celtic salt has the canny ability to bring back to center whatever function is unbalanced in the body.

Celtic salt is a blood pressure normalizer. Most people can't understand this, but Celtic salt has a 'biochemical intelligence.' It's a thinking salt. It is totally different from the dead, lifeless, refined salt currently used.

Unfortunately, De Langre says that most sea salt that is sold in health food stores can be just as bad for your health as regular salt, because it is so highly refined. You can tell sea salt is refined if it does not have any sign of moisture at all. Refined salt is very dry salt. This tells you the magnesium has been taken out, because magnesium is a water-hugging molecule.

When salt is refined, even sea salt, the manufacturers basically extract all the precious elements out of salt so they can sell the minerals to chemical companies for a good profit.

What's left is a by-product, pure sodium chloride. To this they add anti-caking agents, anti-yellowing bleaches, and glucose.

There is a huge difference in taste between refined salt and celtic sea salt. First taste Celtic salt. Your taste buds will .be gently awakened. But f you put the regular salt on your tongue, your tongue will be out of commission for at least 30 minutes. You cannot taste anything else, because your taste buds are stunned and weakened.

This is why you see people in restaurants piling the salt on in order to get some taste out of the food. The salt irritates the taste buds and inhibits them.

In addition, if you eat celtic sea salt y ou don't need to eat as much food, because you are getting more nutrition from the food you eat. You will find you are satisfied quicker.

Ideally, you want to cook the salt as little as possible. It is best to add the Celtic salt to your food directly. When you cook with the salt, try to add the salt toward the very end of the cooking. This is when you have almost no boiling going on. Just a low simmer.

Can you have too much celtic sea salt? Of course, you can overdose on anything. You have to use common sense. In healthy people, there is a built-in mechanism that tells them when the body has had enough salt. You are not as prone to start pouring the salt from the shaker as many do with refined salt.

Vegetables cannot be fully digested without being salted. De Langre believes that when you use Celtic salt, you can get up to seven times the nutrition out of vegetables. Some people believe that vegetables have little taste until you put good salt on them.

Anyone who takes herbal teas for healing should add a pinch of Celtic salt to the tea. This will make it far more potent. In Africa, the natives add this salt to their tea at night. It is far healthier to take tea with celtic sea salt, than with a sweetener.

While some people like to eat salt from ancient sea beds, De Langre also believes this is not fit for humans, because after thousands of years of rainfall through the geological layers, many of the vital minerals are depleted. The natural balance of the salt is gone.

Celtic salt is also good for animals, even pet fish. You can tell that good salt is good for animals by watching how much trouble animals go to collect salt. For example, in parts of Africa, elephants dig huge holes with their tusks to get salt, or even go down deep, dark caves to grind rocks off the walls and suck salt out of them.

Elephants at night time go down into a cave to find salt.

An elephant grinds rocks in the cave off the walls to suck the salt out of them.

Occasionally some people initially have adverse reactions from using celtic sea salt. Some people get rashes. The salt

acts as a scavenger and purges the body of many toxins from some hidden areas. These toxins come out into the circulatory and lymph system, and particu larly the kidney area. This is where the rash comes from, it is a kidney cleansing. This is a normal reaction for people who are very toxic. If you are not toxic, it will not happen. A similar reaction is that sores will break out under the arm pits.

Editor’s Note: You can buy celtic sea salt from the web or your health food store. If they don’t stock it, give them a copy of this article and ask them to stock it. Prices can be as high as $12 a pound or even higher. However, I once found a salt which was described as unrefined, sun-dried sea salt which was moist and was only $4.00 a pound, which I believe would be just as good as celtic sea salt.

Title: Consuming Less Salt Doesn’t Lead to Lower
Description: *Mortality Rate, researchers Say*

TheUnhivedMind - July 6, 2011 09:21 PM (GMT)

Consuming Less Salt Doesn’t Lead to Lower Mortality Rate, Researchers Say

By Robert Langreth - Jul 6, 2011
http://www.bloomberg.com/news/2011-07-05/r...rchers-say.html

No strong evidence exists that advising people to eat less salt or putting them on a low-salt diet reduces their death rate or cuts cardiovascular events, an analysis of seven studies found.

The report combined the results of seven previous randomized clinical trials that looked at the effects of lowering salt consumption in 6,250 people with normal and high blood pressure. While patients in the reduced-salt groups lowered their blood pressure, there was no significant difference in mortality rates, according to the analysis published yesterday in the American Journal of Hypertension.

Public health authorities in most developed countries recommend reducing salt intake by roughly half. Still, the number of patients in the trials wasn’t large enough to exclude “clinically important effects” of reduced salt on mortality, wrote Rod S. Taylor, a University of Exeter researcher and the study’s lead author.

“They found that we don’t have sufficient evidence to know whether it would be good or bad,” Michael Alderman, an epidemiologist at the Albert Einstein College of Medicine in New York and editor in chief of the hypertension journal, said in a telephone interview. The study isn’t “a game-changer, I just think it reminds us that we don’t have the evidence we need.”

British researchers wrote in yesterday’s report that while the inconclusive findings “are consistent” with the idea that lowering salt consumption is beneficial, the results don’t provide good evidence to support the theory that advising people to eat less salt will

save lives.

Alderman said in a telephone interview he is skeptical of widespread calls for large reductions of sodium intake. He said he has been an unpaid adviser in the past to the Salt Institute, an industry trade group.

View Full Version: Vitiligo

Title: Vitiligo

TheUnhivedMind - May 17, 2011 05:49 PM (GMT)

Vitiligo

By Jim Bolen, close friend and student of Dr. F. Batmanghelidj, MD
http://www.watercure2.org/vitiligo.htm

Loss of pigment (depigmentation) in areas of the skin (milk-white patches). Also known as Leukoderma. There is an increased association of vitiligo with certain auto immune conditions such as Thyroditis, Hyperthyroidism and Diabetes Mellitus. The thyroid over works or it under works. Diabetes Mellitus is inadequate secretion or improper utilization of insulin. Diabetes Insipidus is insufficient secretion of an antidiuretic hormone (vasopressin).

Deficient of this antidiuretic hormone will causes the kidney tubules to fail to hold back (reabsorb) needed water and salt. I asked DR B about this condition and he told me that it was a mainly a lack of amino acids. By the time a person has this skin problem popup, they have a whole host of problems. The main amino acid that is lacking is tryptophan. There are 20 amino acids and Tryptophan is the King. We don't get enough of this amino acid in our foods eaten today.

Many people today have another indicator of being very low on amino acids, this is when a person gets brown spots on the back of their hands and starts up their arms. Year's ago they called this old age spots or liver spots. They are a sign of being very low on Typtophan. Vitiligo is also a sign of being low on amino acids according to DR B. Today, almost everyone is lacking amino acids.

We need to eat lots of eggs, beans, cheese 4%,yogurt and nuts. Also green beans and lentils are good for amino acids. I have had people with this condition fully recover in 90 to 120 days. Most of the body's cells regenerate every 120 days according to DR B. Even aids is a condition of lacking water, salt and amino acids.

I have had one person with aids, third stage only given 3-4 days to live. She was on oxygen and morphine 24-7. Her weight was 75 lbs, all skin and bones, no energy. She walked out of that aids hospice in 30 days.
The problem is getting people to stop the commercial crap we are taking every day. The answer to most health problems is to drink half your weight is ounces of water and a person needs to take1/8 tsp of salt (sea salt, unrefined is best) for every 16 oz of water. Some will need more salt like 1/4 tsp per 16 oz's of water. If a person gets to much salt their eye lids will swell up, get puffy. If this happens just drink plain water without taking any salt.

As for the salt. a person can put it in there water, put it in there mouth and drink the water over the salt or just put the salt in there food. There is a sequence of drinking the water that is very important. The sequence is always drink water and wait 30 minutes before eating food and after eating a person needs to note the time and when two and half hours have passed they need to drink water and do there salt.
This will help complete the digestive process that dehydrates the body in many areas. A person needs to space out the amount of water required for them, half their weight in ounces. Any time a person is thirsty, he should drink it, even with their meals if they need it.
A person needs to get DR B's books,tapes or CD's and even his DVD's where he is giving a full blown lecture in person. There is so much to read and so little time today for anything. Stress dehydrates the human body.

All of DR B's books have something different in each one but the main message is water and salt following the sequence of drinking water and waiting 30 minutes before eating food. That is the same thing dog's and cat's do. Watch them.

DR B gets into the AA's (amino acids) in book Your Body's Many Cries for Water page 123- 131 soft cover book. This chapter is on Diabetes mainly. You can find this book at any book store or get it on line thru the web or call DR B's order number 1-800-759-3999 Mon-Fri 900am-1700 eastern time zone USA.

I hope this will shine some light on your skin problems. And yes sun light is very important as well as exercise is. Everything stated above comes from DR B's books and tapes (ten hours, 8 tapes or on CD).

As always this information does not replace your doctor or taking any medication at this time. This is only educational information to help inform a person of what is going on in their body.
I personally like DR B's book, the ABC of Asthma, Allergies and Lupus. It has a chapter on salt and foods.

Subject: Watercure Testimonial

Dear Connie and Bob

Just writing to say I started the Watercure on 3/12/2009 following a lumpectomy of a lump in my right breast. It has been confirmed as a low grade invasive carcinoma. Axillary glands, (ten), were negative. The tumour was 13mm in size.

I came home from hospital on 3/12/2009 and by Divine Providence found your website... downloaded the diet and commenced immediately together with the suggested supplements.

I am feeling well, energised and sleeping well.

Last night reading some of the conditions reported to have improved in others I came across mention of the depigmentation of the skin.(Vitiligo) I have had this on both my forearms for several years. Easily observed by others.

Well, I checked them there and then. There are two very small spots still showing the depigmentation. It is clearly on its way back to normal !

Therefore I am concluding that every other cell and function in my body is doing the same thing.

In addition a small growth of my forehead at the hairline is becoming smaller and smaller.

I am confident of a full return to health and am not going to be agreeing with Tamoxifen or radiation treatment if it is suggested on Friday 08/01/09 when I go for a followup check. I am sure my body and its immune system can heal itself as it was designed to do.

Thank you for all the encouragement you are spreading.

All good wishes for this New Year just unfolding.

Kind Regards

Date: 8-31-06

From: Anonymous Jim Bolen Supporter

To: Bob Butts

Hi there. I want to thank you for introducing me to Jim Bolen. I've been on this "diet" for two weeks and I feel soooo much better. My vitiligo spots are beginning to turn ever so slowly darker. I'm sure if I keep it my vitiligo will go away completely. The diet of veggies, fruit, nuts and eggs sure keeps me full and has me feeling lighter and brighter. I thought it would be hard to keep it up but I'm never hungry and I'm not tired like I was before too. Anyway, thanks for being an angel and sending my angel, Jim Bolen to me. I will keep you abreast of all the changes that my body is going through, getting healthier every day!

View Full Version: Heart Disease Deaths Four Times Higher With Low

Title: Heart Disease Deaths Four Times Higher With Low
Description: *Salt Intake*

TheUnhivedMind - May 15, 2011 03:59 AM (GMT)

What did I tell you about listening to the nonsense pushed mainstream on health? They want you dead and within the 75% of the populace that has to go from this Earth into an early grave. Therefore if they wish to tell you not to take salt, you should find the best quality salt which is Himalayan or Redmond and take it in balance. The Chinese use salt why aren't you? Just don't use table salt as this is processed rubbish. Study the knowledge that Dr Fereydoon Batmanghelidj had on Salt and start by reading his wonderful book 'Water & Salt your healers from within.'

QUOTE

Heart Disease Deaths Four Times Higher With Low Salt Intake

Submitted by Lois Rain on May 10, 2011 – 8:51 pm
http://healthfreedoms.org/2011/05/10/heart...ow-salt-intake/

Maybe you are among the fortunate few who enjoyed salty seasoned meals, defying all medical warnings and nagging from your friends and family. The Journal of the American Medical Association (JAMA) is changing their tune about salt intake. Natural health professionals have long valued salt for cardiovascular balance among other benefits.

JAMA will publish a study that shows that people with greater salt intake are the ones more likely to avoid hypertension, heart disease and death. Doctors never really could explain why they believed lower salt intake would improve heart health.

But don’t expect convention doctors to sing the praises of salt any time soon.

~Health Freedoms

Heart Disease Deaths Four Times Higher With Low Salt Intake: JAMA Study
As Gaia Health has informed you, there is no truth to the claim that high salt intake is unhealthy. In fact, evidence shows the opposite to be true.
Forget all those claims that you need to keep your salt intake low to maintain heart health. It isn’t true.

Those claims have been based on deeply flawed studies and the medical establishment's enforcement of lock-step obedience to whatever the current orders happen to be. Right now, one of them is that lower salt intake is healthy for everyone. The reality is exactly the opposite for most people.

Today, the Journal of the American Medical Association(JAMA) is publishing a study of 3,681 people that correlated their salt intake with hypertension and cardiovascular disease and death. The results are clear: People with greater salt intake have significantly less heart disease and death from it.

The authors concluded:

The associations between systolic pressure and sodium excretion did not translate into less morbidity or improved survival. On the contrary, low sodium excretion predicted higher cardiovascular mortality. Taken together, our current findings refute the estimates of computer models of lives saved and health care costs reduced with lower salt intake. They do also [sic] not support the current recommendations of a generalized and indiscriminate reduction of salt intake at the population level. However, they do not negate the blood pressure-lowering effects of a dietary salt reduction in hypertensive patients

Notice, also, that lowering blood pressure is not beneficial to health, though that claim is also routinely made. As the JAMA study shows, a slight decrease in blood pressure occurs with lowered salt intake; it's nominal and entirely unrelated to outcomes.Trial participants were followed for a median of 7.9 years. Overall, the death rates were:
Independence of the Study

The study, entitled "Fatal and Nonfatal Outcomes, Incidence of Hypertension, and Blood Pressure Changes in Relation to Urinary Sodium Excretion", did not suffer from the common flaws of many, if not most, medical studies. It wasn't financed by Big Pharma. None of the authors received money from Big Pharma or industries related to the topic studied. There were no ghost authors; the researchers who drafted the manuscript are specified. The researchers named first and last in the credits, Katarzyna Stolarz-Skrzypek, MD, PhD and Jan A. Staessen, MD, PhD for the European Project on Genes in Hypertension, were both the research leaders and the actual authors.
How Are Estimates of Death Rates from Salt Intake Generally Made?

Of course, we're all aware of just how consistently we're told that lower salt intake improves heart health. But how do you suppose they come up with the estimates that supposedly prove it? It's done by magic, of course! As the study's authors point out, presumptions are fed into computer models, which grind out predefined results of "lives saved". The claims are based on bits being tossed around inside computer chips, not on real-life data.
Furious Response from Mainstream Medicos

As might be expected, mainstream medical so-called experts are furious about the study. According to reporting by Lisa Nainggolan of theHeart.org, Dr. Graham MacGregor, of Queen Mary University, London, a low-salt promoter who has managed to con the entire UK nation into reducing food salt content, the findings are "paradoxical" and, therefore, cannot be trusted. He stated:

They've shown that salt puts up blood pressure, and yet they then claim that salt relates inversely to events. Well, that doesn't make sense…[It illustrates] the bias of the authors, in my view. Everything else that has been shown to lower BP is beneficial in terms of heart attacks and strokes.

He further stated that the paper is "badly written" and has "severe methodological problem, and continued with:

I really don't think this is worth paying attention to. They are trying to create a stir. This is clever, but it's harmful in my view. It's like saying we don't think cigarettes are harmful so we shouldn't do anything about smoking.

The overall evidence [in favor of salt reduction] is overwhelming. That isn't to say we wouldn't change our mind if we had really good evidence, but I don't think this is it. This will not divert us from reducing

salt intake worldwide. At a high-level meeting of the World Health Organization, salt reduction has been recommended as the next thing after tobacco reduction because it's so cost-effective to implement and so easy to do.

MacGregor uses typical methods of obfuscating. He attacks the quality of the study, but offers little to support his assertion. He makes sweeping claims without supporting them. He then falls back on one of the grand standards for those who don't really have good evidence to support their contentions: They make clear that their view is the popular one.

In the end, MacGregor states that, even if the study were "perfectly done" it wouldn't make any difference, because there are so many that support his point of view. What he doesn't mention is how deeply flawed those studies are. As I discussed in Take a Grain of Salt With That Salt Reduction Advice, careful analysis of most of those studies shows that they tend to cherry-pick data, while meta analysis of the data itself shows the same results as this study.
Turning Differing Views Into Heresy

The danger inherent in rigidly held beliefs by entrenched health powers is clearly revealed here. Modern medicine's focus on treating disease, rather than on maintaining health, has resulted in promotion of many false claims, with obvious negative effects on the well-being of people.

It has become virtual heresy to suggest that any claims by modern medicine are incorrect. It's so ingrained that even alternative medicine often follows the pack, as in the advice to lower salt intake.

And now, we have governments enforcing these false claims. Salt reduction is being enforced in the food industry. Schools are reducing salt in lunches—and some schools are forcing children to eat their lunches instead of bringing them from home. There is now an industry in place to push people into consuming less salt.

Don't expect the results of this study to have any effect on what modern medicine or their cohorts in crime, governmental agencies, do regarding salt recommendations. Too much is riding on them. Reputations of doctors and high-ranking government officials could be harmed if the truth were acknowledged. The waste of massive amounts of the public's money in promoting lower salt intake would betray the political health of elected officials. In that world, the actual health of the people carries little weight.

As a result, any pseudo-study that promotes the approved doctrine is pointed out as "proving" the official proclamation. Any honest study that demonstrates the truth is quickly ridiculed, condemned, and then quietly swept under the rug.

Humans have understood the value of salt since humans have existed. It was traded among the earliest communities on earth—likely back in the times of cave dwelling. We use expressions like "salt of the earth" because of that recognition of its value. Only in modern times, with science corrupted by corrupted medicine and government,is salt treated as our enemy.

View Full Version: Big Berkey gravity-fed water filters are a top

Title: Big Berkey gravity-fed water filters are a top
Description: *pick for clean water and long term*

craig-oxley - October 18, 2010 12:13 AM (GMT)

Big Berkey gravity-fed water filters are a top pick for clean water and long-term preparedness

Sunday, October 17, 2010
by Mike Adams, the Health Ranger
http://www.naturalnews.com/030070_Big_Berk...ter_filter.html

The water filtration market is saturated with products that claim to provide clean drinking water. While all of them work to one degree or another, some can be complicated to install and maintain. And some are downright expensive on a per-gallon basis, too. The more popular faucet filters, for example, only filter a hundred gallons of water (or so) before requiring replacement. Personally, I like to have water filters that can handle several thousand gallons of water at a very low effective cost per gallon.

I also like gravity-fed water filters for several important reasons: They require no electricity to use -- meaning they'll work even when the lights go out -- and there are no complicated motors or pumps to wear out or replace. They're also light and fairly portable, making them a natural choice for anyone interested in short-term storm preparedness or even long-term "end of the world" preparedness scenarios.

I've used several gravity-fed water filters, and I've come to really like the Big Berkey system the best. As far as simple, reliable water purification on your countertop, it doesn't get any better than Berkey water systems.

How the Big Berkey works
With a Berkey water filter, you simply put the water into the top chamber and gravity pulls it through the media filters that capture bacteria, parasites, herbicides, pesticides, solvents, nitrates, nitrites, lead, mercury, chlorine, VOCs, and even fluoride. You can run practically any type of water through the unit and get fresh, pure drinking water as a

result. (Of course, really dirty water will clog the filters more quickly, requiring more frequent cleaning of the filters, but that's true with any filtration system.)

I personally use the "Big Berkey System" which is made out of stainless steel, and I love it! I used it for many months in Ecuador without a single problem, and it is still a personal favorite that I highly recommend. The water always comes out clean, no matter how dirty it is when you initially pour it into the holding container at the top.

My favorite feature on the Big Berkey System is the stainless steel water container. Many other brands of water filters are made out of polycarbonate and plastic components that may leach harmful chemicals into the water (Berkey does sell a co-polyester variety, but guarantees that it's BPA free). Another cool feature of the system is that it requires no pumps or effort to function. Gravity literally does all the work for you. Yes, it takes some time for the gravity filter to produce water, but by filling the top container, the effective water pressure provided by gravity is more than enough to produce sufficient drinking water each day for a typical family.

The stainless steel aspect of the Berkey water filters is also a huge plus. I've used other hand-held filters that ran the water through a hose, and it seems like the water always comes out tasting a bit like the hose. But with the Big Berkey, there's no "hose" taste because there's no hose! The water tastes clean and clear, with no "surgical" aftertaste.

If you don't already have a gravity-powered water filter, I recommend one for every household that's interested in preparedness. As long as you have access to some source of water, this water filter can get you through a storm, a blackout or even a period of social unrest. When the municipal plumbing fails, Big Berkey keeps you hydrated with clean, bacteria-free water.

That's worth its weight in gold, in my opinion.

Where to get Big Berkey water filters
Here's the source for Big Berkey water filters that I'm familiar with and recommend. You'll get excellent customer service with these folks along with very competitive pricing, too:

http://www.directive21.com

(They also carry some other large-scale water storage devices such as the Aquatank.)

Got a family member who doesn't believe in preparedness? Give them a Big Berkey and call it a Christmas present. One day when they need it, they'll realize you actually gave them the gift of clean water during an emergency, and that's perhaps one of the best gifts you can ever give anyone.

Keith - October 22, 2010 04:10 AM (GMT)

yeah, i been wanting to get a berkey for a while now

michael - December 20, 2010 01:52 AM (GMT)

bought one for my significant other to take w her to haiti for relief work with MSF,,,I was a bit disappointed with the plastic in the machine, but it works & it works very well.

I actually tried it on some pond water - this is a very good product.

I will be buying one for the house.

Avoid the Soda: Water Consumption is Necessary for Your Body

Tuesday, September 14, 2010 by: Alice E. Marson
http://www.naturalnews.com/029728_water_soda.html

Consuming water is of the utmost necessity to our bodies. The average human body is 60-65 % water and the human brain tissue is 85 % water. In fact, water is most essential to the body - next to air. The body can survive four weeks without food but only three days without water. Not one of your body processes can take place without water. Soda pop is the cause of many health problems.

Water is essential for transportation of nutrients, hormones, toxins and waste products. Your daily energy depends on water and the lack of water is the number one trigger of daytime fatigue, since water is a cleanser, a healer and is necessary to maintain constant body temperature. Your body needs about three quarts of water per day under normal conditions---more under other circumstances. Foods provide 1 1/2 quarts of water and fruits and vegetables more than 90 per cent. Enough water is needed to keep skin soft and supple, your brain sharp, and your elimination system regular. Water is a diet aid, a fat reducer, and in addition, reduces sodium build-up.

Your body contains a variety of necessary fluids---about 42 quarts in all. They are: blood, bile, pancreatic juice, gastrointestinal, cerebrospinal and synovial fluids, urine, aqueous humor, and others. These fluids are dependent upon your intake of water and other liquids.

Some of the things adequate water can do for you: treat allergies, asthma, depression, high blood pressure, diabetes, headaches, chronic fatigue, colitis, alcohol dependency and general pain. Eight to ten glasses of water a day can significantly ease back and joint pain.

Seventy-five percent of Americans are chronically dehydrated. Caffeine in coffee, tea, and colas acts as diuretic and results in water retention. A mere 2 % drop in body water can trigger fuzzy short-term memory, trouble with basic math and a focusing differential. Five glasses of water daily decreases the risk of colon cancer by 45%, breast cancer by 79%, and bladder cancer by 50%.

With all the assumed water consumption today the average American still drinks an estimated 56 gallons of soda each year. In the past ten years soft drink usage among teenagers and children has almost doubled. The active ingredient in soda pop is phosphoric acid which interferes with absorption of calcium resulting in softening of the teeth and bones. Bones become weakened and are prone to fracture. Phosphoric acid also disrupts digestion by neutralizing the hydrochloric acid in the stomach.

Sugar is an issue with soft drinks. A can of pop has about 10 teaspoons of sugar and 150 calories. Sugar increases insulin levels which can lead to high blood pressure, high cholesterol, heart disease, diabetes, weight gain, premature aging and many more negative side effects.Soft drink manufacturers are the largest single users of refined sugar in the U.S. Aspartame is the chemical sugar substitute in diet soda. There are over 92 different health side effects as a result of aspartame consumption. Some of these are: brain tumors, birth defects, diabetes, emotional disorders and epilepsy/ seizures.

Another unhealthy component of soda is caffeine of which there is 30-55 mg per can. Caffeine can cause jitters, insomnia, high blood pressure, irregular heart beat, high blood cholesterol levels, vitamin and mineral depletion, breast lumps, birth defects and possibly some forms of cancer.In addition, soda pop contains food coloring and nitrites.

Nutritionally speaking, soda pop is the cause of many health problems. Drinking soda leaves you with little appetite for vegetables, protein and other foods your body needs.

You can be assured that water is your best bet!!!!

Drinking water before meals helps dieting, says study

Water contains no calories and drinking it makes us feel full

24 August 2010 Last updated at 01:43
http://www.bbc.co.uk/news/health-11057891

Drinking water before meals can help people to lose weight, says a US study.

Scientists from Virginia found that slimmers can lose an average of 5lb extra if they drink two glasses of water three times a day before meals.

They tested the theory on 48 older adults, split into two groups, over 12 weeks.

While drinking water can make you feel full on zero calories, say researchers, too much water can also lead to serious health problems.

The researchers presented their findings at the National Meeting of the American Chemical Society in Boston.

All adults who took part in the study were aged 55 to 75.

The first group followed a low-calorie diet but did not drink any extra water before meals.

The second group followed the low-calorie diet but also drank two glasses of water before each meal.

'No calories'

Over the course of 12 weeks, those drinking water lost about 15.5lbs while the others

lost about 11lbs.

A previous study found that middle-aged and older people who drank two glasses of water before eating a meal ate between 75 and 90 fewer calories during that meal.

Professor Brenda Davy, senior author of the study, from Virginia Tech, said it was the first randomised controlled trial looking at water consumption and dieting.

She said the reason water may be so effective is because it fills up the stomach with a liquid that has no calories.

"People should drink more water and less sugary, high-calorie drinks. It's a simple way to facilitate weight management," Professor Davy said.

Diet drinks and other drinks with artificial sweeteners may also help people reduce their calorie intake and lose weight, researchers said.

However, Professor Davy advised against drinks sweetened with sugar, because they are high in calories.

A regular can of fizzy drink contains about 10 teaspoons of sugar, she explained.

The study was funded by the charity, The Institute for Public Health and Water Research.

craig-oxley - August 20, 2010 12:37 PM (GMT)

Avoid and Treat Dehydration during the Dog Days of Summer

Monday, August 16, 2010 by: Tony Isaacs
http://www.naturalnews.com/029480_dehydration_summer.html

The long hot dog days of summer have arrived, with temperatures across much of the country regularly reaching into the upper 90's and beyond for days on end. With the heat comes a heightened risk of losing too much of our bodies fluids. Our bodies are normally about two-thirds water. When levels dip below that amount, the result can be dehydration - which means our bodies lack the proper amount of water and fluids. Though dehydration can be a serious and even life-threatening condition, it can be avoided and treated easily with common sense measures in most instances.

In the summertime, the main cause of dehydration is sweating from heat. Likewise, exercise and heavy physical activity can cause dehydration due to sweating and the likelihood becomes even greater when physical activity is combined with heat.

Typical symptoms of dehydration include:

* dry or sticky mouth
* low or no urine output
* concentrated sticky yellow urine
* lack of sweating when exposed to heat or during physical activity
* not producing tears
* sunken eyes

The best way to prevent dehydration is to drink plenty of water and fluids and to avoid excessive heat and physical activity which leads to heavy sweating. In the heat of the

summer it is especially good to avoid overdoing it and get out of the heat when needed. Most health experts advise us to drink at least 6-8 large glasses of water every day to keep our bodies hydrated. During summertime heat and heavy activities, the amount of water and fluids required can be much larger - as much as twice as much or more. Thus, it is essential to drink plenty of water before, during and after exposure to the heat or heavy physical activity.

If you do become dehydrated, the best treatment is the same as what you would do to avoid dehydration: drink plenty of water and liquids, get out of the heat and cool off. Since dehydration also causes the loss of important mineral electrolytes such as sodium and potassium, sports drinks can be a good way to both restore fluids as well as replenish lost electrolytes. However, commercial sports drinks may contain artificial colors and other ingredients that are less than healthy. Following is a recipe for a sports drink you can easily make at home from common and healthy ingredients:

Homemade Sports Drink

1 large regular teabag
3 regular-sized green tea bags
1/4 to 1/2 cup of molasses
3-4 lemons
1-1/2 teaspoons of sea salt
2-3 cups Apple juice (or your juice of preference)
Honey to taste

Bring water to boil, add salt. Turn off heat and add teabags. Steep for 15-20 minutes. In a gallon jug mix molasses, honey, lemon juice, and apple juice (or your juice of choice) to make 1/2 gallon. Shake well. Add prepared tea and water to complete the gallon. Refrigerate and enjoy.

The molasses adds potassium, some glucose and other good stuff. (Make sure to use real molasses and not the syrup sold as molasses in some stores.) Of course, the salt adds the sodium. Honey is simply good for us, but it also adds some glucose too without raising the glycemic index too much. The lemon is mainly for taste, but the vitamin C can't hurt. The apple juice is definitely for taste, so add whatever juice you prefer (for example, grape juice would be wonderful).

Sports drink recipe contributed by Shara from The Oleandersoup Yahoo Health Group

NOTE: In the instance of severe dehydration, seek immediate medical attention. Severe dehydration is usually characterized by prolonged dizziness, lightheadedness, lethargy and/or confusion.

“Tapped” is a film that examines the role of the bottled water industry and its effects on health, climate change, pollution, and reliance on oil.

Sources:
Tapped the Movie ; http://www.tappedthemovie.com/

Dr. Mercola's Comments:

The next time someone offers you a bottle of water, take a stand and say something clever like, “No thank you, I don’t believe in it.” This simple move will open up a conversation about the massive swindle that is bottled water … and possibly persuade one more person to give it up entirely.

Please also make a point to see this fantastic new movie, "Tapped", which is playing in select theaters in the United States and is available on DVD.

Even beyond the issues of your health and the environment, bottled water represents a novel form of privatization, in which private corporations have succeeded, and quite successfully I might add, at making water a commodity.

I would say, and I suspect you would agree, that water is more a “right” than it is a commodity. And private corporations should have no more control over the selling of water than they do the selling of our air supplies. Well, this is already occurring to some extent as corporations make a profit selling water -- which at times even makes water less available to the people living in the area.

Even public water supplies are being increasingly taken over by private corporations, and in some areas of the world are up for grabs by the highest bidder.

This has been publicized in countries such as Bolivia, where residents battled police and the military to protect their water rights from the US-based Bechtel Corporation, but you should know water privatization initiatives are being pushed all over the world … including in the United States.

If you’re interested in learning more, an excellent, eye-opening film on this topic that I highly recommend is Thirst.

Getting back to bottled water, however, many, many Americans still drink it, believing it is somehow healthier than tap water.

In 2008, U.S. bottled water consumption reached nearly 9 billion gallons, raking in revenues of more than $11 billion.

Folks, this is for a “product” you can get virtually for free by turning on your kitchen tap!
Are You Paying 1,900 Times More for Unhealthy, Earth-Damaging Water?

If you drink bottled water, yes, you are!

Bottled water typically costs more than $1.50 per bottle, which is 1,900 times the price of tap water.

Yet, that very same bottled water that you’re paying a premium for is, in about 40 percent of cases, simply bottled tap water, which may or may not have received any additional treatment.

On top of that, most municipal tap water must actually adhere to more strict purity standards than the bottled water industry. Further, while the EPA requires large public water supplies to test for contaminants as often as several times a day, the FDA requires private bottlers to test for contaminants only once a week, once a year, or once every four years, depending on the contaminant.

An independent test performed by the Environmental Working Group revealed 38 low-level contaminants in bottled water, with each of the 10 tested brands containing an average of eight chemicals including disinfection byproducts (DBPs), caffeine, Tylenol, nitrate,

industrial chemicals, arsenic, and bacteria were all detected.

So what you are paying for is often no different, or even worse, than the water that comes out of your faucet.

When you factor in other elements, like the chemicals that can leach from the plastic bottle and its impact on the environment, bottled water becomes a losing proposition no matter how you look at it.
Drinking From Plastic Bottles is Not a Wise Health Move

When drinking bottled water you need to think not only about the water but also about the bottle itself. Plastic is not an inert substance as its manufacturers would like you to believe. It contains chemicals like BPA and phthalates, which mimic hormones in your body.

Even tiny concentrations can cause problems such as:
Structural damage to your brain
Hyperactivity, increased aggressiveness, and impaired learning
Increased fat formation and risk of obesity
Altered immune function
Early puberty, stimulation of mammary gland development, disrupted reproductive cycles, and ovarian dysfunction
Changes in gender-specific behavior, and abnormal sexual behavior
Stimulation of prostate cancer cells
Increased prostate size, and decreased sperm production

Anytime you drink from a plastic bottle you risk exposure, but if you leave your bottle of water in a hot car or reuse it, your exposure is magnified because heat and stress increase the amount of chemicals that leach out of the plastic.
Plastic is Hurting the Earth in a Major Way

About 1.5 million tons of plastic are used to manufacture water bottles each year around the world, and the processing itself releases toxic compounds like nickel, ethylbenzene, ethylene oxide and benzene. Further, according to the Sierra Club, the U.S. alone uses 1.5 million barrels of oil to make plastic water bottles, the majority of which then end up in landfills.

In fact, 1,500 water bottles are thrown away every second!

This massive waste is one reason why there is now a plastic “stew” twice the size of Texas swirling through the Pacific Ocean.

Also extremely harmful to the environment is the way corporations are pumping water from underground aquifers. These natural springs serve as water sources for nearby streams, wells and farms, but the aggressive pumping can easily dry them out prematurely.
A Simple Solution is at Your Disposal

One you realize that many sources of bottled water is:
No safer than tap water
Extremely expensive
Often contaminated by plastics chemicals

Contributing to massive environmental harm

… the choice to stop using it becomes simple. Fortunately, the alternative to having pure water is also simple: filter your own at home.

Unfiltered Tap Water is NOT Better than Bottled Water!!

My favorite filter is a reverse/osmosis filter as it will remove virtually all of the pollutants, such as disinfection by products, fluoride, arsenic, lead, drugs in the water supply, rocket fuel, bacteria, viruses, you name, it removes it. Unfortunately the down side is that it also removes minerals that should be in there. Fortunately the solution is quite simply. Add some high quality salt, like Himalayan salt, about 1/4 teaspoon for gallon.

I currently use a R/O system that is not yet commercially available. It is a tankless system in which I fill a glass container directly that is easy to clean. This eliminates the stagnant water in the holding tank and inevitable mold/slime contamination with using a R/O system with a holding tank. We hope to bring this to system to market in the next year.

Additionally the filtering process damages the structure of the water. A simple way to restructure the water would be to create a vortex. You can do this by putting a large spoon in the container and swirling it around very fast for awhile. This will clearly start to restructure the water. Getting the water cold, down to about 4 degrees Centigrade or 39 degrees Fahrenheit will also work. The best way to do that would be to store your bottle outdoors in the winter (when it doesn't go below 39 F) or put the bottle on your cement garage floor at night and the earth will remove much of the heat from the bottle. Store the water in a cool area.

You could cool the water in a refrigerator but that would impart negative EMF into the water so it is less than ideal. Similarly there are vortex machines you can purchase for about $500 but they will also impart these EMFs into the water.

This enables you to rely on your own well or municipal source for safe, clean water. If you need to take some with you on the road, store it in a glass jar or bottle.

What is the BEST Water in the World?

There is no question in my mind that the absolute finest source of water in the world is NOT from an artesian well but from a gravity fed mountain spring that is obtained directly from where it has come out of the earth. It is filtered by the earth and structured and it is also not pasteurized or heated like nearly all commercial bottled waters. You see there are living organisms in water like algae that are actually beneficial for us but when you heat the water, just like pasteurizing milk, you damage it.

So you are probably wondering the best way to find a gravity fed raw spring.

Well fortunately there is a web site called Find a Spring.com which allows you to do so. The website also allows you to add a spring that is not currently in the database. You can include information about the spring's temperature and location, and insert pictures or videos you took of the spring. Relax if you don't live near a mountain though as just about

any spring is better than all other available options. So if you are at sea level just use that local spring. Typically they are monitored by the local municipalities for contaminants.

It is an awesome resource and I strongly encourage you, your family and your friends to use it. Please pass this gem along. There is a strong likelihood there is a spring within one hour of your home. Most of these springs are FREE, that is right, the best water in the world and there is NO CHARGE for it. You can easily store ten five gallon jugs in most cars and it is a wonderful opportunity for you to regularly escape from the city get out in nature.

If you don't have the large water bottles you can easily find them online. Glass would be best but if you use those, it would be better to get the three gallon jars as the five gallon ones are too large and can easily break and you can hurt yourself. You can also find corks to stop the bottles at most hardware stores. Just bring the bottle in with you so it fits properly.

If you do choose glass just make sure you wrap the bottles in your car with some blankets or towels so they don't bang against each other and break.

In my mind getting fresh raw spring water is one of the more powerful, inexpensive and phenomenal lifestyle adjustments you can make and I would strongly encourage you to try it.

ITS IRON MOUNTAIN FOLKS

Furthermore, in 1991, in a book entitled The First Global Revolution: A Report by the Council of The Club of Rome [2] and coauthored by one of the founders of The Club of Rome, Alexander King, they admitted choosing global warming and other threats to unify humanity under a world government.

"In searching for a new enemy to unite us [all of humanity], we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill. In their totality and in their interactions, these phenomena constitute a common threat which as the enemy, we fall into the trap about which we have already warned, namely mistaking symptoms for causes. All these dangers are caused by human intervention and it is only through changed attitudes and behaviour that they can be overcome. The real enemy then is humanity itself." [emphasis mine]

The reason so many drink bottled water is because their scared to death about the Fluoride in the public water systems. People would be much more accepting to the public water system if the Knights of Malta were not purposely trying to control them via it. So everyone rushes out to get bottled water and gets attack by BpA instead. The other advantage of plastic bottled water is that you can carry a fluid around

without the fear of glass smashing if you drop it. You'll also still have your fluid nine times out of ten if you do. What I suggest to you is in order to keep away from Fluoride then you can get bottled water tip the current bottle into a glass bottle and then ozone the chemicals out of the water. This water if left to the air for twenty minutes or more will be free from Ozone too. This is the only way you'll stay away from Fluoride other than having to use the long process of steam distillation. We have to ask which chemicals are worse, the plastic ones which may have leeched or the Fluoride halogen which is definitely in your public supply at 1 ppm or higher?

Five Reasons You Need More Water

Friday, May 07, 2010 by: Aaron Turpen
http://www.naturalnews.com/028735_water_health.html

Water is the Elixir of Life. It comprises 80% of your body and is the most important element to your well-being and health, outdistancing all others. New readers to Natural News may not be familiar with the review Mike Adams did of the seminal water cure work of Dr. Batmanghelidj.1 That alone should tell you why you need to get enough water.

There is no "magic amount" that covers everyone. Some need more than others and most need more than they're getting now. It's estimated that 75% of Americans are chronically dehydrated. Even if you don't drink coffee, soda, or other diuretics and water-robbers, you may still be dehydrated. There is no such thing as too much water - you literally can't get sick or die from drinking too much (good) water. You can, however, if you don't drink enough.

Here are 5 reasons you need water:
Your body needs water to make new cells of every type: blood, bone, skin, etc.

When you have enough water, your lymphatic system operates at peak, removing wastes and toxins from your body at a healthy rate.

Water lubricates your joints, helps bring nutrients to your nervous system, and helps keep your vision clearer and your teeth stronger.

Water regulates your metabolism and aids digestion and temperature control.

Literally every cell, organ, and system in your body requires water to function correctly.

Things to know about your water

Before you start drinking water, however, there are things you should know about it too. If you live in urban or suburban America, it's likely that your water is infused with fluoride. Municipal water sources (including most bottled water you buy in the store) put fluoride into water supplies to promote dental health.

There are a lot of reasons that this is not a good idea, however. Even the CDC's own study that gave fluoridation of water a glowing report admits that fluoride only helps teeth topically and doesn't do anyone any good when ingested.2 In fact, fluoride is listed by the CDC as a poisonous substance.3

Then, even scarier, there are the countless pollutants and trace pharmaceuticals that could also be in your water.4 Those are definitely not good either.

Getting good, quality drinking water for health and well-being

Luckily, it is possible to clean up your water or access clean water yourself, if your water is not already of good quality. That, of course, has also been covered here on NaturalNews.5

However you do it and wherever your choice in water comes from, make sure you drink plenty of it. Water is, after all, the Elixir of Life.

Title: Prevent Asthma and Allergy Symptoms Naturally

craig-oxley - May 7, 2010 05:44 PM (GMT)

Prevent Asthma and Allergy Symptoms Naturally

Thursday, May 06, 2010 by: Dr. David Jockers
http://www.naturalnews.com/028725_asthma_allergies.html

Many years ago, an Iranian doctor named Dr. Batmanghelidj reported on the occurrence of asthma and allergies with states of chronic dehydration. Although the connection was plausible, the science had not been done to back up this claim. Today, more science has been conducted to look at this phenomena and the relationship seems valid.

Both asthma and allergies are due to abnormal immune responses. Under both conditions, simple irritants cause massive inflammatory attacks that damage tissue. The key question is always: Why is my body not healing itself? The answer is always the same: Toxicity and/or Deficiency. A common and easily addressed deficiency that is present in what is estimated to be anywhere between 80-98% of society is chronic dehydration.

Dehydration: All life began in water; even the developing fetus is surrounded by water. A water rationing system takes effect immediately in response to any form of dehydration. A neurotransmitter named Histamine becomes active and redistributes water throughout the body. Some areas of the body are obviously more important than others. The order of circulatory priority (an inborn triage system) is the brain, lungs, liver, kidneys, and glands. Of least importance are the muscles, bones & skin.

Histamine's responsibility is to ensure that these vital organs have enough water to function properly during times of dehydration. If the dehydration issues become chronic, then water must be taken from major regions within the body. Additionally, chronic dehydration can cause histamine to become excessively active leading to symptoms that are often mistaken for other disorders. The most common symptoms associated

with dehydration and elevated histamine include allergies, asthma, dyspepsia, colitis, constipation, rheumatoid arthritis, migraine headaches and chronic pain.

In addition, during times of chronic dehydration, the body will attempt to conserve water by preventing unnecessary water loss. A large amount of water is normally lost from the lungs as water vapor through expired air. Histamine, which also controls bronchial muscle contractions, may attempt to restrict water loss through expiration by constricting the bronchial muscles.

Mainstream medicine's approach is to suppress the symptom (they rarely ever attack the cause); therefore, they give anti-histamines, which negate the body's attempts to protect vital organ function. Regular anti-histamine use is now known to enhance cancer growth.

In the Journal of the National Cancer Institute, May 18, 1994, "Antihistamines enhanced malignant cell growth in mice," a study discussed antihistamines ability to diffuse through a cell`s membrane and disrupt normal tumor inhibiting mechanisms. The drugs are designed to bind to the histamine receptors, causing them to interfere with the so-called P-450 enzyme system, a group of enzymes that helps detoxify poisons and aid in regulating cell growth.

In a healthy cell this disruption should be successfully tolerated. But if the cell has already been hit by a cancer initiator, the alterations in the P-450 system may tip the cell over the edge. That cell now begins to divide in the out-of-control fashion characteristic of cancer.

Optimizing hydration levels is one critical step in reducing the symptoms and overall prevalence of asthma and allergies as well as many other disorders. Be sure to drink pure, well-filtered (reverse osmosis/alkalized) water throughout the day. Ideally, one would continually saturate their cells with a steady intake of water, 2-8 oz every 15-30 minutes throughout the day with periodic breaks before and after meals. The addition of some pink salts loaded with trace minerals such as Himalayan Sea Salt will enhance the delivery of water into the cells and make up for any trace mineral imbalances or deficiencies.

Why Himalayan Pink Crystal Salt is so much better for your health than processed table salt

Wednesday, May 05, 2010
by Mike Adams
http://www.naturalnews.com/028724_Himalayan_salt_sea.html

If you've been reading NaturalNews for long, you've heard me talk about the importance of switching from processed table salt to a "full spectrum" salt. Table salt -- or "white salt" -- is to real salt as table sugar is to dehydrated cane juice. Both white table salt and white sugar are devoid of the full spectrum of minerals and other nutrients that protect and enhance your health.

Here in Ecuador, I regularly drink jugo de caña, for example (fresh, raw sugar cane juice), but I would never think of eating refined white sugar. I don't use refined white table salt, either. Instead, I use Himalayan Pink Crystal Salt because it contains the full spectrum of 84 minerals and trace elements just like Mother Earth intended. It is an unrefined, unprocessed "raw" salt that's hand-mined from abundant salt caves that were formed 250 million years ago as ocean salt settled in certain geologic pockets around the earth.

Most of the western world thinks of salt as sodium chloride -- a highly refined, processed white substance that's devoid of nutrients. Salt is so devoid of nutrients, in fact, that in the early 20th century, doctors noticed that people who ate white table salt started to suffer chronic degenerative diseases such as goiter. This was caused by the lack of iodine in the salt.

Iodine deficiency, by the way, is the No. 1 most preventable cause of mental

retardation. Eating processed salt that lacks iodine, in other words, can cause your offspring to be retarded.

Now what's really interesting about processed table salt is that it's missing over 80 minerals. But they only put ONE mineral back in -- iodine. That's because iodine is the one mineral that causes the most obvious disease (goiter is sort of hard to not notice).

Iodine is a naturally occurring mineral in the ocean. It's abundant in seafood and in real sea salt, but it's completely missing from refined white table salt.

So they started adding iodine to table salt, creating "iodized salt."

But why would you want to eat salt that's been artificially enriched with ONE mineral when you could be eating salt that naturally contains eighty-four minerals?

Himalayan Pink Crystal Salt contains 84 minerals and trace minerals, including iodine! And below we share a link where you can get it at 33% off...

Beware of the "sea salt" scam
You've probably noticed a lot of processed salt companies now claiming to offer "sea salt." The truth is, virtually all salt is sea salt because it all came from the sea at one time or another in the Earth's history.

The term "sea salt" is essentially meaningless. White processed salt can still be called "sea salt" even though it is devoid of full-spectrum sea minerals.

The way to tell if your salt is really full-spectrum salt is to look at the color. If it's pure white, it's not full-spectrum. White salt is just like white sugar: It's missing the key supporting minerals and nutrients your body needs.

Full-spectrum salt always has a non-white color. Celtic Sea Salt, for example (which is really good salt) has a brownish sandy color. Our Pink Himalayan salt is a sort of sandy rose color. All the truly natural full-spectrum salts are sandy or brownish in color.

Save 33% on our full-spectrum salt
Himalayan Pink Crystal Salt normally sells for $14.95 per pound. With this week's special for NaturalNews readers, we've discounted the one-pound bag to $12.95 (a 13% savings).

When you buy three one-pound bags of Himalayan Pink Crystal Salt, the price drops to just $9.98 per bag. Three pounds of this full-spectrum salt are just $29.95 (a 33% savings!).

Click here to take advantage of this NaturalNews discount on Himalayan Pink Crystal Salt.

The 3-pack is our best price on full-spectrum salt, and if you don't need all 3 pounds for yourself, they make fantastic gifts for family or friends!

Some other things you may not know about full-spectrum salt:

• This product stores for years. It's naturally shelf-stable as long as you keep it relatively dry and unopened. Store in a dark, cool place for longest shelf life.

• Full-spectrum salt is a crucial preparedness item. Your body cannot live without salt, and in a crisis situation, real salt may be very difficult to come by in many areas. Storing full-spectrum salt is not only good for your health today; it's a type of nutritional insurance against future food shortages.

• If you exercise a lot, juice a lot or live in a very hot climate, your body may actually need more salt than you're getting. But processed salt doesn't provide all the minerals your body needs to replenish. Only full-spectrum salt fulfills your body's true salt needs.

• A craving for junk foods is often just a craving for full-spectrum salt. When your body lacks minerals, it urges you to consume more. This is often mistranslated in your mind as a craving for salty snack foods. But consuming full-spectrum salt (in a reasonable amount) can often ease your junk food cravings.

Pick up Himalayan Pink Crystal Salt today by clicking here.

Where it comes from
Our Himalayan Pink Crystal Salt comes from the Himalayan Region of the Karakoram mountain range located 400 miles from the Hunza Valley in Pakistan. (http://en.wikipedia.org/wiki/Karakoram)

Our salt is always stone ground. No metal ever touches the salt during grinding. All the salt is extracted by hand from the salt caves (ancient sea bed deposits). No salt from other sources is mixed with this salt. This is 100% from the Karakoram mountain range salt caves.

These salt deposits are roughly 250 million years old, meaning they were deposited long before the earth became polluted with heavy metals, pesticides and PCBs. While there is really no such thing as "organic" salt, this is probably the most pristine salt you'll find anywhere on the planet. Eating this salt is a lot like going back in time and consuming minerals from pre-industrial Earth.

Get some for yourself by clicking here.

This is the salt I use regularly. I actually add salt to raw foods recipes (like raw guacamole) in order to increase my mineral intake. That's necessary because I eat very

few packaged foods that are high in salt. Plus, I exercise regularly so I'm losing a lot of minerals through sweating. This is why salt intake is a regular part of my diet. To me, it's actually a type of superfood, and I make sure I get enough full-spectrum salt on a daily basis.

Note: If you have high blood pressure or eat a lot of salty processed foods, then obviously don't add more salt to your diet. Instead, replace the junky processed salt in your diet with full-spectrum salt. Stop eating salty snack chips and canned soups (those soup cans are lined with BPA, too) and start eating fresh juice smoothies and homemade cuisine made with full-spectrum salt.

craig-oxley - April 18, 2010 05:26 PM (GMT)

Enjoy the Benefits of Hot and Cold Water Therapy

Saturday, April 11, 2020 by: Kim Evans
http://www.naturalnews.com/028551_water_th...h_benefits.html

Hot and cold baths have been used for centuries and some of the benefits they bring include: increased energy, increased circulation, detoxification, and the clearing of negative energy. An easy way to replicate the spa experience of alternating hot and cold baths, and the primal experience of jumping from hot springs to cold rivers, is to simply alternate hot and cold water in your shower. Most of us are quite accustomed to warm showers and even the idea of introducing cold water can be intimidating. But once you've done it for yourself, you'll see it's really not that bad. Actually, you'll probably find it's quite invigorating.

It's best to start with hot and after a few minutes to use a blast of cold for a minute. Then use hot water again, repeat several times, and end your shower when you're ready. The hot should be hot and the cold should be cold - in fact, as long as you're not scalding yourself: the hotter the better and the colder the better. This can be done daily, but if you're clearing a negative energy dump or if you need more powerful detoxification, it can be done several times a day.

The extremes of hot and cold water cause your muscles to expand and contract which offers gentle detoxification as toxins are squeezed from your muscles. It also improves circulation and the benefits of improved circulation shouldn't be underestimated. When your body has poor circulation, it's impeded in delivering fresh blood to all areas of the body. As a result, the body can't cleanse the blocked and stagnant areas regularly - and toxins, filth and disease accumulate in these oxygen and fresh blood deprived areas.

This is regularly seen with cancers and tumors which are really just clumps of fungus

and filth that the body was unable to remove. They develop to contain the waste that couldn't be removed because our detoxification systems are frequently overwhelmed due to the large amounts of chemicals and improper foods that most people take in daily - and also because poor circulation prevents regular cleansing.

Cold water, it should be noted, holds a magic of its own. Cold water has more oxygen in it than hot water, and therefore has an alkalizing and detoxifying effect. Plus, cold water is known to wipe away negative energy from our bodies. And there's a negative energy component to most disease - particularly where cancers or tumors are located. Using cold water can help remove the energy that's binding the filth in certain locations and when that energy is gone, the filth can more easily be moved out of your body - where it truly belongs.

Sea salts and ocean swimming also remove negative energy, which may be the reason many beach oriented cultures have reputations for being laid back. Plus, if you can release the negative energy when it's produced, there's a much slimmer chance that it will be stored in your body and come back to haunt you, either as a disease or an emotional trigger.

To clear negative energy, another technique is to hold a couple teaspoons of quality sea salts in the palms of each hand for a few minutes to absorb the energy if it returns after your shower. Negative energy is released through the palms of our hands and in this manner, the salts can absorb the energy from you. After the salts have absorbed your negative energy, let them sit in the sun for a day or two to regain their purity.

People with heart problems, the elderly, and infirm may want to forgo extremely cold waters.

black_swan - April 6, 2010 08:16 PM (GMT)

Craig,
I'm currently suffering from obesity. I read your replies regarding this topic from another member. My question is what's the best way to maximize the effect of hexagonal water in regards to diet and excersice.

craig-oxley - April 13, 2010 05:55 PM (GMT)

Take the hexagonal water three times daily. One should either do daily twenty minute walks or longer. A great exercise is of course common housework such as scrubbing, vacuuming and so forth. I find that house work is in fact more potent on the metabolism than walking. Diet must be more alkaline and of course mucusless. Now if one is obese due to thyroid dysfunction then its not advisable for them to utilise hexagonal water due to its potent effects on the metabolism. Weight issues can be linked to a stagnated Liver which creates edema within the body.

black_swan - April 18, 2010 04:46 AM (GMT)

Craig,
My vitalizer plus arrived last wednesday and so far my experience has been very positive. My body seems to be digesting food faster than it used to. The bloating sensation I would often experience after eating a decent sized meal has all but disappeared. I also seem to have more energy than before. Overall, I would say I feel much better; a worthy investment. I know you recommend drinking hexagonal water three times daily but i've been drinking around 3-4 8oz bottles worth everyday and seeing results. Thanks for the good advice.

craig-oxley - April 18, 2010 10:25 AM (GMT)

If you can take more Hexagonal water then you can take this. I just prefer people start off slowly and increase gradually as it can be very powerful on some people and people with certain ailments, especially metabolism problems like dysfunctional Thyroids. Have you studied the work of Dr Fereydoon Batmanghelidj? I strongly recommend his knowledge to everyone. When one understands the body and diet, we do see that Fereydoon's full protocol is not needed if one does everything balanced. This would mean correct portions of mucus less foods. When one eats incorrectly then Fereydoon's information becomes of more importance. In Chinese medicine they do not in take extra large amounts of water but remember their diet is correctly balanced. If you've been lacking energy I'd also recommend you now start to eat six Jujube dates daily along with an intake of the herb, Astragalus. I'd suspect you may need a little work on the Kidneys, Liver and Spleen to aid you in your work. I would also like to point out that the Chinese adore the watermelon with the red insides for water intake and especially if theres heat in the heart and Kidney issues. Unfortunately Dr Fereydoon didn't understand hexagonal structured water and was quite ignorant which was surprising. If only he'd studied it fully, he may have been an aid to spreading the knowledge of its powers. Have you noticed how quick the water itself is absorbed in the mouth? I only use steam distilled water when I've made my hexagonal water. You know straight away that the water is different!

black_swan - April 18, 2010 04:32 PM (GMT)

I've just been using bottled water for now but I do notice a considerable difference in how my body absorbs this water vs bottled/tapped. How effective is steam distilled water vs bottled store bought water? Are Jujube dates and Astragalus sufficient in supplement form?

Title: Steam Water Distillers
Description: *Information on filtering water*

Sylph - April 2, 2009 01:20 AM (GMT)

Does anybody have any information on water distillers, good prices/models, are they difficult to operate etc?

A friend just bought an expensive thing called a 'jupiter ionizer' which manages the ph level of tap water and eliminates things like chlorine but I wonder if it is truly efficient at taking out the things that count. Apparently steaming is the way forward...

billfryer - April 15, 2010 04:50 AM (GMT)

Hi Sylph

Today, **water distiller** is the only way which provides you 99.7% pure drinking water. Its very easy to operate water distiller. Water distiller simply boils water which removes all viruses and bacteria. Then, steam is collected in steel coils which colds the water to form pure water. then, this water passes through charcoal filter which removes rest of the impurities to offer you purest form of water.

Water distillers are cheap in comparison with other filtration systems. Megahome 943SBS water distiller will cost you £151.00 only with 30 days money-back guarantee. for more http://www.jdharris.co.uk/water-distiller

Cheers

View Full Version: British children drink only half recommended

Title: British children drink only half recommended
Description: *amount of water*

craig-oxley - July 4, 2009 01:47 PM (GMT)

British children drink only half recommended amount of water

By Daily Mail Reporter
Last updated at 6:59 PM on 02nd July 2009
http://www.dailymail.co.uk/health/article-...nded-water.html

One in seven parents surveyed said their children did not usually drink any water at all

The average British child drinks just half of the recommended amount of water, researchers said today, prompting experts to urge families to make sure youngsters stay hydrated in the heatwave.

Children drink on average three 250ml glasses of water each day with less than a fifth (18 per cent) actually consuming the recommended six glasses, they found.

One in seven parents said their child does not usually drink any water at all, however the research did not say whether they drank milk or juice as alternatives.

The survey of 1,000 adults by drink brand Nestle Pure Life, found most parents did recognise thirst and lethargy as symptoms of dehydration. Six in ten also knew that a lack of water could trigger a fall in concentration or energy.

Nutritionist Anita Bean said: 'As the hot summer months continue and with more hot weather predicted, it is even more important to ensure your children are well hydrated when they're running around keeping active.

'Children can easily forget to drink, particularly when they're active and having fun. In order to prevent involuntary dehydration, encourage them to drink little and often throughout the day.

'Water is essential for both adults and children to get rid of the body's waste products and to help their kidneys, brain and digestive system function properly.'

Meanwhile, medical professionals called for an system to alert frail older people when a heatwave hits.

Doctors writing on the British Medical Journal website bmj.com recommended that vulnerable older people should drink two litres of water, milk, or fruit juice a day.

If they were taking drugs that suppressed their thirst, or disturbed the balance of fluids in the body, these should be temporarily stopped or the dose reduced.

Other measures suggested included educating those at risk to dress lightly, take frequent showers, and avoid alcohol.

View Full Version: Ocean Plasma

Title: Ocean Plasma

craig-oxley - April 11, 2009 04:45 PM (GMT)

Ocean Plasma

This substance represents one of the greatest medical innovations of the (20th) century. Harmless, simple and inexpensive, Quinton Plasma achieves today, as it did at the turn of the (last) century, therapeutic results that must be seen to be believed. And they can be seen on this website (refering to a past website--Ed.), thanks to the photos Quinton and his colleagues took in the hospitals where they worked.

Have you ever heard of Rene Quinton? Probably not. Yet this man saved several thousands of children's lives in France and in Egypt at the beginning of this century by using a serum which now bears his name.

Rene Quinton "was the first person to discern and to investigate the similarity between sea water and mammalian lymph and blood plasma systems. He endeavored to solve the mysteries of sea water and its compatibility with living organisms by proceeding to carry out several scientific experiments in hospitals. The results he obtained were dramatically unexpected, since several people who were dying regained their vigor. Rene Quinton worked in collaboration with Drs. Potocki, Mace and Jarricot, and for four years he labored at perfecting his techniques and adjusting dosages. In 1904, he released the results of his hospital experiments in a book entitled, 'L'eau de mer, milieu organique' (Sea Water: Organic Medium). The book was re-issued in 1995 because of the timeliness of its well- researched contents."

In 1921, Dr. Jarricot brought out "The Marine Dispensary" which contained the results of his therapeutic experiments in the treatment of childhood diseases using Quinton's formula.

Hospitals everywhere became aware of Rene Quinton's new therapy and were favorably disposed to its use. Twelve centers for the application of his methods were subsequently established in France, Belgium and Egypt. Unfortunately, the war in Europe put an end to his research and his theories were temporarily set aside.

Exhausted by his work, Rene Quinton died in 1925. It was not until the 1980's that French doctors and therapists once again started to investigate his therapeutic approach.

This century-old approach is now widely used in France, Germany, Spain and Italy. A Study and Research Centre has also been established with the aim of making available earlier and current research carried out using Quinton products. Extensive studies are also being made, especially of injectable Quinton Plasma for use in the treatment of severe or advanced diseases, many of which are now on the rise.

METHOD OF PREPARATION

Sea water is extracted from a particular location which is situated between 10 meters from the bottom and 30 meters from the surface. This location is called the zone of solar penetration, and is known for its exceptional purity. Isothermic vehicles are used to transport the sea water to the laboratory for processing in less than 48 hours. The bottling in vials and packaging is completed in less than 24 hours under sterile conditions in the absence of any metallic contact or raised temperature in accordance with the original sampling techniques laid down by the physiologist and biologist Rene Quinton and in conformity with present day pharmacological standards as well as those of the G.M.P."

"Sea water tends to maintain its characteristic biodynamism and the molecular balance of a 'living medium'. The entirety of trace elements contained in sea water are to be found in the solution in their active states.

SOURCE AND AUTHENTICITY OF QUINTON PRODUCTS

After several years of research, Rene Quinton deduced and proved that sea water could not be extracted from random locations.

The composition of sea water varies as a ratio of its distance from the coastline, according to climate and presence or absence of specific marine vegetation.

He also proved satisfactorily that sea water, which is a colloidal solution, differed fundamentally in its therapeutic effects from the artificial saline solution (water plus salt) currently used.

In addition, he proved that the drying out or desiccation of sea water destroyed it permanently. He showed that it was experimentally impossible to reconstitute sea water out of its dried extract.

Another important factor which he brought to light was that the equilibrium of its pharmaco-dynamic action was totally destroyed in desalinized sea water, that desalinized sea water had no valid therapeutic action. The same goes for artificially

isolated trace elements whether as single units, double units, or three at a time. Their action was noted to have minimal effect.

This part of the report relates to the first Quinton family seawater company. It was part of the original copyrighted article and so had to be left in the article.

RENE QUINTON'S PATENTED PROCESS

After several years of intensive research, Rene Quinton assembled his results and had them patented.

The patent designates the following: - The only area suitable for extracting the quality of sea water which is completely compatible with the mammalian organism.

- The methods and techniques for maintaining all the nutritive elements found in sea water in their active state without using chemical additives.

- Bottling and packaging methods.

Quinton International Laboratories SARL is the sole proprietor of this patented process. It is the only laboratory to obtain a permit from the French Ministry of Health for marketing sea water prepared according to Rene Quinton's formula. Only vials and bottles originating at these laboratories may bear the mark "QUINTON" on the glass containers.

QUINTON HYPERTONIC, QUINTON ISOTONIC

Quinton Hypertonic Solution is pure unadulterated sea water in its natural form with its oceanic components. It is extracted and stored under the strict conditions described earlier. Its mineral and trace-element concentration is thus superior to that of universal blood plasma, making it the most concentrated form of Quinton solutions, hence its name: Hypertonic Solution.

Quinton Hypertonic Solution may be taken orally with a little water.

Quinton Isotonic Solution, on the other hand, is produced from Quinton Hypertonic Solution. It contains exactly the same concentration of minerals and trace-elements as blood plasma but its sodium content matches that of blood, hence its alternative name: Quinton Plasma.

Quinton Hypertonic Solution is reduced to isotonicity with the addition of Aqua Fontana (Mont Roucous Spring Water) which has no mineral or medicinal content and is guaranteed to be naturally sterile and free of bacteria.

Quinton Isotonic Solution may be taken orally, injected or used in transfusion. Injections may be administered subcutaneously, intramuscularly or intravenously as required.

To recapitulate, Quinton Hypertonic Solution is the most concentrated form. Quinton Isotonic Solution or Quinton Plasma is equal to blood plasma in its mineral and trace-element concentration. Quinton Plasma can thus never be hypertonic.

PROPERTIES OF QUINTON HYPERTONIC SOLUTION

Quinton Hypertonic Solution promotes cellular nourishment to a noticeable degree. It is to be used as a regenerating and remineralizing factor, a life-giving essence when there is a need for a concentrated natural supply of all the minerals and trace-elements for the optimum functioning of any organism.

Quinton Hypertonic Solution is recommended for use in order to produce a therapeutic shock effect on the organism, and to induce an almost immediate reinvigoration of depleted organic systems. It is also recommended for use prior to an anticipated drain of energy whether physical, intellectual or emotional.

PROPERTIES OF QUINTON ISOTONIC SOLUTION

Research carried out by Rene Quinton and his successors has shown incontestably that, from a scientific and clinical standpoint, Quinton Plasma is identical with the indispensable fluid which sustains the development of life.

Rene Quinton's successors were: - Professor Alexis Carrel (Nobel Prize in Neurophysiology) - Professor A. Bogolometz (Cytotoxic Serum) - Doctor Jean Jarricot (Marine Method) - Doctor Alfred Pischinger (Basic Regulation System)

They all came to similar conclusions, that is to say, that sea water (as is contained in Quinton Plasma) is identical with the liquid inner environment of humans and mammals. This makes it possible, under certain optimum conditions, for isolated cells, tissue fragments and whole organs to survive in this medium.

Modern analytical techniques used by A. Pischinger in 1994 have confirmed what Rene Quinton could only intuit in 1904 in the absence of appropriate technology:

Quinton Plasma expedites the regeneration of the organism either by the speedy or by the gradual substitution of a depleted inner medium by replacing it with a natural and identical equivalent, thus promoting optimum cell development and activity. This Plasma is, par excellence, a physiological serum.

QUINTON PLASMA IN CASES OF CANCER, LEUKEMIA AND MULTIPLE SCLEROSIS

Quinton Plasma may be considered as a valuable adjunct in the medical treatment of these diseases.

4 to 6 vials must be taken regularly every day over a period of many months.

In certain cases, the Plasma should be administered by injection for maximum efficiency. Injections of 30 to 60cc (3 to 6 vials) may be given every second day throughout the first two months. Advanced stages of the disease may require higher doses. Subsequent treatment, when appropriate, may be tapered off from a single injection twice a week to once a week."

"HYDROTHERAPY OF THE COLON USING QUINTON PLASMA

Modern advances in Physiology and Molecular Biochemistry" ...have proven the similarity in mineral content of the mammalian inner environment and sea water.

"This similarity makes it possible for any organism to select or reject what it needs in a natural way.

The assimilation or elimination of marine ions is made possible through cellular receptors with a high degree of accuracy by the identifying polarity derived from biocenosis.

Cold-sterilized Isotonic sea water is usually eliminated through the kidneys. This eliminated sea water tends to be twice as concentrated and twice as voluminous as artificial physiological serum.

TOTAL OSMOSIS OCCURS BETWEEN THE PLASMA AND THE INNER FLUID ENVIRONMENT

The advantages of Quinton Isotonic Solution in colonic hydrotherapy:

- Physiological irrigation and cleansing of the intestinal membranes. - Anti-anaphylactic action of sea water. - Reabsorption of micro-nutrients and minerals through the portal vein. - Physiological stabilization in case of insufficient potassium. - Anti-inflammatory and anti-spasmodic action as required in adjustable doses. - In cases of infection: optimum absorption results - Strengthens the immune system."

"Here is what two highly respected European researchers write about the Quinton Plasma:

From an 1991 article by
Dr. Andre Passebecq, M.D., Ph.D., N.D.
Dr. Jean-Marc Soulier, Ph. D., pharmacist

To maintain a healthy body, homeostasis must be kept constant. Thus a dynamic equilibrium is continuously reconstructed in the face of modifications due to the surrounding metabolism. A healthy organic terrain is the basis of health and conversely diseases develop on a depleted or congested terrain. Upstream of most diseases there is an unbalanced terrain."

"Mineral salts
The four most abundant cations in the body are sodium, potassium, calcium and magnesium from which phosphorus cannot be disassociated.
Sodium is the monovalent cation characteristic of extracellular fluid (ECF) and, conversely, potassium is that of intracellular fluid (ICF).
The composition of salts present in the ICF greatly differs from that of ECF but directly depends on the composition of the latter. Their relations are ensured by the ion pumps of the cell membrane.

Interaction and balance of mineral salts

Magnesium can only be used if a balanced calcium-phosphorus ratio exists. Magnesium acts as a regulator of the calcium fixation and serves as a phosphorus carrier. It is therefore an integral part of the calcium-phosphorus complex.

Any calcium-phosphorus imbalance reduces the resistance to illness and therefore enhances susceptibility to diseases, increases fatigue, weakens intellectual faculties and leads to premature ageing.

In addition, an abnormal potassium rate produces a magnesium and sodium imbalance. No salt is independent of the others as they all interact directly or indirectly with the other electrolytes.

Much more than an isolated salt, it is the general equilibrium of the saline matrix of the internal environment which will ensure proper functioning of the organism.

For example, the influence of the different salts on cardiac automaticity evidences their separate involvement: sodium through volemia and its relation to calcium, potassium regulating cardiac automaticity, calcium and magnesium governing muscular contraction, etc.

Seawater

Seawater is an extraordinarily rich and complex matrix that still possesses numerous unexplained features.

Note first that the structure of seawater remains incompletely known. Indeed, to this day, no model encompasses all its physico-chemical properties. In addition, the elements that compose the marine saline matrix also exhibit specific properties: for

example the coefficient of dissociation of salts present in the seawater is higher than that observed in salts dissolved in distilled water, in spite of the simultaneous presence of other salts in seawater. A 33% solution of sea salts, redissolved in distilled water does not exhibit all the properties of natural seawater of the same salinity.

Additionally. most of the constituents dissolved in seawater (except for $CaCO_3$) are far from saturated, irrespective of the importance of the external inputs or the availability of these elements in submerged rocks.

Dittmar's laws show that whatever the total saline concentration, the relative concentrations of the different ions present in the ocean waters with respect to that of chlorine can be regarded as constant. The complex mechanisms governing these concentrations have not been fully explained yet.

Also the issue of artificial seawater reconstitution remains highly complex: chemists have to introduce certain dosage modifications associated with the stability of the elements present at a very low concentration.

The wealth and diversity of mineral salts and trace elements present in seawater are exceptional. Gregory and Overberger have shown that the marine saline matrix contains the 92 trace elements of Mendelev's periodic table.

It includes all vital nutrient salts and trace elements at concentrations ranging from 1 mg/L and 10 mg/L.

It exhibits an important buffering capability, with a pH comprised between 7.9 and 8.3 and a mean saline concentration of 33/%.

Note in particular that all the minerals contained in seawater are at a concentration close to that at which they are usually found in man's internal environment.

The joint study of seawater and internal environment highlights the similarity between the mineral compositions of human plasma and seawater. In addition, the results of treatments involving correctly elaborated water preparations demonstrate the amazing therapeutic efficacy of seawater. How can this be explained ? What are the links between seawater and the vital internal environment ? As a result what is the influence of seawater on the ionic and mineral balance of the organism ?"

Rene Quinton addressed these questions with certain theories about the relationship between seawater and the internal environment of mammals, including man. He concluded that the human organism maintained this rich, life-giving internal environment so closely related to isotonic seawater for the full development of cells.

"He postulated that from the mineral point of view, human and marine plasmas are environments of the same nature. In other words, there is physical and physiological

identity between seawater and the internal environment of the organism. Not only do they exhibit very similar mineral compositions, but the particular form, organization and synergy of trace elements and mineral salts that make up the saline matrix of seawater closely resemble those of the internal environment constituents."

After a documented body of scientific observations, Quinton surveyed the possible medical applications of his findings.

"Together with a medical team, Quinton developed for more than 25 years the so-called "marine method" based on "Quinton's Plasma," a marine plasma in the form of an injectable isotonic solution.

The works of physicians Jarricot, Robert Simon, Lacheze, Mace and Quinton rely on the principle of regeneration of the depleted internal environment, on which cells live, by means of purified seawater preparations exhibiting a balanced and complete composition, so as to allow the patient to globally reconstruct his terrain and the cells to find once again the elements they need.

Given the particular period in which these works were published, they mainly cover various types of cutaneous disorders, neurovegetative asthenias, anorexias, acute cachexias, infant diarrheas, deep dehydrations, gastroenteritis, pulmonary tuberculosis, cholera, typhus."

(Of course, in the early 1900's no AIDS existed, cancer was a rarity, auto-immune diseases were 50 years from discovery, and many other "modern day" maladies were unknown .--Ed.)

"Exceptional results were obtained and the findings of these precursors should now be supplemented by numerous other investigations. Their writings and the listed clinical cases demonstrate the great therapeutic attractiveness of Quinton's assumptions and the efficacy of his method.

Marine plasma is a living medium. It is worth pointing out that, basically, living matter differs from mineral matter in its organization and not in the nature of the atoms that compose it. A living cell is much more than the sum of its elements. The mere dosage of components does not suffice in itself to account for the therapeutic effect of marine plasma.

A good illustration of this can be found in the therapeutic mineral waters; except for the elements that are abundant in them, many waters develop their curative power essentially when drawn from the mineral water spring. Due to the preservation methods and conditions used, these waters lose their properties although the constitutive elements remain present.

Hence is there a specific state of these waters when they are drawn? Numerous

theories could be devised, starting from the "homeopathic dynamization" whose most probable substratum would be a particular state of the solvent, in this case water.

As a result, how can we envisage the specific therapeutic gain that could result from the use of the trace elements present in marine plasma? The assumption of physiologic identity between human plasma and marine plasma supposes a form of availability particularly well-suited to the needs of the organism.

Resulting from the mineral balance, pH should be restored by marine plasma. German physician Ropffer thoroughly investigated the evolution of body pH in patients to whom he had prescribed hydromarine treatments. He concluded the following:

'For normal and alkaline organisms, an increase in acid values has unequivocally been established. Similarly for hyperacid organisms, a dramatic decrease in acid values has been recorded. No case has remained the same.

It can therefore be stated that in case a global inconstant acidity, a cure of drinkable seawater causes the normal acidity to be recovered. In particular for gastritis due to dietary errors or alcohol and nicotine abuse remarkable results have been obtained.'

Dr. Jarricot wrote:

'Marine plasma is not a serum against such and such illness, but it is designed for the living cell.'

In other words, it is a product which by its very nature primarily contributes to the restoration of health and the suppression of disease and its symptoms.' "
.....

Seawater – A Safe Blood Plasma Substitute?

18.04.2008 By Dianne Jacobs Thompson. Diluted seawater contains almost the same concentration of minerals and trace elements as blood plasma, and its sodium content matches that of blood. It has been used successfully in animal tests as a blood transfusion substitute, but human trials are long overdue.

Title: Much Ozone information by Gaylene

craig-oxley - September 13, 2008 05:11 PM (GMT)

I've been doing a story on ozone I'm trying to put on a few web sites for the last few months. Instead of posting little bits, I'm just going to throw it all out here. This is the rough draft, and I was wanting some opinions before I send it in. It's about 24 pages long. Can you guys think of anything I've missed, or should include, or does it need some more refining, or anything else?
Thanks for any input!

Introduction:

What is Ozone:
Through the action of lightning, nature produces ozone for the purpose of purifying the air, and to destroy all organic decay which disease germs and bacteria thrive on. It has however, a greater oxidizing, antiseptic and germicidal power that has been proven for many years. For this reason it is being used with great success for the relief of many diseases.
Like oxygen, ozone is a healthful gas. Oxygen is the most important element we need to survive. We can go without food and water for a couple of weeks, but only a few minutes without oxygen. We are really oxygen burning machines.
Ozone is a highly unstable common gas sometimes called triatomic, or polymeric oxygen. It is manufactured by passing oxygen though a high voltage discharge (corona). Ozone (03) is electrified oxygen (O2) regardless of the technique used to manufacture it.
Ozone is an allotropic form of oxygen: It is oxygen in its most active state: It’s therefore the life giver and a “life sustainer”.

What does Ozone do?
1. inactivates viruses, bacteria, yeast fungi and protozoa
2. stimulates the immune system
3. supports and enhances the healing process
4. cleans arteries and veins

5. breaks up red blood cell clumping
6. purifies the blood and the lymph
7. normalizes hormone and enzyme production
8. reduces inflammation
9. reduces pain, calms nerves
10. stops bleeding
11. prevents shock
12. scavenges free radicals
13. prevents stroke damage
14. reduces cardiac arrhythmia
15. improves brain function, and memory
16. oxidizes toxins, facilitating their elimination
17. increases the amount of oxygen in the blood
18. stimulates production of all protective cell enzymes
19. prevents and reverses degenerative diseases
20. prevents and treats communicable diseases
21. prevents and eliminates auto-immune diseases

Facts About Ozone:
For years the physicians around the world have used Ozone for bringing curative and relieving results to many, many people. There have been 10-20 MILLION applications of ozone around the world, with virtually 0% side effects.
Ozone is one of the most energetic and useful agents known to science. Its therapeutic action is due to the oxygenation of the blood by the loose molecules (“free radicals”) of oxygen in ozone. It is carried to the various organs and tissues of the body and absorbed, thus oxidizing the waste, and facilitating their elimination. In other words, Ozone increases the metabolism without the expenditure of vital energy.
After careful analytical investigation of disease, this has been repeatedly demonstrated: Almost all forms of nervous, functional, respiratory and blood disorders can be successfully corrected by oxidative restoration. The effects are perfectly natural; the nerves being left calm, toned with a feeling of buoyancy and exhilaration. It stimulates the vasomotor system through the nerve centers, which fact is clearly shown, increases the redness of skin, a feeling of warmth to the whole body and waste products are more freely eliminated.
Oxidation is the source of Life!! It's lack, causes impaired health, or disease. Its cessation is DEATH!!

False Information On Ozone:
Recently the FDA, and other such suppressive organizations have been trying to destroy the beneficial and life sustaining qualities of ozone by telling the public that ozone is toxic and harms the body. "Ozone alert days" is really an example of a successful public relations hatchet job. Don't be sucked in like the news media by this false information.

The major exhaust pollutants caused by burning hydrocarbons in oxygen in the internal combustion engine are carbon monoxide, nitric oxide, and sulphur dioxide. Ozone cannot be produced in the internal combustion engine because the hydrocarbon fuel quenches the spark gap.
Ozone has been incorrectly blamed for smog. Carbon monoxide, a deadly poison, is present in smog at about 3000 parts per hundred million. Toxic hydrocarbons are present in smog at about 100 parts per hundred million. Ozone is present in smog only briefly at around 25 parts per hundred million. Ozone has a half life of about 20 minutes. Ozone in smog is produced by the effect of the sun's energetic photons acting on polluting gases. Single molecules of oxygen are broken off these gases momentarily, but in seconds it reattaches itself to the other gases, which is part of nature's system for cleaning the atmosphere.
The problem is not one of too much ozone in smog, but not enough ozone in the smog. If sufficient amounts existed, the pollutants would all be oxidized and rendered harmless.
Ozone is easy to measure, so they use this deceitful tactic to smear the name of ozone. Carbon monoxide is a proven killer. Ozone is a proven health enhancer. Yet, you never hear of a carbon monoxide alert.

Development:
It was discovered by Schonbein in 1840 and has been used to purify water and treat patients for more than 160 years. Some major cities in Europe have used ozone to purify the municipal water supply since the turn of the century. The Los Angeles municipal water treatment facility uses ozone, and is the largest in the world. Most swimming pools in Europe use ozone rather than chlorine (Chlorine gas is a WMD) to purify water. It has been known for at least 100 years that ozone is highly germicidal in

that it will almost instantly kill virtually all viruses, bacteria, fungi, parasites, molds, cancer, etc. It is known to oxidize just about all manmade chemicals also. Go to the Pharmacology section here to see the evidence.

Here's a short history of ozone. There have been many other events that happened than the ones included here. These are the best of.

Ozone therapy was accepted medicine in the USA from at least 1880 until 1932, a period of fifty-two years.

In 1881 Dr. J.H. Kellogg used ozone in steam saunas at his Battle Creek, Michigan clinic. He wrote about this in his book, "Diphtheria: Its Nature, Causes, Prevention and Treatment."

In 1885, the Florida Medical Association published "Ozone" by Dr. Charles J. Kenworthy, MD, detailing the use of ozone for therapeutic purposes.

In 1896, the electrical genius Nikola Tesla patented his first ozone generator, and in 1900 he formed the Tesla Ozone Co. Tesla sold ozone machines and ozonated olive oil to doctors.

In 1898 Dr. Benedict Lust, a German doctor practicing in New York and the founder of Naturopathy, wrote many articles and books on ozone. Naturopathy has as its foundation the use of heat, light, air and water. Ozone qualifies as the 'air' segment.

In 1902, J.H. Clarke's "A Dictionary of Practical Materia Medica", London, described the successful use of ozonated water --- he called it "Oxygenium" --- in treating anemia, cancer, diabetes, influenza, morphine poisoning, canker sores, strychnine poisoning and whooping cough.

In 1902, Dr. Charles Linder MD, of Spokane, Washington was written up in an article in a local newspaper which stated that he injected ozone into patients as part of his standard medical practice.

In 1904 "The Medical Uses of Hydrozone and Glycozone" by Charles Marchand, a New York chemist. Hydrozone was another name for ozonated water and Glycozone was another name for ozonated olive oil. This book is in the Library of Congress with the US Surgeon General's stamp of approval on it.

In 1910 Sears sold ozone generators.

In 1911, "A Working Manual of High Frequency Currents" was published by Dr. Noble Eberhart, MD, the head of the Dept. of Physiologic Therapeutics at Loyola University, Chicago. He details the use of ozone to treat tuberculosis, anemia, chlorosis, tinnitus, whooping cough, asthma, bronchitis, hay fever, insomnia, pneumonia, diabetes, gout

and syphilis.

In 1912, Dr. H.C. Bennett published "Electro-Therapeutic Guide". He described the inhaling of Ozol, which is what he called ozone after bubbling it through eucalyptus, pine or thyme oils.

In 1913, the Eastern Association for Oxygen Therapy was formed by Dr. Eugene Blass and some German associates.

In 1920, Dr. Charles Neiswanger, MD, President of the Chicago Hospital College of Medicine published "Electro Therapeutical Practice." Chapter 32 was entitled "Ozone as a Therapeutic Agent."

In 1929, a book called "Ozone and Its Therapeutic Action" was published in the USA. It listed 114 diseases and how to treat them with ozone. Its authors were the heads of leading American hospitals.

In 1930 The Journal of The American Medical Association published an article called: "The Therapeutic Use of Oxygen in Coronary Thrombosis"

1931 Dr. Otto Warburg wins first Nobel Prize for work proving cancer is caused by a lack of oxygen in the cells. He states in "The Prime Cause and Prevention of Cancer" that the cause of cancer is no longer a mystery, we know it occurs whenever any cell is denied 60% of its oxygen requirements. This occurs
through a buildup of pollution or toxicity within and around the cell which blocks and then damages the cellular oxygen respiration mechanism.

Beginning Of Ozone Cover-up: (3 years after saying it was “therapeutic”)
In 1933, the American Medical Association (AMA), headed up by M. Fishbein, set out to eliminate in the USA all medical treatments that were competitive to drug therapy. The suppression of the use of ozone therapy by doctors in the USA began then, and continues to this day, except in thirteen states, where currently doctors are protected by state laws.

1938 In the Parisian Medical Bulletin, Paul Aubourg, Honorary Electro-Radiologist in the Hospitals of Paris, published "Medical Ozone: Production, Dosage, and Methods of Clinical Application Using Rectal Insufflation” noted that of 465 patients, the colon capacity varied from 150 to 800ccs so everyone was x-ray photographed to determine the proper dosage. Vaginal insufflations were common. Breathable concentrations of ozone were routinely applied to infected sinuses. Intermuscular injections were abandoned as too painful and ineffective. In 8000 applications of ozone, there were no accidents or harmful side effects.

Government Cover-up:
In the 1940s at the request of the AMA, the FDA began seizing ozone generators.

1944 Dr. Otto Warburg won his second Nobel Prize for his work linking cancer to damaged cell respiration due to a lack of oxygen at the cellular level.

1951 Dr. William Turska, Chairman of the Committee on Scientific Research of the American Naturopathic Association published "Oxidation." He pioneered the breathing of Aethozol (ozone passed through selected oils). He also pioneered
and maintained one of the best methods of putting ozone into the body was to put up to 250 cc's directly into the portal circulation through the rectal veins with no pain, discomfort, or side effects. With repeated application, this completely cleans the liver.

1956 Two time Nobel Prize winner Dr. Otto Warburg published in SCIENCE MAGAZINE "On the Origin Of Cancer Cells."

1961 John Wiley and Sons published in the Encyclopedia of Chemical Technology, the symptoms of breathing high concentrations of ozone are acute, there appear to be no chronic affects among normally healthy people because the body has the ability to repair such damages. "No free radical reactions which
directly involve ozone have been observed. During the 80 year history of the large scale usage of ozone, there has never been a human death attributed to it."

Government Corruption:
1965 Senator Edward Long holds U.S. Senate hearings where Dr. Herbert Ley, FDA Commissioner testifies that the FDA "protects" the big drug companies and are subsequently rewarded, using the government's police powers they attack those who threaten the big drug companies. And you thought they are there to protect the public.

Government Corruption:
1969 U.S. Congress studies the FDA and states that 37 of the top 49 officials of the FDA who left the agency moved into high corporate positions with the large companies they had regulated.

Government Corruption:
1975 The U.S. Government General Accounting Office studied the FDA and revealed that 150 FDA officials owned stock in the companies they were supposed to regulate.

Government Corruption & Lies:
1976 The FDA then publishes: "Ozone is a toxic gas with no known medical uses."

1980 Dr. Sweet Dept of obstetrics and Gynecology, Washington University School of Medicine, St Louis, Mo) & W. Hagar (St Louis Air Pollution Control) publish in Science Magazine, a U.S. peer reviewed scientific journal, their study: "Ozone Selectively Inhibits Human Cancer Cell Growth." Announced "Evidently the mechanisms for defense against ozone damage are impaired in human cancer cells." "All of the cancer cells (lung, breast, uterine and endometrial) showed growth inhibition in ozone at .3

and .5 ppm" while the normal cells were not affected." "Evidently cancer cells are less able to compensate for the oxidative burden of ozone than normal cells." They also stated that ozone inhibits cancer 40 to 60%, and up to 90%, yet there is no response from mainstream medicine.

1980 The German Medical Society states 384,775 patients were treated with ozone with a minimum of 5,579,238 applications and the side effect rate observed was only .000005 per application! (That is virtually 0%) The report also stated "The majority of adverse effects were caused by ignorance about ozone therapy (operator error)."

1983 In Italy 58 cases of Herpes Simplex showed complete recovery in two to five days following ozone therapy. "Results, Herpes Zoster: in all patients healing of skin lesions were observed after a minimum of 5 and a maximum of 12 ozone injections. Herpes Simplex: all patients healed after 1-5 injections. Daily endovenous injections of 20cc.

1983 The chairman of neurosurgery Dr. Jewell Osterholm, at Jefferson Medical College in Philadelphia, announced that stroke damage can be reversed with spinal injections of ozone. Experiments on lab cats showed the procedure does reverse stroke damage.

1983 SIXTH WORLD OZONE CONFERENCE LIST 33 MAJOR DISEASES SUCCESSFULLY TREATED WITH OZONE "OZONE Removes viruses and bacteria from blood, & humans. Successfully used on AIDS, Herpes, Hepatitis, Mononucleosis, Cirrhosis of the liver, Gangrene, Cardiovascular Disease, Arteriosclerosis, High Cholesterol, Cancerous Tumors, Lymphomas, Leukemia. Highly effective on Rheumatoid and other Arthritis, Allergies of all types... Improves Multiple Sclerosis, ameliorates Alzheimer's Disease, Senility, and Parkinson's...Effective on Proctitis, Colitis, Prostrate, Candidiasis, Trichomoniasis, Cystitis... Externally, ozone is effective in treating Acne, burns, leg ulcers, open sores and wounds, Eczema, and fungus."

1986 Dr. Alexander published case histories of AIDS patients treated with ozone who are now completely healthy and back at work.

1986 Medizone, Inc. states all stored blood can be decontaminated with ozone, and ALL HIV can be eliminated. Medizone applies for human test approval. Despite 50 years of medical ozone's use on humans by over 7,000 physicians, and flawless animal studies, the FDA won't allow human testing in the U.S.

In 1987 Dr. Hans Neiper, an ozone using doctor in Hanover, FRG, in an video taped interview, talks about his colon cancer work. Although he can't divulge the name of his patients, "President Reagan is a very nice man." And, "You wouldn't believe how many FDA officials or relatives or acquaintances of FDA officials come to

see me as patients in Hanover. You wouldn't believe this, or directors of the American Medical Association, or American Cancer Association, or the presidents of orthodox cancer institutes. That's the fact."

In 1987 K.S. Zanker presents ozone has benefit in cancer treatment paper at the 2nd International Conference on Anticarcinogenesis and Radiation Protection Gaithersburg Maryland "The selectively inhibitive effect of medical ozone
prepared from pure oxygen on tumorous human cell cultures has been known for a long time, and has recently been confirmed once more."

In 1987 Cuban (FDA equivalent) National Inst. For Scientific Research conducts ozone animal studies proving ozone is non-toxic, non-mutagenic, non-carcinogenic. (Ozone won't cause toxicity, mutations, or cancer)

In 1987 Strahlenther Onkol in the German Cancer Journal states: "Recently, evidence was provided that ozone has a selective effect on an ovarian
carcinoma, two solid adenocarcinomas of the ovary and one endomentrial carcinoma."

In 1989 "Ozone Science and Engineering" publishes Immunological Examinations In Patients With Chronic Conditions Under Administration Of Ozone/Oxygen Mixtures;" states "A significant increase in IgG, the most important immunoglobulin in the immune system. must be assessed as an immunostimulation. No immunosuppressive effect occurs, On a long term basis, no kind of immunosuppressive behavior caused by ozone application can be found in the dosage range selected.”

In 1989 "Ozone Science and Engineering" publishes “The Influence Of ozone On Tumor Tissue In Comparison With Healthy Tissue" "The in vitro results clearly show that a pronounced influence on tumor metabolism, which does not occur in healthy tissue, is indeed possible with ozone. Because, here in particular, the respiratory cycle and glycolysis as well as general oxygen utilization in tumor tissue are positively influenced by ozone therapy."

In 1989 Cuban M.D.'s are successfully treating sickle cell anemia, ankle ulcers, farm accidents, and ocular (RP, retinitis pigmentosa) disease.

In 1990 Experimental Chemotherapy publication states: "In vitro Synergistic Activity of 5-Fluorouracil with Low-Dose Ozone against a Chemo resistant Tumor Cell Line and Fresh Human Tumor Cells" "Our results indicate that ozone in combination with 5-fluorouracil (5-FU) makes a 5-FU resistant cell line susceptible for the combined treatment modality. Furthermore, ozone acts synergistically or at least additive to chemotherapy in different tumor cell suspensions, derived from the breast and the colon."

In 1992 Science and Technology section of the Canadian Government's Supply and

Services Dept publishes "Better Blood Sterilization With Ozone." "The products of this research have worldwide applications,' says DND's Capt. Shannon. 'In the right concentration, ozone sounds almost too good to be true. We're trying not to be overly enthusiastic, but the data so far is very compelling."

So now you know, the generally unknown history of ozone therapy.

So, since 1933, the AMA and the FDA have done everything in their power to prevent ozone therapy from being used or even known about, in order to protect the profits of the pharmaceutical industry and promote the practices of the membership of the AMA. These days, the FDA and the giant pharmaceuticals have interlocking directorships. People are working, and taking money, from both sides, while still supposedly maintaining their impartiality.

Pharmacology:
Ozone works by it's unstable form. That extra molecule (O3) breaks off and combines with other molecules, and oxidizes them. What is left is oxygen. (O2) This process happens in about an hour. Half of the ozone is gone in about a ½ hour, and oxygen is left.
This process oxidizes all toxins, boosts the immune system, kills unhealthy cells, & helps healthy cells. Ozone also kills all virus, bacteria, molds, mildew, fungus, and cancer.
The way ozone does all this is the extra molecule of oxygen makes ozone unstable. This molecule breaks away and travels throughout the body and joins other molecules. For instance, if there's carbon monoxide (CO1) in your body, that extra molecule will join with it and turn it into carbon dioxide. (CO2) Your body doesn't know how to eliminate carbon monoxide, and it will kill you if you get enough, but your body knows how to handle carbon dioxide and will eliminate it. That's how ozone oxidizes toxins.
The way ozone boosts the immune system is by eliminating toxins, this frees up the liver and immune system to do the job they're supposed to do again. Virtually every person who has a serious disease is filled with toxins. The liver can no longer eliminate all of them, and passes them on where they circulate throughout the body. When toxins enter the body, the immune system has the job of eliminating them. This makes the immune system weakened, and more defenseless. So by doing the job of the liver & immune system, ozone allows them to do their job again. There are several doctors that say ozone seems to actually take the place of the immune system. The most famous doctor saying this is Dr. Atkins. (Known for the Atkins diet) He treated several people with cancer in his clinic using ozone with good results, until the FDA (Federal Disaster Agency) invaded his office, took all his patient information, and his ozone machines, resulting in patients dying from cancer.
The way ozone kills unhealthy cells, and not healthy ones is through enzymes. All healthy cells have three enzymes that protect them from being oxidized. All healthy cells love oxygen and require it to operate properly. Every cell is really a oxygen

burning machine. All unhealthy cells don't have these enzymes to protect them from being oxidized. This makes ALL unhealthy cells, including ALL cancers defenseless to ozone. Actually cancer is very easy to kill if you can get enough ozone to the tumor. Cancer cells also loose their ability to process oxygen properly, and start processing sugar instead. This is why cancer patients shouldn't eat sugar. So it is the lack of oxygen, toxins, and lack of proper nutrition that is the cause of ALL cancers.
The way ozone kills all virus, bacteria, molds, fungus, and cancer is they are all organisms that live in low oxygen environments. All of these except cancer lived on Earth before there was oxygen. They all thrived openly everywhere until oxygen thrived on Earth. Then they had to find places to hide like in dirt, plants, animals, decaying organic materials, and places in people that are low oxygen environments.
Ozone is a great penetrate also. I live in Washington State and had mold growing on the outside of my house. When I got my ozone generator, the mold was killed within a few months on the OUTSIDE of my house. The ozone penetrated paint, sheetrock, insulation, and wood to kill the mold from the inside of my house. Ozone is used by many companies to cure "Sick House" syndrome. (Where mold or fungus invades the walls of houses.)
Now the way ozone cures cancer is the same way it kills the above-mentioned organisms. It was proven in the 40's by Otto Warburg that cancer sets in when the amount of oxygen normally in the body lowers by 40%, and the cells start using sugar for power instead of oxygen. Think about this, have you ever heard of heart cancer? It doesn't exist. There is cancer in places around the heart, but not actually in the heart. Oxygen is delivered straight to the heart from the lungs. Cancer is a lower life form like virus, bacteria, etc. Cancer loves sugar, and can't use oxygen anymore, and doesn't have the enzymes to protect them from oxidation. So cancer can be killed by ozone.
I know this all may sound confusing, or too simple to be true, but there are numerous studies proving this. Just add some common sense in and it all makes sense. This is why we decided to try it when my wife HAD 18 tumors through out her body and the doctors said there was nothing they could do, so go home and die. That was 4 years ago. DON'T LISTEN TO CONVENTIONAL DOCTORS! They do what the FDA, AMA, EPA tell them to, because they don't want to loose their high paying jobs.

Ingredients:
Ozone (O3) is just oxygen (O2), the air we breath, with an extra molecule of oxygen added. Several ozonides, peroxides and aldehydes are formed during ozone therapy. All are effective in fighting cancer and any disease. A recent study on Vitamin C http://www.dailymail.co.uk/pages/live/arti...in_page_id=1798 proved "that the growth of cells exposed to vitamin C was reduced by at least 99 per cent. Why it killed cancer cells but not normal cells was unknown, said the researchers. It was possible the hydrogen peroxide caused damage that was repaired in normal cells but not in sensitive cancer cells." Hydrogen Peroxide is a ozone by product! One reason they didn't mention, and probably don't know about vitamin C, is Vitamin C tricks cancer cells into thinking it's sugar. The tumor sucks it up like it's sugar, and is killed from the inside out. So this is a

very effective combination with ozone. Ozone will kill the tumor from the outside in, and Vitamin C will kill it from the inside out.
There is one thing everyone should know about ozone. There are basically two kinds of ozone. There is medical grade ozone and non-medical grade ozone. Ozone made from pure oxygen, and ozone made from the air we breath respectively. Since the air we breathe is mostly nitrogen, and has pollution in it, ozone made from this will contain nitrous oxide along with other toxins. Nitrous oxide and these other toxins aren't good for the body. So if you're really serious about curing, or have a serious disease, then you should get a medical grade ozone generator. A medical grade generator will produce MUCH more purer, and effective ozone. It uses an oxygen tank to make ozone. My wife cured her cancer using a non-medical grade generator the first time she had cancer, so any ozone is better than no ozone, but medical grade is a lot better.

Effectiveness:
Ozone is very effective alone or in combination with other therapies, conventional, or alternative. Ozone is electrified oxygen, and there's no disease that more oxygen won't produce better results in.

Studies:
This is a general summary of the studies on ozone therapy. There are MANY doctors in Germany and other countries in Europe, Russia, and Cuba, that are treating patients that haven't done studies. These countries are more forward in treating disease, and don't have the FDA controlling how doctors heal. So this is only published studies that I can find. There are many studies in Russia and other countries that haven't been published in PubMed. I would also like to say there are several studies showing ozone can eliminate chemo resistant cancer too.

Clinical Studies:
Total Clinical Studies: 143

20 on cardiovascular diseases. 30 on Surgery and wound healing. 15 on eye disease. 15 on skin disease. 20 on Orthopedic bone and joint disorders. 20 on cancer. 13 on digestive disease. 25 on Dentistry and mouth disease. 15 on viral disease. 5 studies on Ear and tracheal disease. 5 on liver disease. 2 on Hematological disease. 5 on Gynecology. 5 on blood and tissue. 1 on hormones. 3 on the immune system. 5 on Dementia and Parkinson's disease. 3 on Asthma. 1 on Diabetes. 1 on Fibromyalgia. 7 on burns. 2 on Sepsis. 3 on various pathologies. About 15 on various other clinical studies. 3 on Veterinary. 4 using what is called Vasogen's immune modulation therapy, which includes only about 10 cc of blood ozonization and exposure to heat and UV-light.

Quantity of Papers:
There are VERY good papers showing ozone is effective against disease, and cancer. Such organizations as the Florida Medical Association, the Library of Congress, the US Surgeon General's, the head of the Dept. of Physiologic Therapeutics at Loyola University, Chicago, President of the Chicago Hospital College of Medicine, the American Medical Association, the American Naturopathic Association, the Encyclopedia of Chemical Technology, the Dept of obstetrics and Gynecology, the Washington University School of Medicine, the St Louis Air Pollution Control, Science Magazine, Jefferson Medical College in Philadelphia, the National Inst. For Scientific Research (Cuban FDA), the German Cancer Journal, Supply and Services Dept. (The Science and Technology section of the Canadian Government's)

Conclusiveness of Papers:
A few papers show total elimination of tumors. Several show reduction in tumors. Several show ozone is good in combination with conventional treatments. Something about ozone in studies, is either they don't apply it in high enough frequencies, or long enough time in each application, or in high enough concentrations like you can do at home. Also some doctors have been shut down with threats (from the FDA and AMA) of losing their license if they continue. So there would be more evidence if not for these factors.

Standalone Ability:
Ozone has great standalone ability. Some studies done, didn't include any combinations of other treatments. Some are in combination with conventional treatments like chemo.
Personally I believe any alternative treatment should include juicing and raw foods, since all disease is caused by deficiency (in nutrition) and toxicity. (from manmade products) I also believe Vitamin C IV's are also the perfect combination to ozone. Killing the tumor from the inside out with Vitamin C, and outside in with Ozone. Combinations with other treatments are not required at all, as long as you get enough ozone to the problem area.

Ease of Use and Protocols:
There are many ways to use ozone, as one expert says, any way is ok. There are some ways that are better for certain diseases than other ways. It's usually relatively easy to use. Most applications require a ½ hour at the most. Some require going to a doctor. The most common application, ozonated water, only takes 15-20 minutes of ozonating water and drinking it.
I'm just going to list the more common ways it's applied, with a brief description. There are other ways to apply it, but they are still in the same categories as the ones listed below.

The methods can be grouped into five categories:

1. Injection - Autohemotherapy - withdrawing 50-500 cc of blood into a container, injecting ozone into it, shaking it up to mix the two, and then infusing it back into the patient over 20 - 30 minutes as an IV drip. Direct Injection – injecting ozone into a vein, artery, muscle, joint, or tumor. There is also what is called RHP Therapy that larger amounts of blood than 500cc's and puts in back in the body. This is probably the most effective way to use ozone for curing all kinds of diseases. You can see a picture of this therapy being done at http://www.ozoneuniversity.com/RHP.htm You can see the difference in the blood color with your own eyes.
2. Insufflation – Using a metal tube, or plastic adaptor for areas like ears, vagina, rectum, or urethra.
3. Inhalation – Breathing ozone that is bubbled through olive oil, or eucalyptus oil. You can also just turn on the generator on in the room and leaving it on while you're in there.

4. Ingestion - Ozonating water is putting ozone in a glass of water for 10-20 minutes, and drinking it.
5. Transdermal – Bagging is closing off an area of the body with a plastic bag, and applying ozone to that area. Body Suit is a suit that covers the whole body, so ozone can be applied to the whole body. Ozonated Olive Oil is applying ozone to olive oil for about two weeks, and applying it oil to areas on the skin. Using a funnel connected to the output of the ozone generator, and covering an area of the body. Steam Sauna is a container you can sit in with the head outside of it, with steam and ozone applied to the rest of the body. All of these applications are usually for 15-30 minutes.

Prevention:
Ozone is great at preventing cancer, since cancer happens when the oxygen level in cells is lowered by 40%. Ozone will keep this from ever happening, as long as you drink 1 glass of ozonated water daily. It's easy and cheap. 15-20 minutes, and only a few cents at the most to make.

Side Effects:
First of all I'd like to say ozone has been used in Europe for about 50 years, and in other countries like Russia, and Cuba for years now. A 1982 German study of 384,775 patients (5,779,238 applications) documented only a 0.000005% rate of adverse side effects. This is the standard for 0%. This is MUCH, MUCH, safer than ANY drug. Several thousand people die from aspirin each year in America each year, for example. There are some detox symptoms such as low-grade fever feeling, nausea, sore lungs, or a tired feeling when starting to use ozone. These symptoms usually subside within a few days, and are replaced with a feeling of well being & more energy.
Also there is the famous ozone rash. This happens to 80% of people who apply ozone to the ears. It can be very annoying, itchy, and will also ooze lymph fluid that contains toxins, out of the ears. A very few people can also get the rash, or a mild version when "funneling" the skin. The rash is actually a good thing though. This is the body eliminating toxins, and will go away when the toxins are gone, leaving fresh healthy skin. So all the "side effects" are really ozone doing it's job, eventually go away, and eventually will make you healthy again.

Compatibility:
Ozone is compatible with just about any treatment, even chemo or radiation. There have been studies showing ozone actually enhances the effects of chemo and radiation, so the patient requires less of them to kill cancer. (As was the case with my wife) Also ozone helps heal the bad effects of chemo and radiation too.
One conflict with ozone is taking drugs, supplements, or even food at the same time. Since ozone oxidizes just about anything, you shouldn't take ozone 1 hour before, or 1 hour after anything else, to be safest. It won't harm you if you do, but it will help eliminate the desired result of the other things you put in your body if you do. My family

has drank ozonated water MANY times right after dinner with no bad effects ever, but it's better to be on the safe side. "First do no harm."
Also don't use DMSO and ozone together; there have been reports of problems with this combination. There was nothing serious requiring hospitalization, but keep them 8 hours apart to be safe.

Years Available:
It was discovered by Schonbein in 1840. So it has been around longer than any drug, and doesn't cause any ill side effects, like ALL drugs do.

Cost per Month:
You can buy the least expensive generators for $120-$300 which are good for ozonating water. That is the total cost of operation for this type of generator.
If you are serious about be healthy again, you need a medical grade generator. These can range from $600-$1,800. These require an oxygen tank to make pure ozone, which costs about $75 for the tank, and about $15 to fill it each time. So it would cost about $700-$1,900 for total set up, and then about $7-8 a month.

Critical Information:
Ozone has great oxidative abilities, which can be a down fall when it comes to combining other things with it at the same time. Since it can oxidize just about anything, the rule of thumb is like with swimming. Take ozone an hour before, or an hour after anything else. For instance even when eating.
One other potential problem with ozone is getting it in your eyes. Although it doesn't damage your eyes, they will turn red, and burn a little for 2-3 days. Now this is in high concentrations, not in normal use. This is with medical grade ozone for instance when ozonating the face area. There are studies showing eye problems can be cured using ozonated water in the eyes. So it does no damage. The reason for the redness is because of a ph change in the eyes, which is good. It's just that ozone does it instantly that makes it turn red.
It's the same if you get a really concentrated breath of medical grade ozone to the lungs. It will instantly oxidize all the toxins in your lungs, and the natural reaction is coughing. In reality it's a good thing, but the symptoms seem to be bad. Again this is with medical grade ozone usually.
Also people may seem to be having a bad reaction when using ozone, like dizziness, faintness or maybe a flu like symptom. These are detox reactions. Some people may also feel energy. So as you can see the symptoms can vary greatly. The bottom line is if you keep it up, after maybe taking a day or two off, you will get through these symptoms, and be on your way to health again.

Testimonials:

Here are a few links for ozone testimonials for a verity of diseases or problems. You can find more by doing a search for 'ozone testimonials."

Email Forums:
Here are the best one's I've found, but there are more.
Here is Dr. Pressman's ozone group where you can ask him questions.
http://health.groups.yahoo.com/group/ozonetherapy/
Here is another good ozone group.
http://curezone.com/forums/f.asp?f=193&t=83079

Manufacturers:
There are MANY manufacturers of ozone generators. Too many to list. I'm going to list just the few I recommend. You can do a search for either "ozone generators", or "medical grade ozone generators", to find more.
1. The best medical grade generator on the market is from http://www.plasmafire.com It is made by Dr. Pressman, and cost $1,800. (beta model) It comes with all the equipment you need to apply it all the different ways.
2. Here is another medical grade generator. http://www.longevityresources.com/htdocs/o...ator-ext50.html
$895, but you have to buy the other things to apply the ozone.
3. Here's a non-medical grade generator for about $300, but does not make any Nitrous Oxide, which is good. http://www.justmagnotherapy.com/ozone-generator.html

Novusordo - February 15, 2009 08:31 PM (GMT)

read it all. been meaning to read about ozone for ages now. this Ozone would

definately give the miracle mineral solution a run for it's money. they are both oxidative treatments. At 600-1500 for an ozone machine, ouch. This MMS is alot cheaper but is not natural and no long term studies have been carried out about possible side effects.

Wolveshater - February 15, 2009 09:06 PM (GMT)

I'm doing the MMS, three weeks now, what is encredible is in the DVD and book Humble and the Dr. in Mexico mention that sore joints could get better, well prior to the MMS I had sore knees and assumed years of hiking running, horse backing, back packing, hunting, and hauling huge chunks of meat on my back, skiing snow machining, dirt biking, had ruined my knees, The last five years I was limited a bit on my outings, with a wait for the pain to lesson before going out again..since the MMS the knees do not hurt, even if I go hike or ski multiple days, I thought I would never be able to do that again. I'm only doing MMS twice a week, Two days twice a day. four drops each time... If I turn green I'll let ya know :)

Title: Jim Humble's MMS
Description: *Cure for malaria, AIDS, cancer...*

pivakl - December 29, 2010 02:42 AM (GMT)

Sodium chlorite (NaCl02) in the presence of vinegar, lime, lemon juice turns into ClO2, which supposedly has the power to accept five electrons, and is thus a powerful oxidant.

Jim Humble travelled to Africa, and South America curing malaria with one hundred percent success.

Here you can download his book for free:

mms cure

It's dirt cheap, you can make it at home yourself, it cures all sorts of things, which is no surprise, as all disease has a common denominator according to the theory of Dr. William F. Koch, and that is inhibition of normal cell function, because some toxic substances prevent electron exchanges in the cell, making cells unable to work aerobically, and for example developing cancer, which are cells living anaerobically.

Check into this

TheUnhivedMind - December 30, 2010 01:23 AM (GMT)

I still prefer the much safer Ozone

servant of truth - December 30, 2010 02:24 AM (GMT)

there was a maior attack on this in the front page of the main newspaper in New Zealand,experts were quoted saying how 'dangerous' it was to consume 'pool cleaner '

This attack was because MMS was starting to gain notice and was obviously helping

people, so they used their favourite weapon fear to stop that

Flood Your Body with Oxygen

Thursday, July 29, 2010 by: Paul Fassa
http://www.naturalnews.com/029306_oxygen_pathogens.html

The most overlooked solution to all manner of illness and disease is perhaps the simplest. All pathogens, viruses, and parasites are anaerobic. They thrive in the absence of oxygen, but cannot survive with an abundance of oxygen. Even cancer cells cannot exist in oxygen. They depend on fermenting glucose to survive and multiply.

The most common and effective therapy for oxygenating is ozone therapy, which was practiced in the USA from the late 19th Century through the 1940s. But since the 1940s the FDA has come down hard on ozone therapy in the USA, while much of Europe, Russia, Cuba, and Mexico use ozone therapy now and continue to prove its efficacy without side effects.

Ozone Therapy

So if oxygenating is so great, then why aren't emphysema patients able to walk out of their wheelchairs? The O2 oxygen supplied by those canisters helps people breathe, but doesn't create the process of internally manufacturing detoxifying enzymes. The O3 ozone has an unstable atom that breaks away as O1, which penetrates tissue and serum cells more rapidly than O2, initiates unique metabolic processes. Both healing and detoxification occur rapidly as a result.

Ozone therapy is currently used successfully in Germany, Spain, Russia, the Caribbean, Mexico, Cuba and other nations. The results are astounding, and there are no adverse effects. Ozone is normally administered as a liquid by IV or injection and simultaneously as a gas though a tube placed in the anus. Because of potential Herxheimer reactions ("healing crisis" from toxins released) that can discourage one

from continuing, full percentage dosages are not administered until the fourth session.

Then the next four sessions are for healing at full strength. A clinical evaluation is made after each series of four sessions, each of which takes no more than a half hour. The results are often dramatic. Most chronic diseases and cancers are cured completely in less time than most other alternative treatments take.

Ozone therapy is often used simply to improve health by intense detoxification, even for those who are not suffering from a particular disease. Of course, doctors were not taught this in medical schools. Those health practitioners who are interested have to receive special training at specialized facilities.

Hyperbaric oxygen therapy is often effective by placing the patient in a highly pressurized chamber of pure oxygen. This more expensive method requires specially trained personnel as well as special bulky equipment.

Oxygenating at Home

Non IV use ozone generators for home use are available for ozonating water and purifying air, even for absorbing ozone anally or vaginally. But the manufacturers of these devices are often harassed or shut down by the FDA.

Food grade H2O2 or hydrogen peroxide can be mixed with water and consumed as a method of oxygenating serum and tissue cells. Food grade means it's pure and without stabilizers, making it safe for consumption if properly diluted. The over the counter is H2O2 3.5% non-food grade. The 35% food grade H2O2 has to be properly diluted.

But handling 35% hydrogen peroxide is dangerous since it is so caustic if not properly diluted. It can burn. So now there are lower percentage and safer food grade hydrogen peroxides available, as low as 12%.

Since "Mr. Oxygen" McCabe's book Flood Your Body With Oxygen as well as his videos, audios, and live lecture tours, several "designer supplements" that create oxygen in the body have emerged for health conscious consumers. They are usually mixed in water and consumed without the hassle of ordering food grade H2O2 and diluting it properly for consumption.

FDA declares war on ozone generators; seizes inventory

Wednesday, June 09, 2010 by: David Gutierrez
http://www.naturalnews.com/028958_ozone_generators_FDA.html

Declaring ozone generators an unapproved and untested medical device, the FDA seized the inventory of a California manufacturer on January 29.

"The seized devices are potentially harmful to public health," said the agency's acting associate commissioner for regulatory affairs, Michael Chappell. "The agency will take action to protect the public from FDA-regulated products that are in violation of the law."

According to an FDA press release, Auburn, Calif. manufacturer Applied Ozone Systems has promoted its devices for the treatment of a variety of health conditions including cancer, AIDS, herpes and hepatitis. The use of ozone machines as medical devices has not received FDA approval, however, making it illegal for the company to market them for those uses.

"The FDA advises health care professionals and consumers to discontinue use of these devices," the FDA said.

The battle over the ozone generators began in October 2009, when the FDA applied for and received a warrant to inspect the Applied Ozone Systems factory, after the company's owner allegedly refused inspectors entry without one. Upon inspecting the facility, the FDA concluded that good manufacturing practices were not being used, and confirmed that they were being marketed without FDA approval. The agency sent a letter to the company on Dec. 21, asking it to voluntarily recall the products from the market. According to the FDA, Applied Ozone Systems never responded to this

request.

The raid was carried out by U.S. Marshals on behalf of the FDA, in conjunction with the California Department of Public Health, Food and Drug Branch. Marshals seized 77 ozone generators valued at a total of $75,900.

Ozone is classified as a respiratory pollutant, and due to its biocidal properties is also used as a disinfectant. The FDA claims that there is no evidence that ozone can be effective as a medical treatment, and expressed concern that patients undergoing ozone therapy might stop using more proven treatments.

The agency also expressed concern over "infection from potential contamination of the applicator or catheter."

View Full Version: Ozone and teeth

Title: Ozone and teeth

craig-oxley - June 7, 2010 04:21 PM (GMT)

Hello Anke,

I'll be writing an article about this, but the way I do it is to place the 1/4 inch hose from the ozone machine in my mouth (without an air stone attached) and add a second larger diameter plastic hose (3/8 or 1/2 inch diameter) as an outlet for the ozone gas going into my mouth. I close my lips around the two hoses. The second hose is about 4 feet long and I point it away from the body and laying on the floor. I only breathe through my nose and not through my mouth while applying the ozone/air mixture into my mouth (this is extremely important to remember, otherwise you're going to gag if you breathe ozone into your lungs). The ozone hose brings the ozone into the mouth (and teeth, gums, etc) and the outlet hose allows the gas to exit. I keep my mouth closed during this application and it allows ozone gas to flow through my mouth cavity and will penetrate my gums and teeth.

I usually allow the ozone application to run for 10-20 minutes.

You can also rinse your mouth with 3% hydrogen peroxide many times during the day to help kill tooth and gum infection. I keep the peroxide in my mouth as long as possible before I have to spit it out. You can also swish colloidal silver around your mouth for 5-10 minutes and then swallow it. The can do the same thing with powdered Vitamin C in a form called "Ascorbate" You can either buy Calcium Ascorbate or Sodium Ascorbate from the health food store and dissolve a 1/2 teaspoon in a warm glass of water and swish around your mouth for 5 - 10 minutes and then swallow.

Another idea is to use a toothpaste that has anti-infection additives. They sell a toothpaste that uses colloidal silver or homeopathic silver. One brand is "SilvaFresh" by TriMedica www.trimedica.com (Tempe, Arizona)

I also use "Zinc Plus" by Vita-Myr www.vitamyr.com (toothpaste info courtesy of Luke Gatto)

If you have a Function Generator, you can set the frequencies to known teeth and gum infection agents published in Dr. Hulda Clark's books (and on my web site at http://educate-yourself.org/hc/huldaclarkt...s02nov05.shtml) and frequency zap your mouth using copper pipe electrodes wrapped with a single layer of wet paper towel (as explained in Hulda's books).

Another idea is to use the North pole of a permanent magnet (not too big or powerful), taped against your cheek where you have the gum or tooth infection. Leave the magnet in place for 20 minutes to one hour and then remove for six hours and repeat the procedure. . The North pole of a magnet will reduce growth activity of all cells, including bacteria cells. It's quite AMAZING how well simple magnets work to knock down infections You don't usually need powerful magnets and you shouldn't leave them in place for too long or you may have an opposite effect from that which was desired.

A small red laser pointer, sometimes called a Cold Laser, can do wonders to stop gum infection and tooth decay. I shine my small red laser pointer around all my teeth and gums for 5 or 6 minutes, two or three times a day. .

It's not hard to kill teeth and gum infection if you apply the above techniques.

Root canal is a separate problem. If this is infected, the ozone may or may not get to it. You have to try for a while and see what you get. Hulda recommends removing all root canals as they are an unending source of infective agents leeching into the body (including the brain and organ systems) Read the book called Tooth Truth by Dr Frank Jerome. It's the best book in print on explaining why you can't use any metals in the mouth and why root canals and teeth implants are bad news. You can order the book directly from Dr Jerome's office by calling 1-812-376-8525 , Monday - Friday 8am - 5pm Central time USA.

More information on Tooth Truth is posted below.

Regards, Ken

View Full Version: anti Cancer protocol with MMS

Title: anti Cancer protocol with MMS

craig-oxley - March 11, 2010 09:56 AM (GMT)

I am 45 and have a 7 year old son
Both my sisters got breast cancer in the last 10 years so I had about 3 mammograms over a few years. In July 06 I discovered some lumps in my right breast and went to the hospital for a check up.
They said these were benign but discovered lobular (scattered cells without tumours) breast cancer in the left breast. I had a lumpectomy but refused radiotherapy or chemo and immediately saw a nutritionist and began the detoxification process.
I was familiar with Dr Hulda Regehr Clark books so began daily enemas, kidney cleansing and did a liver flush and took all the chemicals out of my house and gave up wheat, dairy and sugar and tried to make my body as alkaline as possible,
.
In September I was told that the cancer was still spreading and the lumpectomy had failed so I must have double mastectomy and chemo. I refused and they decided to try another lumpectomy which I did. Both times I had 4x5cm of tissue removed.

I then went on a healing course and met a lady who recommended a medical intuitive to me. I started on his programme in October 06. This was massive doses of supplements mainly vitamins and meditation and a strict nutritional programme – no wheat, dairy, yeast, sugar, vinegar, pork, seafood and citrus fruit etc. I also had bio resonance every few weeks. I found out that I was suffering from CFS, adrenal stress, parasites, Candida, metal toxicity from my teeth, cadmium, thyroid imbalance, sugar imbalance, radiation from excessive mobile use, geopathic stress in my house and all my organs were affected liver, spleen, kidneys, bladder and gall bladder.

Six months later the cancer was gone. However two months before this I decided to have a dental implant that got infected and 3 weeks later I had a 5cm mass along my breast scar. The hospital said it was a tumour. By October 07 it has grown to nearly 8cm and my prognosis was near death. This must have signalled to my unconscious brain and the cancer returned. In December I was told about MMS so started on 3 drops twice a day and just kept increasing the dose so by January I was on 75 drops

per day. I had all sorts of sickness and diarrhoea frequently. Most significantly on 20th December I took 12 drops on an empty stomach in the afternoon and by dinner time was feeling quite rough. The Diarrhoea started and I went to the loo frequently for about 4 hours and I was sick a couple of times, as if my whole system emptied out.

Just after this my medical intuitive said my pathogens were at 60% and my cancer was decreasing and was at 18%, he also said he had linked into Jim Humble, who at 75 didn't have any pathogens. He also said his neighbour had cured himself of hepatitis in a couple of months, so I persevered. I had numerous days where I had to lie down for 4-5 hours because I felt so ill but I knew that the nausea was a good sign.
On 16th January I had dinner and took 16 drops and soon after that I had what seemed like dysentery I went to the loo about 11 times and every time yellow liquid poured out until the 11th time it sort of petered out and my bowels were empty. I had diarrhoea often in the morning but it was manageable.

23rd Jan my pathogens were down to 18% and cancer was at 3%. I dropped the doses down to 3x20 per day. Then I read Jim Humble part two in Feb so started taking last thing at night as well. By mid February I couldn't bear to drink it much more so just went down to 3x8 drops and my at next reading on 20th February my cancer and all pathogens were zero. The lump in my left breast is disintegrating and now down to 3cm. With MMS I have successfully eliminated babesia which I had had for 22 years and was apparently 80% responsible for all my health problems and trichomonas and herpes zoster and Candida.

My medical intuitive rates health 1- 10, 10 being death and a new born baby being 1. I was 7.5 and now I'm 1.9.

In 07 I must have spent over £30k on curing cancer and in two months with MMS spent £40 and got to almost perfect health.

DECIDE YOURSELF, AND DO NOT ASSOCIATE mms ONLY TO THIS. THIS PRODUCT IS NOT LIKE ANYTHING ELSE.

WWW.MINERALSUPPLEMENT.BLOGSPOT.COM

craig-oxley - March 11, 2010 09:57 AM (GMT)

Update.

lady with the breast cancer, her husband called ma again to update me with more details.

Before she started taking the MMS her doctor told her that the cancer will spread from

her breasts to her liver and then to her brain. she would only live for another 6 to 8 weeks.

before taking the MMS the tumors in her breasts were 5cm and the other was 3cm.

now after 2 months of taking the MMS she went for her scan and the tumors have reduced, the 5cm to 2cm and 3cm to 1.6 cm.

this woman is another life saved by using MMS.....dont believe anything here, just get it and use it. you can save your own life or that of a loved one.....

View Full Version: Ozone and TCM protect the liver

Title: Ozone and TCM protect the liver

craig-oxley - February 23, 2010 07:13 PM (GMT)

World J Gastroenterol. 2007 Dec 7;13(45):5989-94.
Protective effects of medical ozone combined with traditional Chinese medicine against chemically-induced hepatic injury in dogs.

Li LJ, Yang YG, Zhang ZL, Nie SF, Li Z, Li F, Hua HY, Hu YJ, Zhang HS, Guo YB.

No. 425 Central Hospital of PLA, Sanya 572008, Hainan Province, China.

AIM: To investigate the protective effect of medical ozone (O(3)) combined with Traditional Chinese Medicine (TCM) Yigan Fuzheng Paidu Capsules (YC) against carbon tetrachloride (CCl(4))-induced hepatic injury in dogs. METHODS: Thirty healthy dogs were divided randomly into five groups (n = 6 in each group), namely control, oleanolic acid tablet (OAT), O(3), YC and O(3) + YC, given either no particular pre-treatment, oral OAT, medical ozone rectal insulfflation every other day, oral YC, or oral YC plus medical ozone rectal insulfflation every other day, respectively, for 30 consecutive days. After pre-treatment, acute hepatic injury was induced in all dogs with a single-dose intraperitoneal injection of CCl(4). General condition and survival time were recorded. The biochemical and hematological indexes of alanine aminotransferase (ALT), aspartate aminotransferase/alanine aminotransferase (AST/ALT), serum total bilirubin (TBIL), prothrombin time (PT), blood ammonia (AMMO), and blood urea nitrogen (BUN) were measured after CCl(4) injection. Hepatic pathological changes were also observed. RESULTS: Compared to the other four groups, the changes of group O(3) + YC dogs' general conditions (motoricity, mental state, eating, urination and defecation) could be better controlled. In group O(3) + YC the survival rates were higher ($P < 0.05$ vs group control). AST/ALT values were kept within a normal level in group O(3) + YC. Hepatic histopathology showed that hepatic injury in group O(3) + YC was less serious than those in the other four groups. CONCLUSION: Medical ozone combined with TCM YC could exert a protective effect on acute liver injury induced by CCl(4).

View Full Version: The FDA Continues to Suppress Ozone Therapy

Title: The FDA Continues to Suppress Ozone Therapy
Description: *Despite Proven Efficacy*

craig-oxley - February 19, 2010 12:42 PM (GMT)

The FDA Continues to Suppress Ozone Therapy Despite Proven Efficacy

Friday, February 19, 2010 by: Paul Fassa
http://www.naturalnews.com/028201_ozone_therapy_FDA.html

In January 2010, the FDA sent U.S. Marshals into Auburn, California to raid manufacturer Applied Ozone Systems and seize their ozone generators. The FDA press release asserted all kinds of ridiculous reasons for this particular raid, citing poor manufacturing procedures and the generators' potential for spreading infections, among others. What the press release ignores is the existence of FDA's ban of ozone therapy in the USA since the 1940s even after 60 years of prior successful ozone therapy in America. The FDA also ignores the fact that ozone therapy is currently used safely, effectively, and openly in Germany, Russia, and Cuba. Evidently, America's Medical Mafia is not fond of ozone therapy's proven efficacy for a wide range of diseases, including cancer and AIDS.

What Is Ozone Therapy?

In her September 2009 Health Freedom News article "The Miracle of Ozone Therapy", London based homeopathist Louise McClean asserts, "Ozone is probably one of the most miraculous healing therapies available on our planet at this time. Through its oxygenating power, it successfully treats and cures a wide range of serious degenerative conditions including cancer, cardio-vascular disease, diabetes, liver, and kidney disease".

Ozone or O3 is a highly charged oxygen molecule with increased oxygenating properties. It is often administered intravenously, or by injection, though it can be vaporized and inhaled or taken in through anal and vaginal openings. There is some

use of ozone by U.S. dentists and medical doctors to prevent infections during surgical procedures, but the FDA taboo for curing with ozone remains.

Ed McCabe (Mr. Oxygen), ozone therapy advocate and author of Flood Your Body With Oxygen, explains that oxygen is the most important nutrient for our bodies, while virtually all pathogens are anaerobic and will not survive in a heavily oxygenated environment. Biochemist Otto Warburg was granted the Nobel Prize decades ago for discovering that anaerobic cancer cells die in oxygen.

Some History of Ozone Therapy

In Germany, ozone therapy has been widely used since 1959. There have been 10,000 German doctors using ozone therapy for close to 10 million patients for various diseases with a 90 percent cure rate and virtually no side effects. Yet the FDA disregards this as "anecdotal evidence", while the pharmaceuticals with "scientific evidence" kill many and cure few.

Russia claims 40 years of successful ozone therapy, especially for tuberculosis. A medical report from Russia claims that those who are cured do not have a reoccurrence. Cuba authorized ozone therapy in 1986 and uses it in all its hospitals. So if you can get to Cuba, you may get a good deal! But there are ozone clinics in Mexico and other parts of the Caribbean as well.

In the 1960's, Robert Atkins, MD of Atkins Diet fame, temporarily lost his license after it was discovered he had cured, repeat cured, a woman's breast cancer by injecting the tumor with O3. He used his NYC weekly radio show to announce exactly what had happened. The resultant public outcry forced the NY State Medical Board to reinstate his license, but with Atkins' agreement to quit using or publicizing ozone therapy.

The FDA suppresses ozone therapy in every way possible. Prior to the 1940's, it was commonly used in the USA. The first USA ozone generator was created in 1896. Successful ozone therapy in America dates back to that time, before the FDA was created. Ed McCabe considers this fact sufficient to legally grandfather ozone therapy's use in America today. Unfortunately, the Medical Mafia doesn't see it that way.

Description: *[IMPORTANT CRAIG OXLEY COMMENTS!!]*

craig-oxley - November 12, 2009 01:10 PM (GMT)

I disagree with Jim about Ozone, its safety has an excellent record. I would not be without my 600mg/hr Ozone machine I have. Ozone has saved my life a few times now already. Jim's product is good for remote areas and when the power is out and you cannot switch on an Ozone machine. I have no idea how corrosive his product is compared with Hydrogen Peroxide, hopefully its safer to handle than the later. Both these two are good for power outs and remote regions like in Africa of course. I'd always stick with Ozone personally and I know I can throw Ozone in my eyes, can you with MMS or Hydrogen Peroxide? I doubt it. At the end of the day nature created Ozone whilst the other two are mans chemical tamperings. Ozone is merely made in nature and by passing a high voltage output within ambient or pure oxygen. Your choice but study the work of Ed McCabe's book, 'Flood Your Body With Oxygen' before you make the choice. Also ask yourself something very important here. If Jim Humble was as much a threat to the Knight of Malta controlled Medical Mafia as it seems then why the hell is he being allowed to treat people and spread this information across Africa? Just look at the amount of Ozone doctors assassinated, jailed and suppressed. Of course Jim may claim he's small fry in comparison but this is nonsense. I'd never seen any publicity of these poor Ozone doctors who're now in a wooden box did you? Where as Humble is all over the internet and all over Africa, right as rain. Use your common sense. Ozone is the king of this type of healing and forever will be. Another thing about Ozone is its very simple, switch the machine on and bubble in water and thats it unless its a Polyatomic Apheresis machine of course. In todays society the people have no idea what their doing due to their dumbed down brains. They literally cannot follow simple instructions on how many drops of one to another chemical. So would you trust them making up chemical reactions for the body? This is why I don't like pushing Hydrogen Peroxide to much as it needs to be 35% food grade but then diluted down to either a 3% or 6%. The people of today will mostly make a pigs ear of it and hurt themselves. They cannot even follow a simple Liver Flush without problems and a multitude of questions. Also why is Jim talking about 'anti-oxidants' for? If they were anti-

oxidants then you'd die if you swallowed all those supplements etc using this silly claim. Their simply free electrons and nothing more. They should be termed correctly as 'Free Radical Scavengers'. ***-Craig***

MMS1 and MMS2 Vs. Ozone and Hydrogen Peroxide

by Jim Humble, Sept 26, 2009
http://jimhumble.biz/biz-ozonecontrast.htm

These four chemicals are all oxidizers. MMS1, MMS2, Ozone, and Hydrogen Peroxide. They all kill pathogens by oxidation.

Ozone and hydrogen peroxide have been used for years in the human body to kill many diseases. They even oxidize heavy metals to some extent. Many lives have been saved and much suffering has been overcome using these two oxidizers mostly by intravenous injection.

Ozone is the most powerful oxidizer known and Hydrogen Peroxide is a close second. In the healing field they both have been very useful as they both can kill any known pathogen. The problem lies in that these two oxidizers are so strong that they not only kill the germs, but they can damage many other things. Of course, the amount of damage is often determined by the amount of chemical in solution. But it doesn't now matter how weak the ozone or hydrogen peroxide is, it can still oxidize things in your body that you may not want to oxidize - not even in small amounts.

So that is the major disadvantage of these chemicals, and it's the reason people buy antioxidant pills and capsules. You don't want free oxygen adrift in muscles and flesh. The only safe oxygen is carried in red blood cells. Otherwise free oxygen can damage things you don't want to damage even though a doctor might use oxygen therapies to remove bad things.

When oxygen is used in the human body it can damage good body cells as well as kill pathogens that are present. In addition, oxygen and ozone is so powerful that they get used up quickly. And being used up quickly, they cannot penetrate deeply into tissues where many pathogens hide. They never get to important places because they are used up before they reach the pathogens that one is attempting to kill. So, before oxygen ever penetrates to reach bad things, it gets used up killing good things along the way.
An MMS Training session
This is not to say that they haven't been useful in treating some diseases that nothing else can destroy, but they do cause a certain amount of damage on the way. There are many diseases that simply hide deep enough in the tissues that they cannot be reached with these oxidizers. One example would be HIV and AIDS. These oxidizers simply

cannot kill HIV or AIDS as they cannot penetrate deep enough into the tissues of the body to reach the hiding places of these diseases. However, there have been some instances where enough disease germs were killed that the victim had a few months to a few years of breathing room before the disease again took over.

Hydrogen Peroxide was once sold from the shelves of almost all health food stores in America, but it was then found out that it was creating a number of health problems when it was used. It not only killed pathogens, but it killed many beneficial bacteria as well. The ones that it killed left special room for pathogens to grow or re-grow.

I personally used Hydrogen Peroxide for brushing my teeth - as the label says you can do. Did it every day, but I developed a terrible taste in my mouth that also smelled pretty bad. I finally stopped using Hydrogen Peroxide and the health of my mouth returned and some health food stores stopped offering it for sale as it became evident that it was doing more harm than good. As time passed a few health food stores began to offer it for sale again, but they risk being sued as the data concerning the problems of Hydrogen Peroxide are known and are visible on the Internet.

There are now quite a number of proponents of Ozone and many of hydrogen peroxide as well. They continue to push these two oxidizers as being the best thing possible or the only thing possible to cure a number of diseases. I personally wouldn’t want to suggest that it is not true. They are not the only thing possible anymore, as now MMS1 and MMS2 is in use by over a million people each day. With Ozone and hydrogen peroxide the use of intravenous injection is not a simple matter to most of the world. It takes equipment and special knowledge and the fact is the general public is never going to be able to self administer intravenous injection. In addition to that, one still has all those problems that I mention above.

Enter MMS1 and MMS2.

MMS1 generates chlorine dioxide, a very special oxidizer that is not powerful at all. It is a weak oxidizer, but powerful in a different way. It doesn’t have the oxidization potential required to oxidize most materials. Just about the only living thing that it can oxidize is pathogens. There are many non living things that it can oxidize, but not normal living cells. When I say it is powerful in a different way, the fact is that it has a much greater capacity than Ozone or Hydrogen peroxide for pathogens while at the same time not being able to oxidize hundreds of things that these other oxidizers can oxidize.

MMS1 penetrates deeply into the tissues of the body while not being used up on the way to the target. It simply cannot oxidize any of the living cells of the human body. MMS1 (chlorine dioxide) is one of the two important chemicals that the human immune system generates naturally to kill disease pathogens and other items in the body that need to be destroyed. MMS2 is the other important chemical that the immune system generates. Isn’t it funny that the two miracle minerals that are hundreds of times more

effective than any drug are actually chemicals that the human body has been using for hundreds of thousands of years?

But I think the thing that is the most hard to understand is that modern medicine never discovered this in their billions of dollars of research. In addition, hundreds of thousands of people have already proven that MMS1 and MMS2 can be effectively self administered. This allows for MMS1 and MMS2 to be used throughout the world in thousands of places where it would be impossible to use Ozone.

MMS2 is a special weak acid that the human immune system generates naturally to kill hundreds of different pathogens and other things in the body that need killing. The name of this acid is hypochlorous acid and it is a natural acid made in small quantities within the body. Although it is available naturally, evidently the body cannot generate enough of it to handle powerful diseases under certain conditions. When MMS2 is taken it immediately turns to hypochlorous acid and in most cases the disease is killed in just a few hours or several days.

MMS2 generates hypochlorous acid, a very special acid that the immune system learned to use hundreds of thousands of years ago. This acid releases nascent oxygen when the special proteins of pathogens are present including viruses and most other microorganisms. This acid works using a special mechanism that neither ozone nor hydrogen peroxide can match. The acid itself is not an oxidizer, but it is considered an oxidizer because it releases nascent oxygen in the presence of some proteins. Thus hypochlorous acid can penetrate deeply into the tissues before it encounters the proteins of the pathogens and then releases the powerful nascent oxygen. The body chose well when it began to use hypochlorous acid as no pathogen has ever developed a resistance to it in a hundred thousand years.

The various diseases can hide deep in the tissues of the body, but the hypochlorous acid is a liquid that slowly penetrates deeper and deeper into the tissues until it is flowing as deeply as the disease pathogens. As a molecule of hypochlorous acid recognizes the protein in a pathogen molecule it instantly releases its oxygen molecule and it changes to an ion of table salt and a hydrogen ion that becomes part of the water. No new compounds are created and nothing is left behind but a molecule of salt. There is nothing to create side effects.

Of course, the nascent oxygen destroys the pathogen and becomes discharged oxygen that becomes carbon dioxide to be breathed out on the next breath outwards.

So you see, MMS1 and MMS2 are miracle minerals that are far beyond ozone and hydrogen peroxide and any other known oxidizers. Both of these chemicals have saved thousands of lives and the two working together will probably cure any disease known. At least they will kill any disease that is caused by pathogens and I do not know of a disease that is not caused by pathogens one way or the other. MMS1 and MMS2 will

kill many diseases that ozone and hydrogen peroxide cannot touch and they will kill every disease that these oxidizers are now being used to kill.

Ozone and hydrogen peroxide should be retired as they are no longer required. Sorry, but I have treated more than 5,000 people and some of these were being treated with ozone or hydrogen peroxide at the time. I always suggested that they stop the ozone or hydrogen peroxide treatments and use MMS - which always worked quickly. Both MMS1 and MMS2 are many times more effective and much faster. MMS1 and MMS2 chemistry theory is much better, it is much easier to use, and thousands of lives now prove the point.

Please check the actual facts before you continue with ozone or hydrogen peroxide. Normally, intravenous MMS treatment is not required, but it can be used in special cases. Normally just drinking a few doses will cure most minor things. And the HIV protocol will cure most any incurable disease. That is simply giving a victim of most disease 3 drops of activated MMS1 each hour for 8 to 10 hours a day for 3 weeks. Many patients can treat themselves but some require special treatment.

When something is really bad, like the patient is about to die of cancer then add MMS2 every 2 hours . I have personally seen a number of cases just come right out of different incurable diseases and go back to work. That is, they went from about to die, to back to work in from two to three weeks.

See various MMS protocols at my site http://JimHumble.biz/ .

Extensive MMS information has been collected at http://MMS-education.com/ .

Jim Humble writing from Africa, September, 2009

Ozone: Its purpose and use in Alternative Medicine

SHORTENED ARTICLE BY NUTRITIONIST CHRISTINE DOYLE, UK

Ozone is a natural gas that we breathe daily. It is created when oxygen (O_2) molecules are split into two separate atoms by ultra violet radiation from the sun, lightning, and electric arc. The freed atoms recombine in 3-atom groups to form cousins of oxygen: ozone (O_3). The word ozone comes from the Greek word ozein meaning smell, because of its distinctive sun-ray lamp smell. Ozone is nature's way of cleaning pollution from our atmosphere.

HOW DOES OZONE WORK?

Ozone tends to react with other substances by attaching the third oxygen atom to the other substance, thereby oxidizing it. Many of us have heard weather reports where the ozone levels were referred to in conjunction with pollution levels. Ozone is present in smog because certain processes that create pollution also produce ozone. Ozone recombines with those same pollutants and neutralizes them by breaking them down into water, carbon dioxide, sulphur, nitrogen and oxygen. The highest natural levels of ozone are found at the seashore and in forest/mountain locations, places where you automatically feel refreshed. The invigorating air after a thunderstorm is as a result of ozone, so is the smell of naturally dried laundry on a clothesline. High mountain areas produce high levels of ozone. This is why people with respiratory problems, TB etc. were sent to such areas.

THE HISTORY OF OZONE THERAPY

Over 1,000 scientific papers have been written about ozone and its benefits. The first ozone generators were developed by Werner von Siemens in Germany in 1857. In 1870 ozone was used therapeutically to purify blood by C. Lender in Germany. In 1885 The Florida Medical Association published 'Ozone' by Dr. Charles J. Kenworth, MD, detailing the use of ozone for therapeutic purposes. In 1896 Nikola Tesla patented his first ozone generator and went on to form a company selling ozone machines to doctors. Tesla also made ozonated olive oil and sold it to naturopaths, just as we do today. Some of Tesla's generators are still working today. In 1902 J. H. Clark published a Dictionary of Practical Materia Medica and described the successful use of ozonating water to treat anemia, diabetes, influenza, morphine poisoning, canker sores, strychnine poisoning, and whooping cough. Just a few years later ozone was used to treat Tuberculosis, anemia, tinnitus, asthma, bronchitis, hay fever, pneumonia, gout and syphilis. In World War I ozone was used to treat gangrene, the effects of poison gas and wounds. In 1915 Dr. A. Wolff used it to treat colon cancer and cervical cancer. But one man we may have all heard of is Dr. Otto Warburg of the Kaiser Institute in Berlin. In 1926 he announced that the cause of cancer is a lack of oxygen at the cellular level. He went on to become the only man to receive two Nobel Prizes for Medicine and be nominated for a third. So ozone has quite a history and is well established as a successful therapy with over 7,000 German doctors using it daily and Russian doctors

even bubbling it into brine for use on burn victims.

USES OF OZONE

Perhaps you are a smoker or live with someone who smokes or maybe work with people who do. That is a worrying scenario as cigarette smoke has over 3,600 chemicals. Ozone will break those chemicals down into their basic molecular components, neutralizing them. It is capable of destroying tar, soot and oil in the lungs, benzene, vinyl chloride and other hydrocarbons. Having performed this task the ozone itself reverts to just plain oxygen! Dr. Clark regularly warns about the dangers of airborne gasses such as formaldehyde, carbon monoxide, and chemical pollutants given off by carpets, wallpaper, and furniture. When e.g. formaldehyde is infiltrated by ozone it breaks down into carbon dioxide, water and oxygen. Solvents from fresh paint are instantly neutralized by it. Well worth bearing in mind if you have pollutants in your house or workplace like these that you are not in a position to remove. Perfume can be intolerable for people suffering chemical insensitivities. An ozonator may be the answer.

Bacteria, molds, fungi and even mildew are destroyed when they react with ozone as the outer membranes or ‘shells’ of these micro-organisms contain receptors that absorb ozone to their own demise. They are anaerobic, meaning that they can thrive only where oxygen levels are depleted. Ozone increases oxygen levels. Viruses can also be destroyed by ozone on contact. Dr. Michael Carpendale wrote an article in Science magazine (Vol. 209 22 August 1980) and stated that the growth of human cancer cells from lung, breast and uterine cancers were selectively inhibited in a dose dependent manner by ozone at 0.3ppm to 0.8ppm in ambient air during 8 days of culture. Evidently the mechanisms for defense against ozone are impaired in human cancer cells. I do not believe that there is a disease or health condition that ozone hasn’t been used with, there is no way I could list all the conditions it is successful with, all the cancers, all the bacterial, parasitic diseases etc. Unsolicited testimonials are sited on the Internet and covering such a wide variety of conditions including one of silicon poisoning following leakage from a breast implant! In cleaning water, ozone is more efficient even than chlorine to kill bacteria, mold and fungus. Chlorine reacts with organic materials to form chloroform, carbon tetrachloride etc., that have been implicated as carcinogens in the development of kidney, bladder and colon cancer. However, ozone when used repeatedly and in conjunction with charcoal, reacts with organic materials to break them down into simpler compounds that are not dangerous. Ozone swimming pool cleaners are very popular because they also remove odor and taste. So cleaning the pool is not such a frequent or time-consuming job, chemicals are not required and the water is smelling good and clean. In cleaning the air, ozone reacts with odors oxidizing them into harmless compounds or carbon dioxide. It doesn’t merely mask harmful substances or smells – it seeks them out, eliminating cooking smells, animal odors, cigarette smoke, garbage smells etc. Ozone used for cleaning fruit and vegetables has an interesting side effect because ethylene given off by fruit accelerates the ripening process, however, ozone reacts with ethylene reducing rapid ripening and

thereby extending shelf life (grocers note!). Regular use of ozone in the home can ensure high levels of immunity from most common diseases. It is comforting to know that breathing the ozone bubbled through olive oil or water when using Dr. Clark's recipes is not only safe but beneficial. Some recommend this for respiratory diseases such as bronchitis, asthma etc. As ozone cleans up your body the immune system responds, arteries are cleaned, veins also, circulation improves with blood vessels unclogged, blood and lymph normalizes, inflammation reduces, bleeding stops, cardiac problems reduce as plaque is oxidized in arteries (such patients are often dependent upon oxygen tanks throughout the day), the brain and memory respond to the increases in oxygen produced, heavy metals are chelated, tumor metabolism is inhibited and the outer lipid layer of malignant cells is broken down and destroyed.

HOW DR. HULDA CLARK USES OZONE

Dr. Hulda Clark uses ozone therapy for different purposes in her therapy:
• To eliminate freon from the body, use 1 glass of ozonated water daily. Ozonate water for 5-7 minutes. Drink within 20 seconds of ozonating.
• To eliminate PCBs from the body, use ozonate olive oil. Ozonate oil for 30 minutes. Take 2 tbs. of ozonated olive oil 3 times daily for 2-3 weeks. PCBs are the fourth factor Dr. Clark has found that inhibits immunity in cancer patients (and other diseases, especially AIDS). It also makes zapping less effective.
• Much like frankincense oil, ozonated olive oil inhibits virus replication and is especially recommended for HIV vicims or other viral conditions.
• To kill Ascaris and certain tapeworms. Ascaris and dog tapeworms are especially hardy, and when they are killed with the regular herbal program, they decay and release more eggs and stages than the body can handle. Ozonated oil can penetrate their membranes and kill the eggs and stages on the inside before they open up. Take 3 tbs. of ozonated oil per day, for 3 weeks, together with 2 times 3 Cysteine capsules.
As with anything i.e. oxygen, water etc. too much can be harmful, yet no one has ever died from using ozone and it has been in use for many years. Only chronic high overdose may give problems and then there would be warning symptoms such as coughing for more than 30 minutes continuously. At such times Vitamin C (5,000mg) – an antagonist of ozone – can reverse the effect. The Food and Drug Administration declares 0.05ppm as the safe level for 24 hour a day inhalation in the USA. However, natural outdoor levels in certain ideal locations can reach 0.65ppm, so nature then breaks the FDA's rulings! Even at these higher rates no harm has been caused, in fact the opposite is the case.

Queens Raids Prompt Alert on Homemade Explosives

By William K. Rashbaum
September 15, 2009, 2:05 pm
http://cityroom.blogs.nytimes.com/2009/09/...ade-explosives/

An investigation that led to several raids in Queens on Monday prompted the Federation Bureau of Investigation and the Department of Homeland Security to issue a terrorism-related bulletin to law enforcement agencies around the country warning them to be vigilant about homemade explosives.

“In light of the ongoing investigation in New York City, the F.B.I. and D.H.S. believe it is prudent to remind our state and local partners about the variety of domestically available materials that could be used to create homemade explosives, which have been utilized in previous terrorist attacks,” according to the bulletin, which was headed “On-Going Terrorist Interest in Homemade Explosives.”

The bulletin said the two agencies have no specific information on the timing, location, or target of any planned attack.

It noted, however, that precursors chemicals used to form hydrogen-peroxide based explosives can be obtained at various retail outlets, including hardware stores and pharmacies, and that recipes for such explosives are taught in terrorist training camps, published in widely circulated terrorist manuals, and have been recovered from terrorist safe houses.

“Hydrogen-peroxide based explosives are powerful and highly unstable; furthermore, similarities in appearance and methods of production can cause first responders to

mistake certain explosives for chemicals used to manufacture narcotics," it said.

It added:

Homemade explosives can be concealed and transported by an individual using a backpack, suitcase, plastic container, or other hand-carried item. In the attacks that occurred in London on 7 July 2005, the suicide bombers carried their homemade hydrogen-peroxide based explosives in backpacks.

No arrests were made and no explosives or weapons were found in the raids, which were characterized as "preventative" by Senator Charles E. Schumer of New York.

Title: Why injecting oxygen into tumours 'can kill cancer
Description: *[+CRAIG'S COMMENTS]*

craig-oxley - August 2, 2009 02:45 PM (GMT)

Now folks they will be injecting ambient oxygen into these tumours. Notice how they make out their poison useless chemo is still needed? When you use Singlet Oxygen it will simply Oxidise away the tumour quick smart. This knowledge below is totally nothing new. Otto Warburg was the master behind this way back in 1924 a whole 85 years ago. Study Ozone, Hydrogen Peroxide and MMS. -Craig

Why injecting oxygen into tumours 'can kill cancer'

By Tamara Cohen
Last updated at 9:00 AM on 01st August 2009
http://www.dailymail.co.uk/health/article-...l#ixzz0MvLyW8Gu

Injecting oxygen into cancerous tumours significantly boosts the chances of recovery, a ground-breaking study has revealed.

Scientists at Oxford University found slightly increasing the supply strengthened blood vessels in cancer cells, making chemotherapy more effective.

Cells which are damaged and weak had a constricted oxygen supply and were less sensitive to radiotherapy treatments, in a series of experiments on mice.

Ground-breaking: Slightly increasing the oxygen supply could strengthen blood vessels in breast cancer cells like these

The team behind the breakthrough hailed it as an 'exciting' development which would allow drugs to 'soften up' tumours before they are targeted with strong treatments.

Scientists had previously tried to starve tumours of oxygen, believing a more stable

blood supply would only help the cancer spread.

Professor Gillies McKenna, director of the UK-MRC Gray Institute for Radiation Oncology & Biology, said: 'We are very excited to have uncovered this brand new approach to cancer treatment where the drugs prime the cancer cells for radiotherapy.

'You might expect that by increasing an oxygen supply to tumour cells you would help them grow. But actually by oxygenating the cell with a better blood supply we enable radiotherapy and chemotherapy to do a better job of killing them.'

The research is published today in the journal Cancer Today and includes tests on breast, head and neck cancers as well as carcinomas on the skin and major organs.

Scientists tested the effects of four drugs which are in clinical use or under development for cancer therapy.

The drugs were given to the mice at doses which did not alter tumour growth but the effects of the drugs acted to increase the blood supply to the tumours.

An early trial in human patients with pancreatic cancer, which is notoriously difficult to treat has also been positive, Professor McKenna said.

He added: 'Previous work by our group had shown that treatment with some of these types of drugs could improve radiotherapy, but it was not understood how. Now with the new understanding, strategies could be developed to use these drugs to ‘soften up’ tumour cells before treating them with radiotherapy.'

Dr Lesley Walker, Cancer Research UK’s director of cancer information, said: 'For a long time scientists have been looking for ways to boost the oxygen supply to tumours to improve response to treatment and make radiotherapy even more effective.

'We still need to do more work on this technique but boosting the effects of radiotherapy and chemotherapy are very exciting developments that hold real potential for use in patients.'

craig-oxley - August 2, 2009 02:45 PM (GMT)

Otto Warburg - Cancer and Oxygen

Here is the orginal conection between Cancer and Oxygen, that is poo pood by the mainstream as it runs amok to their agenda...

Chris Gupta

The Nobel Prize in Physiology or Medicine 1931

Presentation Speech by Professor E. Hammarsten, member of the Nobel Committee for Physiology or Medicine of the Royal Caroline Institute

Your Majesty, Your Royal Highnesses, Ladies and Gentlemen.

The discovery for which the Nobel Prize for Physiology or Medicine is to be awarded today concerns intracellular combustion: that fundamental vital process by which substances directly supplied to cells or stored in them are broken down into simpler components while using up oxygen. It is by this process that the energy required for other vital processes is made available to the cells in a form capable of immediate utilization.

Many famous names and many discoveries have been associated with research on this vital process, while, before natural philosophical thought was limited by the demands of accurate measurement, it was a fertile field for speculation. The life work of many savants finds a place in the volume of which Otto Warburg has written - for the time being - the last pages. The first were written by John Mayow in 1670, then less than 30 years of age, whose observations on the power of saltpetre to set fire to organic substances led him to the view that certain igneo-aer al particles existed in saltpetre, in the air, and also in organic substances. He inferred that the significance and function of respiration was to bring these particles into the body, and so make combustion therein possible. It is clear that Mayow's igneo-aerial particles correspond with oxygen, which had not yet been discovered. Some thirty years later the ill-famed phlogiston theory of combustion was born, and spread like an epidemic throughout the scientific world, causing the seeking for truth to be diverted from its proper course that had been opened by Mayow's discovery, which had, if one may use a somewhat dubious expression, been made before its time and had received little attention. Comprehension of the mechanism of combustion was thus, quite foolishly as it might seem, delayed for more than a century. Return to the proper path had to await the discovery by Lavoisier of the real nature of the process in connection with the final discovery and isolation of oxygen in the hands of Priestley and Scheele. Otto Warburg's work has met with a kinder fate.

As combustion of foodstuffs outside the body in the presence of atmospheric oxygen occurs only at high temperatures, it must be assumed that during combustion in living cells, something happens that alters the rather inert air-oxygen, or the foodstuff, or perhaps both so that they can react with each other. Fully conscious of the insuperable difficulties of explaining at present the innermost mechanism by which this inertness was overcome, Warburg decided to investigate the nature of the mysterious substance that acts as the primus motor in intracellular combustion. Nature often seems to use methods that appear to be indirect and less «natural» than those we should have devised, and such was the case here. It was not possible to isolate the active substance, the catalyst, or respiratory ferment as Warburg called it, by ordinary chemical methods, because it forms less than about a millionth of the weight of the cells to which it is firmly bound, while it is easily destroyed by procedures which might be used for liberating it. So, just as in modern atomic research, indirect methods had to be used.

It had been known, since the days of Davy and Berzelius, that many metals possess the power of initiating or accelerating various reactions, including combustion. Starting from the possibility that had indeed been envisaged earlier, Warburg assumed that intracellular combustion might also be regarded as being due to catalysis by metals, i.e. that it might be initiated by some metallic compound. Definite

proof that he was on the track of this well-hidden secret of Nature was obtained by the use of exact measurements of combustion in living cells or, as Warburg calls it, cell respiration. The quantitatively measured variations in the process of combustion under different conditions threw light on the nature of the respiratory ferment. Its tendency to enter into compounds with substances which combine with iron showed that it is itself an iron compound, and that its effects are due to iron. The correspondence between the effects of light on cellular combustion inhibited by carbon monoxide and on carbon-monoxide compounds of certain pigments closely related to blood pigments led, with the aid of a detailed mathematical analysis to the conclusion that the respiratory ferment is a red pigment containing iron, and that it is closely related to our own blood pigment. This was the first demonstration of an effective catalyst, a ferment, in the living organism, and this identification is the more important because it throws light on a process of general significance in the maintenance of life.

Professor Warburg. From the start, your research has been focussed on problems of central importance. Your bold ideas, but above all, your keen intelligence and rare perfection in the art of exact measurement have won for you exceptional successes, and for the science of biology some of its most valuable material.

I take the liberty of mentioning those two of your discoveries, which seem to be of the greatest value.

The medical world expects great things from your experiments on cancer and other tumours, experiments which seem already to be sufficiently far advanced to be able to furnish an explanation for at least one cause of the destructive and unlimited growth of these tumours.

Your discovery about the nature and effect of the ferment of respiration, which the Caroline Institute is rewarding this year with Alfred Nobel's Prize for Physiology or Medicine, has added a link of brilliant achievement to the chain that binds for all time, John Mayow (England), Antoine Laurent Lavoisier (France), and Otto Warburg (Germany). On behalf of the Caroline Institute I invite you to accept the prize from the hands of our King.

QUOTE

HISTORY

Otto Warburg was born in 1883. His father was a doctor and he studied under a Nobel Prize Winner, who helped him advance in his understanding and knowledge in science. He won a Nobel Prize and was award a second. He was unable to except his second Nobel Prize because because he was a Jew during the Hitler regime. Basically Otto Warburg won 2 Nobel Prizes in cancer.

When your doctor gets nominate for a Nobel

Prize or listens to the facts about cancer

then he could say he knows what he is talking

about. Until then his is just mixing poisons

such as Hitler did. Mustard gas. Ask them to mix you

enough mustard gas to make your time short.

Otto Warburg (biochemist) about 30 years after being awarded the first Nobel Prize, he begin working with Dr. Carl Reich on a part time bases. This was between of 1962 and until his death in 1970. They were doing the final experiments regarding cancer and we•re almost ready to produce the book that would have changed the treatment for cancer totally. Seems after his death Dr. Reich was not allowed to even pickup their privately owned equipment or the life saving research. Some 30 years later the privately owned research has not been released to the public.

But Dr. Carl Reich never gave up and some 20 years later he and Robert Barefoot (biochemist) produce •The Calcium Factor•. To simplify the research Robert Barefoot wrote •Death by Diet•. Robert Barefoot being a biochemist such as Otto Warburg has enough knowledge to put the remaining pieces together.

As you read this lecture I want you to realize that Otto Warburg is talking about an enzyme deficiency with cook foods. What basically happens when cooked foods which are enzyme destroyed are eaten, is that it causes the red blood cells to cluster together.

A smaller view is 4 microns in diameter. A red blood cell is 7 microns in diameter. When you feed your family enzyme deficient foods the red blood cells are weaken and stick together in a groups and cannot travel through the smaller veins. This causes the body to have many anaerobic (low or no oxygen areas within the body) that allows cancer to develop. But than, if the your body is towards an alkaline state then the cancer cannot continue to survive because your body is basically more oxygenated.

Cancer basically needs and low oxygen environment to survive. Over the years I have heard about a lot of vegetarians getting cancer. And I'm guessing here, but if the saliva pH test is done I'm sure they will be extremely alkaline. Meaning that acidic or alkaline extremes unnatural to the body are causing a steady low oxygen environment which cancer needs to survive. It can get started and has the environment it needs to continue. Basically 99% of the time a terminal cancer victim body is a thousand time more acidic, then normal. But both these environments are causing a low or no oxygen environment which cancer loves you for. This is causing a low oxygen environment. Which means you are normally calcium deficient. And your cells are oxygen starved.

Hydrogen Peroxide is old news to us. -Craig

Natural bleach 'key to healing'

Zebrafish are often used to investigate biological processes

Saturday, 6 June 2009 00:44 UKE-mail this to a friend Printable version

A natural bleach produced by the body appears to play a key role in marshalling the immune system to fight off infection and heal wounds.

US scientists, working on zebrafish, which have similar genes to humans, found a burst of **hydrogen peroxide** is released following a tissue injury.

This seems to be the signal for white blood cells to converge at the site of damage and begin the healing process.

The Nature study may help explain conditions such as asthma.

Asthma, obstruction in the lungs and some inflammatory gut diseases have all been linked to high levels of white blood cells.

Although zebrafish would at first appear to have nothing in common with humans, they do have similar genes and are widely used to investigate biological processes. This study could provide new insight on immune function and the causes of various inflammatory diseases in humans
Dr Leslie Knapp
University of Cambridge

The researchers, from Harvard Medical School, inserted into the fish a gene that glows

in the presence of hydrogen peroxide.

They discovered that when the tail fins of these fish were injured, a burst of hydrogen peroxide was released from the wound and into the surrounding tissue.

Teams of white blood cells appeared to respond to this chemical signal, arriving at the site of the wound to begin the healing process.

When the researchers blocked the ability to produce hydrogen peroxide, white blood cells failed to respond to the injury.

Mysterious signal

Researcher Professor Timothy Mitchison said: "We've known for quite some time that when the body is wounded, white blood cells show up, and it's really a spectacular piece of biology because these cells detect the wound at some distance.

"But we haven't known what they're responding to. We do know something about what summons white blood cells to areas that are chronically inflamed, but in the case of an isolated physical wound, we haven't really known what the signal is."

In the human body, hydrogen peroxide is produced primarily in three places - the lung, gut and thyroid gland.

Professor Mitchison said: "Perhaps in conditions like asthma, the lung epithelia is producing too much hydrogen peroxide because it's chronically irritated, which, if our findings translate to humans, would explain inappropriate levels of white blood cells.

"This is certainly a question worth pursuing."

Dr Leslie Knapp, of the University of Cambridge, said: "Although hydrogen peroxide is routinely used for wound cleaning and prevention of infection, some laboratory-based studies suggest that hydrogen peroxide can have a negative effect on the healing process by interfering with the activities of cells that form connective tissue.

"This new study, involving a living organism, could provide new insight on immune function and the causes of various inflammatory diseases in humans."

Dr Elaine Vickers, of the charity Asthma UK, said hydrogen peroxide levels did appear to be higher in the lungs of people with asthma, but it was not clear why.

"We welcome any research that increases our understanding of the role that hydrogen peroxide plays in the body.

"This could shed light on the causes of asthma symptoms and potentially lead to new

avenues for creating future asthma treatments."

View Full Version: UBI--Irradiating Blood For Infections

Title: UBI--Irradiating Blood For Infections

craig-oxley - April 11, 2009 04:03 PM (GMT)

UBI--Irradiating Blood For Infections

A review from the Eclectic Medicine International (EMI) staff at http://www.holisticcancersolutions.com/

"The history of Ultraviolet treatments, or Photoluminescence Therapy, reaches back at least as far as the clinical use of medical ozone. The treatment is similar to major autohemo-therapy; blood is taken from one arm, it is exposed to ultraviolet radiation, then led back through the other arm. The two treatment modalities are close relatives; there are many similarities between them. However, there is one major difference: U.B.I. has been approved by the FDA, and medical doctors in the USA are free to use it. This fact in itself brings up some very disturbing questions. As you will see in this report, U.B.I., an entirely harmless, benign, and painless procedure, has already been proven very effective decades ago in reversing and completely eliminating viral infections that today are regarded as irreversible, and are treated with dangerous and expensive drugs.

Being informed about this treatment may one day save your life, so let us take a closer look at U.B.I.

Despite the fact that this modality is very little known in North America, it is not one of those obscure experimental methods that are practiced in the basements of some private clinics. Quite the opposite! U.B.I. has been used in mainstream medical practice in the United States from as far back as 1935. In Europe, particularly in the former Soviet Union, millions of patients were treated successfully with blood irradiation. One of the reasons for the interest in this therapy in the USSR was that it is a very inexpensive, yet effective procedure. Why didn't it become a major tool against viral diseases in the hands of US medical doctors?

In 1998 we have received a report from an M.D. in Ohio, who has just finished a large

clinical study with 32 Hepatitis C patients. He reversed all of them with ultraviolet treatments, completely eliminating the infection. This was very similar to reports from naturopathic physicians in British Columbia, Canada, who are regularly achieving such results with medical ozone.

The U.B.I. equipment is being distributed in the USA by a firm called Foundation for Blood Irradiation, Inc. Its owner and medical director is Dr. Carl Schleicher. They offer training seminars to interested doctors. The followings are excerpts from their literature.

U.B.I. Therapy is intravenously applied ultraviolet energy.

This produces effects of a profound nature in human beings with photochemical, biochemical & physiological aspects.

These effects have proven to be of great value clinically in a wide variety of disease processes.

No harmful effects have been observed over a period of more than 25 years, during which UBI has been given more than 500.000 times to over 30.000 patients by at least 100 physicians.

Effects of UBI:

A rapid detoxifying effect.

An increase in venous oxygen in patients with depressed blood oxygen values.

A marked anti-inflammatory effect in diseases where severe damaging inflammatory processes exist.

A powerful regulatory or normalizing effect on the autonomic nervous system.

A rapid rise of resistance to acute or chronic viral or bacterial infections.

UBI has excellent effects in:

Viral infections (Hepatitis -- serum, infectious, acute, chronic, Mumps, Measles, Mononucleosis, Herpes, etc.)

Bacterial infections (Septicemias, staphylococcus, pneumococcus, streptococcus, coli, salmonella, pneumonias, etc.)

Profound overwhelming toxemias

Severe damaging inflammatory processes

Non-healing wounds, ETC.

Treatment requires from fifteen to twenty minutes. Outpatients rest fifteen minutes, after which time they resume their normal activities. The quantity of blood withdrawn is small, and the procedure doesn't cause either pain or discomfort.

END OF EXCERPTS.

In a letter written to us in 1998, Dr. Schleicher remarks: "We haven't yet seen an infectious disease we could not treat."

Here is the introduction to the 1997 Edition of a book written about UBI:

Ultraviolet Blood Irradiation: A History and Guide to Clinical Application

The publication of this book has been years in the making, with many hours of fine detective work spent in finding some of the missing chapters long considered lost. The Foundation for Blood Irradiation (FFBI), its well-wishers, supporters and staff view this accomplishment as a coming of age and
renaissance for Ultraviolet Blood Irradiation (UBI). Those who participated in this effort can be justifiably pleased.

The writing of this manual began in the 1930's with the pioneers of this technique, specifically, Olney, Miley, Knott and Lewis. They treated thousands of patients with a broad spectrum of disease complaints, and closely observed these patients, often over a period of years. Because of their dedication and vision, we now have concrete documentation on the efficacy and safety of UBI. Their efforts have filled the pages of this manual and make a profound argument for UBI to become one of the more effective treatment methods of our time.

Writing was completed in 1997 with the addition of Chapter 23, which documents recent research into the treatment of HIV/AIDS using UBI. This Chapter replaces the original Chapter 23, which dealt with diseases of connective tissue, and regrettably was lost over the many years since work began on this project.

UBI was originally created through the research of E.K. Knott to fight the ravages of poliomyelitis in the 1930's, which it did with considerable success. However with the advent of antibiotics and the Salk vaccine this method of treatment fell into disuse during the 1950's and 1960's, and was for a long period of time overlooked by most physicians. Those who had not been totally seduced by the use of antibiotics continued to apply UBI and were soon rewarded with the knowledge that UBI could successfully treat many other ailments than polio, as well as those diseases not responding to antibiotic treatment. As news of this discovery spread, UBI found a renaissance in the 1980's and has been re- introduced by FFBI in the 90's, with an improved, state-of-the-art device.

The Foundation for Blood Irradiation (FFBI), an organization founded in New York in 1947 by Louis Ripley, John Winters, Dr. H.T. Lewis and others, moved to Maryland in 1979 and continues in operation today under the direction of Dr. Carl Schleicher. Recently FFBI has obtained research reports of the use of UBI in the treatment of HIV/AIDS; projects are currently in process for treating immune system disorders, Alzheimer's Disease and Gulf War Syndrome. While no claims can be made for UBI's efficacy in treating these illnesses, funds are being sought for research.

Since this method uses no drugs and lowers the cost of medical treatment, it can be expected that there will be resistance from those who feel that their interests are threatened by this device. A similar situation occurred in the 1950's and 60's when computers replaced many persons doing clerical keyboard operation. Now we can see that computers have actually created more jobs at higher rates of pay than the near minimum wage of keypunch operators. It is expected that the same could happen here with the advent of energy medicine and the use of alternative, non-drug approaches to the treatment of disease. It should be understood that most drugs have side-effects and risks. UBI has no known side-effects or risk.

This manual is dedicated to the pioneers of UBI and to their untiring search for more effective, safer, and lower-cost methods for healing the diseases that face humanity, using one of nature's own tools: ultraviolet light.

This book is largely a collection of the documented case work of Miley, Olney, Lewis and others as performed with the UBI device or Knott Hemoirradiator, applied to a variety of diseases afflicting their patients. This treatment continues to be effective today although it has not changed in application for 50 years. There have been no known negative side effects, and it continues to be a safe, painless and easy-to-apply process.

In his book Into the Light, William Campbell Douglass, M.D. (a pioneer in the new era of UV energy medicine), states that Ultraviolet Blood Irradiation is the life-saving breakthrough therapy of the age. The secondary title of Dr. Douglass' book is Tomorrow's Medicine Today; we concur, and hopefully this manual can serve as a guide to continue this breakthrough well into the next century.

END OF INTRODUCTION TO THE BOOK.

If you are interested in this treatment modality, please call the office of Dr. Schleicher. They will be able to give you the address of a clinic or doctor nearest to you, where you can obtain the treatment.

Is UBI an 'alternative' treatment? It is neither unapproved, nor actively suppressed. A

medical doctor is free to practice it. However, it is very little known, and almost never used against infectious diseases, except by a handful of practitioners. If an excellent medical modality becomes neglected and forgotten by the medical community, does that place it in the category of alternative medicine? Hardly. Maybe we should create a new category: neglected medicine, or not sufficiently profitable medicine.

So, if you have an infectious disease, and you are not satisfied with the answers you get from your doctor, it may help to talk to other doctors. Don't let one person's ignorance prevent you from recovering your health."

Title: Oxygen therapy benefit in autism

craig-oxley - March 14, 2009 06:22 PM (GMT)

Oxygen therapy benefit in autism

Saturday, 14 March 2009
http://newsvote.bbc.co.uk/1/hi/health/7940149.stm

A decompression chamber may help children with autism, say researchers.

After 40 hours of hyperbaric treatment autistic children showed significant improvements in social interaction and eye contact compared with controls.

The BMC Pediatrics study could not show if the results were long-lasting but should prompt further investigation of the treatment, the US team said.

One theory is that oxygen can help reduce inflammation and improve flow of oxygen to brain tissue.

Hyperbaric treatment - effectively giving high concentrations of oxygen at increased atmospheric pressure - has been shown to have some benefit in other neurological conditions such as foetal alcohol syndrome and cerebral palsy.

We're certainly not talking about a cure, we're talking about improvements in behaviour, improving certain functions and quality of life

Study leader, Dr Dan Rossignol

Some studies have looked at the treatment in children with autism but they have not compared with a dummy procedure raising questions around a "placebo effect".

In the latest study, carried out at six centres in the US, 62 children aged two to seven with autism were randomly assigned to receive 40 hours of treatment over a month with

24% oxygen at increased atmospheric pressure (1.3 atm) or normal air in a slightly pressurised room (1.03 atm).

Children who received the treatment showed significant improvements in overall functioning, receptive language, social interaction, eye contact, and sensory or cognitive awareness.

In all, 30% in the treatment group were rated by doctors as "very much improved" or "much improved" compared with 8% of those in the control group.

Overall, 80% in the treatment group improved compared with 38% of controls.

Behaviour

Study leader, Dr Dan Rossignol from the International Child Development Resource Centre, in Florida, said the use of hyperbaric therapy for autism has been gaining popularity in the US where parents can buy their own hyperbaric chamber if they have a spare $14-17,000.

He said the findings would be quite controversial and he too was initially very sceptical of the idea but was prompted to do more research after the treatment showed benefits for his two sons who have autism.

"We're certainly not talking about a cure, we're talking about improvements in behaviour, improving certain functions and quality of life.

"The next step is to try to find out which kids do respond, because it's an expensive treatment - it may be that kids with more inflammation respond better.

We also don't know about long-term effects - it could be a transitory effect

Richard Mills, Research Autism

"It would also be nice to know how long the treatment lasts, and the finding needs to be confirmed."

Richard Mills, research director at Research Autism, said this was the first well-designed study looking at the therapy.

"We know this kind of therapy is useful in a number of neurological conditions and that's been well established.

"What we don't know is how useful it is in autism, what we could be seeing is an improvement in other neurological conditions that go alongside autism.

"We also don't know about long-term effects - it could be a transitory effect."

Professor Philip James, an expert in hyperbaric medicine at the University of Dundee, said the pressure used was no more than that used to pressurise an aircraft cabin on the ground.

He added that oxygen was the "controller of inflammation" but also had other effects on regulation of genes and tissue regeneration.

But even if proven, the treatment may not be for everybody.

"When you have any condition, there are people who have too much damage to get better."

"All the oxygen is doing is bringing things towards normal."

View Full Version: Hydrogen Peroxide Healing Protocol by Craig Oxley

Title: Hydrogen Peroxide Healing Protocol by Craig Oxley

craig-oxley - November 10, 2008 03:00 AM (GMT)

[dohtml] [/dohtml]

HYDROGEN PEROXIDE PROTOCOL

BY CRAIG OXLEY

[dohtml] [/dohtml]

This protocol is the more hardcore dosages built up over a period of time to allow the reduction of oxidative stress via enzymatic reactions. Please be careful and if possible utilise Ozone instead which is far safer and nothing to handle. Your 35% Hydrogen Peroxide should be made into a 6% solution. Only use 35% Peroxide as this has less chemicals within, it's known as 'Food Grade'. Remember that 1 drop of 35% is equal to 6 drops of 6%. If you're no good with maths then find someone who is and work out your needs in your conversion of 35% into 6% solution Peroxide. This is a must as we cannot play around with this substance. So many people haven't a clue on these matters and will harm themselves. Again make sure your conversion is correct or else. Once you've got your 6% solution you simply add the drops advised below into 8 ounces of water as recommended in frequency below:

Day - Drops / Frequency (How times a day)

1 - 2 / 2
4 - 3 / 2
7 - 4 / 2
10 - 5 / 2
13 - 6 / 2
16 - 7 / 2
19 - 8 / 2

22 - 9 / 2
25 - 10 / 2
28 - 11 / 2
31 - 12 / 2
34 - 13 / 2
37 - 14 / 2
40 - 15 / 2

This is 30 drops of 6% which equals 5 drops of 35%

43 - 11 / 3
46 - 12 / 3
49 - 13 / 3
52 - 14 / 3
55 - 15 / 3
58 - 16 / 3
61 - 17 / 3
64 - 18 / 3
67 - 19 / 3
70 - 20 / 3

This is 60 drops of 6% which equals 10 drops of 35%

73 - 16 / 4
76 - 17 / 4
79 - 18 / 4
82 - 19 / 4
85 - 20 / 4
88 - 21 / 4
91 - 22 / 4
94 - 23 / 4
97 - 24 / 4
100- 25 / 4
103- 26 / 4
106- 27 / 4
109- 28 / 4
112- 29 / 4
115- 30 / 4

This is 120 drops of 6% which equals 20 drops of 35%

118- 22 / 6
121- 23 / 6
124- 24 / 6

127- 25 / 6
130- 26 / 6
133- 27 / 6
136- 28 / 6
139- 29 / 6
142- 30 / 6
145- 31 / 6
148- 32 / 6
151- 33 / 6
154- 34 / 6
157- 35 / 6
160- 36 / 6
163- 37 / 6
166- 38 / 6
169- 39 / 6
172- 40 / 6
175- 41 / 6
178- 42 / 6
181- 43 / 6
184- 44 / 6
187- 45 / 6
190- 46 / 6
193- 47 / 6
196- 48 / 6
199- 49 / 6
202- 50 / 6
[dohtml] [/dohtml]
***** Then go down to do to a regular dosage of 30 drops 6% twice daily. *****
[dohtml] [/dohtml]
Please do not go for over 6 months on the 202 days levels of 50 drops 6 times daily.
Get on that regular dosage and stick with it from then on. Under no circumstances should you stop this protocol quickly. To stop you need to very slowly decrease over time. So be prepared before doing anything with the Peroxide. Again I prefer Ozone which is far safer and can be used willy nilly almost. This is the proper Peroxide protocol for healing.
[dohtml]
[/dohtml]
